It is apparent, Congressman KARST, that the pending bill is the culminating effort of what has been for many months a bold attempt by big business in the United States to trample existing law under foot which protects small business and genuine free enterprise in the economy. This attempt is the result of court decisions which have finally caught up with the predatory practices of big business and legally scotched them. All over the Nation there is discernible a vigorous awakening of the judiciary to the necessity of protecting free enterprise. Big business is now simply endeavoring to get the Congress to wipe out this hopeful progress and give monopolists a free hand. I feel confident that they will not succeed and that Congress will refuse to turn small business and the economy over to big business by passing Senate bill 1008 as it now stands.

Respectfully,

RANKIN PECK, *President.*

[1] This amendment preserves the existing power of the Federal Trade Commission as already upheld by the courts to reach the price-leader type of monopoly under section 5 of the Federal Trade Commission Act on the ground of monopolistic behavior tending to a substantial lessening of competition.

[2] This amendment preserves intact the existing power of the Federal Trade Commission under the Clayton Act, as amended by the Robinson-Patman Act, to reach the price leader type of monopoly where the use of delivered prices may cause an injury to competition.

[3] This amendment preserves the existing power of the Federal Trade Commission to prevent the unlimited use of freight absorption to unfairly kill off competitors more efficiently located by sellers less efficiently located, geographically speaking, and thereby encourages industrial growth in the South and West.

[4] This amendment preserves the existing law of the Clayton Act, as amended by the Robinson-Patman Act, which refuses to make the meeting of competition in good faith a complete defense to a charge of price discrimination where competition may be injured.

Federal Control of Education

EXTENSION OF REMARKS

OF

HON. CHAUNCEY W. REED

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address made by me over radio station WIND on April 11, 1949, relative to the proposed Federal control of education:

Ladies and gentlemen of the radio audience, besides being a Congressman, I am a citizen of the State of Illinois, a taxpayer, and the father of three children who attend the public schools of my State. It is my wish that they and their fellow pupils receive the best education obtainable commensurate with the amount of tax money that my neighbors and I pay into the tax collector for that purpose. I am particularly concerned that they be taught love of country, reverence for its glorious past, obedience to its laws, and all the necessary branches of learning to develop them into intelligent and useful citizens. My children and their future mean much to me. So much so that I am unwilling that control of their education shall pass, even in the slightest degree to some remote governmental agency and away from the local boards of education that my neighbors and I are privileged to select. In the few minutes allotted to me on this program, I shall discuss with you a proposal that I consider a menace to our educational system and a dangerous step toward a centralized and systematic molding of tender minds to fit a plan that may well be disastrous to our concepts of free government and our American way of life.

For almost a quarter century proponents of an expanded federalism and the consequent destruction of State sovereignty have urged some form of Federal control over education. Failing in one they have advanced others again and again and again. In the Eightieth Congress they won their battle in the upper House but failed to convince that branch of Congress that is closest to the people. In this the Eighty-first Congress they have won the first skirmish for on March 25, the Senate Committee on Labor and Public Welfare favorably reported to the Senate their bill (S. 246) for Federal control of education under the innocuous title of the "Educational Finance Act of 1949."

The committee report states that the purpose of this legislation is to assist the States in equalizing educational opportunity. This is to be accomplished through an appropriation of $300,000,000 to be apportioned among the States, Territories, and possessions. The amount to be paid to each State will depend upon the school-age population of such State, its income, and its appropriations for educational purposes, but each State will receive at least $5 per year for each of its children of school age. To be eligible for Federal aid, a State, through its governor, its legislature, and its school authorities must formally agree to a number of conditions included in the bill to insure that the money is properly used and accounted for; that the Federal Government receives adequate reports; that schools for minority groups receive equitable treatment; that within 3 years the State will spend at least $50 per pupil each year and that each year after 1949, such State will spend for such purpose an amount at least equal to the amount they spent this year. Federal administration of the bill is placed under the Federal Commissioner of Education.

Now, who wants this proposed Federal aid for education? Have the States themselves solicited it? Or has the request come from just those States that will be the greatest beneficiaries under the proposed bill?

A review of congressional hearings on these proposals for Federal aid to education over the years seems to indicate a group-pressure movement. Congressman RALPH W. GWINN of New York, a member for many years of the House Committee on Education, has declared that the leading pressure group in this movement is one of the most active and most powerful lobbies in the National Capital. Throughout the Nation it has organized many of our teachers into action behind these proposals through the lure that a substantial part of this Federal subsidy will be used to increase their salaries. Of course it is natural that, under such an inducement, they would want it. Yet, how many of our teachers, do you suppose, have studied

these proposals, know the full implications of what they have been induced to request, or the ultimate predicament in which they would find themselves when Federal bureaucrats took over? Benjamin Franklin aptly answered this question more than 160 years ago when he said, "He who trades freedom for security will lose both."

Not a single State has officially asked the Federal Government for educational aid. Nor did any taxpayers' group or chamber of commerce or board of education from any State, county, town, or city, appear before the committees of Congress to request Federal aid from Washington.

Do the States need Federal aid for education? One of the alleged reasons repeatedly advanced has been that the States of the South are unable to finance adequate educational programs. Proponents of such Federal aid include among such alleged impoverished States, Virginia, Alabama, North Carolina, Texas, and Mississippi. Of course, Indiana and Illinois are not included as among the impoverished States, yet, under the bill, both would receive Federal grants.

Let us look, for a moment, at the financial status of these so-called impoverished States of the South, not one of which has officially requested this proposed aid, all of which resent the implication that they need it, and most of which openly oppose it.

It is common knowledge that the Federal Government now staggers under an almost intolerable debt burden of $252,000,000,000—a load that not only keeps our Federal income tax at a high level but requires the imposition of other taxes on amusements, on railroad fares, on telephone service, on inheritances, and even on things we eat and things we wear. On the other hand it is just as well known that the States have been constantly reducing and liquidating their debts, and that many of them have large unexpended surpluses in their treasuries. In fact, at the beginning of the fiscal year of 1948 the 48 States had a combined surplus of about $3,250,000,000.

Among those notably in the South is the State of Virginia which, at the beginning of the current fiscal year, had a surplus of more than $70,000,000. Under this bill she would get a little over four million. She has not requested this Federal aid and does not want it.

At the beginning of the present year Alabama had a surplus of more than $22,000,000. Under the proposed bill she would get fourteen and one-half million more. Why? Her surplus is already $7,500,000 in excess of what she would get.

North Carolina, under the proposal, will get about twenty-one millions from the Federal Government, probably the largest share. At the beginning of this year, North Carolina had a surplus of more than $83,000,000 or about four times what she will get from Uncle Sam.

Texas has a surplus of more than eighty-seven millions. Under the proposed Federal grant, she would receive about eleven million. She doesn't want it. She never asked for it, and both of her Senators voted against Federal control of education in the Eightieth Congress.

At the beginning of this fiscal year, Mississippi, always referred to by the proponents of this legislation as the most needy of all the States in the Union, had a balance or surplus of forty-two millions. Under the proposed grant-in-aid she would get about $15,500,000 from the Federal Government. During the past 8 years, Mississippi has increased her teachers salaries 156 percent. She has more than enough funds to pay off all her outstanding bonded indebtedness, and remarkable to relate, her surplus funds are invested in Federal securities. That means that Mississippi actually is right now lending money to the Federal Government.

But what about Indiana and Illinois? Does Indiana, a State that last year spent about $174 per pupils in her own schools want Federal control? If the bill now favorably reported to the Senate becomes law, Indiana taxpayers will contribute almost $6,000,000 to make up the grand total of three hundred million, authorized by the bill. How much will Indiana school children get back? Just about three and one-half million. The net result is that it will cost Indiana taxpayers $6,000,000 to get three and one-half million for their own schools. Their legislature a couple of years ago passed a significant resolution which in part, reads, "The people of Indiana have been fooled for quite a spell with a magician's trick that a dollar taken out of their pockets and sent to Washington will be bigger when it comes back to us. We have taken a good look at said dollar. We find that it lost weight on its journey to Washington and back." That tells the story in a nutshell and I doubt if the Hoosiers will be fooled again.

Now what about Illinois? Certainly Illinois never asked for this measure, and she doesn't need it. At the beginning of the current fiscal year Illinois started with a surplus in her treasury of more than $215,000,000. Under the proposal, she will receive about seven and one-half million. But the cost to Illinois taxpayers to finance this project will be $21,000,000. In other words for every dollar of the twenty-one million that Illinois citizens will be taxed for this monstrosity the Federal Government will generously return us 33 cents to finance our own schools.

While this proposal attempts to assure us that administration of the school systems will be left with the States, the bill itself provides a subsidy and then sets up an involved and intricate system of Federal control. We remember that when farmers accepted subsidies, they found that they must also accept controls. When they objected, and a test case went to the Supreme Court, that tribunal held that the Government can regulate that which it subsidizes. With Federal control come Federal bureaucrats—a vast horde of them. They will swarm over the States like locusts. They will have power to invade every schoolroom in the Nation, to snoop into the expenditure of every dollar of Federal aid they authorize. No school board, no superintendent, no principal, no teacher, no child will be free from their inquisition. All will be in bondage to a powerful, expensive tax eating political bureaucracy. To preserve American ideals and retain for the citizens in every community, the right and opportunity to control through their chosen public-school officials, the destinies of a free thinking young America, this proposal should be rejected by the Congress of the United States.

The Railroads and America's Future

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. SMITH of Ohio. Mr. Speaker, by unanimous consent, I insert in the Appendix of the RECORD a copy of a broadcast entitled "The Railroads and America's Future" by Ambrose W. Benkert, a recognized authority on railroad securities, president of A. W. Benkert & Co., Inc., 70 Pine Street, New York; director of the Minneapolis & St. Paul Railroad and other industries. I wish every American citizen might have the opportunity to read this splendid statement.

The address follows:

During the past 100 years we have developed under free enterprise the most comprehensive, efficient, and dependable railroad plant in the world. It provides the safest service at the greatest speed and the lowest cost than can be found anywhere on earth. This is vital for America, for without the railroads our future would be dismal indeed. Without mass transportation we could have no mass production. Industry would stagnate; commerce would be paralyzed; great cities would disintegrate, and our common well-being and national unity would be destroyed.

Why are the railroads so essential? Why are we so vitally dependent upon them?

Because man has not yet developed any other means of transportation for the mass movement of freight and the mass movement of people even remotely comparable in cost and efficiency to power on wheels applied to cars on rails. One Diesel locomotive pulling a freight train of 5,000 tons with a crew of five and using 1 teaspoonful of fuel oil per ton-mile illustrates the observation. It would take 500 trucks, with each truck carrying 10 tons, to duplicate this feat.

Just last Tuesday here in New York City, headlines in the press announced: "Long Island Railroad wins fare rise to stave off crisis." In its decision, the Public Service Commission of New York said:

"The stark issue and the only present choice seems to be: Is there going to be railroad transportation on Long Island continued and improved, or is there likely to be disintegration of service, confusion, and receivership?"

Here is striking evidence indeed that there is no substitute whatever for this railroad in the transportation of 200,000 Long Island commuters. Even at the increased fares authorized, 5-day tickets will cost the user about 1¼ cents a mile compared with local taxicab rates in excess of 20 cents a mile. Despite the belated order authorizing higher fares, bankruptcy was announced a few days later. Such an occurrence should awaken the public everywhere to support railroad petitions for decent compensation.

The common measurement of freight service is the ton-mile. Last year, the railroads moved freight over 700,000,000,000 ton-miles, as compared with 447,000,000,000 in 1929. The average haul was 403 miles. For every man, woman, and child, they moved a ton of freight about 600 miles in 1880, and over 4,500 miles in 1947. During the next 24 hours, the railroads will move 1,800,000,000 ton-miles of freight, equal to 1 ton for a distance of 12½ miles for every man, woman, and child in the United States. And, in the same 24 hours, nearly 2,000,000 passengers will ride an average of 60 miles.

The cost of freight service during the depression and throughout the war was less than 1 cent per ton-mile, and even today, less than 1¼ cents. No other form of transportation can remotely compete with these charges.

INTERSTATE COMMERCE COMMISSION

Freight rates and passenger fares are fixed by the Interstate Commerce Commission under Federal laws requiring a rate structure adequate to the needs of an efficient transportation system. For the past 30 years the Commission has substantially met these requirements. It is mandated to do so in the future. This fact, and the innate cost advantage of the railroads over every other form of transportation for the mass movement of goods and passengers, are the two fundamental bases upon which rest constantly improving service of the railroads to future America.

In doing their job, the railroads as private enterprises stand on their own feet without any Government subsidy whatever. They will continue to do so. This is of vital im-

portance to America's future. Every competitor of the railroads is subsidized by the American taxpayer in one form or another. Trucks and buses, river barges, ocean shipping, and air lines all are dependent on the taxpayer for their continued operation.

Only the railroads pay their own way. Paradoxically, their taxes are used to subsidize their competitors. Railroads carry 94 percent of the intercity mail and receive less than the air lines get for carrying the other 6 percent.

RAILROAD TAX BURDEN

In 1947, out of every dollar received, the railroads paid out nearly 11 cents—10.8—in taxes. This amounted to nearly one billion dollars in 1947, equal to one-fortieth of the entire tax receipts of the Federal Government. This is important to America's future.

ADDITIONS AND BETTERMENTS

In the 11 years ended December 31, 1948, the railroads spent over $6,000,000,000 on improvements. Of this, over $1,000,000,000 was spent in 1948. This, in addition to expenditures for maintenance. The total investment in improvements since World War I exceeds $13,000,000,000. This resulted in improved efficiency and in reduced costs to the public.

PRIVATE VERSUS GOVERNMENT OPERATION

In World War I, Government operation of the railroads cost the American taxpayers $1,616,000,000—an average of about $2,000,000 a day, although both freight rates and passenger fares were materially increased.

During World War II, under private operation, the railroads cost the taxpayer nothing. Freight rates remained at prewar levels and passenger fares were advanced but slightly. In the 4-year period, 1942 to 1945, the privately operated railroads actually paid the Government $2,500,000 a day in Federal income taxes.

Taking losses under Federal control into account, the Federal Government was nearly $4,500,000 a day better off under private operation in World War II than under Government operation in World War I.

During World War I, under Government operation, passengers paid 51 percent more per passenger-mile and shippers paid 80 percent more per ton-mile.

During World War II, under private operation, passengers paid 2 percent more per passenger-mile and shippers paid 1½ percent less per ton-mile than in 1939.

As compared with World War I, under Government operation, the railroads in World War II, under private operation, moved each month twice as many troops, performed twice as many passenger-miles of service, moved 5 times as much Army freight and express, 20 times as much Navy freight for overseas, and double as many ton-miles of freight of all kinds—and they did all this with one-fourth fewer employees, one-third fewer locomotives, one-fourth fewer freight cars, one-third fewer passenger cars. Since 1939 railroad wage rates have increased 86 percent; prices of fuel, materials, and supplies, 118 percent; and the tax bill is 177 percent greater. These greatly increased costs have been offset with rate increases totaling only 52 percent.

This performance record demonstrates the importance to America's future of the railroads constantly having adequate funds for improvements.

Trying to condense the story of railroad accomplishments and railroad indispensability into a few words is like trying to engrave the Lord's Prayer on the head of a pin.

INVESTMENT AND CAPITALIZATION

The investment in railroad property as of January 1, 1948, was over $28,000,000,000. This is $12,000,000,000 greater than the total par value of all railroad stocks, bonds and other securities. Railroad stocks are not watered. They are outstanding to the tune of $12,000,000,000 less than the investment in the property. It is vital for America's future that this fact be known.

The undercapitalization is due to the fact that year after year the railroads have plowed earnings back into property without issuing any stock against such investment. This explains the high earnings per share of many railroads. The Atchison, Topeka & Santa Fe is an example. During the past 4 years, this great railroad showed earnings averaging $15.88 per share per annum. Immediately this figure gives the impression of high earnings. It is cited by labor leaders as proof that the road could pay higher wages, and still make big profits. It becomes a target for shippers who want lower rates and point to high earnings. But actually, earnings are not high on the Atchison. Each share represents not only the original $100 but a reinvestment from earnings down through the years of an additional $200 per share. If the Atchison would capitalize this investment, it would issue two additional shares to each holder of one share and the earnings over the past 4 years would have averaged only $5.29 per share per annum.

Instead of issuing stock to represent this additional investment of $200 for share, the Atchison shows this investment in its balance sheet under "earned surplus." How many labor leaders and shippers who oppose rate increases look at "earned surplus" in balance sheets before saying profits are "big" enough to warrant higher wages and lower rates?

The managements and boards of directors of every railroad in this country are doing the railroad industry and America's future positive harm by failing to issue stock for earnings invested in the property so that the stock at par actually will reflect the whole investment in the property, not just one-third or one-tenth of the investment.

Net value (after depreciation) of the property investment in all railroads is about $23,000,000,000. To this should be added $2,000,000,000 in cash and nearly $1,000,000,000 in materials and supplies, making a total net investment of $26,000,000,000—on which the 1948 earnings amounted to only 4.3 percent, or about $1,200,000,000. After all interest charges, there was left for stockholders $711,000,000.

TROUBLE LIES IN PUBLIC'S THINKING

In other words, there is nothing the matter with the railroads. They have the finest plant and equipment and the largest cash and working capital position in their entire history. The trouble lies in the thinking of the public about the railroads—due obviously to lack of knowledge.

Adequate knowledge of the facts would lead every right-thinking citizen to favor a square deal for the railroads. So long as the railroads are denied a decent return on their invested capital, and so long as they are compelled to subsidize all their competitors, they are not getting a square deal. Notwithstanding the present magnificent plant and equipment hundreds of millions of dollars could be spent right now for additions and betterments to the railroad plant which would result in improved service, increased efficiency and still lower costs to the public.

During the past few years one mid-western road spent $80,000,000 in track realinement which reduced this road's transportation costs by nearly 10 percent. On the basis of present gross revenues of $200,000,000, this means a saving of nearly $20,000,000 per annum or 25 percent on the investment. Another railroad has installed an automatic classification yard at a cost of $10,000,000 with commensurate savings.

FINANCING PROBLEM

The expenditure of the vast sums involved in such a program is only possible if the funds can be obtained from the public. Accordingly, the price level of railroad securities and the cost of raising and servicing the funds is a matter of vital concern to America's future. This invites examination of the present situation in the railroad securities market.

What do we find? Stocks of leading roads selling for less than twice one year's earnings; bonds at prices to return over 10 percent per annum despite large coverage for interest requirements. Whole railroads priced in the market—some for less than their salvage value, others for less than cash and rolling stock alone—the railroad plant itself being given away.

Assets and earnings are such that on a comparable basis many of these securities are worth enough to make financing possible right now if the facts were known.

Let me repeat: There is nothing basically unsound about American railroad securities. The unsoundness is in the thinking of the public, lacking the facts.

To know the facts is of vital importance to America's future. We need a public aroused to give the railroads a square deal and to keep them as private enterprises.

If the withering hand of Government ownership ever falls upon our railroads, God help us all.

Address of Hon. Robert E. Freer

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a short and interesting address made by Hon. Robert E. Freer, former member of the Federal Trade Commission, to the graduating class of the Honeywell Foundation in Bethesda, Md., on June 4, 1949:

A LEARNER, NOT A LEANER

Dr. Honeywell asked me earlier this afternoon to give him a title for the remarks I shall make to the graduating class. On the spur of the moment I told him it was "A learner, not a leaner."

The United States of America is still the land of opportunity, of hope, and of promise for the individual man or woman, boy or girl. This great stronghold of free enterprise rests on freedom of opportunity: First, for education; and second, for leadership in life based upon capacity.

During your progress through school to this, your graduation day, you have learned what was known in the nineteenth century as the R's—"Readin', 'ritin', and 'rithmetic." There is a fourth "R" about which I wish to speak to you briefly today. To my mind it is a most important "R." It is the "R" in the word "learn." Take away that "R" and you have left only the word "lean." Now, when our people become leaners instead of learners we shall no longer be able to maintain that leadership which is the envy of all the other peoples of the world. When we become leaners we shall sink to the level of those in the rest of the world who do not have our opportunities for learning or for exercising leadership based upon our capacity.

More than 150 years ago Benjamin Franklin wrote in Poor Richard, "These are the evidences of an education: Correctness in the use of the mother tongue, refined and gentle manners, the power and habit of reflection, the power of growth, and the power to do."

These words of Poor Richard were painted on the wall of one of the classrooms of a very respected eastern college when the building was erected sometime around 1870. They exercised, no doubt, a large influence on somewhere near 20,000 graduates of that college before whose eyes they appeared. While perhaps not all of those five evidences are accorded the same respect that they once were, I wish to assure you that the power to do is the hallmark of the free-enterprise system of the United States of America in the eyes of everyone throughout the world.

This power to do is nurtured by the powers of reflection and of growth and in large part is founded upon the development to the fullest extent possible by each individual man or woman, boy or girl, of what I have been pleased to call the three I's; namely, his or her intelligence, industry, and integrity. The way is hard, not easy, but in the United States of America the reward is great, not meager, for those who learn, not lean.

Remarks of a Member of the Committee on Un-American Activities

REMARKS
OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. MOULDER. Mr. Speaker, I reluctantly believe that it is fitting and proper for me, as one of the members of the Committee on Un-American Activities, to clarify and briefly answer some of the criticism and statements that have been made or published in the newspapers concerning the committee of which I am a member.

During an executive session of the committee, held on the 14th day of this month, and at the close of the examination of witnesses, with Democratic and Republican members of the committee present, and while members of the investigating staff of the committee were also present, the chairman, the Honorable JOHN S. WOOD, presented and read a petition filed by the Sons of the American Revolution. The petition alleged that Communist-influenced textbooks were adopted and used in the classrooms of our schools; that communism was taught and its philosophy encouraged in classroom courses of studies in many of our schools throughout the country. The allegations of the petition were generally discussed by the committee in the presence of the investigating staff. The discussion on the petition and its subject matter closed and immediately another matter was discussed without any action whatsoever being taken on the petition or the investigation therein requested. No decision nor investigation of any kind was authorized by the committee.

However, the zeal of the staff of investigators was aroused, and they on a day thereafter selected at random a list of schools in different locations throughout the country, and they mailed a letter to the school officials requesting a list of the textbooks and supplementary reading—with names of authors, in use in our educational institutions throughout the country. The chairman's name, JOHN S. WOOD, was stamped or signed on these letters by the investigating staff, but such action by the committee staff was not authorized or directed by the chairman nor any member of the committee, and neither did the chairman, Mr. WOOD, nor any other member of the committee have any knowledge of the letters whatsoever until after they were mailed and received by the school officials. Even so, our chairman, Mr. WOOD, being a southerner from Georgia, and possessing the heritage of a deep sense of personal loyalty, fidelity, and chivalry, so traditional in the South, assumed full and sole responsibility for the letters and instead of disclaiming the letters which were mailed by the staff to the schools, he, in order to protect the committee's staff members, dictated a supplementary letter to each of the schools explaining that the letters were not sent in a spirit of investigation nor intended to interfere with the academic freedom of our educational institutions and that the letters should not be construed as having the slightest unfavorable accusation against any of the schools to which they were mailed.

I do not condone Congressman WOOD's courageous protection of the committee's employees. I do admire him for his loyalty and fidelity in protecting the committee employees responsible for the letters, but in fairness to himself and the committee the foregoing facts concerning the letters should be published.

In the last Tuesday, June 21, issue of the Washington Post, on the front page, there is an article headlined "GOP committee disavow any part in textbook probe." The Republican members of the committee prepared and issued a signed statement for publication requesting the committee to drop all proceedings in this matter forthwith. This published article quoted the Republican members of the committee as having said that the proposed inquiry was begun at the request of some of the Democratic members and without the knowledge or approval of the Republican members, and further stated that the committee should center its efforts on weeding out Communists in the Federal Government. That statement by the Republican members of the committee is grossly false and amounts to cheap political chicanery in its lowest form.

What does the record of the Republican dominated Committee on Un-American Activities of the Eightieth Congress reveal? I hold in my hand a pamphlet entitled "Communism and Education," which was published and distributed by that committee, while under the control of the Republican majority. Some of the members are still on the committee. On page 4 of the pamphlet there appears the following numbered question and answers:

20. Just what makes up the "school system" in America which the Communists want?

There are about 201,100 schools in this country listed by the United States Office of Education. They teach some 31,880,000 students everything from cooking to atomic physics.

Our schools range from public to private to church ownership, and from kindergartens to colleges.

Add to these the thousands of commercial, music, drama, art, business, and trade schools not counted in the list above.

Add the research centers, textbooks houses, teachers' unions, school supply companies, the National Education Association, and its affiliates.

Each and every one would be wrecked and the pieces taken over.

On page 7 you will find the following numbered question and answer:

42. Are there many Communist fronts and fellow travelers in the United States school system?

There are, and they are a deadly danger.

We find the following questions and answers on pages 8 and 9 of the pamphlet:

48. Do they meddle in student activities?

Says Dr. Gideonse: "Perhaps the most effective tactic they employ, however, is their practice of espousing popular causes and protesting militantly against anything which they can make appear as unfair practice, exploitation, or discrimination."

49. Do the students know what they're getting into, when they go to these things?

Hardly ever. They go for the fun and excitement, usually, but then the loops and the snares go out and catch all too many.

50. What happens to them, then?

The girl or boy who falls under Communist influence is in danger of losing his whole future as an independent American citizen.

The same applies for teachers or anybody else.

And on page 13 of the pamphlet the questions and answers are as follows:

70. Does all that come out in Communist-influenced textbooks?

It does not. Instead, the authors deliberately falsify facts to support the fiction that the Communist experiment has been a grand and glorious success in the U. S. S. R.

71. Do these books teach lies about this country too?

Yes. For example, some give students the idea that our country is hopelessly ridden with economic evils.

73. What's biting these textbook writers, then?

Communism. Whoever is touched with communism loses his sense of truth as we know it.

74. How else have American Communists dug into the United States school system?

Besides active teaching in public schools, private schools, and church school, from kindergartens to colleges, they run some schools outright.

75. You mean there are actually Communist schools in this country?

Yes.

In spite of the above-quoted shocking charges made in this pamphlet which was printed and distributed by the Republican Committee on Un-American Activities, they now say that proceedings to investigate the charges should be dropped forthwith.

The unauthorized letters written by the investigating staff of the committee was an improper and unfortunate procedure of investigation, and I wholeheartedly concur with the statements made by the distinguished gentleman from Ohio [Mr. HAYS] when he contends the committee should exercise a most rigid control and supervision over the activities of the investigating staff serving the committee. I, also, firmly believe that if and wherever communism is taught and encouraged in our schools it should be exposed. However, liberal philosophy and teaching should not be

confused with communism and if any investigation is undertaken, it should be strictly conducted in accordance to a plan and procedure which will not embarass educators nor interfere with the academic freedom of our educational institutions.

I favor and support the Democratic administration's European recovery program and the expenditure of American money and resources to prevent the spread of communism and its influence throughout the world, and I, also, believe that the American people, the taxpayer, the American mothers and fathers of our country should be informed and know whether or not our educational institutions are being infiltrated with Communistic teachings detrimental to our form of Government and democratic way of life.

What is your opinion and what would you do if you were assigned to a duty as a member of the Committee on Un-American Activities?

Resolution of Waterbury Lithuanian-American Council

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. PATTERSON. Mr. Speaker, we who are born free cannot at times visualize the terror of our less fortunate contemporaries who have found a haven here in America from despots abroad. This is particularly true in the case of our Lithuanian friends who feel strongly for their loved ones, who have for 9 years borne the yoke of Soviet oppression.

Americans of Lithuanian descent have not yet lost faith, and still retain the hope that our great Nation will lead in reinstating liberty and freedom in their native land. I join with them in calling for strong measures to assure that Lithuania, a land of democratic people, be assisted in every manner to regain its cherished freedom.

A resolution adopted by the Waterbury Lithuanian-American Council on June 18, 1949, follows:

WATERBURY LITHUANIAN-AMERICAN COUNCIL,
Waterbury, Conn., June 20, 1949.

Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR MR. PATTERSON: Resolution duly voted at a mass meeting held the 18th day of June 1949 at St. Joseph's Auditorium in the city of Waterbury, Conn., under the auspices of the Lithuanian-American Council of Societies:

"Citizens of Waterbury, observing the sad ninth anniversary of the annihilation of freedom of the Baltic States by Hitler's Russian ally and the eighth anniversary of the institution by Russia of the horrible crime of genocide through mass murders and deportations of the indigenous population of Lithuania, Latvia, and Estonia, vehemently condemn the conspiracy of silence evident in United Nations circles, and demand that the Senators and Representatives of Connecticut in Congress of the United States exert public efforts to induce the Government of the United States to champion the cause of freedom and to honor its solemnly assumed joint obligation in the Crimean declaration to liberated European peoples to restore sovereignty, self-government, and democratic form of government to the peoples of Estonia, Latvia, Lithuania, Poland, and other liberated European countries."

ALEXANDER ALEKSIS,
Chairman.
Miss MARCELLE ANDRIKIS,
Corresponding Secretary.

Macclesfield, N. C.

REMARKS
OF
HON. JOHN H. KERR
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. KERR. Mr. Speaker, the leaders of our Nation and the world who are fighting the threat of communism at home and abroad would do well to pause and observe the example of the people of Macclesfield, N. C. The people of this community, led by the Woman's Club, have banded together to improve their town and make it a better place in which to live. In the recent More Beautiful America competition, sponsored by a national magazine, this North Carolina town triumphed over other towns and cities many times its size by reason of the improvements they had made. The citizens of this community deserve every congratulation for these efforts. Here is an example of democracy at work and these fine people have given to the world an outstanding example of a way to make democracy live and an answer to the threat of communism.

I include in my remarks an item appearing in the June 26, 1949, issue of the News and Observer, Raleigh, N. C.:

EDGECOMBE TOWN HONORED FOR TASK—MACCLESFIELD GETS PLAQUE FOR AMERICA'S BEST COMMUNITY FACE-LIFTING

(By Simmons Fentress)

MACCLESFIELD, June 25.—This tiny Edgecombe town reaped the honors today for America's best job of community face-lifting.

Its 367 residents, and especially its 29 Woman's Club members, gathered in the reward for the Miracle of Macclesfield, an arduous job of community improvement that beat anything in the Nation.

The reward came in the form of a bronze plaque from Better Homes and Gardens magazine, whose More Beautiful America competition was won by the hard-working women of this quiet village. More concrete recognition came 2 months ago in a $2,000 check from the magazine, the top award in the national beautification sweepstakes.

Editor Frank McDonough was on hand today to make the award for Better Homes and Gardens. Plaudits also came from the White House in a telegram from President Truman. State Auditor Henry Bridges, representing Governor Scott, and a host of county and district officials added their words of praise.

Macclesfield's accomplishment was a community job that began in March, 1947. To win its $2,000 award, the Woman's Club launched a campaign that eventually brought the complete remodeling of five homes, the repainting of 11 and landscaping of 10. It brought the town a neat new post office, a rebuilt community house, modernized store buildings, new awnings to replace rusted tin, an ambitious plan of debris removal and a sewer system.

BEGAN IN 1947

When a handful of women began pushing things early in 1947, Macclesfield didn't have a usable public building. It didn't have a civic club to sponsor any improvement campaign until Mrs. J. E. Wright, wife of the town's only physician, undertook to organize one. With Mrs. Wright as the guiding force, the Macclesfield Woman's Club was born. Once it was organized, it started swinging right and left for the improvement of a community that even its residents admitted was probably the worst looking in the State.

When visitors surveyed the results today, they found them amazing, almost as amazing as the idea that a town of 367 could win top honors over such places as Portland, Oreg., Cleveland, Ohio, and Norwich, Conn.

WHY THEY WON

Editor McDonough had the explanation. "You won because so many of you participated, because you did your painting, the planting, the tearing down, the rebuilding with your own hands," he told the town this morning as he awarded the plaque to Mrs. Wright. "You won," he continued, "because you did so many things—the community house, the water mains and sewers, the new awnings and store fronts, the home remodelings, the ball park, the general clean-up. No other town did anywhere near so many things."

As Mrs. Wright took the plaque, the other 28 Woman's Club members beamed from the front rows of the small high-school auditorium. She deserved to be the official recipient, they said later, because the whole thing was her idea. She was the one who had started the "Miracle of Macclesfield" on its way.

One-half of the town's $2,000 reward came for winning in the class of towns under 10,000 population. The second half was the big award, the one that went to the winner of the national sweepstakes.

Macclesfield had the prizes safely tucked away today, but its beauty-consciousness is still producing results. With the presentation only 30 minutes away, painters still were busy on the home of A. B. Felton on the village's main street. Others had projects under way; still others have them in the planning stage. The Woman's Club already has spent most of its $2,000 on further improvement at the sprawling community center, which even now would be a prize asset of a community 20 times this size.

GENERAL HOLIDAY

Today banners flew from the town's clean streets. Merchants closed their stores and headed for the high-school ceremonies. Picnic lunches were spread on the campus and visitors were taken for quick tours of the town. Red-lettered signs with "Stop Here" messages marked the major points of improvement. In the afternoon, the crowd filed to the ball park for nine innings of baseball. The park was a big stopping point on the tour. It was one of the Woman's Club's top-improvement projects. Two years ago it was little more than a cow pasture.

Macclesfield was proud of itself today and prouder of its women. Its residents nodded approvingly as Editor McDonough told them that the important thing is that Macclesfield, "and all the other cities which entered, can hold their heads higher. They are ready to receive visitors more heartily than ever before. * * * Citizens all over the Nation are thinking that if your community can become an attractive town instead of a collection of down-at-the-heel buildings and roads, then they can do it too."

It was 27 months ago when Mrs. Wright picked up her copy of Better Homes and read the America Needs a Bath article which announced the beautification contest. She had an idea in terms of Macclesfield. Soon, four of her friends—Mrs. C. S. Winstead, Mrs. G. W. Peebles, Mrs. D. L. Felton, and Mrs. Roy Phillips—heard her suggestion and approved. The handful set out to convert others and to organize a woman's club for the town.

They did just that on April 5, 1947, at the Wright home. Thirteen members were there when they voted to enter the magazine's contest. The charter members were Mrs. Wright, Mrs. N. T. Parker, Mrs. C. L. Harrell, Jr., Mrs. Peebles, Mrs. R. M. Lewis, Mrs. V. E. Lewis, Mrs. Max Harrell, Mrs. Graham H'gh, Mrs. Roy Eason, Mrs. Phillips, Mrs. E. G. Narron, Mrs. Laura Phillips, and Mrs. C. P. Webb.

COMMUNITY PROJECT

A month later work began. The club had 35 members. It was a long hard job. Suppers were held to raise money. Merchants were talked into spending to improve their places. Contributions as big as $25 began coming in as town people began to realize the possibilities of what was to become the Macclesfield miracle.

There were home-improvement contests, and paint brushes began moving all over town. Mrs. Dorothy Webb and Mrs. Roy Phillips won top prizes for converting unsightly homes into pleasant living quarters. The town's Negroes were interested and they started work, too. Ditches were filled, and work started on the old community house. It took a square dance, a baby contest, and a bridge tournament to raise the needed money. There was a brunswick stew and turkey and cake sales. At the end of the first year, they had scraped together $745.

Last February, the club learned that the $2,000 was headed toward Macclesfield. Better Homes staffers came down in April to gather facts on the big undertaking. They are published, with numerous illustrations, in the July issue of the magazine.

CONGRATULATIONS

The town took special pride in four of its for the award, and they wanted Senator FRANK GRAHAM and their Congressman, Representative JOHN KERR. None could come, but Truman wired his praise anyway. "This seems to be another case of David putting down Goliath," read the White House w're.

The big day came to a close in the evening with movies at the ball park. They included face-lifting scenes shot in Macclesfield.

The town took special pride in four of its visitors today. They were former residents of Macclesfield, England, a town of 35,000 from which this village took its name. Mr. and Mrs. Walter Abrahams and Mr. and Mrs. Horace Lovekin, the visting four, live now in Holyoke, Mass. They came down to see what little Macclesfield had done.

British Deal With Argentina Shows Selfishness and Ingratitude to United States

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. MULTER. Mr. Speaker, I have on many previous occasions directed the attention of my colleagues to the fact that while we are going out of our way to help Great Britain rehabilitate her war-torn economy she has been doing her best to undermine our trade relations with other countries.

The following editorial which appeared in the Brooklyn Eagle of June 26 further substantiates what I have been saying:

BRITISH DEAL WITH ARGENTINA SHOWS SELFISHNESS AND INGRATITUDE TO UNITED STATES

Great Britain has been free and generous in recognizing the value of economic aid from the United States as a factor in her progress toward recovery. Life in Britain, it is true, remains close to the austerity basis but improvement has been constant and conditions on the whole are somewhat easier than they have been since the war. In Britain, as in France, Italy, and the other countries of western Europe, Marshall-plan aid has been a major factor in the change for the better. Prime Minister Attlee, Mr. Bevin, and other leaders of the Labor government have conceded this to be the case.

One of the principles of the European recovery program is that of unity in the efforts to advance a common cause, of practical cooperation in helping all of the participating nations. Mr. Attlee's government has shown a callous disregard of this principle in entering into a unilateral trade agreement with Argentina, an agreement which benefits only the principals involved and which places the United States, from which Britain has drawn the economic sustenance which has held it together, at a serious disadvantage.

Under the terms of this agreement, as it is interpreted by Washington, Britain over the next 5 years will exchange machinery for Argentine beef. The arrangement virtually excludes the United States from the Argentine market for machinery and reduces American agricultural exports to Britain.

Insofar as Britain is concerned, the spirit which this agreement reflects is one of selfishness and ingratitude. Its implications, in fact, are even worse. In the opinion of Economic Recovery Administrator Hoffman, "that kind of trading," if extended, could do infinite harm to the Marshall plan, making it ineffective at a time when so much depends upon its success.

In entering into this agreement with Argentina, the Labor government has shown a mean side. It is eager to grasp the benefits of the Marshall plan and also to reap whatever advantages may be gained by undermining the program. This is not an admirable course of action. Americans cannot be blamed if they are resentful and even angry.

The Portsmouth Naval Base

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. MERROW. Mr. Speaker, the United States Naval Base, Portsmouth, N. H., which has made a most enviable reputation in the construction of submarines for the United States Navy, is located on the islands at the mouth of the Piscataqua River. The major islands in the group include Seavey, Wood, Newcastle, Badgers, Marvin, Goats, Fishing, Squash, Pumpkin, Nobles, Pierce's, Little, Clark's, Jamaica, Gerrish, Cedar, Star, White, Lunging, Duck, Appledore, and Haley's, also called Smuttynose.

The maritime history of these islands had its inception with their discovery in 1603 by Martin Pring, an English explorer sailing for a group of Bristol merchants. The islands and the shipyard play a prominent and outstanding role in the naval history of the United States. From the time of their discovery, 3½ centuries ago, to the recent completion of the newest radar-studded picket submarines, they have made a continuing contribution to the strength of our Navy. Probably there are no tracts of land of equal size which have furnished so much to the material resources behind the United States Navy.

The islands on which the United States naval base is built were formerly used extensively by fishermen who stopped in the well-protected Piscataqua River to dry their fish and to repair their nets. They were first called the Puddington Islands in honor of a prominent fisherman. In 1794, one of the islands was sold to William Dennett, of Kittery, Maine, for the sum of £500.

EARLY SHIPBUILDING

The value of the Portsmouth area was early recognized because of the rich supply of excellent shipbuilding timbers available in practically unlimited quantities. Ship construction in this section soon grew into an extensive industry. Many merchant and fishing craft were constructed previously to the building of naval vessels. The first man of war was the *Falkland*, a 54-gun ship which was completed in 1694. This was the first vessel built in the new world for the Royal Navy.

When war broke out between England and the American Colonies in 1775, Portsmouth had already succeeded in establishing a wide reputation and had acquired extensive experience in shipbuilding. It was therefore chosen to construct ships for the Continental Navy. The first ship of its type—the *Raleigh*—was made by a private firm on what is now known as Badger's Island. Only 1 year after this in May 1777, John Paul Jones became commander of the famous *Ranger* which was launched from the same ways on which the *Raleigh* was built.

NAVY YARD ESTABLISHED

In the latter part of the eighteenth century there were no regular shore plants for the Navy. The Navy was administered by a commission appointed by the Congress under supervision of the Secretary of War. In April 1798 the Navy became a distinct and separate branch of the military service. Benjamine Stoddart, the first Secretary of the Navy, was much interested in establishing Government-owned shipbuilding yards. Because Portsmouth had been successful in constructing the *Raleigh* and the *Ranger*, this area was given immediate and favorable consideration. Dennett's Island was purchased in 1800 and the Portsmouth Navy Yard was established.

FROM 1812 TO THE CIVIL WAR

From 1812 to the Civil War in 1861 the Portsmouth shipyard experienced gradual but continual development. The

temporary wooden buildings were replaced by permanent construction of brick. In 1851 a floating drydock capable of handling ships up to 5,000 tons was commissioned and continued in operation until 1907. At this time the work of the dock was taken over by a graving dock which was completed in the gut between Dennett's and Seavey's Islands. The latter was purchased in 1864. The material removed to construct the graving dock was used as a fill to join these two pieces of land. At the present time the Portsmouth naval shipyard sprawls across both islands.

The Civil War brought increased activity to the Portsmouth yard. The largest ship in the Navy during the War of the Rebellion, the steel frigate, *Franklin*, was constructed in the new ship house. At the start of the Civil War appropriations were immediately increased and the Navy once again came into its own. The yard became alive with workmen, and its piers were crowded with ships. The increased activity is shown in the number of workmen employed at the yard. In the year 1864 from 1,400 to 2,500 mechanics and laborers were on the rolls. The memory of the heroic acts of the Navy during the war between the North and South grew dim as time passed, and again interest in the navy yard took a decided and precipitous slump.

CIVIL WAR TO 1900

Following the War Between the States appropriations decreased annually and the Portsmouth yard was almost deserted. Only 71 men were employed in 1877. Interest, however, soon returned and in 1878, more money was allotted to Portsmouth than in the previous 5 years. This allowed a few ships to be repaired that year and provided additional improvements for the yard. The question of telephonic communication with the city of Portsmouth was considered and by 1882 lines were run between the yard and the city.

The renewed interest in the navy yard was of short duration as a board was appointed by Congress in 1883 to consider closing some of the naval establishments. In the board's report relative to the Portsmouth Yard, it was stated, "That it must be closed whenever the necessity for repairs of wooden ships ceases." Appropriations for maintenance of the yard were subsequently reduced over a period of several years.

Portsmouth again came into prominence when the Greely relief expedition arrived in August 1884. The ships consisted of the *Thetis*—Commander W. T. Schley—the *Alert*—Commander G. W. Coffin—and the *Bear*—Lt. W. H. Emory. Lt. A. W. Greely, United States Army, and five other survivors, with the bodies of 12 men of the expedition who had died in the Arctic, were landed at the yard. Lieutenant Greely occupied house R until October 8, 1884.

Because of reduced funds very little was accomplished by way of yard improvements until 1890. Disregarding the recommendation of the board to close the Portsmouth yard when the need for repairs on wooden ships ceased, Congress granted money for tools and machinery to be used in repairing iron and steel ships. This increase in appropriations again brought activity. When the Spanish-American War began the yard was well prepared to handle ship repairs and consequently received a large share of this work.

RUSSO-JAPANESE PEACE CONFERENCE

The Portsmouth yard achieved international prominence and was given wide publicity when the new supply building—building 86—was selected by President Theodore Roosevelt as the council chamber for the discussion of the peace terms settling the war between Russia and Japan. The peace treaty was signed here on September 5, 1905.

WORLD WAR I

During World War I the importance of submarines in naval warfare rapidly increased. At this time construction of underwater craft began in Portsmouth. Prior to the outbreak of World War I the monopoly of submarine construction in the United States was controlled by two private companies in Connecticut—the Electric Boat Co. of Groton, and the Lake Torpedo Boat Co. of Bridgeport.

Portsmouth soon acquired the status of a submarine specialty yard and was made the home base for all submarines stationed on the Atlantic Coast. It was the construction yard for seven boats whose keels were laid between March 1917 and October 1918. In addition to the production of submarines and the repair work on underwater craft many surface ships were assigned for overhauling. During World War I three new submarines were launched—the *L–3* on April 23, 1917; the *O–1* on July 3, 1918, and the *S–3* on December 21, 1918.

WORLD WAR II

From 1921 to 1940 the yard carried on a submarine building program which averaged approximately one a year. Even with this modest program there was continuous development in improved methods of production. The small design and construction forces were an important development during this period. As a result of the work accomplished in the 1920's and the 1930's Portsmouth, at the beginning of World War II, was in a position to expand its facilities and increase submarine building to an unprecedented level. The 27 years of successful submarine construction prior to the Second World War produced the skill and the craftsmen necessary for turning out underwater craft in mass production.

The total number of submarines manufactured in the United States from 1941 to 1945 inclusive was 214. To this vast undersea fleet whose effect on the Pacific phase of the Second World War is so well known, the Portsmouth Navy Yard alone made the impressive contribution of 79 submarines. Thus 37 percent of all United States submarines built during the last war are credited to Portsmouth. In the yard's record year, 1944, 32 were completed. The building time was reduced from 469 calendar days in 1941 to 173 calendar days in 1944.

So rapid has been the development of the Portsmouth Navy Yard in submarine construction that it has achieved national prominence in this field. It serves as the main design headquarters for submarines. This includes the increase of hull strength or maximum depth for submergence; additional of several types of radar; a change to direct drive with slow speed motors instead of noise-producing reduction gears; addition of considerable sonar equipment; equipment capable of withstanding the shock of depth-charges; sound isolation methods to minimize noise transmitted through the hull by auxiliary machinery and electrical units; and many other types of work.

OTHER SUBMARINE YARDS

The other submarine construction yards in the country include the Naval Shipyard, Mare Island, and the Electric Boat Co., Groton, Conn. During World War II the Manitowoc Shipbuilding Co. of Manitowoc, Wis., and the Cramp Shipbuilding Co. of Philadelphia, Pa., contracted to build submarines. Toward the end of the war the Boston Naval Shipyard and the Philadelphia Naval Shipyard were given submarine construction work which they are now completing.

COMPONENTS OF THE UNITED STATES NAVAL BASE

On the first of December 1945 the Portsmouth Navy Yard became the Portsmouth Naval Shipyard and a component of the United States Naval Base at Portsmouth. The base includes and integrates the naval shore activities in the Portsmouth area as prescribed by the Chief of Naval Operations. The components are the Portsmouth Navy Yard, the Disbursing Office, the Naval Hospital, Marine barracks, the commissary store and the Naval disciplinary barracks.

PORTSMOUTH NAVAL SHIPYARD

The Portsmouth Naval Shipyard is under the management control of the Chief of the Bureau of Ships and under the technical control of the cognizant departmental agencies. The tasks are—to perform necessary and authorized work in connection with building, repairing, overhauling, docking, altering, converting, and outfitting ships and related and special manufacturing work and necessary storage; to carry on authorized work in connection with building, altering, and maintaining shore electronic activities in the First Naval District and to conduct research, development, and test work as assigned.

It is of great interest to note that all standard electrical fittings for the Navy are manufactured at Portsmouth. In addition the electrical manufacturing shop produces much of the special electrical equipment for the submarines under construction and overhaul.

DISBURSING OFFICE

The United States Navy Accounts Disbursing Office is under the management and technical control of the Bureau of Supplies and Accounts. The work of this office is to provide all services relating to pay and accounts of naval personnel of the base and the crews of vessels not carrying a disbursing officer while present at the naval base. It issues transportation for officers, enlisted men, and civilian employees transferred under orders,

and when so authorized, to the families of naval and civilian personnel.

NAVAL HOSPITAL

The United States Naval Hospital is under the management and technical control of the Bureau of Medicine and Surgery. It provides all medical and associated facilities of a hosptial; fleet surgical, medical, and dental services; hospitalization for naval personnel as required by operating forces and naval activities in the Portsmouth area; medical care and hospitalization for dependents of naval personnel in this area; medical care as directed for veterans of the armed forces; and medical care as directed for the Federal Security Agency, Bureau of Employees Compensation patients.

MARINE BARRACKS

The United States Marine Barracks, Portsmouth, is under the management control of the commander, naval base, Portmouth, N. H., and under the technical control of the Commandant, United States Marine Corps. The barracks furnish sentinels and armed guards as required for the security and enforcement of law and order within the naval base.

THE COMMISSARY

The commissary store, United States Naval Base, Portsmouth, N. H., is under the management and technical control of the Bureau of Supplies and Accounts. The commissary operates in accordance with Navy regulations and has facilities to provide for 1,800 families of service personnel on active duty, retired personnel, and widows of service personnel.

NAVAL DISCIPLINARY BARRACKS

In 1903 a naval prison was established on board the U. S. S. *Southery*, a prison ship anchored at the back channel pier. In 1908 the present prison was commissioned under the supervision and control of the Judge Advocate General of the Navy. This is one of the two naval prisons in the United States. On the 5th of June 1946 the naval prison was redesignated as the naval disciplinary barracks. It is under the technical control of the Bureau of Naval Personnel and a component activity under the military command and coordination control of the commander, United States Naval Base, Portsmouth.

THE SQUALUS

No account of the United States Naval Base at Portsmouth would be complete without recalling the now-famous *Squalus*. The 8-year history of this submarine was initiated on October 19, 1937, when the keel was laid. The *Squalus* was launched in 1938. In March 1939 the Navy announced the commissioning of the submarine. Two months later the *Squalus* figured in one of the few peacetime tragedies of naval history. On May 23, 1939, this submarine was operating off the Isles of Shoals. The expected surfacing report was about 1 hour overdue. The failure to communicate with the submarine produced alarm.

The U. S. S. *Sculpin*, due to leave for Newport, was ordered to pass through the *Squalus* operating areas in an attempt to make contact with her. The *Sculpin* sighted the red smoke bomb fired from the disabled craft. Fifty-nine men, including three civilians who were assisting in preparation for sea trials, were trapped in the submarine. The Navy employed every available resource to save these men. The U. S. S. *Falcon* rushed from New London to the scene of the tragedy. It carried the famous diving bell which meant the difference between life and death for 33 survivors. Technicians, divers, and engineers came by plane from Washington.

The Navy finally decided that the *Squalus* ould be worth salvaging. For 3½ months the Navy struggled to lift the craft from the bottom of the ocean. Several times workers almost succeeded and each time they were foiled. In September 1939 shortly after the outbreak of World War II, the *Squalus* was raised from 40 fathoms and came to rest in the navy yard drydock. Six months later Portsmouth recommissioned the U. S. S. *Squalus* as the U. S. S. *Sailfish*. The new-born *Sailfish* sailed to join the Pacific Fleet on January 16, 1941.

The *Sailfish* has 12 war patrols to her credit, 9 of them successful. She sunk or damaged 20 Japanese ships, 8 of them warships, including 2 carriers, 4 destroyers, and 1 submarine. She survived relentless depth charging by the enemy, a bomb hit from a Japanese seaplane, and an uncompensated trim dive with a dozen new torpedoes aboard.

Now the *Sailfish* is home at the Portsmouth Naval Shipyard where her conning tower is appropriately mounted on the Mall to serve as a memorial to all the men of the United States Submarine Force.

PRINCIPAL DESIGN YARD

Since the earliest experience in the construction of underwater craft the yard has continued to acquire knowledge and gain experience in the designing, in the constructing, and in the repairing of submarines. Today it is recognized as the principal submarine design yard as well as the east coast center for the construction and conversion of submarines. The submarine design history of Portsmouth began in 1914 when plans were begun for the *L–8*, the keel of which was laid in 1915.

Now the most modern submarines are being built in Portsmouth. The keel for the U. S. S. *Tang* was laid April 18, 1949. The *Wahoo* and the *Gudgeon* are under contract for construction. Portsmouth produced the first United States snorkel submarine, the first guppies, and the first radar picket submarine. At the present time there are five submarines undergoing overhaul, one submarine for reserve training, and one PCE, also for reserve training. Portsmouth is currently engaged in designing and building an entirely new type of high-speed underwater craft.

EMPLOYMENT

The peak of employment during World War I was in October 1918 when 5,723 employees were on the rolls. During World War II, the peak of employment was reached in December 1943 when 20,466 were employed at the navy yard. Currently there are over 5,000 employees at the naval base.

BASE FACILITIES

The base has facilities to build, overhaul, or construct submarines and small surface-type ships, such as oceangoing tugs, submarine rescue vessels, Coast Guard craft, and patrol vessels. It has the equipment to overhaul medium-sized surface ships, such as submarine tenders, destroyers, LST's, cruisers—turrets cannot be handled because available crane facilities limit lifts to 50 tons—and oilers.

Were it to concentrate solely on repair work the base with its present facilities and manpower could overhaul 10 submarines simultaneously. The overhaul of each would require about 3 months. The base has equipment and plant facilities for utilizing three or four times the present number of workmen. Under conditions existing during World War II, with personnel and appropriations available, it had facilities to build 42 submarines a year without any repair work going on at that time; or to build 20 new submarines while 12 were under overhaul.

THE FUTURE

The naval base at Portsmouth will play a significant part in future United States naval history. It will continue to make an outstanding contribution in the design and construction of submarines. It is vitally essential to the welfare of the country that the Portsmouth base be maintained on an adequately active status so that the necessary skill will be developed and the craftsmen will be trained for the rapid construction of underwater craft to meet any future emergency. From the first use of underwater craft, this base has excelled in highly specialized submarine craftsmen.

The submarine will perform an essential role in any future conflict both as an antisubmarine instrument and as a weapon for the destruction of enemy shipping. United States control of the shipping lanes on the high seas will make it impossible for any power to invade this continent and in the event of another war will extend our ability to strike and at the same time will enable us to aid our allies.

If we possess an adequate submarine fleet any power contemplating the initiation of a future conflict or the precipitation of aggression will give long consideration before deciding to move against us. With proper submarine protection a potential enemy will be faced with the impossibility of employing their own submarines to destroy our shipping and with the impossibility of carrying on shipping for the purpose of making war upon us.

Submarines constitute a most vital part in our program of defense. The history of the Portsmouth Navy Yard, now the United States Naval Base, is one of which the Nation can be justly proud. It has made an outstanding contribution to the superb power and the superiority of the United States Navy. In the future the naval base at Portsmouth will continue as it has in the past to serve as a sinew of tremendous strength to the Navy. It is a decisive factor in guaranteeing the security of the United States.

Yeshiva's Progress

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. MULTER. Mr. Speaker, I am happy to call to the attention of my colleagues who are interested in education the following article which appeared in the New York Herald Tribune of June 26, 1949. It tells a graphic story of the history of Yeshiva University of New York.

YESHIVA'S PROGRESS—JEWISH-SPONSORED UNIVERSITY ENTERS NEW PHASE OF EXPANSION

(By William G. Avirett, education editor)

Yeshiva University, first American university established under Jewish auspices, wound up an 8-day program last Sunday with a dinner at the Waldorf-Astoria, at which Vice President ALBEN W. BARKLEY was a guest of honor.

The occasion marked a successful conclusion to the first phase in the university's expansion and a dedication to the needs of the second phase. In particular, the dinner celebrated the twenty-first birthday of Yeshiva's undergraduate college and the formal launching of plans for a medical school.

If all goes well, the new medical school will open in 1952, with accommodations for 100 students at the outset and for a larger number later. In anticipation, premedical courses were begun at the undergraduate level last fall. Although under Jewish auspices, the school will be nonsectarian.

In addition to the medical school, plans for the second phase include an institute for adult education and provision for graduate studies in mathematics. The work of the present department of mathematics in Yeshiva College, headed by Prof. Jekuthiel Ginsburg, has already won recognition.

According to Dr. Samuel Belkin, president of the university, a main objective of the second phase is to broaden the scope of our program in the sciences and humanities." Enrollment is expected to increase gradually from the present level of 1,500 students to 5,000, but Dr. Belkin is not interested in expansion merely for the sake of bigness and hopes that enrollment can be kept from rising above 5,000.

Most recent development in the university's physical expansion was the dedication of four new buildings on the upper Manhattan campus; a science hall, graduate hall, dormitory, and the Pollack Graduate Library. Louis A. Johnson, Secretary of Defense, was the principal speaker at the ceremony, which was the opening event of the university's week of dedication.

The first two of the new buildings are modest two-story structures erected with Federal and State aid. Between them is the library, a happy conversion of a former public utility plant from one type of powerhouse to another. All four are on Amsterdam Avenue, between One Hundred Eighty-fifth and One Hundred Eighty-sixth Streets, a block south of the $2,500,000 main building of the university.

Other events of the week were an educational conference and the annual commencement exercises, at which Dr. James B. Conant, president of Harvard, and recipient of an honorary doctorate of laws from Yeshiva, defined American strength as a "unity based on diversity and on tolerance of difference of opinion."

A high spot of commencement was the singing of the Israeli hymn, Hatikvah (The Hope), by the audience. Similarly, an outstanding feature of the Waldorf dinner was the liturgical solo of Cantor Moshe Kousevitsky.

Music of this quality, unfamiliar to many western ears, served as an avenue of understanding to the East. It conformed to the Yeshiva purpose as defined by Dr. Belkin: to aid in creating "a harmonious blending between the cultural heritage of our American democracy and the ancient spiritual traditions of Israel."

"Yeshiva" is the traditional term for a center of higher Jewish learning based on the Talmud, the 36 books of Jewish civil and canonical law. The first American institution of this type, from which the present university springs, was established here in 1897 as a theological seminary named in honor of Rabbi Isaac Elchanan, of Kovno, Lithuania.

Growth of the Yeshiva has been steady. In 1915 an elementary school, Eitz Chaim, was merged with the seminary and in 1919 the Talmudical Academy, first American high school under Jewish control, was approved by the New York State Board of Regents.

A teachers' institute, founded by the Mizrachi Organization of America, was absorbed 2 years later. Seven years after that, the undergraduate college opened. Then came the organization of a graduate school named for the late Dr. Bernard Revel, who had become president of the seminary in 1915 and had founded the college in 1928.

Four years ago Yeshiva was officially designated as a university, authorized to grant degrees from Bachelor of Arts through Doctor of Philosophy; it is now fully accredited. In the same year the Harry Fischel School for Jewish Studies was established. The final step of the "first phase" was the opening of a school of education and community administration last September.

Of this school, Dr. Jacob L. Hartstein, dean of the university's graduate schools, states: "It is important that our teachers and our community center leaders have an understanding of each other's problems. The bringing together of courses in education and in community administration in one school recognizes the growing need for closer cooperation between school and community."

Ohio Buckeye Boys' State

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the inaugural address of Gov. William I. Goettman, delivered at the ceremonies inaugurating him as governor of the Ohio Buckeye Boys' State on Monday evening, June 20, 1949:

Mr. President, members of the commission, citizens of Buckeye Boys' State, and guests, I am thrilled and humbled in being elected the thirteenth governor of this, the forty-ninth State of the Union—Buckeye Boys' State. Words cannot express my sincere and deep appreciation of the honor bestowed upon me, and it is my first intention to thank those men of my party, the Nationalists, its leaders, Chairman Dick Savage, and Keynote Speaker George Bach and its members throughout the State; also the Federalists, without whose support my victory would not have been possible. To all of you for your untiring efforts in my behalf, I am deeply indebted. I came to Buckeye Boys' State with the desire of running for governor. Ever since I have known of Buckeye Boys' State I have dreamed and hoped that I might by some kindness of fate be elected governor. Little did I know that my dream was to be fulfilled on this day. A dream made possible by loyal and true Americans who banded themselves into an organization, whose sole purpose is to protect and proclaim throughout the Nation, those rights and principles on which our democratic government is founded.

This organization, the American Legion, recognizing the continual influence of those who would destroy our way of life, our cherished institution of free enterprise and freedom of the press, have made it possible through this program to educate us in the principles of practical politics. To the commission, may I express the appreciation of all of us, including myself.

To you men, Nationalists and Federalists, all one in this program, may I express my appreciation to both of you. When one wins, one must lose—when one party is entrusted with the guidance of the responsibilities of this state, the other must be the minority. But as we all know, the very foundation on which our form of government is built, is the party system. A minority party is just as important as a major party, and even though it is not in control, it still plays a vitally important and extremely necessary part in our democratic government.

It is on this idea, the Nationalist Party formed one of the planks of its platform. On this platform, I intend to carry out, to the utmost of my ability, and I ask for the cooperation of my opponents. To my worthy opponent, Jack Feldman, may I thank him for the high quality and clean ethics which he used in the campaign. It was a challenge and an honor to have had him as my opposition. It is my intention to carry forth a progressive and energetic program in complete cooperation with the legislature. Only through this cooperation can such a program be enacted. I will do all in my power to see that such a united program will be carried out.

It will be a government of law and order; a government which will strive to encourage business, to adhere to the calls and problems of labor and management, and the needs of the people within this State. God grant us that we, the leaders of tomorrow, may be strong, loyal Americans. May our spirit ring out clear and firm as did that Liberty Bell in the year '1776. Again, as I have said, we can only live free in this wonderful America if we accept the obligations and responsibilities which go with free government. One of the best ways to fight diligently and intelligently the subversive activities is to be aware of these responsibilities which are ours and to express ourselves at the polls. May I say again, Buckeye Boys' State has made a splendid voting record. It is a challenge to us who live in a country where at present less than 60 percent of our citizens exercised their right to vote. Therefore, we can see that just as we today accepted our responsibilities by over 98 percent going to the polls, we must all work to the end that all Americans awaken to increasing their participation at the polls. But now, we at Boys' State have a great job ahead of us during the next few days, if we are to make our government a success, and one that will rank with the best in the Nation.

Let us therefore, tomorrow, take up our jobs with enthusiasm working through all branches of government, the city, the county, and the State; no one of which is more important than the others. Our time is short; but if we apply ourselves diligently, the job can and will be done. I pledge you my best, but I need each and every one of you. When this is over, I know that this thirteenth Buckeye Boys' State will not only be the best in the Nation, but the best Buckeye Boys' State that has been held. In doing this, we

can justify the faith of those who have made this possible.

So, that our job of tomorrow is to put these ideas and principles into actual practice—and to this end, majority and minority, we pledge ourselves.

Adequate Housing for the Underprivileged

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Wayne County Council of Amvets:

Whereas there is an urgent need for adequate housing for those persons who because of their economic status cannot nor ever will be able to purchase a home nor afford to rent decent living accommodations if they must be solely dependent upon their own earnings; and

Whereas the only means of making available decent housing for these people is by Government financing: Be it

Resolved, That the Wayne County Council of Amvets at their second annual convention hereby go on record as supporting a Government-financed public-housing program which will be exclusively for the clearance of existing slum and blighted metropolitan and rural areas, and the construction of new housing; and be it further

Resolved, That the State and national departments of Amvets adopt this slum-clearance housing program as one point in its over-all national housing program; and be it further

Resolved, That the Wayne County Council of Amvets support bill H. R. 4009.

Communist-Inspired Hysteria

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article which appeared in the New York Herald Tribune of June 26, 1949:

COMMUNIST-INSPIRED HYSTERIA—WASHINGTON REACTION TOWARD RED MENACE CONTRASTED TO AVERAGE CITIZEN'S VIEW

(By Heptisax)

A few days ago, on a short jaunt into my native territory, I spent an evening with an extremely well read and thoughtful old friend, who charged me with being far too much occupied in my thoughts and writings with Soviet Russia. Just a week before I had faced the same charge in another group, and a third party had come to the rescue by exhibiting a New York newspaper of that date with the greater part of the front page devoted to relations with Russia, or to domestic problems traceable to Soviet policy. Strangely enough, my friend's wife came to my defense by exhibiting the front page of a local paper. There were the trial of the 11 Communist Party leaders, the Hiss trial, the Coplon trial, a report on the progress of conversations with Mr. Vishinsky in Paris, an interview with a general on the Berlin situation, and something about the budget, in which contemplation of military expenditures came up and led around to Soviet Russia again.

Every newspaper makes an effort to cater to various interests and to provide a mixed bill of fare on the editorial page; but on the front page the effort is to give the readers what most of them want. And there is certainly nothing in which most intelligent Americans take a livelier interest than they do in Soviet Russian policy and in its direct and indirect effect upon their own welfare and prospects. Also, it is very often, with very many people, an angry interest; and most of the time, with most of us, a subconsciously irritated interest.

Now this sometimes angry, and most of the time irritated, interest is what our native Stalinists, their apologists and their dupes describe as "hysteria." Many gentle souls are disturbed by that charge. But is there any justification for it? I cannot see it. Before an individual or a people gets hysterically angry, the person, or the mob or the nation, must get unreasonably and vociferously angry. But the anger of the American people is neither vociferous nor unreasonable. It is very well under control; for if it were not, genuinely hysterical persons would be leading demonstrations for war and the crowds in Foley Square would not be howling their abuse of a patient judge, but would be surging up against police lines to get at the defendants.

I have yet to read of a mass meeting in the United States in which resolutions in favor of a "preventive" World War III were adopted or even submitted. For every individual one meets who will confess to a feeling that war is inevitable, and that the quicker it comes the better (usually a working-class veteran who feels that we have been cheated out of a hard-won peace), one meets 10 who are stewing over the problem of winning Uncle Joe over to some sort of live-and-let-live arrangement, whether through kind words or pressure short of war. If there is any organization in this country bringing pressure on public opinion for war, I haven't heard of it. But there are very big organizations, quite apart from the party-line groups that clamor for peace a la Russe, and by no means pro-Soviet, which are so eagerly exploring the possibilities of lasting peace that their anxiety is almost pathetic. In short, hysterical anger against either the Stalinist empire or its fifth columnists here is virtually nonexistent in this country.

Furthermore, when we think of hysteria, as the word is popularly used, we think of a state of excitement, sometimes angry or resentful, sometimes not, which is unreasonable and unjustified. American resentment of Soviet policy and its effects upon our affairs is by no means hysterical in its manifestations, to begin with, and is by no means unjustified, in the second place. The average citizen, "the common man," alias "the man in the street," certainly does not entertain all the grudges against Soviet policy at home and abroad which a close student of Stalinism in action has. But he has at least three, and they are enough. The first is that which I have already attributed to the veteran particularly, but which is in some degree shared by all. We fought and worked and made heavy sacrifices and depleted our resources and rolled up a monumental debt burden to win much more than victory over Axis gangsterism. We thought we were paying heavy premiums on insurance against the recurrence of such a situation as Hitler and his mad colleagues created, without further need of investment in arma virumque. Out of that kind of peace we have been cheated by Soviet policy.

The second grudge is really an extension of the first. Not only have we been cheated out of a lasting peace, through unselfish and mutually tolerant international relations and the spiritual relaxation that should come with it, but, thanks to the Kremlin's clearly expressed ambition, by force of arms in some quarters, by subversion everywhere else, to reduce all humanity to a state serfdom for which there is no precedent in human history, we have this cold war. A few irresponsible neurotics, carrying guns at friction points, might turn it into a world holocaust any hour of any day. The third justified grudge, and perhaps the bitterest, is that of sustaining among us a fifth column of highly disciplined potential traitors, mostly American-born and educated, who are dedicated to body-and-soul service to such a ruthless, savagely policed despotism as neither Caligula, nor Tamerlane, nor Hassan ben Sabbah, grand master of the Assassins and greatest racketeer in human history hitherto, ever dreamed of. The power of Moscow to erect and direct on this American soil such a rattery, with such legally unchecked power to spread a moral typhus among us, is deemed humiliating by the man in the street.

If the reader thinks that an exaggeration let him study and consider the measures that are now being taken within the labor organizations to exterminate their red vermin. There is no hysteria there. There you have most reluctant action, because it breaks the labor front, resulting from long-engendered and long-restrained resentment against an un-American fifth column's effort to hitch American labor to Stalin's triumphal chariot.

All this my old friend and I discussed, agreeing, point by point, that the American attitude toward Stalinism rampant was not hysterical but was well justified and yet singularly restrained. We then came to what goes on in Washington about the Red menace and agreed that that is in an entirely different category. What you have there, whether from the Un-American Committee, as the leftists call it, or from the Attorney General, with his list of subversive organizations, proclaimed by ukase without charges or hearings before their proclamation, and by none worth mentioning after the United States Government is so committed, all appealing to a popular hysteria that does not exist, add up to the worst grudge that thoughtful Americans have against Stalin and company.

This remote gang, so fearful of the consequences of its own outrages against its own people that it has to use almost exactly ten thousand times the number of secret police that the Czars did, has forced us to violate our standards of free expression and fair play to the extent that an American Attorney General can blacklist me tomorrow as a subversive person (as I wish he would) and be under no obligation to tell me why. The Stalinists have never subverted our institutions to that extent and never will; but I hate them most because they have given an agency of the American Government an excuse for imitating their methods.

News and Views on Pending Postal Legislation

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by George E. Ernenwein, president of the New York State Federation of

Post Office Clerks, over radio station WWRL on Wednesday, June 8, 1949:

Friends and fellow citizens, as president of the New York State Federation of Post Office Clerks, it gives me great pleasure to say a few words regarding pending postal legislation, and thereby at least partially acquaint you with these bills, and at the same time outline our reasons for desiring their enactment.

At present several measures of particular importance to postal workers are receiving congressional consideration. Senate committee hearings on military service credits and reclassification bills, S. 689 and S. 1772, were recently concluded.

House committee hearings on companion bills, H. R. 87 and H. R. 4495, both introduced by Congressman MILLER of California, are now in progress, and efforts are being made to secure favorable action by these committees as well as by both Houses of Congress prior to adjournment of the present session.

The Miller bill, H. R. 87, provides for the granting of credit to veterans of World War II, for service rendered in the armed forces, on the basis of 1 day's credit of 8 hours for each day served in military, and provides for said employee's promotion to the grade to which he would have progressed had his original appointment been to grade 1. It would also grant veterans who were in military or naval service on or before June 30, 1945, an advancement of four additional grades, as provided in Public Law 35, section 3, Eightieth Congress, upon advancement to a regular position.

We might mention that civil-service examinations were suspended during the wartime period, while these men were serving with the armed forces. For these reasons many of the employees in question were prevented from entering the postal service at an earlier date, and thus deprived of benefits to be gained thereby.

It is therefore apparent that these employees are being deprived of benefits to which they are entitled because they were discharging a duty to their country and serving in our Nation's armed forces. The Miller bill, H. R. 87, would correct this situation and grant veterans of World War II, salary credits for time spent in military service. This is simple justice to these men, and in our opinion but minor consideration for those who rendered a gallant and patriotic service to our Nation during the great emergency.

Our State federation is heartily in favor of this very necessary legislation and we urgently appeal to the members of the committee to do all possible to secure favorable consideration upon this measure during the present session of Congress. Those affected are fully entitled to any assistance which may be given them along this line and we hope and trust that our appeal in their behalf will receive every possible consideration.

Other legislation under consideration would provide for an upward revision of postal wages. In this regard I might state that in recent years salaries of postal employees did not advance in proportion to the rise in living costs. When the cost of living increases, employees such as these, with fixed incomes, suffer a reduction in their purchasing power and a lowering of their living standards.

During the session of the Eightieth Congress we were advised that an increase of over $1,100 was needed to bring postal employees' purchasing power to the 1939 level. In order to at least partially assist them, a $450 annual increase was granted during the closing days of that session (Public Law 900, which became effective July 1, 1948).

Actually this did not accomplish the desired results, for while there has been a slight decrease in over-all costs, according to the Bureau of Labor Statistics, a deficiency still exists, and it is estimated that approximately $650 would be needed to bring these employees up to their former living standards. Considerable hardship and inconvenience has been encountered by them due to the aforementioned reduction in their purchasing power.

We, therefore, feel justified in our request for an additional salary adjustment for all postal employees at this time. We seek a basic salary increase compatible with the increase in living costs so as to restore them to their 1939 level.

Several measures at present before the House committee would grant these employees a $650 annual increase in salary, and this would do much to restore their purchasing power. We appeal for early and favorable action upon these bills.

Our State federation also favors several other bills under consideration which would grant postal employees additional beneficial and much needed improvements, such as the Miller bill, H. R. 4495, the provisions of which include:

Credit for past service in determining salary grades. The principle of longevity awards is based on the theory of rewarding long and faithful service. This principle is defeated or greatly minimized if no consideration is given past meritorious service. We therefore appeal for this consideration and urge early and favorable action upon this legislation with an amendment thereto, granting similar consideration to employees in second-class offices.

Twenty-six days annual and 15 days sick leave is another important provision in this bill.

All other Federal employees are given these benefits and we urgently request similar consideration for postal employees. We believe this section of the bill warrants the support of every Member of Congress for it would remove an outright discrimination against employees of the postal service.

In this connection it might be interesting to note the remarks of Congressman KENNETH B. KEATING, of the Fortieth New York District, who, while discussing this matter on the floor of the House of Representatives, on January 31, 1949, stated in part as follows:

"For some time a discrepancy has existed between the annual and sick leave to which a postal employee is entitled and that applicable to other Federal employees. The latter are entitled to 26 days annual leave and 15 days sick leave, whereas, a postal employee receives 15 days annual and 10 days sick leave. There seems to be no reason for this discriminating against a group of Federal workers who certainly in diligence, faithfulness, and devotion to duty are second to none in the Federal service.

"In order to remedy this inequity, I have today introduced a bill to equalize the provisions relating to all Federal employees. If it is enacted into law, postal employees will hereafter be granted 26 days leave of absence with pay (exclusive of Saturdays, Sundays, and holidays) and sick leave with pay at the rate of 15 days a year. This leave is cumulative.

"Also classified substitute employees under such regulations as the Postmaster General may subscribe are given the same right and benefits with respect to annual and sick leave which accrue to regular employees.

"Since this measure represents only justice to the postal workers, it is hoped that it may have early and favorable consideration both in the Committee on the Post Office and Civil Service and in the House."

Elimination of the first four salary grades is another provision of the Miller bill. The present entrance salary for postal clerks is $2,550 per annum, which is increased by $100 each year during this period.

This would bring the entrance salary to $2,950 and do much to eliminate the conditions with which those in the lower grades must contend. We might mention that practically all of these employees are veterans who are striving to live on an equal basis with their friends and neighbors, and we trust that this matter also will receive serious and favorable consideration during the present session.

The bill also provides for compensatory time at the rate of time and one-half for services performed on Saturdays, Sundays, and holidays. A 5-day week is the accepted standard in American industry and if it is necessary for postal employees to work in excess of their 40-hour workweek, they should receive this consideration. The present law is in need of correction for a contradictory situation exists whereby payment is made at the rate of time and one-half for overtime, yet when compensatory time is granted they are given same at the straight-time rate.

Another matter of considerable importance is the rating system. This bill provides for its elimination and with this we heartily agree. The present method of determining an employee's competence and ability has nothing to recommend to any officer or agency, and does not increase the employee's efficiency. A tremendous saving would be brought about by its elimination, by discontinuation of administrative overhead and printing of useless forms necessary to comply with the law. It serves no good purpose to either the Government or the employee and we urge the approval of this legislation for the benefit of all concerned.

Another provision of H. R. 4495, calls for an annual salary increase of $150 to regular employees and 5 cents an hour to employees serving on an hourly basis. As previously stated, approximately $650 is needed to bring these employees to the 1939 level, and we therefore suggest an amendment to increase these amounts in accordance with the aforementioned legislation.

Permit me to add that much of this legislation is of a corrective nature and if enacted would greatly assist in adjusting inequalities and securing improvements in the Postal Service.

We appeal for favorable action upon this measure, the Miller bill, H. R. 4495, as outlined with amendments to increase the salary provision to $650, with proportionate increase to hourly employees, and grant credit for past services to employees in post offices of the second class.

We are now endeavoring to enlist public support in our campaign for this legislation. A letter or postal card to your local Congressman and Senator, asking them to vote for and support the postal military service credits and reclassification bills will be greatly appreciated.

I wish to express my appreciation for this opportunity to present our views upon the legislation pending in Congress, and at the same time say a word of thanks for any consideration that may be given our appeal in behalf of the loyal and faithful employees of our Postal Service.

Any action which may be taken to assist us in securing these much needed improvements and adjustments during the present session of Congress will be greatly appreciated.

I thank you.

New Evidence of Desperate Need for Housing

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. MULTER. Mr. Speaker, only in the eyes and minds of those who would

impede all progress of our country is there no need for slum clearance and public housing. The city of New York alone needs at least 250,000 more units of public housing. The following editorial which appeared in the Brooklyn Eagle of June 24, 1949, is most apropos:

NEW EVIDENCE OF DESPERATE NEED FOR HOUSING

Early this week applications were taken for 2,100 apartments in a city project. More than 42,000 persons, many of them veterans, stood in line to apply for the apartments. It happens that the incident took place in the Bronx. But it could have—and has—happened in Brooklyn and the other boroughs. The plain fact is that there is a desperate need for housing throughout this city and the rest of the Nation. Some of it is housing to accommodate an increasing population; some of it is housing to replace dwellings that were inadequate when they were built and are now downright slums.

That is the reasoning behind the big national housing bill. Certain interests profess to see in its provision for public housing units of the kind familiar to Brooklyn a menace to private enterprise in the housing field. Actually, as Gerald J. Carey, counsel for the New York City Housing Authority, said the other day before the Brownsville Neighborhood Council, the bill is nothing of the kind. Public housing is neither sinister nor subversive—nor can it ever supplant private construction.

Neither private nor public building can do the big job alone. Public housing must supplement private construction, which, at its best, can even carry out the economic rebuilding of whole areas. A keystone in our housing program is the eradication of slums. As Mr. Carey said, "talk, propaganda, and lobbying" won't do that. The only way to eradicate slums is to tear them down and replace them with decent housing.

It is particularly important that the veterans, who gave up so many good years of their lives to the war, should get the decent homes at reasonable prices to which they are entitled. That is why leading veterans' organizations in the borough and the State have come out in support of the housing bill as a supplement to the efforts of private builders.

The bill we are now considering would not permit more than 85,000 units to be built in the entire State of New York in the next 6 years. The need of the rest of the State outside of the city is just as desperate as that of the city. It should be perfectly obvious to the opponents of this measure that the city of New York will pay most for this bill and get the least out of it. The city and the State will still be required to do the bulk of its slum clearance and public housing at its own cost and expense with a minimum of Federal aid

A National Theater

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under unanimous consent granted me to extend my remarks in the Appendix of the RECORD, I want to express my keen interest in the national-theater project which builds no great building in the Capital but looks toward encouraging theater throughout the country.

A NATIONAL THEATER FOR AMERICA

(By J. K. JAVITS)

The United States is unique among the great nations of the world in not having a Government-supported national theater, opera, and ballet. France, England, Russia, Italy, and many smaller nations such as Cuba, Denmark, and Sweden, can all boast of a national theater, operating with aid from their governments and at the same time maintaining high standards of artistic accomplishment. Groups like the Old Vic in England and the Comédie-Française in France—the former a recent development and the latter the most illustrious national theater in the world—successfully demonstrate that government and private organizations can cooperate mutually in cultural ventures to the great benefit of the entire population. Yet in this country, materially the most fortunate in the world, millions of citizens are deprived of the best in theater, opera, and ballet.

The enthusiasm of the Nation for the theater is not something which press agents manufacture to sell the public. Actors and producers are justifiably excited in their praise of audiences in theater-dry areas. Composed of average Americans, visibly enhanced by the presence of "meat actors"—the phrase comes from Vermont—these audiences in Iowa and South Dakota, Wyoming, and Alabama, are attracted to the theater with a delight that is extremely touching. The reception given to Margaret Webster's Shakespeare touring company, and the experience of the Barter Theater traveling repertory company, also playing Shakespeare to packed houses in rural southern towns, indicates the craving for the drama in America.

It is easy to understand why the theater exercises such a hold on our imagination. In what other art do we find such a personal harmony between artist and audience? Where, but in the drama, do we feel so responsive, so entranced by the presence of flesh-and-blood actors and actresses, performing but a few yards from our seats, speaking words that are not directed to an unseen audience of millions, but directly to us beyond the footlights? But, despite the Nation's overwhelming love of the drama, the sad truth is that today the theater economically is unable to supply the demand for live entertainment.

There are now estimated to be throughout the country about 400 to 500 community theaters, a handful of opera companies, and some 126 professional symphony orchestras. Many of these organizations are limping along, alternately opening and closing for lack of funds. It is an ironic commentary on the richest city in the richest country in the world that the Metropolitan Opera Co. almost failed to open its 1948–49 season and had to abbreviate it for lack of funds.

The ballet suffers serious restrictions under existing high operating costs to such an extent that Agnes de Mille, the distinguished choreographer and ballet director, recently declared that without a national ballet "the dancers of this country are licked."

One prominent booking office which books legitimate shows lists only 30 cities for its tours, while there are 104 cities in the United States with a population of 100,000 or over which should ordinarily have the benefit of living theater. An Actors' Equity Association, the Actors' Guild, with a membership of about 6,000, is stated to have employed about 10 percent of this number during the recent season. The great cultural resources inherent in the American theater, opera, and ballet, and the future of dramatists and composers, producers, technicians, and performers are in grave danger not because of lack of interest or a dearth of talent, but because somehow the audience and the artist cannot be brought together.

There are many reasons for this decline, but the most important is the crippling financial difficulty of successfully operating the theater on a Nation-wide scale. Consequently, it is not too difficult to appreciate why the theater today is centralized in New York City. To bring the theater to Americans all over the country, therefore, involves the wise interference of government.

As the first step in the establishment of a national theater, and of a national opera and ballet, a bill was offered simultaneously in the House of Representatives and the Senate last January by Senators IRVING M. IVES, of New York, ELBERT D. THOMAS, of Utah, and myself. This bill does not specifically request an appropriation to provide for these organizations; rather, it asks for funds so that the President may convene an assembly to determine methods by which the theater, opera, and ballet can be organized on a national basis with Government support. At this constitutional convention, to which representatives of the theater, opera and ballet would be invited—including, besides performers, drama critics, composers, producers, managers, musicians, Government officials—two separate plans would be drawn up; one for a national theater and one for a national opera and ballet. These plans, in turn, would be submitted to Congress, which would have the final word in passing on these proposals and, of course, appropriating funds for their maintenance.

The bill which Senators IVES and THOMAS and I jointly introduced does not seek a revival of the WPA Federal Theater project, which was essentially an emergency relief measure. The role of the Federal Government in the national theater, opera and ballet will be subsidiary. It will be asked only to supplement and improve their opportunities for development and expansion without controlling or directing these establishments. The democratic control of the theater, opera and ballet will be in the hands of the constitutional elements gathered in the assembly. These arts, therefore, will continue to flourish within a private economy aided by the Federal Government.

Before citing the history and development of the national theater abroad, it is worthwhile to describe and summarize the activities of the American National Theater and Academy, which may well become the foundation of the Government-supported national theater. Indeed, ANTA has been the most healthy sign in recent years of the expansion of the theater nationally, and it is to this group that Americans owe a debt for its revitalization of the dramatic arts in this country. ANTA was founded in 1935 as a nonprofit, tax-exempt organization under a charter granted by Congress. Readers may be interested to know that there are few such charters in America; the American Red Cross, the Federal Reserve bank, the Smithsonian Institution, the American Legion, and the Boy Scouts of America are several other examples.

The ANTA charter vested in a group of civic-minded citizens and lovers of the art corporate powers for the following purposes:

(a) The presentation of theatrical productions of the highest type.

(b) Stimulation of public interest in the drama as an art belonging both to the theater and to literature and thereby to be enjoyed both on the stage and in the study.

(c) The advancement of interest in the drama throughout the United States of America by furthering the production of the best plays interpreted by the best actors at a minimum cost.

(d) Further development of the study of drama of the present and past in our universities, colleges, schools and elsewhere.

(e) Sponsorship, encouragement and development of the art and technique of the

theater through a school within the National Academy.

Among the original sponsors of ANTA were Robert Sherwood, Leopold Stokowski, John Hay Whitney, William Rhinelander Stewart, William Green, Mrs. Felix du Pont, and Col. C. Lawton Campbell.

After a number of years of inactivity enforced on ANTA largely by the war, it is now a vigorous and flourishing organization under the leadership of Vinton Freedley, the celebrated producer. Other officers are Col. C. Lawton Campbell, chairman of the board of directors; Robert Breen, executive secretary; Rosamond Gilder, secretary; and Wilva Davis, assistant. Other directors are Clarence Derwent and Margaret Webster who lead Actors Equity Association, and such distinguished performers as Helen Hayes, Blanche Yurka, Raymond Massey, and Lucia Chase; producers such as Gilbert Miller, Oscar Serlin, and Theresa Helburn; dramatists like Moss Hart, and representatives of many theatrical unions.

Since 1946, ANTA has stepped into high gear, and from its offices in New York has organized, planned, and advised theatrical activities throughout the country. The Breen-Porterfield Foundation Plan, a long-range program designed primarily to stimulate the growth of regional theaters was instituted, embracing three main functions:

1. A national foundation to serve the theater much as the Rockefeller, Carnegie, and Rosenwald foundations benefit education, libraries, and race relations and the betterment of human welfare. This part of the program plans for enough funds to lend money to worth-while projects and to assist the growth of the theater in every possible manner. ANTA's resources are derived from membership dues and the income from such projects as Theater U. S. A., a weekly radio show engaging first-rate performers who devote most of their fees to ANTA.

2. A national service bureau which gives assistance to theatrical groups in the form of personnel placement, and advice as to the construction of new theaters. It also finds and distributes new play manuscripts.

3. A clearinghouse in New York City, a news and public relations center which also maintains a research staff keeping up-to-date information on almost every theatrical activity in the country, both professional and noncommercial.

ANTA hopes to see the establishment by 1955 of 100 resident professional companies such as Margo Jones' Dallas Theater, 1949, and 150 professional touring companies such as Margaret Webster's repertory company and the two Barter Theater repertory companies, which have their headquarters in Virginia. The latter, equipped especially for theaterless areas, are high-caliber companies traveling in motorized units. They are sponsored on a guaranty basis and plan their bookings a year in advance. This is the type of touring company that theater-dry areas need desperately, and it is toward the expansion of the professional theater in this direction and of the resident professional company that ANTA is working so hard now.

For all purposes, then, it would seem that ANTA has become the focal point of the American theater. Despite its inadequate funds, this group is laboring mightily to bring live theater to every section of the country.

As we contemplate this first step toward a national theater, opera and ballet, it is well to remember that the theater in the United States has a luminous history. It has its origins in earliest American history, before the Colonies had united in their struggle for independence, and is a vital part of the American tradition.

For the better part of the nineteenth century there were many flourishing theaters in numerous communities of the United States. Records differ concerning the date of erection of our first theater structure; but all agree that the place in which the first theater was founded on American soil was Williamsburg in the Colony of Virginia. The dates vary from 1716 to 1722.

This earliest American theater was, in a sense, the predecessor of our present summer stock theaters, since the entertainment was held in a building closely akin to a barn. This arrangement typified the theater for many years, until the Southwark Theater was erected in Philadelphia 60 years later. After Philadelphia's lead the cities of Baltimore, Mobile, Charleston, Annapolis, Memphis, and New Orleans organized theaters. These cities became theatrical centers and were nourished by traveling companies which journeyed from stage to stage. The annals of the theater reveal that there was enormous interest in these theaters and that inhabitants of rural areas and small towns were fascinated spectators who delighted in welcoming traveling players.

According to Mary Caroline Crawford in Romance of the American Theater, we, as liberty-loving Americans, owe much to the theater. The British officers who served in America during our Revolution were great lovers of stage performances, and became so engrossed not only as spectators but also as participants in play-acting in New York, Philadelphia, and Boston that they increased that very nonpreparedness which made it possible for the patriots to win.

From the early nineteenth century there are records of traveling companies alternating their performances between towns such as Natchez and Port Gibson, 50 miles away, and between Richmond and Petersburg, 25 miles distant. The latter itinerary is part of one undertaken by the famous Junius Brutus Booth, who walked those 25 miles on one occasion to give a performance because he had missed the stagecoach.

These early pioneers of the American theater undertook difficult travels without much reward to bring the theater to the people of the United States. Performances then were generally given only 3 or 4 nights a week, and though the professional skill may not have been of the first rank, the repertoires included plays ranging from Shakespeare's tragedies to comic operas, and included such attractive sounding titles as Sheridan's Pizarro, or the Virgins of the Sun.

Gradually the traveling companies settled down in one place and restricted their travel to extremely limited areas. It was from these companies that the stock companies arose and it was here that the guest-star system was initiated. Famous English performers, such as Fanny Kemble, Edmund Kean, and William Macready, traveled from one company to another demonstrating their art. It was through these players that the touring system arose, as they began to take with them on tour first one, then two, and at last whole companies of players.

By 1915 there were 90 touring stock companies and by 1928 this number had grown to 178. Since the depression, however, economic pressures, organization of the theater on a big business basis, and chain-theater ownership have resulted in the disappearance of the touring companies and the gradual concentration of the theater in New York.

The most famous national theater in the world is the French Comédie Française. It has established the pattern for a national theater in almost all European countries. Molière's troupe, supported by Louis XIV, was the first state company although art and artists were subsidized in France as early as 1515 by Francis I. The French national theater has not been decentralized, however, and since there is general agreement in the United States on the need for decentralization of our theater we should not look to the French theater as our model.

Sweden has found the middle way in a national theater as in everything else. It has a Royal Dramatic Theater and Academy and a Royal Opera all located in Stockholm. The theater and opera have been functioning since 1788. In addition, the government subsidizes municipal theaters in the cities of Göteborg, Malmö, and Hälsingborg. In order to bring the theater to all areas in the country, a state organization, the Riksteatern, was established. This organization provides for presentations in outlying areas by touring companies. The touring companies originate generally from government and municipal theaters, but the Riksteatern covers touring companies of private theaters as well. There is a central office in Stockholm to correlate the tours. An organization has been set up to function as a subscription bureau which stimulates the public interest and guaranties theatergoers good seats at a rebate.

Both the Royal Opera and the Royal Dramatic Theater are operated by a company which has a board of five members, one of whom is the director. Three of the board members are appointed by the Government. Since 1909, the Royal Dramatic Theater has received a regular grant from the Government, and each year experts are appointed to inspect its economic status and artistic program.

Last January 21, the English House of Commons gave a second reading to a bill providing for £1,000,000 ($4,000,000) for the erection and maintenance of a national theater building in London. This is one of the few noncontroversial measures submitted recently to Parliament, and has been praised by all political parties. The plans provide for a building containing two theaters, one seating about 1,200 people and the other about 500. In presenting the bill to Parliament, Glenvil Hall, Financial Secretary of the Treasury, said that it was contemplated that the building would be the national center of dramatic art.

This bill is the culmination of British Government aid to the theater which began during the war with the establishment of the Council for Encouragement of Music and Arts. CEMA was founded in December 1939, by the Pilgrim Trust, a private philanthropic organization, in conjunction with the British Board of Education. While initial support of £25,000 ($100,000) came from Pilgrim Trust money, within 3 months CEMA received a similar grant from the Government. The grant was increased yearly to maintain the council's activities, which provided for the continuance of the arts in Britain during the war and the taking of music and drama to the people cut off by wartime conditions. In 1942, the Pilgrim Trust withdrew its support of CEMA and the Government took full financial responsibility.

The CEMA met with such success that it continued after the war as the Arts Council of Great Britain, and moved from the shelter of the Ministry of Education to the Treasury, which still supervises its activities. The relationship of the Arts Council to the drama is as follows: The Arts Council consists of a central council of 16 members, one of whom is chairman. He is also chairman of the executive committee, which includes four other members of the central council. The central council meets as an administrative and supervisory body passing on all matters dealing with art, drama, and music. Their suggestions are sent to the executive committee, which in turn advises the Treasury, the final administrative power. The Treasury, of course, receives its appropriations for the arts from Parliament. The central council is advised on dramatic activities by a drama advisory panel, consisting of 20 members, all prominent in the theater as managers, producers, or actors. Currently serving on the panel are Peggy Ashcroft, Alistair Sim, and Noel Coward, all well known to Americans. At the base of the working administration

are 12 regional officers, who supervise theatrical programs in their areas and in turn advise the drama advisory panel.

It will, no doubt, come as a surprise to Americans to learn that the British Arts Council is modeled after ANTA. Currently ANTA finds itself in the paradoxical position of citing the British Arts Council as a precedent for its own place in the American national theater.

There are two important facts to note in connection with the subsidy of the drama by the Arts Council. The first is that the council does not have very large sums of money to disburse. The amount allotted to the drama department by the Treasury during 1947–48 was less than £60,000 ($240,000). The second important consideration is that the public has given such wholehearted support to the Old Vic and other beneficiaries of the Arts Council that grants and guaranties—and net costs absorbed by the Government—to many of the enterprises have been substantially reduced since 1945. (The figure for the operating year 1946–47 was about £100,000.) In addition to giving financial assistance the Arts Council aids the British theater by directly managing some touring companies and, most important, supervising resident repertory companies such as the Bristol Old Vic. It is important to emphasize that the policy of the Arts Council is largely to support enterprises rather than to initiate and establish state-run entertainment. As a consequence many theatrical companies receive financial assistance from the council but operate under their own management.

The British Government also subsidizes these groups by eliminating the high entertainment tax. However, in order to obtain the tax exemption, the entertainment organizations must be nonprofit in character. In addition, they must abide by the agreement that each theater company receiving Government aid must make with the Arts Council. One of the stipulations of the agreement is that the subsidized theater company must strive "* * * to spread the knowledge and appreciation of all that is best in the theater, and thus to bring into being permanent educated audiences all over the country."

In designing our national theater we must fit into it all the varied and brilliant aspects of our entertainment world—movies, television, radio; we must even be cognizant of the role of the juke box. We must be careful to include as part of our national organization the great number of little and community theaters throughout America and particularly the university theaters. Some 500 theaters flourish on university campuses like Yale, Stanford, the University of Indiana, Denver University, the University of Wisconsin, the University of North Carolina, Catholic University, and George Washington University. The theater at Catholic University in Washington, D. C., for example, rivals the commercial theater in the quality of its productions.

It would be a mistake to believe that a national theater establishment will hurt or interfere with movies, television, or radio. On the contrary, it will give these media much greater opportunities than exist today, for our motion-picture producers find their best pictures and their best actors in the living theater. The more living theater, the better it is for them. They know, better than anyone else, that business is best on a busy street, and that when show business is active and millions are interested in the theater, they will not only see more theater but more movies and better ones.

Radio and television are in the same position. The enormous material resources and performers made available to these fields will intrigue the public far more than today. How often do we find audiences today getting fed up over a whole period of time with current radio and television fare; and as to the moving pictures—is it not true that many of the foremost cinema stars have been trained on the stage and that some of the best moving pictures have been adaptations of stage plays? Let us think, too, of the enormous potential resources in performers, composers, and dramatists in our land who, with the present limitations of the theater, have little opportunity to show their wares.

To help newcomers to the profession, and to stimulate interest in the theater, a meeting was held earlier this year at Chapel Hill, N. C. Delegates from college drama departments and community theaters of 10 southeastern States met to draw up plans for a southeastern theater conference. One of the plans espoused, to encourage local playwrights, calls for the selection of a play written within the conference for production by six or seven groups. The playwright is to receive royalties for the production of his play. Another plan seeks to employ professional actors and directors to spend several weeks in each college to give theatrical instruction.

Our war experience should certainly convince us of the need for mobilizing our cultural resources through the medium of a national theater, opera and ballet. During the war, the Army, the Navy, and the Air Force, and the American Theater Wing, produced plays and musicals on a wide scale as morale builders, and today the United States Military Government is sponsoring similar projects in the occupied areas of Germany as a potent force for teaching democracy.

It is natural to ask, in the consideration of legislation such as ours, what form a national theater will take, for the bill before Congress does not anticipate a final form. That is one reason it has received such widespread support; it does not put ideas in a strait-jacket, but seeks the democratic development of the best plans from the arts themselves and their audiences. However, a number of suggestions have been made which deserve serious consideration.

First, it has been suggested that the tax of 20 percent on admissions to operas and symphonies produced by nonprofit organizations should be remitted; the same principle could, of course, be applied to university theaters and other non-profit organizations producing plays. Such a suggestion may involve as much as $4,000,000 per year, which would in effect be a Federal subsidy helping those nonprofit organizations. This is one plan and must be carefully considered to determine whether it will also serve the broader purpose of bringing theater, opera, and ballet to the country at large.

Another plan suggested is for the Federal Government to match the funds appropriated by individual States to help university, community, State, and municipal theaters in the respective States. These organizations would then bring the advantages of theater to the people of the State in areas not now normally reached by living theater, opera, and ballet. Such organizations could also travel to adjoining States so that the cultural resources of all the States could be interchanged.

There are other plans, among them, for example, one first developed by Robert Porterfield, the distinguished director of the Barter Theater of Virginia (the first State-aided professional theater, receiving an annual grant of $10,000 from the State of Virginia), and Robert Breen, a member of the board of ANTA and one of its founders, which calls for a number of touring companies to travel through the United States bringing the living theater where it is not now seen regularly. This is also one of the goals of ANTA, as mentioned above. Such touring companies would also afford great opportunities to artists and technicians trained in a national academy as part of the national theater establishment.

It is very likely that in each of the latter two plans the cost to the Government will not be prohibitive. Since Americans are so anxious to see living theater, opera and ballet, I believe they will support these arts to a large extent by their admission tickets.

It will be noted that I have not discussed a national theater, opera, and ballet in terms of a brick and mortar structure to be erected in Washington, Chicago, New York, San Francisco or some other great cultural center. Such structures are not considered an absolutely essential part of the national theater, opera, and ballet. They may come one day in the form of a great theater and music center and academy, but at the present time they are certainly not the first necessity. Rather, the bill Senators IVES and THOMAS and I have offered looks toward the day when the great artists of the United States will be as proud as the artists of France who add after their names "Sociétaire de la Comedie-Française," a title which proclaims the actor—wherever he may be performing—as a member of the illustrious national theater.

Thus, if Americans will think of a national theater not in terms of a physical structure but as an integrated, country-wide, organization aided by the Federal Government, the expansion of theater arts to every section of the United States will become a very real possibility. The establishment of a national theater, opera, and ballet deserves the support and encouragement of every American who believes that culture must not perish in a world sick with anxiety.

New York Herald Tribune Supports Housing Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. JAVITS. Mr. Speaker, the housing bill presents an important policy question to all who believe in the principles of our private economy and who want to make it work effectively. The appended editorial should be an important answer to any accusation of "collectivism" as against the pending Housing bill:

TIME TO MEND THE ROOF

The arguments for a public housing program that have been sufficient for the last 5 years hold with still greater force as the House, at long last and for the first time, prepares to face this legislative proposal. The opposition in the House to any housing program now finds it expedient to express its hostility in terms of the cost of the program. That cost has been atrociously misrepresented. But even assuming that capital grants for slum clearance and annual subsidies to secure low rents would come to around one-third of a billion dollars annually, the benefits to hard-pressed cities and ill-housed families would be cheaply bought, and the maximum rate of contributions would not exceed 1 percent of the present Federal budget. Poorly bargained economies are not a cloak of respectability in this case. Such arguments lack sincerity when found in the mouths of legislators who last year opposed the same program on the ground of its alleged inflationary effect. They too closely resemble the old saying about the right time to mend a leaky roof. We are more impressed when individuals so widely separated in ideology as Senator TAFT and Walter Reuther realistically plead for the bill as a necessary economic weapon in fighting back a slump in housebuilding.

Any short-term arguments will fail to fit a long-range program like that proposed in the housing bill the House is about to consider. We have too long delayed attacking the twin problems of slums and the housing shortage. The sooner we get on with them the better. The legislative issue in the House is not the details of this program, but a declaration of national policy within which more precise determinations of program can later be made. That decision cannot be shirked. We hope it will be favorable.

The Need for an Insurance Investigation

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following statement made to the newspapers on June 20:

CELLER PROTESTS INSURANCE COMPANIES MAKING COMMERCIAL LOANS

Again we hear that a group of life insurance companies have privately gobbled up certain issues of commercial companies to the extent of $23,350,000. Munsingwear, Inc., borrowed a million dollars from the Equitable Life. The Employees Credit Corp. borrowed $2,350,000 from the Mutual Life Insurance Co. and a second company. The Continental Can Co. borrowed $20,000,000 from the Equitable, the Mutual, and a Canadian company.

There was deliberate avoidance of the Registration Act and supervision by the SEC. For all intents and purposes they are regular commercial loans, although for a period of years. One would assume that with such and similar loans by insurance companies coming thick and fast and with increasing daily profusion, our banks might complain. They apparently do not. Maybe interlocking directorships of many banks and insurance companies is the reason.

Such loans made by these insurance companies involve no compliance with regulations of any adequate public authority. There is no supervision by any clearing-house, State superintendent of banking, Federal Reserve bank, or Federal Deposit Insurance Corporation. The SEC is disregarded. It will be argued that a State superintendent of insurance exercises control. But such control in most States is nonexistent, and in a few States where it does exist, it is highly inadequate. Assuredly it is high time that these loans be scrutinized so that the public may know about them.

What are the relations between these lenders and borrowers? What intervening agents receive compensation—how much and for what? Policyholders' moneys are involved—many millions of them.

Forty-nine United States legal reserve insurance companies have over $50,000,000,000 in assets. This staggering sum of money is siphoned off from the policyholders all over the land, and is concentrated into the hands of a few men, for them to control, invest, or dispose of with practically no public supervision. It is high time that the public became aware of this baneful situation.

In answer to my statement printed above, the Mutual Life Insurance Co. made the following statement:

We feel that we cannot let Mr. CELLER's statements go unanswered. It is difficult for us to understand his inference that there has been any concealment of the facts regarding directly negotiated loans. Direct loans made by this company are widely publicized. We release to the press the pertinent details about such loans as they are made, so that security holders of the borrowing corporation, other investors, Government agencies, policyholders and any others interested in such transactions are fully and promptly informed. In addition, complete details are made available to the New York State Insurance Department.

Mr. CELLER was also quoted by the Associated Press as saying it might be assumed that banks would complain about such loans. He ascribed the lack of such complaint to the alleged existence of interlocking directorates among banks and life-insurance companies.

There have been many cases in which a bank and a life-insurance company have competed actively against each other for a loan. But it is hard for us to believe there could be any objection to that. It has been our understanding that Mr. CELLER wants to encourage, rather than discourage, competition among lenders. We strongly favor such competition.

Some direct loans made by the Mutual Life and other companies have been for 10 years or more—a duration in which commercial banks are generally not interested. Where such loans have taken the form of serial notes, it has sometimes been possible to work out an arrangement under which a bank takes the early maturities, while a life company takes the longer maturities. Thus, together, the two institutions can provide the borrower with just the kind of financing needed. At the same time each lending institution obtains the sort of investment best suited to its own purpose.

Mr. CELLER was also quoted as saying that insurance-company loans involved no compliance with regulation of any adequate public authority. This will come with the shock of surprise to the New York State Insurance Department and to the insurance departments of other States, under whose investment laws and regulations the life-insurance companies have built an enviable investment record over a long period of years. In spite of the absence of any Federal regulation, no important life-insurance company has failed in the last 25 years, which period included the greatest depression in history. More than 70,000,000 policyholders throughout America look with confidence to the life-insurance companies for their financial security, and we do not think they should be told that their funds are being invested without adequate supervision and safeguards.

According to the Associated Press dispatch, Mr. CELLER also said that, in connection with directly negotiated loans, he wanted to know what intervening agents received compensation—"how much and for what?" Speaking for the Mutual Life, the answer is: "None whatever, to anyone." If a borrowing corporation feels that it needs investment bankers or other financial experts for advice, or to negotiate in its behalf, such experts are paid by the borrower, not by us. We see nothing wrong with the retention of experts by either party to a loan transaction.

We feel that such loans by life-insurance companies have provided American industry with an important source of borrowing and that they have added a new element of competition among lenders.

In referring to the investments of life-insurance companies, Mr. CELLER was quoted as saying that a "staggering sum of money is siphoned off" from policyholders all over the land, and "disposed of with practically no supervision." Such money is not siphoned off. It is money saved by millions of small policyholders to purchase protection and security for their families. Nor, as previously explained, is it disposed of without supervision.

The funds are invested throughout the United States—in home and farm mortgages, in housing developments, in public utilities, in local industries, in transportation systems, and in Federal and municipal bonds. Thus, while our policyholders are providing financial protection for themselves and their families, they also are helping to provide new homes for others; light and heat for those homes; schools, churches, tunnels and bridges, railroads and highways across our lands. In this vital way, life insurance dollars work for the good of the Nation.

Historically, the life-insurance companies have always provided capital for purposes that were most important at the time. The public interest and the general economic needs of the country have always been important factors in the investment policies of such companies.

After the War Between the States, life insurance funds were devoted largely to the development of the country's railroads. In the great growth of the American economy during the late 1800's, life-insurance funds were again an important factor. In World War I, the funds of such companies were dedicated to the winning of the war. This was true again in World War II. And since the close of the war, when the need has been for reconversion of industry to peacetime production and for the curing of the wartime housing shortage, the funds of life-insurance companies have been devoted primarily to those purposes.

On June 24, I answered the Mutual Life Insurance Co.'s assertions with the following statement:

CELLER COUNTERS CHARGES MADE BY MUTUAL LIFE INSURANCE CO.

The Mutual Life Insurance Co. made a lame answer to my charges that the big insurance companies were nosing out banks in making huge commercial loans to industrial entities, by buying complete corporate issues with deliberate avoidance of the Registration Act and the supervision of the SEC.

The denunciation by Mutual was in no way responsive to the contentions I raised. It served only to throw dust and to befog the issues.

I made no charge of irregularity in the consummation of these loans by insurance companies. It is acknowledged that the insurance companies amply publicize details of the loans made, but the publicity occurs after and not before the loans have been effected. Accordingly, advance notice to the public, governmental agencies, policyholders, and interested parties, is completely lacking. There is no competitive public bidding. The issues are privately placed. This is so even in the case of the many issues of bonds of public utilities bought by insurance companies.

Mutual counters to my charges that banking institutions are strangely silent, by saying there is intense competition between the insurance companies and banking companies for the business in question. Well, I wonder.

The Department of Justice has brought suit in the United States District Court for the Southern District of New York against 17 large investment houses and banking institutions wherein it is charged that 27 large life-insurance companies (including Mutual) made an agreement in violation of the anti-trust laws to favor securities offered by these 17 banking outfits, and that these 17 entities had an arrangement among themselves not to handle securities for any firms except those over which these bankers maintain financial and business control. The agreement provided that these insurance companies and bankers would refrain from any competitive bidding.

Mutual denies giving compensation to intervening agents arranging the loans. Of course, the insurance companies do not pay for the services of the intervenor. The lender rarely does. The borrower usually pays the piper. Let us view that situation.

Morgan, Stanley & Co. "arranged" a $50,000,000 loan to the Standard Oil Co. of Indiana. Mutual was one of the insurance companies that supplied the money. Morgan, Stanley & Co. did not act as go-between for their health. Let Mutual tell what commissions were paid and for what.

Quite recently, Mutual, among other life-insurance companies, bought $60,000,000 worth of Texas Gas Transmission 3⅝ percent bonds privately placed by Dillon, Read & Co., who with the blessing of Mutual and other insurance companies, received $235,000. I'd like to know the nature of those services.

In less than 1 year Mutual and other insurance companies have privately purchased $678,260,000 worth of natural gas transmission bonds. Morgan, Stanley & Co., Dillon, Read & Co., Kuhn, Loeb & Co., and a few other bankers reaped rich rewards, for arranging these loans. The services rendered by these banker-brokers would make interesting reading. The public, dependent upon these gas-transmission companies and the stockholders, would like to know the nature of those services. The commissions made by these agents, bankers, and brokers placing hundreds of these insurance loans might well be the subject of investigation.

In no part of Mutual's denunciation does there appear any answer to my major contention, namely, the wisdom or rather lack of wisdom of permitting life-insurance companies to siphon off premiums from millions of policyholders all over the land and concentrate same in and around New York, and then, by loans from their vast assets, become privileged to exert a dominant control over American industry.

I do not know the complete answer to the problem. But I want the intense light of public scrutiny to be focused upon the activities of life-insurance companies in the disposition of their $50,000,000,000 of assets. The public is entitled to know the facts. Perhaps knowledge of the true facts will point a remedy.

I have never asked for Federal control of insurance companies, but my detractors are so charging.

This I know. The great concentration of assets of insurance companies can be most baneful if not properly supervised by public authority. There is no proper regulation today.

It is time for a full-scale congressional objective study and dispassionate inquiry. There is no desire to "get" any company, nor desire for headline hunting.

The insurance companies cannot stave off an inquiry. It must come as night follows day.

The Poll Tax Should Be Abolished by Constitutional Amendment

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. HAYS of Arkansas. Mr. Speaker, the Committee on House Administration has reported H. R. 3199, by the gentlewoman from New Jersey [Mrs. NORTON], making unlawful the requirement of poll tax as a prerequisite for voting. This action overruled the recommendation of the subcommittee, headed by the gentleman from Virginia [Mr. HARRISON], minority members have submitted an excellent statement setting forth reasons for opposing H. R. 3199 and recommending as an alternative the passage of a constitutional amendment to achieve the same result. In an effort to give the House an opportunity to pass upon this alternative proposal, House Joint Resolution 214, I have filed a discharge petition, No. 3, and I urge the Members to sign this petition so that full consideration may be given to the constitutional phases of the poll-tax issue.

Under leave to extend my remarks, I include the following statement of views by the minority of the Committee on House Administration:

In the opinion of the minority, it is unnecessary to cite cases or restate the provisions of the Constitution which are repugnant to legislative action as the method of approach to the outlawing of the poll-tax system in those States which now impose such tax as a prerequisite to voting. It has become common knowledge with those who have interested themselves in this question that cases in point and the Constitution condemn the proposal. Minority views accompanying a similar bill in the Eightieth Congress specifically set forth those decisions, and the authority of the Constitution which, in our opinion, unquestionably and conclusively shows the inadvisability of such action.

We believe that the refusal of the proponents of this bill to accept poll-tax repeal through constitutional amendment is evidence of mistaken reasoning, and that the political philosophy involved is inimical both to the States directly concerned and to the Nation.

The approach to this legislation is based on emotion and confusion, without regard to the right of the States affected. It has been aptly said:

"Concealed in the anti-poll-tax bill is a legal weapon that could destroy our system of government and the local supervision of elections. If the bill passes, something of America will pass with it."

It is the minority view that this legislation should be sent back to the Committee on House Administration in order that the Judiciary Committee may consider a constitutional amendment which would permanently settle the issue. We believe that if a constitutional amendment is passed by the Congress, and there is an indication of strong sentiment in both bodies favoring such a method, in all likelihood many, if not all, of the States now practicing the levying and collection of a poll tax as a prerequisite to voting will have abolished it on their own initiative prior to the submission of the question.

Labor Relations

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. JAVITS. Mr. Speaker, the efforts being made in the Senate and which have been proposed here by liberals with outstanding records on labor legislation, to deal with the question of "national paralysis" strikes, has been subjected to much misconstruction. It is out of a profound conviction that this question must be removed from consideration by the adoption of an agreed-upon solution that alternatives have been put forward, particularly the alternative of Government seizure and minimum operation required by the public health and safety, and with other strong safeguards to prevent any effort to make men work who do not choose to do so.

The Christian Science Monitor saw the point exactly as a sincere effort by those who were fighting for true repeal of the Taft-Hartley law, and I append its editorial accordingly from the issue of June 7, 1949:

SEIZURE OR INJUNCTIONS?

The great barrier to repeal of the Taft-Hartley Act, observes Republican Congressman JACOB K. JAVITS, is the public's fear of "national paralysis" strikes.

We would like to put this another way: Apparently the chief barrier to a moderate and enlightened substitute for the T-H law is Congress' difficulty in agreeing on just how the Government should handle such emergencies. For many Republicans and some southern Democrats are rallying behind the Taft-Smith-Donnell substitute bill, and even more Democrats are moving over toward the 5 amendments framed by Senators MORSE, AIKEN, HILL and DOUGLAS (with much guidance from Senator IVES) and already backed by liberal Republicans. Some sort of decent, middle-of-the-road labor bill now seems probable.

From one point of view, it is unfortunate that legislation governing labor-management relations, nine-tenths of which should be concerned with ways of promoting agreements, should come to its sharpest issue on the matter of Government compulsions. The fight has put the prolabor forces in the position of appearing to say that a union striking in an essential industry is bigger than the Government, a position we doubt that any national labor leader actually holds—perhaps not even John L. Lewis. It has put the other side in the false light of demanding return of the old-time injunction.

There is deep public concern on this point. We would interpret it as a feeling that the law should spell out for these situations the authority that any sovereign government does possess and must exercise—authority which stems from its power and duty to defend its citizens from any kind of calamity.

It is not authority to make labor keep working under conditions it rejects for the profit of private ownership (here the unions have a point). It is authority to say that the American people shall not be deprived of essential services while capital and labor fight over dividing the fruits of production.

Government seizure, even as a last resort, is always awkward—more so, perhaps, for management than for labor. But it appears the only recourse consistent with this elemental function of all government. A recognition of this view seems to be pointing Congress toward some form of seizure rather than toward retention of the Taft-Hartley injunction.

Agriculture's New Electronic Brain

REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. CHRISTOPHER. Mr. Speaker, I desire to refer to the remarks of a gen-

tleman who spoke a minute ago about an atomic brain and poked fun at the American farmer and at the Secretary of Agriculture and farm programs in general. I listened to the radio this morning and someone made the statement they were having food riots in Iraq and Iran and that people were starving to death by the thousands over in China and in other parts of Asia.

May I remind the gentleman that instead of poking fun at the American farmers, the Secretary of Agriculture, and suggesting the Secretary use the new electronic brain, maybe the gentleman had better make use of the brain that Providence gave him else we get into the same shape they are in over in Asia?

Your office may be located on the thirty-third floor of a New York skyscraper, but the soil of our land will either support your body or it will perish. Kings and potentates may wear robes of the richest satin trimmed in ermine. Their crowns may be fashioned of gold and encrusted in diamonds, but the vegetables that give them health and life will continue to come from plots of soil fertilized with droppings from the pigeon cote. The eagle that looks into the eye of the noonday sun must seek his food on the ground. The farmer feeds and clothes the world, and when any man makes disparaging remarks about the soil or the people who till it he is talking about the thing that gave him birth and without which he cannot live.

To Ban Pickets From Federal Courts

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Chronicle:

PICKETS ARE OBSTRUCTING JUSTICE

The American Bar Association has sent a committee to Washington to urge Congress to ban the picketing of Federal courts. We have no reservations in saying that the practice must be ended, for the sake of nothing less than the integrity of justice, and if an act of Congress is necessary to strengthen the powers of judges to protect their court rooms from intimidation by pickets, Congress should act—and at this session.

The bar association committee, appearing before a joint House-Senate Judiciary Subcommittee, said the practice of picketing courts is of recent origin and, so far as they were aware, had been "employed solely in connection with proceedings involving alleged Communist Party members or Communist sympathizers." This is the fact. It would make no material difference whether any other group, right, left, or center, had started it ahead of the Communists—any picket line thrown about a court anywhere in America is an interference with the dispensation of justice by the court and hence intolerable.

Picket lines have been thrown around the court of Judge Medina, trying the 12 Communists in New York. In Los Angeles last March, several hundred persons paraded in front of the Federal Building, where nine persons were being sentenced for criminal contempt of the court for their refusal to answer a grand jury's questions about Communist activities. Some of the pickets carried signs calling the prosecution a witch hunt, and large numbers even surged into the corridors and courtroom. Both these incidents were cited by the bar association committee. For some reason, a case of appellate picketing, which occurred in San Francisco, went unmentioned. Last November, in a hearing involving the same Los Angeles defendants, 200 persons picketed the Mission Street side of the post-office building here, carrying placards and handbills comparing this country to Hitlerian Germany. A loudspeaker truck was hauled up to add its stridency to the demonstration. The court being picketed was the United States Court of Appeals for the Ninth Circuit, one level below the Supreme Court.

What conceivable reason can there be for tolerating picketing of the courts as an exercise of free speech or comment? Absolutely none, we think. The action per se aims at influencing the judicial process, which must be kept inviolate. It is an attempt at intimidation of the judge, the court's officers, the jury, if any, and the witnesses, and can have no other purpose.

The fact that such picketing may take the form only of parading on the sidewalk outside the court building does not remove the objection. Judges, witnesses, and jurors have to enter and leave court buildings, and must be protected not merely from physical interference but from the effects of insinuation and intimidation. Freedom of speech for the court-building picket is no more involved in this matter than freedom of the press is involved in the power of judges to hold newspapers in contempt for comment on pending cases that tends to obstruct justice.

We doubt that the Joint Judiciary Subcommittee of Congress has any more important consideration before it than this one of acting to end court picketing, so far as Federal law can end it.

Caseyville, Ill., Observes One Hundredth Anniversary

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address which I delivered at the commemoration of the one hundredth anniversary of the founding of the village of Caseyville, Ill. The observance was sponsored by the Caseyville Memorial Post, No. 1117, Veterans of Foreign Wars, and the Caseyville Volunteer Firemen, and was held Sunday, June 12, 1949, in Community Park.

My remarks on the occasion follow:

The one hundredth anniversary of the founding of a community is an important milestone. It is a fine and satisfactory thing to be proud—and all of us are very proud indeed—as we make a celebration out of the occasion, and look back over the accomplishments and the solid, enduring achievements which Caseyville has made for itself and which the men and women who were born here have added to the sum of the whole country's progress in 100 years.

I feel it is a special honor to have been asked to take part in this observance and I am grateful to the Veterans of Foreign Wars and the Volunteer Firemen for inviting me to be here today. These two organizations, I might point out, have something in common which may not come to the mind of most of us often enough. Their membership is made up of men willing to sacrifice themselves in the service of their fellow men—and whose service to their neighbors is usually thought of only when they are called to the rescue.

In this new world 100 years is a good long span in the life of a village. Yet we in this area of Illinois can boast of many communities over that age. Cahokia (which this year observed its two hundred and fiftieth anniversary), Upper Alton, Alton, Belleville (which in 1814 was situated in the flourishing settlement called Turkey Hill), Collinsville, Edwardsville, and Waterloo, all were settled before Illinois was admitted to statehood in 1818.

Caseyville is a few years younger than these neighbors, but it, too, can stake a claim as a pioneer settlement in this historic region of our great country. Possibly, Caseyville may have been the first community in the State of Illinois which was founded for a purely industrial reason—a forerunner for the great industrial centers that now surround it and make St. Clair and Madison Counties so important to our national economy.

Coal, so essential in the life of people and nations—brought Caseyville into existence when the Illinois Coal Co. platted a village here in 1849. This newborn community took its name from an official of the company, Zadoc Casey, and an honorable name it bears.

Zadoc Casey's life commenced in poverty in Georgia on St. Patrick's Day, 1796 and ended September 4, 1862 after he had attained considerable means and much prominence as a statesman, soldier and businessman. He served in the Illinois General Assembly, the Congress, was lieutenant governor of Illinois and a delegate to the second constitutional convention.

They said of Casey as presiding officer of the State Senate that he never had a superior in the State in voice, impartiality, grace, and dignity of bearing.

He must have been a very popular politician in his day for he had a long series of service in public office, interrupted for a brief while during a period of service in the Black Hawk War. He served 17 years in the State legislature and 10 years in Congress. He was one of the few men in Illinois history who had the honor of presiding, at different times, over the house and the senate in the general assembly. He resigned as lieutenant governor to start his first of five terms in Washington.

At the time of his service in Congress this area was in the Second District. There were only three districts in the State.

An interesting sidelight of the times may be found in the fact that Government financial difficulties then were much the same as they are today. Receipts for the State of Illinois for the biennial December 1, 1948, to December 1, 1950, were $402,179 and expenditures for the same period were $640,280. In 1850 the State of Illinois was in debt $16,627,509.

As in the case of most of the early settlements in this area Frenchmen played a part in the community's early history but by the time of the founding of the village the old familiar French names in St. Clair, Randolph, and Monroe Counties were gradually disappearing and American ideas, with introduction of American laws and customs, had begun to predominate. In the new land all groups had already learned how to mingle harmoniously. The new society they formed was agreeable and lively and conducive to the growth and importance of the new State of Illinois. In this Caseyville played its part.

I said at the opening of my remarks it is a fine thing to be proud, but the pride I speak of is not vanity. It is a glowing satisfaction that, in spite of troubles, men have

succeeded in cooperating so well that, all together, they have created something that no one person could do by himself. It is not an easy thing to make a community, but it is a proud thing when you succeed in doing it.

Many generations have shared good times and hard times in these surroundings. Each one has taken something and also has given something. Holding the community together for a century has not been done without sacrifice. Nothing worth while is ever accomplished without sacrifice. The tragedies and disappointments and failures are just as much a part of the community as the achievements and the success.

These are the lessons of the past—and the past is important because of the experience we gain from it. We should promote an understanding of this among our youngsters today.

At a time when the essential ideas of Christianity, of equality and freedom of opportunity are threatened through all the world, when we stand embattled in the war of ideas and ideologies, as our predecessors in this great land were threatened by simple dangers of savage enemies, and of hardship, and cruel weather, it is important that we should teach the children of America the meaning of the past. For without understanding the past, we have no future.

People who have forgotten the values we as Americans cherish, stand ready to take away from us the freedoms the hardy pioneers who settled this region labored to achieve for themselves, and for us, their followers.

The sacrifices our predecessors made, stand today as a valuable relic and living idea to guide us. I hope we will make use of it by imprinting on the minds of our young people the meaning this one hundredth anniversary holds for us. If we do this, the sacrifices we celebrate here today, will have been worth making.

If we but apply the lessons of the past to the problems of the future, they will help us to make headway in our community and in the Nation.

Caseyville sent its sons into military service in four wars and it is fitting that we should remember them on this occasion. We should pay a solemn tribute to the men of this community who served in the armed forces during the great wars which threatened our national existence, and particularly we should remember with pride and affection those who died in uniform.

They were a part of the great citizen forces which our peace-loving republic created out of its own inner strength to defend its right and guarantee its purpose to pursue the ways of peace. They bought with their courage and their devotion a new opportunity for this Nation, and all nations, to seek a larger community spirit which we hope will make it possible for us to prevent wars.

Back of those citizen forces, back of the men who went from Caseyville and all other cities and towns and the countryside of the United States, were the strength of a free and self-governing people, the mighty industrial resources of a highly developed modern society, and the deep spiritual power of a Nation that believes every person has the right to stand on his own two feet, to solve his own problems, to win his own way in his community and in the world.

Those who stayed on the home front know that the job of support was not done without sacrifice. The disruption of normal business, the interruption of home life, the long irregular hours, the strain and the worry, the shortages of food and clothing, and many other things imposed sacrifices on the civilian side.

Yes, Caseyville did its part in every national emergency, and proudly. But our fondest hope should be that Caseyville, nor any other American community, should never again be called upon to face another war.

On Caseyville's first birthday there were only 111 miles of railroad track in the State of Illinois and it was an all-day journey between settlements, even though they might be only 25 miles apart. Today great aircraft circle the world in a matter of hours. There are guided missiles and the atomic bomb. The agents to destroy civilization.

Much has happened to the world since the Illinois Coal Co. platted this village. Let us hope that through these 100 years nothing has happened to disturb the real strength of America. The people who settled here in 1849 had a lot to do with giving this Nation its strength. They were part of the source of it; for it is in the spirit of America that our great strength is found; the foundation of the Republic is the moral sense of her people, a sense of what is right and what is wrong, that the faiths we hold are the chief armament of our democracy.

Even with atomic weapons, America would be weak without the spirit and the faith of the men and the women who founded her villages, her cities, and her towns. To carry the burdens of world leadership that now rest upon us we need this strength of spirit in great measure.

The new world was settled by pioneers who believed in man, not merely as production units but as children of God. The development and happiness of the individual is the purpose and goal of American life. Our flourishing economic life is the consequence of our ethical and moral standards and precepts—of our democratic faith in man.

This park undoubtedly was once a part of the community life. It must have been one of the fields the settlers depended upon to raise their crops. Here men worked together building a new part of a new State and a new nation—they worked together tilling the soil, in the new mining venture which resulted in the founding of the village—they had faith in each other.

Never be misled into believing America can be strong with military force alone—when in truth the foundation of our strength and amazing vitality is not in material things but rather in the faiths we cherish.

We are a people with a faith in each other—and when we lose that faith we are weak, however heavily armed.

We are a people with a faith in reason, and the unending pursuit of new knowledge, and if we lose that faith we are insecure, however heavily armed.

We are a people with a faith in God, with a deep sense of stewardship to our Creator, the Father of us all; and when that is no longer strong within us we are weak and we are lost, however heavily armed with weapons—even with atomic weapons—we may be.

These faiths are the inheritance from the men and the women who made America—the settlers who carried their strength, their courage, their common sense into every part of the land as they founded new communities and opened new fields and opportunities for those who were to come after them.

These are the things we should think of today as we celebrate Caseyville's one hundredth birthday. I have been honored in having been privileged to participate.

Nahant Properties

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Daily Evening Item, Lynn, Mass, Monday, June 23, 1949:

NAHANT AND UNCLE SAM

At its annual convention held in Washington some months ago, the American Municipal Association adopted a resolution calling on Congress either to authorize local taxation of federally owned property or to require the Federal Government to make compensatory payments in lieu of full taxes to the municipalities within whose limits its properties lie.

In other words, the association felt it unfair that Uncle Sam should be permitted to step into any community, take property and deprive the community of the taxes formerly assessed upon it, without making up the loss in some way.

We have a prime example of that sort of thing in nearby Nahant. Wholly disregarding the Fort Ruckman area, which has long been in Federal hands, a survey shows that the War Department in recent years has taken over Nahant properties with an aggregate value of $167,714 and representing a tax loss to the town of $51,803.39. They include the Lodge, Elliott, Mifflin, Harris, and Lowell properties, although the Lowell property has since been returned. Before its return, however, the town lost $5,501 in taxes on it. As of December 31, 1948, tax losses on the other properties were: Lodge, $18,297; Elliott, $21,992; Mifflin, $5,501; and Harris, $510.

So far as the Fort Ruckman property is concerned, there is now a bill in Congress authorizing the War Assets Administration to convey the entire property to the town and a hearing is expected to be held on the proposal shortly.

The fact that Federal installations often bring new business to a community (such as Fort Devens to the town of Ayer) and increase its taxable capacity is not an adequate excuse for the Federal Government's refusing to assume a fair share of the cost of local government operations. It can be argued that private industries also benefit the communities where they are located, yet they pay full local taxes. Furthermore, municipalities today are hard pressed for funds to finance essential services and their prime source of revenue is real estate taxation.

One glowing example of the unfairness of the present Federal policy is San Francisco, where about 6½ of the city's 44 square miles of territory is federally owned and tax-exempt. Thus San Francisco loses $5,000,000 annually in taxation because Uncle Sam won't pay up. Nahant's loss, of course, is relatively small in comparison, but it looms large when one considers the size of the neighboring community. The Federal Government ought at least to recognize an obligation to pay for the services rendered by cities and towns on its behalf.

Unemployment Among Veterans Justifies Extension of Unemployment Allowance Provisions of the Servicemen's Readjustment Act

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the CONGRESSIONAL RECORD the report of a special committee

of the American Veterans Committee on the need for extension of the unemployment benefits of the Veterans Readjustment Act.

This is a careful, documented statement from which I have omitted only the detailed statistical break-down of veteran unemployment increase by months.

While AVC specifically endorses a bill other than my own, I am not wedded to the language of my own bill. What I want is the best possible bill for the benefit of this country's veterans that can be reported from committee; and I urge upon you, Mr. Speaker, that time is short.

The report follows:

The following summary study of the question of extending the unemployment-allowance provisions of the Servicemen's Readjustment Act beyond July 25, 1949, has been prepared by the American Veterans Committee in the belief that careful consideration of the facts concerning veterans' job opportunities in the immediate future will indicate the advisability of prompt congressional hearings on this problem:

CONSIDERATIONS IN RELATION TO EXTENSION OF SERVICEMEN'S READJUSTMENT ALLOWANCES

The servicemen's readjustment allowance provision of the GI Bill of Rights was intended to provide unemployment benefits for veterans of World War II during the period following their discharge when they were attempting to make a permanent employment connection. The provisions of the act affecting the vast bulk of World War II veterans are scheduled to expire on July 25, 1949. H. R. 5130, introduced by Representative NOLAND, provides for extension of these provisions for an additional 18-month period, while retaining the same payment of $20 per week.

The following facts should be considered in determining whether this act should be extended:

GENERAL ECONOMIC SITUATION

It is now generally recognized that we are in the midst of a period of economic readjustment. Unemployment totaled 3,290,000 in May, about 1,500,000 above the level of a year ago, according to the Bureau of the Census. Total nonfarm employment has dropped by more than 1,000,000 over the year, the hiring rate in manufacturing is the lowest since 1939. (Source: U. S. Bureau of Labor Statistics.) Most other available indicators point to a decline in economic activity from the high levels of the preceding postwar years. The number of jobless veterans has been appreciably higher in 1949 than it was in 1948.

The general consensus of opinion among economists in both business and Government is that barring unforeseen contingencies, we can expect no return to a higher level of business activity in the period immediately ahead. An average unemployment of between four and five million in the coming 12-month period is probable, and more pessimistic forecasts range much higher.

UNEMPLOYMENT SITUATION OF VETERANS

In the current labor market, the veteran is at a distinct disadvantage. Because of his service in the armed forces the veteran now in industry typically has less seniority and less work experience than other workers of like ages. He is, therefore, typically the first laid off; once laid off, he finds it more difficult to locate other jobs. In May 1949, about 850,000 men veterans of World War II were reported unemployed by the Bureau of the Census—or about 70 percent more than the total of 500,000 in May a year ago. A comparison with men nonveterans in the same age groups shows a consistently higher rate of unemployment among the veterans. In April 1949, 63 of every 1,000 veterans in the labor force, aged 20 to 34, were unemployed, as compared to a rate of 48 per 1,000, among men nonveterans of the same age.

Moreover, large numbers of World War II veterans have not yet entered the labor market to seek their first regular postwar job. Over one million veterans were still enrolled in colleges and universities this spring, completing educational courses interrupted by the war. (Source: Veterans' Administration.) Probably one-third of them will finish their courses this coming year and will look for work commensurate with their training and experience. Included among them are large numbers of men with family responsibilities. Many of these current and prospective graduates are likely to have a difficult period of readjustment still ahead of them, in view of the increased competition for most types of professional and managerial jobs. (Source: BLS press release on Outlook for June Graduates, May 26, 1949.)

LACK OF ADEQUATE PROTECTION AGAINST UNEMPLOYMENT RISK

Large numbers of veterans do not have other sources of income or savings to fall back upon if they become unemployed. Those who have recently entered the labor market, as well as the veterans employed in agriculture or in their own businesses, are not eligible for benefits under State unemployment compensation laws, if they become unemployed. Veterans, moreover, because of their service in the armed forces, were not able to build up their own cushion of savings to the same extent as other workers. In the past few years, many veterans have undertaken heavy financial commitments, particularly for homes, at inflated postwar prices. Unemployment and reduced earnings would therefore cause exceptional hardship.

COST OF SRA PROGRAM

There will be important financial offsets to the gross expenditures entailed by an extension of the servicemen's readjustment allowances. To the extent that veterans file claims under this program, even though eligible for State unemployment benefits, the drain on State system reserves will be reduced. Extension of SRA will also serve to minimize any rise in defaults under the mortgage guaranty feature of the GI bill of rights. From the point of view of city and other local governmental agencies, this measure will have the effect of cushioning the rapidly rising costs of public relief programs.

EVALUATION OF POSSIBLE OBJECTIONS

The President's budget message for 1949 did not provide for an extension of SRA benefits. However, it did recommend that the same ends could be achieved by providing for the extension of social-security benefits and for the passage of a national health program. The message indicated that the size of the veterans group was such as to make it more desirable to operate on the basis of the entire population.

Although it is agreed that full coverage for all unemployed by means of the unemployment compensation provisions of the Social Security Act would be preferable to an extension of the servicemen's readjustment allowances, it would appear that such coverage under social security is unlikely in the near future. In any case, even if changes were made in the unemployment insurance provisions of the social-security program immediately such changes would not meet the problems to be faced by unemployed veterans during the immediate months ahead. For example, if the present system of unemployment insurance were to be extended to workers in industries not now covered by the program, such workers would not be eligible for benefits until pay-roll taxes had been deducted for at least a year and probably 2 years, depending on the requirements of the individual State law.

One school of thought considers that the extension of the servicemen's readjustment allowance provisions is not justified because veterans have had ample opportunity to accumulate wage credits under the State unemployment insurance laws and are, therefore, eligible for unemployment compensation. It is true that at the present time well over half of SRA claimants are eligible for unemployment-insurance benefits, according to estimates of the Bureau of Employment Security. In some instances the figure is even higher. For example, in Michigan, according to the survey of last September, 75.2 percent of all SRA claimants are entitled to some benefits under the National Unemployment Insurance Act. Of these, 63.1 percent would qualify for the maximum rate and duration. Examination of experience in various States does also indicate that there is some tendency for veterans to elect readjustment allowances rather than unemployment insurance because the former are somewhat higher in some States, and by choosing SRA benefits, the veteran is able to conserve unemployment insurance wage credits for possible use after readjustment allowance rights are exhausted.

The fact remains, however, that although a majority of veterans now drawing servicemen's readjustment allowances may have available wage credits which will entitle them to some benefits under State unemployment insurance laws, there remain a fairly substantial number who do not have such credits and who would therefore immediately be thrown onto their own resources and perhaps onto relief.

Further, it should be borne in mind that growing unemployment will place an additional drain on State unemployment insurance funds. Although it is understood that none of these funds are in immediate danger of exhaustion, extension of servicemen's readjustment allowances would provide for shouldering of part of the burden of unemployment allowances by the Federal Government. This would have the effect of modifying the rapid drain on State unemployment insurance funds which is occurring as a result of heavier unemployment volume. Also, it must be remembered that even those veterans who are eligible for unemployment compensation under State laws are limited to aid for only 20 to 26 weeks, while under SRA protection is provided for a longer period during which these veterans may be unable to find work.

CONCLUSION

A number of considerations would seem to indicate that the act should be extended. Large numbers of veterans are completing their training under the GI bill and will enter a labor market in which job opportunities are substantially less favorable than at any time since the initial reconversion period following the war. These veterans have, it is true, received certain important benefits from the Government in terms of schooling. In many instances, however, the training may be wasted if provision is not made to carry them through a somewhat longer period of job-seeking which will apparently become necessary. Although a smaller group is involved, similar problems face veterans leaving hospitals.

Faced with the ominous possibility of further shrinkage in the employment market during the coming months; faced with the fact that thousands of veterans heretofore attending colleges, trade, and secondary schools will make their first appearance in the labor force in 1949; faced with the fact that current statistics on unemployment among veterans and nonveterans indicate veterans, through lack of seniority, are jobless at a higher rate than nonveterans; and

aware, finally, that some type of temporary financial assistance must be provided veterans who are without income through loss of work, the American Veterans Committee believes that this Congress should extend the unemployment allowance provisions of the Servicemen's Readjustment Act and that such action is consistent with the intent of Congress to aid the veterans of World War II in rehabilitating themselves as civilians.

We ask that the House Veterans Affairs Committee open hearings promptly on the Noland bill, H. R. 5130, which provides for extension of these payments until the end of 1950.

A Coal Miner Writes a Letter About Mine Safety

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter which I have received from a coal miner, Mr. Joe Alecci, box 446, Valier, Ill., who writes in behalf of H. R. 3023, a bill which I introduced in the House to put teeth in the Federal mine inspection law.

The letter from Mr. Alecci follows:

VALIER, ILL., *June 22, 1949.*

DEAR CONGRESSMAN PRICE: I have been reading the arguments that have been given against your Neely bill and as a coal miner I wholeheartedly believe that your bill should be passed for protection of the miner and operator.

The Federal inspections and State inspections as they are carried on today are just a farce as far as contributing any improvements toward the safety of the miners.

The management of coal companies always seem to know in advance when the State and Federal inspectors are coming and issue an order to start getting ready for the inspectors as to rock dusting and sprinkling of haulage ways and other noticeable violations and immediately after they leave the premises they start their usual demands for more production and disregarding all safety rules and if any individual makes a complaint he is reprimanded to higher authorities and the company sees to it that they aren't given any advancements.

If the politics were taken out of the assigning of State and Federal inspectors they would feel more freely toward carrying out their duties and the operators would not take their recommendations so lightly.

The operators are afraid to see such authority given to the inspection forces because they would have to be on their toes at all times instead of taking the attitude that some operators do.

In most mines in southern Illinois it is practically an impossibility for men to get out by way of "air courses" simply due to negligence of the operator to keep them properly cleaned and timbered. This condition also causes fires on high voltage cables which are improperly laid according to the Federal code.

I believe that any inspector could take the Federal code which the operators agreed to along with the rank and file and close every mine in southern Illinois for an indefinite period. During war years, they (operators) claimed due to the urgent need of coal and lack of material, they didn't have time to operate according to the Federal code but since the war is over, they still don't have time to correct these safety hazards. The only time anything is done is after some miner or miners lose their life or lives.

I believe that the coal companies need to give their workers an incentive to work toward in the way of fair advancements, and other things. The coal miner today seems to think only of staying on the good side of the boss and the dollar he is going to earn.

I have just finished reading the facts on coal mining as to why the Neely bill should be passed and I, as a young coal miner, feel that Mr. Lewis has spoken the sentiments of all coal miners. It isn't very encouraging to the young men seeking jobs to go to the coal mines after looking around and viewing the various families who have been deprived of a father or husband leaving, in some cases, several children to carry on their future lives the best way they possibly can.

Maybe it would be more impressive to the persons fighting against your bill if they spent a week or two going through some of the coal mines in southern Illinois or anywhere else in the United States of America.

I am desperately hoping that your most needed bill is passed and will be a starting factor toward complete safety in the mines.

A miner,

JOE ALECCI.

Make-Believe Insurance, or Soaking the Poor and Not the Rich

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting at this point in the RECORD an article by Mr. Frank Chodorov, which appeared in the June 22 issue of Human Events:

MAKE-BELIEVE INSURANCE
(By Frank Chodorov)

The argument was entitled "Soak the Poor"; it appeared in Human Events (May 4, 1949). The gist of it was that the income tax (sixteenth amendment) was eased into our economy with a "soak-the-rich" slogan, but has turned out to be an instrument for soaking the poor, precisely because there are more poor than rich and the Nation's pay envelope yields more to tapping than do the combined incomes of the affluent.

Since those who live by wages constitute the largest segment of the electorate, political exigency made it necessary to sugar-coat the taxing of their incomes. This was accomplished with the fiction of "social security." It was—and still is—argued that the percentage deducted from the pay envelope is not exactly a tax, a levy exacted to meet the expenses of Government, but is like a premium paid in on an annuity policy. That is, "social security" was likened to, and is believed to be, insurance against the hazards of old age.

I pointed out that this analogy is a false one; that the deductions are not set aside (or so invested as to yield an income) to meet the contractual obligations of an insurance policy. The receipts from "social insurance" taxation are dumped into the funds of the United States Treasury, where they become available without restriction for any expenditure the Government may decide upon. Payments made to the aged do not come from any reserve set aside for this purpose, nor from the earnings from investments in productive enterprise, but from new taxes, levied on current production. It is from the pay roll of the new generation that the pensions come, not from the compulsory "savings" of beneficiaries.

II

This latter point was attacked by a reader of Human Events. It is an exaggeration, he maintained. His criticism is not without point, for technically the social-security receipts are not channeled directly into the coffers of the Treasury. The Social Security Administration receives the money and then loans it to the Treasury in exchange for Government bonds. As a bondholder, the Social Security Administration receives interest (just like any private bondholder) and it is out of this income that payments are made to the beneficiaries, or so the official assertion argues. If more money is needed to meet the contractual obligations, bonds are sold back to the Treasury.

It is on this flimsy pretense that the practices of the Social Security Administration are compared with that of an insurance company. By separating the Treasury into two departments, and giving the offshoot a ledger of its own, it is assumed that a new business is born, whereas, in fact, the arrangement is not unlike the taking in of one another's washing.

If an insurance company did what the Government is doing, if it issued bonds against anticipated premiums, and out of the new premiums paid itself interest on its own bonds, and then met its policy obligations from such income, the directors would be guilty of a felony. If, furthermore, the private company sold its own bonds to itself—well, how can one distinguish between this sort of insurance and the old Ponzi scheme?

That this bookkeeping insurance should be accepted as the real thing by men of intelligence simply proves the effectiveness of unresisted governmental propaganda, or possibly the limitless power of self-delusion. The reality of the matter was put thus by Godfrey N. Nelson, in the New York Times, May 8:

"The Treasury is the only real party to the transaction; it assesses and collects the tax, and issues its own obligations therefor. When it needs the money represented by bonds it must either meet such demand out of current funds—tax receipts—or raise the money again by the sale of bonds."

An even better description of this business comes from Alice in Wonderland: "I'll be judge, I'll be jury, said cunning old Fury; I'll try the whole cause, and condemn you to death."

III

The principal difference between real insurance and the make-believe kind indulged in by the Government lies in the fact that an insurance company, like any financial institution, depends on production for a considerable part of its revenues, while the only income of the Government is taxation. To put it another way, the insurance company is a maker, while the Government is, and can only be, a taker.

After putting aside that part of the premium receipts which actuarial experience has shown to be sufficient to meet its forseeable contractual obligations, the company puts the residue into productive enterprise. Its income—whether for operating expenses, profits for stockholders, or dividends for policyholders—is derived from mortgages on homes and factories occupied by labor and capital, from wheat grown on farms, from freight and passenger services, from the sale of gas and electricity, and so on. It is out of the increased abundance made possible by its loans to industry that the company derives income. Currently, insurance companies are deep in the real-estate field as builders (not as mortgagees) of housing projects.

Even in that kind of insurance where the premiums are calculated on actual risk, the

income of the company is augmented by investment of the premiums until needed for payments.

Since the SSA cannot engage in such operations, even its pay roll must be met by taxes—and no kind of verbal legerdemain can change a tax into an insurance premium.

But, it is maintained, much of the income of an insurance company does in fact come from Government bonds, and to that extent there is a similarity between it and the SSA. One cannot deny that as a bondholder the insurance company is not furthering productive enterprise, for every Government bond is only a lien on the taxing power of the Government; the bondholder is a tax collector, once removed. But the bonds it holds do not make the company a department of Government. Its bonds are contracts with the Government, not with itself.

Even if all the assets of an insurance company consisted of Government bonds, its character would still not be that of the SSA; for it would continue to be a private institution dealing with the Government on behalf of its policyholders and stockholders, not an agency of the Government which issued the bonds. Of course, if we should get around to nationalizing insurance companies, thus making premiums available for governmental appropriations, that would be the end of insurance.

Since the war, insurance companies have been inclined to shift their assets from tax-secured paper—at one time amounting to over 60 percent of their portfolios—to business securities and real estate operations. Apparently, the directors recognize that income from production has advantages over tax-collecting, not the least of which is a larger return per dollar invested. At any rate, such a shift is not possible for the SSA; it has no other recourse than to invest its premiums in the bonds which in effect are issued by itself.

Thus, by whatever criterion we apply to it, the analogy between social-security taxes and insurance premiums is fictitious. One is a form of capital dissipation; the other, at least potential accumulation.

IV

It is estimated that the old-age and survivors trust fund—the debit on the books of the Treasury representing its borrowings from SSA—will eventually reach the fantastic sum of $50,000,000,000.

This brings up an interesting question. Recently Mr. Truman called for an increase in social-security taxes, ostensibly to cover proposed additional benefits. It would seem to be sound business (as well as wise politics) to distribute some of this accumulating fund in the form of benefits, without an increase in taxation. Can it be that the call for higher pay-taxation is prompted by the prospective deficit of the Treasury, due to Fair Deal spending, and that the additional benefits are only additional soporifics?

It may be, as some actuaries maintain, that in due time the fifty billions will be needed to meet the obligations under the social security law; the trust fund must therefore be kept intact. If that is so, one must ask how the Treasury will raise the money to buy back this pile of bonds, or any considerable part of it, when the need arises. The money "borrowed" from the trust fund will long have been spent, and the Treasury will consequently be faced with a fiscal problem of truly staggering proportions.

Let us say that the SSA finds itself in need of only $5,000,000,000, some year in the future. Will the Treasury be forced to ask for that much in taxation, in addition to the regular load—now amounting to 30 percent of our national income? How much additional taxation can our economy stand before it breaks down completely? It is horrendous to contemplate the effect of dumping the entire $50,000,000,000 worth of bonds on the taxpayer, even over a period of 10 years.

The usual practice of the Government is to issue new paper to meet maturing obligations. Even during war, when patriotic fervor favors the undertaking, the floating of a $5,000,000,000 loan is a major task. Can it be done in peacetime? Can it be repeated year after year? One wonders whether in its extremity, the Government will not resort to compelling financial institutions to take its paper, which is tantamount to the confiscation of property.

Finally there is the ultimate avenue of repudiation by inflation. While the prospect of such a desperate step is distasteful to contemplate, both for its immorality and its economic results, it cannot be ignored. The Treasury has never before been compelled to meet so monstrous an obligation. It has, however, learned how to debase currency.

But, whether the Treasury resorts to taxation, refinancing or repudiation, it will be acting as a sovereign government, not as an insurance company. All that an insurance company could do, if forced into a similar position, would be to file a petition in bankruptcy.

D-Day 1944—D-Day 1949

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. SIKES. Mr. Speaker, I wish to call attention to an interesting editorial from the pen of Pete Wehmeier, editor of the Gosport, a very fine service publication from the United States naval air station at Pensacola, Fla.

The editorial first appeared in the Gosport, and subsequently was published in a number of other papers.

D-DAY 1944—D-DAY 1949

(NOTE.—The following was contributed by R. S. Wehmeier, of the Public Information Office, Naval Air Station, for the fifth anniversary of D-day in Normandy. It includes his novel editorial written shortly before the actual storming of the beachheads in France.)

Five years ago today, June 6, 1944, the Allies hit the beaches of Normandy, invading continental Europe. D-day 1944 was an important event in the Allied schedule for winning World War II. D-day 1949 is even more important to us in winning a permanent and lasting peace and the prevention of future wars.

Two days before D-day in 1944 this writer wrote a 143-word editorial, which was novel, yet so difficult, it took 10 hours to write it. The editorial was published in the Gosport, Pensacola Journal, and several others newspapers throughout the country. It read:

D-DAY

"Deliverance day, doomsday, deciding destiny.

"Deceitful, dangerous, devilish demagogues deny, discard, disclaim Deity—disintegrate, die, decompose—damnation.

"Domineering, despised, distrusting, disgustingly debased Duce depraves decency-deluded denizens.

"Distinguished, dashing, diligent, daring, dutiful disciples, decipher, declare, demand, dearly defend democracy.

"Despicable, describable, dastardly deeds dictate deprivation, disaster, disgrace. Defiant defense demonstrates desirable disciplinarian distinction.

"Direct deliberate drive, dogged determination, definite devotion, dedication deals destructive damage, dismal death, depredation, disaster, desolation, destitution. Dangerous daggers decapitate distressed disappearing devils. Devastating death-dealing dynamite deafens, dejected, demoralized, dank, damp, dingy, dirty dens. Dreadful dreadnaughts, dynamically destroy desperate, disarranged decaying derelicts—drowning dumb double-dealing dragons.

"Dynamic democrats dethrone degenerate deceiving devils—diminish domain—disarm defrauding disillusioned dupe—denounce doom, deem demise—drum dirge.

"Don't delay depositing dough, displaying desired denunciation, doing destruction, demolishing discontented deceptive damn demons.

"Dawn, departure, dignity, devotion, dwells during democracy."

Although the above was written before the actual invasion, it turned out to be a fairly accurate forecast of events to come. Much of the forecast holds true even today.

D-day 1949 demands determination and decision—not diddling and daydreaming. Determination to intelligently plan, work—and pray—for a lasting peace. A determination to work as hard to keep the peace as we did to win the war.

Decision to pay the price of peace. True, even the price of peace is expensive but it is cheap insurance in comparison to the cost of war. Maintaining a strong military nation costs money; losing a war to an aggressor nation due to unpreparedness is more expensive.

We can all share in the building and strengthening of our Nation and insuring a peaceful future by participating in the present bond opportunity drive and investing in United States savings bonds.

Title of the Texas Tidelands

EXTENSION OF REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. PICKETT. Mr. Speaker, under leave to extend my remarks, I include herein a carefully thought-out statement of principles on the tidelands question. The author, Mr. M. H. Stougaard, of Huntsville, Tex., evidences by the article his careful study of an issue that ought not to be in controversy and his broad conception of good principles of government. While I do not necessarily agree with the author's personal expressions in every respect, certainly the facts stated cannot be successfully controverted. The article merits careful reading and consideration by all Members of the Congress. It follows:

EARLY-DAY SUPREME COURTS FAVORED STATES IN ALL TIDELANDS DECISIONS—THE TITLE OF THE TEXAS TIDELANDS BELONGS TO TEXAS AND IS INDISPUTABLY CLEAR

(By M. H. Stougaard)

Whereas a good many citizens are not posted upon the facts regarding the title of the Texas tidelands, and the important questions involved, I have spent considerable time in order to get the gist of the facts which clearly illustrate the case.

I am indebted mostly to Mr. Bascom Giles, Commissioner of the General Land Office, for evidence there represented and will endeavor

to state these facts as briefly as possible, considering the wealth of information and the magnitude of the subject.

First, we must consider this—that the case of the Texas tideland now before the United States Supreme Court, which case was instituted by United States Attorney General Tom Clark, is but the natural outcome of the rulings of the above-mentioned Court in the California tidelands case, and it may be well to mention that if the Federal Government, in spite of evidence presented can claim the Texas tideland and all other States' tidelands, then we may as well be prepared for other claims upon other mineral resources, manufacturing plants, and so forth—yes, indeed our very homes.

Our farms and industries are at stake and States' rights may be only a relic of the past.

The decision of the Supreme Court in the California tidelands case may well be classed as a most unique decision. Heretofore, every decision in regard to the State's ownership of tidelands has been upholding the State's ownership. Fifty-two Supreme Court decisions have favored the States in this matter. Two hundred forty-four Federal courts rulings have done likewise, 49 United States Attorney Generals, unlike Attorney General Clark (a Texan), have returned opinions in favor of the States and so have 31 Department of Interior rulings.

Could it be possible that the membership of these past Supreme Courts have all been erroneous in their opinions and inferior in the knowledge of fundamental laws to the members of the present court? Could it be possible that the honorable judges composing the present Court are so much more superior in intelligence and so much better posted upon operation of fundamental laws, the Constitution of State's rights, than all the others of the long procession of highly learned and respected judges of the past?

Could it be possible that the honorable Attorney General Clark is such an intelligent giant in the knowledge of law that his opinion overshadows the opinions of his 49 predecessors who ruled differently than he did?

There have been rumors about political expedience, etc. I do not know. I shall not attempt to answer that question nor the question of the inferior or superior qualities of the Supreme Court judges in the past or at the present. That I shall leave to the readers and the citizens to answer.

I only wonder. So, I asked above—could it be possible?

In the case of *Credy* v. *Virginia* (94 U. S. 391 (1876)), the opinion of Chief Justice Waite said:

"The principle has long been settled in this court that each State owns the beds of all tidewaters within its jurisdiction."

Next, let us examine the rulings of the Supreme Court in the case *Martin* v. *Waddel* (16 Peters 367, 410 (1842)):

"When the revolution takes place, the people of each State become themselves sovereign; and in that character, hold the absolute right to all their navigable waters and the soil under them for their own common use, subject only to the rights since surrendered by the Constitution to the general government."

Quite clear, is it not? And I defy anyone, or any lawyer including the members of the Supreme Court and United States Attorney General Clark to show me anywhere where the Constitution gives the Federal Government any rights of ownership over the States' properties or lands.

But let us cite another decision of the Supreme Court in the case of *Shirley* v. *Bowlly* (152 U. S. 1 (1894)).

"Upon the American Revolution, all the rights of the crown and of parliament were vested in the several States.

The Federal Government as first instituted was merely an agent of all the States, the sovereignty of each State and ownership to its lands remained with the States."

The Federal Government has no more right to the tidelands not only of Texas but also of other States than you, my dear reader, have to the money in my pockets.

Time and again, the Supreme Court has ruled that the same rights and ownerships of submerged lands enjoyed by the original States were vested in other States subsequently admitted into the Union.

Let us scrutinize the decision of the Supreme Court in the case of *Pollard* v. *Hogan* (11 L. Ed. 565 (1845)).

"By the preceding course of reasoning we have arrived at these general conclusions: First, the shores of navigable waters, and the soils under them, were not granted by the Constitution to the United States, but were reserved to the States respectively;

"Second, the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States."

A later Court ruling: *Knight* v. *United Land Association* (142 U. S. 161), were similar to the above:

"It is a settled rule of law in this court that absolute property in and dominion and sovereignty over the soils under the tidewaters in the original States were reserved to the several States."

Let us read the opinion of Mr. Upham, the United States Claim Commissioner, in regard to a claim made by an English citizen in 1853:

"The matter of indebtedness of Texas was a distinct subject of argument by the terms of the Union."

"According to those terms, the vacant and unappropriated lands in the limits of Texas were to be retained by her, and applied to the payment of the debts and liabilities of the Republic of Texas, and the residue of the lands, after discharging these debts and liabilities was to be disposed of as the State might direct, but in no event were the debts of Texas and her liabilities to become a charge upon the Government of the United States of America."

When the question of annexation first came before the United States Senate, one of the main objections against annexing Texas was the assumption of her public debts, Texas would have surrendered her public domain to the Union in return for the payment of this debt, but the Union refused this. And instead, it was agreed that Texas retain all her public lands to be used for payment for her debt.

In spite of the above facts, it seems strange that the Federal Government would even entertain any idea of a move to deprive Texas of her undisputed rightful ownership to her tidelands.

Below is a brief quotation of a letter from Charles H. Raymon to Ebenezer Allen, attorney general of Texas, dated May 19, 1844:

"I had a parting interview today with the President (Tyler) and the Secretary of State. * * * They assured me that nothing should be wanting on the part of the Executive toward insuring to Texas her just rights, after she shall have become a member of the Union."

Thus Texas was encouraged to join the United States and finally did so in good faith. Shall it be said by future historians that the trust of Texas was betrayed by the great United States? And, ironically that Attorney General Tom Clark, himself a Texan, would be instrumental in the betrayal of his trust?

The following is from the CONGRESSIONAL RECORD of the Thirty-first Congress, first session:

"Texas was admitted into the Union with specified boundaries, subject only to the rights of United States to settle all questions of boundary which may arise with foreign countries."

According to this, questions of the Texas boundary with any foreign country might have been settled by the United States of America. But as the treaty with Mexico removed this possibility of settlement, the power of the United States was ended, and Texas retained undisputably her rights to all her borders.

Below is a letter from President Tyler, written the day before he died, to Andrew J. Donelson, charge de affiaires in Texas:

"By whatever name the agents conducting the negotiations may be known, and whether they be called commissioners, ministers, or by any other title the compact agreed on by them in behalf of their governments would be a treaty, whether so-called or designated by some other name.

"The very meaning of a treaty is a compact between independent states founded on negotiations."

The above should remove all doubt that the annexation agreement was not looked upon as a solemn obligation and treaty and if you will consult your dictionary you will observe that a treaty is an agreement between two sovereign nations.

Shall it be said by historians in the future that the great United States tore this treaty up like another scrap of paper?

To follow this up, let us quote a letter from President Polk to Commissioner Donelson:

"We desire most anxiously that she (Texas) will accept the offer as made to her, and if she does, she may rely upon our magnanimity and sense of justice toward her. We will act in a way that will satisfy her."

After this, Polk also advised Sam Houston on June 6, 1845, that Texas need have no apprehension in regard to the boundaries of the Republic of Texas because the United States would not allow the boundaries of Texas to be violated or sacrificed. On June 15, 1845, Polk wrote another letter to Donelson:

"Of course, I would maintain the Texas title to the extent which she claims it to be."

What would Polk, Sam Houston and the great historic personalities say if they could observe the way the Federal Government regards the above sacred obligations at the present day?

If they but could know it, they would turn in indignation in their graves.

Let us quote from the proceedings of the Joint Committee of the United States Senate and House by whom the resolution of the annexation of Texas was made and passed March 1, 1845:

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled:* That Congress doth consent that the territory properly included within and rightfully belonging to the Republic of Texas may be erected into a new State to be called the State of Texas with a republic form of government adopted by the people of said republic, by the deputies in convention assembled with the consent of the existent government, in order that the same be admitted as one of the States of this Union.

"2. *And be it further resolved:* That the foregoing consent of Congress is given upon the following conditions, to wit: * * * Said State when admitted into the Union, after ceding to the United States all public edifices, fortifications, barracks, ports and harbors, navy and navy yards, docks, magazines, etc., and all other means pertaining to the public defense * * * shall retain all her public funds, debts, taxes and dues of every kind, which may belong to or be due and owing to said Republic of Texas and shall also retain all the vacant and unappropriated lands lying within its limits to be applied to the payment of debts and liabilities of said Republic of Texas."

Then follows the statement that after the debt is paid the residue of the lands may be used as the State may direct, etc. The United States later plainly showed that she was ready to honor this treaty by paying Texas $10,000,000 as settlement in her border dis-

pute of the lands on the border of New Mexico.

I could go on quoting pages of evidence as conclusive as the evidence heretofore mentioned but have not the space, nor should it be necessary.

It will be well, however, to quote the dissent by Justice Frankfurter in the California Tidelands case:

"To speak of 'dominion' carries precisely those overtones in the law which relate to property and not to political authority. Dominion, from the Roman concept, dominion, was concerned with property and ownership as against imperium which related to political sovereignty.

"One may choose to say, for example, that the United States has 'national dominium' over navigable streams. But the power to regulate commerce over these streams and its continued exercise, do not change the imperium of the United States into a dominium over the lands below the waters.

"Of course, the United States has 'paramount rights' in the sea belt of California. The rights that are implied by the power to regulate interstate and foreign commerce, the power of condemnation, treaty power, war power. We have not before us the validity of the exercise of these paramount rights. Rights of ownership are here asserted, and rights of ownership are something else. Ownership implies acquisition in the various ways in which land is acquired. Conquest, by discovery and claim, by cession, by prescription, by purchase, by condemnation."

"When and how did the United States acquire this land?"

All the rights the Federal Government has over the tidelands is regulatory rights. The Federal Government can produce no actual, valid claims to ownership and this statement I defy any impartial judge, jury or attorney to disprove.

The loss to Texas of her tidelands would not only rob the Texas school children of billions of dollars in the future, but it would result in a loss of millions of dollars already collected by the Texas General Land Office.

The Federal administration has offered a bill of so-called compromise, which, if passed, would give back to the States 37½ cents on the dollar.

But why should we compromise when the title to our tidelands is undisputably clear? This streak of generosity on the part of the Federal Government reminds me of the hold-up man that robbed a citizen of his wallet, watch and other valuable and gave him back a nickel for carfare home.

Why is the Federal Government so persistent in presenting claims to ownership of the tidelands at present under pretense of needs for national defense, when during more than a century and a half it never even thought of disputing the States' right to ownership?

The Constitution provides control for the Federal Government, in case of emergency or war. Why is any more control needed? But the Constitution never provided for Federal ownership.

The whole story can be told in a few lines: Until the past few years, no one thought of the wealth buried under the tidelands and so long as no one knew, the Federal Government was very well content in letting the States hold the title of ownership. What the Federal Government really wants is the millions and billions of revenue that may be derived from the tidelands, not to be used for defense but in order to further present and future bureaucratic schemes. Even the politicians in favor of centralization of government realize that there is a limit on revenue from taxes; otherwise, they kill the goose that lays the golden eggs. So, some other way to raise revenues must be found, a way less painful to the voters. The tidelands offers that way, that source of revenue.

It has been argued by some that the tideland fight is a fight by and for the large oil corporations.

While the oil corporations, I believe, would rather deal with the States avoiding bureaucratic red tape and inefficiency, it matters not a great deal for the oil industry directly, as they will have to pay the Federal Government about the same royalties as they pay the States. But indirectly, the oil industry may be affected as well as any other industry in the Nation.

If the Federal Government can take away title from the States to submerged oil lands, what will prevent it in the future from putting in claims on and to all the industries, or to your farms, your homes, your businesses, your little peanut stand; yes, even your own individually treasured freedom of the past?

Wake up, America. The time is long past due to awake. Unless you do you may wake some day to find yourself enslaved, under a socialized, totalitarian regime. State and individual rights have been the foundation of American expansion, civilization, and growth. Centralization of Government is dangerous. It leads to the road of totalitarianism, dictatorship, and tyranny, and liberty will cease to exist.

I have heard arguments that the Texas school children have to divide with the oil industry and only receive $1 for every seven the oil companies get. If this is true, would it not be better than to divide up with a bunch of Federal bureaucrats to the tune of 62½ cents on the dollar they got from the oil industry for the Federal Treasury and only 37½ cents for the Texas schools.

And as for the $7 to the one for the schools, have you ever stopped to think where that $7 went?

First, to promote new wells, to bring increased wealth; next, to equipment which made possible for other businesses and manufacturers to employ labor at fair wages. And also in salaries for the millions of well-paid employees of the oil industry and its by-products. These millions again go back into trade channels and their employees and suppliers and producers, thus creating more wealth, more employment, more prosperity.

The writer holds no oil stock, is not employed by any oil corporation, nor am I obligated to anyone connected with the oil industry.

But let us be fair. I believe that I could conclusively state that had it not been for the oil industry, the prosperity of Texas and the prosperity and enormous expansion of the city of Houston might have been a different story.

So, let all loyal Texans join in this, our common battle to retain our Texas tidelands. It is a cause in which we all can take part. It is a fight for the future of the children of Texas—your children.

Address of Hon. John Davis Lodge Before National Convention of Young Republicans at Salt Lake City, Utah

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the keynote address of our distinguished colleague, Mr. LODGE, of Connecticut, delivered at the national convention of Young Republicans held at Salt Lake City, Utah, on Thursday, June 23, 1949.

This trenchant analysis of the issues which confront our country and the course which the Republican Party should pursue in meeting them is characteristic of this penetrating student of government. It deserves thoughtful reading by those who disagree, as well as those who agree. It is the forward-looking product of one who obviously places the welfare of his country first. Along this path, he contends, lies the future glory of his party.

Representative LODGE'S address follows:

Mr. Chairman, fellow Republicans: This is a great occasion. It augurs well for the future of our party and for the Nation. I welcome the privilege of meeting with you in Salt Lake City to celebrate real Republican principles and to plan truly Republican policies.

The Young Republicans did splendid work during the 1948 campaign. I believe that the Republican Party must adopt much of the thinking of the Young Republicans if we are to achieve victory in 1950 and 1952. Political parties should not be exclusive clubs. The Republican Party needs the increased participation of Young Republicans. In order to translate the needs and aspirations of the American people into effective political action, the Republican Party must become impregnated with young ideas.

I believe that the Republican Party must, in its platform and in its actions, reflect the fundamental divisions of thought among the American people. I believe that our party must not be an obstructionist party. It is not sufficient for us merely to carp, to criticize, and to condemn. We must above all conserve, construct, and create. I believe that our party must not be a me-too party; not follow and imitate while others lead and create. I believe that we must not be horse-and-buggy die-hards; we must get the moss off our backs in order to get the country on its feet. I believe that we must be affirmative. I believe that we must confront the people of this country with constructive feasible alternatives. The American people want a choice. I believe that if the Republican Party acts in the tradition of Lincoln the people will choose Lincoln's party.

You who are taking such a significant part in your party's work realize that we are living through perilous and difficult times in which the victory which we won at such tragic sacrifice in human life and such a vast expenditure of national treasure seems to be slipping from our grasp.

Few of you can recall the time when our Government was not a sprawling overlapping bureaucracy sapping the economic strength of our Republic by schemes concocted for the increased power of the bureaucrats rather than for the welfare of the people. And yet most of you have understood well, better, I venture to say, than many of the older members of our party, that the true function of the Republican Party is to maintain individual freedom.

That freedom is threatened. There are sinister forces at work attempting to substitute government by decree for government by discussion. But the presence of these forces seems to me merely to underscore the essential challenge and to define with dramatic clarity the true mission of the Republican Party.

It is true that communism is on the march. It is true that the present administration has failed to deal effectively with the Communist menace in many of its foreign and domestic aspects. It is true that the President has characterized spy trials and investigations undertaken to protect America against Communist infiltration as red herrings, headline hunting, and hysteria. It is true that the Democrat Party has lost

confidence in the American people. But that is no reason why the American people, and particularly the young Americans, should lose confidence in themselves. That is the very reason why we should persevere. The Republican Party, infused with vital, insurgent, progressive elements and transfused with fresh young blood, can meet the dread menace of communism both at home and abroad. It is an unprecedented challenge; it is a challenge worthy of our mettle.

I say with the utmost confidence and with the greatest enthusiasm that, in spite of our present difficulties both at home and abroad, this is a good time to be alive; this is a good time to be a Republican; this is a good time to be an American.

The responsibilities which are inseparable from freedom rest in large part upon the Republican Party. We can be inspired by the sure knowledge that our opportunities for useful service, for dynamic leadership, are equal to these responsibilities.

Let us recognize first that the two-party system is probably the most important single factor in the preservation of American freedom. The Republican Party is the only political instrument standing between the American people and one-party government.

Our two-party system is in danger. It is in danger because there were some 45,000,000 people who failed to exercise their franchise in the last election. It is in danger also because we have a growing number of independent voters in America. The increasing independence of the American voter is in large part the fault of the parties themselves. But it is also due, it seems to me, to the fact that many people do not associate themselves with the political life of the Nation. As the virus bureaucoccus has infected our political structure, as the executive branch of our Government has grown, it has become increasingly difficult for the people to understand how their Government operates. Failure to understand causes lack of interest and lack of interest eventually results in loss of control. That is why we have a minority government in Washington.

Yet the independent voter depends upon the effective functioning of the two-party system. All that America can hope to be depends upon the salvation of the two-party principle. That salvation can come only through a resurgent, virile and victorious Republican Party.

The Republican Party, the party of Lincoln, was founded to fight intolerance and slavery. The greatest American of us all was its greatest statesman and is still its prime inspiration. Abraham Lincoln believed fervently in the dignity of the individual man, in the brotherhood of man under the fatherhood of God, in the freedom not merely of workers or farmers or managers, but in the freedom of the individual. He believed that the individual is the complex heart of society.

In their effort to label the Republican Party as the party of special interests the Democrat Party has called attention to its own failure, during its long years of power, to deal with the very conditions against which it has raised such an outcry during political campaigns. If one could believe Democrat oratory, the Democrat Party would be the me-too party. Actually, however, the Democrat Party by its actions has attempted to destroy our free competitive system and under a deceptive welter of weasel words has surrendered to the minority pressures of the moment.

The Republican Party must be unalterably opposed to special privilege. We believe that it is the function of government to safeguard minority interests while protecting the majority from minority control.

The principles upon which the Republican Party was founded are the principles on which it has always acted in its moments of greatness. Under Lincoln it saved the Union and gave a new birth of freedom to an enslaved people. Under the rallying cry of freedom it made the Nation a kindly refuge for the hunted peoples of many foreign lands. Under Theodore Roosevelt it curbed the excesses of powerful men who threatened to destroy the freedom of the people. Under its great chief justices it evolved a system of law designed to safeguard those freedoms. Actually, the Republican Party, being the party of freedom, has been and is today the party of the people.

It is not an easy fight. The individual, being without spokesman, often seems at a loss in the face of the howling propaganda enthusiastically hurled by the proprietors of vested interest. We Republicans must penetrate through the web of vested interest to the freedom of the individual.

In order to achieve victory we must dedicate ourselves to the principles of Abraham Lincoln. Compromise between men is essential to successful politics but compromise of principle is fatal.

But it should be borne in mind that these principles, on which America grew to her present predominance among nations, are not fixed formulae for reverting to an irretrievable past but are rather felicitous flexibilities for propelling America to a brighter future. The genius of our system in a sense is that we are in a perpetual state of evolution. The Republican Party does not stand for an apathetic stand-pat philosophy. It believes in government by the people precisely because this form of government is not static, because it contains within itself the seeds of its growth. It gives free rein to the largely unpredictable processes of social development. It releases the spontaneous forces in our free society.

Our choice then is not between a mossback philosophy and me-tooism. Between these extremes there is a field in which the Government should act to protect the freedom of all. We need the Government to create conditions favorable to the continued use of private capital, the encouragement of individual enterprise, and the preservation of freedom; freedom for producers and consumers, for employers and employees, for owners and workers. We need it to correct abuses, to protect the weak. In a nation of our industrial power, abject poverty and extreme hardship can and must be prevented.

Because the Government must be the servant of the people it must also be strong enough and wise enough to respond effectively to the problems of the day. While we provide incentives for the creation of new wealth, we must also intercede in behalf of those for whom life is particularly difficult. While, in order to raise our standard of living and buttress our enonomy we should reduce the national debt, effect large scale economies in Government and return to sound fiscal policies, we must also assist those who have no more than a substandard on which to eke out a meager existence. But although the health of our Nation and the education of its citizens, old-age pensions and social security, minimum wages and unemployment compensation, large-scale production and full employment, rural electrification and flood control, adequate housing and soil conservation are all desirable objectives and all involve the people's welfare, we should burn into our brains the incontrovertible truth that the ultimate, the essential welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free society. Aid to the needy, to the unfortunate in our society, is right and just and feasible. But if every family receive housing, food, clothing, medical care and education from Washington, if we succumb to the siren call of womb to tomb security, we shall have embarked upon a course which will cause a break-down not only in the American economy but also in the American character. When a government attempts to redistribute to the citizens more than the citizens can produce inflation and dictatorship are the inevitable result.

A policy of government pensions and subsidies to all would also result in a tax burden which would destroy taxable property rather than increase it. It would effectively socialize America. Indeed, although 33 cents out of every dollar is taxes, the Federal income for the first 5 months of 1949 was more than $3,000,000,000 less than for the first 5 months of 1948.

There is a limit to the social welfare operations which we can undertake and still expand our economy. In order to combat growing unemployment, in order to provide more jobs and higher wages, in order to increase our standard of living, we must increase and improve our tools of production. This we cannot do if incentives are stifled, if risk investments are made so risky that people won't take a chance. The average job in America requires a six thousand dollar investment.

The most self-evident fact in the world today is that America's strength and prosperity depend in large part upon its stock of tools. It is the tools of production which our free incentive system has produced which spell the differences between the standard of living of an American truck driver and a Chinese coolie. In 1850 power tools accounted for about 25 percent of all work done. Today, this 25 percent has grown to more than 90 percent.

Furthermore, nowhere in the world are people so secure, nowhere are the fruits of production so equitably distributed as in America. We know this, but we don't prove it to the people. The American whose income is less than $5,000 a year gets 90 percent of all salaries and wages, 69 percent of all interest and dividends, 83 percent of all rents, and 91 percent of the entire national income. Is that a distribution for which we Americans should bow our heads in shame? These are the facts, and there are many more like them. When the people know the truth about their own system, the champions of that system will be properly identified as the champions of the people's welfare. But the Republican Party has not informed our natural majority of this generation of Americans that what we stand for is exactly what they stand for. It has been like winking at a pretty girl in the dark—you know you are winking at her, but she doesn't. When we tell the American people the simple truth, the large majority of voters will once more vote the Republican ticket.

It is traditional Republican policy that the interests of the people who work come ahead of the interests of capital. Lincoln said, "Capital is only the fruit of labor; could never have existed if labor had not first existed. Labor is the superior of capital and deserves the much higher consideration." And he went on to say: "That men who are industrious and sober and honest in the pursuit of their own interests should after awhile accumulate property and after that should be allowed to enjoy it in peace is right." Labor and capital are both indispensable cooperative parts of the same effort.

The real battle is not between labor and management; it is between the customer and the Government. A majority of the customers are the people who work.

Surely bipartisanship in foreign affairs does not require us to be partisan when the welfare of the working men and women of this country is at stake. They are entitled to be influential in both parties. They are entitled to as statesmanlike an attitude toward their problems as are the people of foreign countries. It should be the mission of the Republican Party to take labor legislation out of politics. Similarly, in order to retain the right to the fruits of his labor, it is imperative that the workingman should not be weighted down with taxes. For my part I am prepared to stay in Washington until the snow flies in order to provide the legislation

necessary to implement the reports and recommendations of the Hoover Commission and thereby save the American taxpayers upwards of $3,000,000,000 a year.

We must also recognize that the primary issue facing our Nation is the issue of war and peace. Any social gains we make will melt like snow in the sun if we have war. While this overriding issue should be met without regard to party advantage, it is more important to be right than to be bipartisan.

I suggest to you that a successful foreign policy cannot be predicated on a formula which calls for running with the hare in China while we are hunting with the hounds in Greece and Turkey and Western Europe. At the risk of being accused of partisanship I shall try to persuade the Administration to hew to its own policy which I understand is no longer the policy of appeasement. I shall use my best efforts to hold the feet of the Administration to the fire of its own policy in the patient and determined hope that we may bring the elements of our power and the details of our plans in line with our foreign policy and provide the vigorous consistency and forthright leadership which is so sorely needed. The announced State Department policy of "waiting until the dust has settled in China" is a tragic betrayal of the cause for which 108,000 Americans gave their lives in the great Pacific war. A do-nothing policy in China will not protect American security.

If we Republicans abdicate our prerogatives, if we fail to discharge these responsibilities, America may soon become an island of freedom in a sea of slavery. The Republican Party is the best hope of America and America is "the last best hope of earth."

In addition we must recognize that the world crisis cannot be resolved solely in terms of dollars and commodities, military equipment and personnel, plans and agreements. It is also most emphatically a question of moral leadership. In fulfilling this exacting role, we must bear in mind that while men and women the world over yearn for safety from war and from want, they are also interested in how and why they are living. We who take sharp issue with the Marxian theory that man lives by bread alone must realize that the problem is not simply one of matériel. It is not just a battle of industrial potential—of things. It is a battle of ideas. It has been well described as a battle for men's minds.

We must place our faith rather on the principles on which America has grown to greatness than on the material wealth which we have acquired through their application. We must treat material forces as a means rather than as an end. We know that our material world will crash in splinters around us if it has no lofty thoughts to hold it up.

For it remains wonderfully true that in spite of recent spectacular developments in the scientific machinery of war and peace, the motive power of human conflicts resides as always in the mind of man. As we think, so shall we act. Man can control his own creations if he wills it. Even the new death-dealing gadgets, sad products of man's mechanical genius will move to the measure of men's thoughts. Even the atom bomb is but an extension of yesterday's weapons and of today's conflicts. Even the atom bomb cannot alter or diminish the validity of those timeless truths on which our Nation was founded. The atom bomb does not change the challenge; it merely underlines it and gives it a terrible urgency which before it did not seem to have. We are still faced with the problem of self-control rather than atom control; and we can develop self-control far better under our free system than under the imposed disciplines of statism. The challenge is still a moral challenge and in that challenge the young people of America—the Young Republicans—will play a predominant part. It is still a challenge to us to give a vigorous demonstration that our private property competitive economy can continue to bring a higher standard of living and more freedom to more people than any system yet devised by man.

The American people are still willing and eager to assume the risks of being free. If Patrick Henry had said, Give me security or give me death, we would not know his name today. That is why we Republicans must be relentless in our efforts to preserve in America the free institutions under which our people can continue to strive for the real security of individual accomplishment instead of bending under the bogus security of government hand-outs. This is the peacetime challenge. The final test of any system of education is that it should enable us to recognize the true challenge of life and prepare us to meet it.

Now the real challenges are ever the same.

Changing conditions may require that we adjust the tempo of our lives, modify some of our opinions, accommodate our methods. Our material equipment has altered enormously and has occasioned tumultuous changes in our social order. But man's equipment to meet life, to face its ordeals has not altered perceptibly. Would we not do better then to live according to those principles of freedom for which men have suffered and died rather than abandon them for some reactionary plan which would substitute authoritarian government for self-government, State control for self-control, reliance on Government-sponsored panaceas for self-reliance. There is nothing progressive, forward-looking, or new about the concept of government as the cure-all for human ills. The issue is whether we shall retain, with such modifications as appear feasible, the recent tradition of individual freedom or in abject defeatism return by an easy succession of plausible political subterfuges to the much older threadbare tradition of the paternalistic, dictatorial state.

That is the issue in the world at large and it is the issue right here.

We live in a changing world. We live in a world of constant alarums and recurring crises. But this we know—that there can be no more progressive, no more contagious thoughts, than those which were forged in the tears, the toil and the turmoil of the American Revolution. These thoughts, these ideals, are timeless. They are the thoughts which inspired the author of those memorable lines which appear on the great monument at Valley Forge:

"And here, in this place of sacrifice, in this vale of humiliation, in the valley of the shadow of that death out of which the life of America rose regenerate and free, let us resolve with an abiding faith that to them union shall seem as dear, and liberty as sweet and progress as glorious as they were to our fathers and are to you and me, and that the institutions which have made us happy, preserved by the virtue of our children, shall bless the remotest generations of the time to come."

This is the real challenge of the peace—this is the challenge to the Republican Party—this is the challenge to America.

The Housing Situation in Syracuse

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a telegram sent to Mr. Paul V. Betters, executive director of the United States conference of mayors, by Hon. Frank J. Costello, mayor of the city of Syracuse, N. Y., on the housing situation in the city of syracuse:

SYRACUSE, N. Y., *June 23, 1949.*

PAUL V. BETTERS,
Executive Director, United States Conference of Mayors,
Washington, D. C.:

In spite of substantial building program carried on in last 2½ years our housing shortage continues particularly as regards accommodations for families of modest and low income. Our emergency housing service had 1,280 requests for aid in finding homes first 5 months this year compared with 829 same period last year. Need for additional housing variably estimated locally from 3,400 to 5,200 units as of January this year mostly in modest and lowest brackets not now served by private enterprise under existing legislative authorization. Families with children our biggest problem. Efforts of our health commissioner to eradicate some of the most subhuman housing conditions are frustrated due to lack of other accommodations for occupants. Our public housing project developed with Federal aid replaced some of worst slums of city definitely reducing health, fire, and police costs.

FRANK J. COSTELLO,
Mayor of Syracuse.

Paul Robeson

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Advertiser, Boston, Mass., Sunday, June 26, 1949:

AN UNDESIRABLE CITIZEN

Gross misconduct is an insufficient epithet to describe the behavior of Paul Robeson, the negro baritone, who has just returned from a subservient pilgrimage to Moscow.

Some years ago, as a student at Rutgers University, Robeson was an admired athlete who competed as an equal with young Americans of other heritages.

He received the Phi Beta Kappa key for scholarship, and is listed in Who's Who as a member of Alpha Phi Alpha and Sigma Tau Delta fraternities.

He has had academic honors poured upon him—he has received degrees from Columbia and Howard Universities and from Hamilton and Moorhouse Colleges, as well as from his alma mater.

It cannot be said that Paul Robeson was denied the benefits of an American education.

Since the early twenties he has fared sumptuously in his profession, appearing in a number of successful plays and operas, making many lucrative concert tours as a singer, and having excellent listings on the radio.

Paul Robeson's favored career has made him a wealthy man.

And for all this, Paul Robeson despises his country.

At a Communist congress in Paris last April, he declared that American Negroes would not fight in a war with Russia—an insult to the thousands of loyal Negroes who

fought in the last war and left their blood on its battlefields.

At a Communist rally in New York on his return from Russia, Robeson made a communistic speech in tones and terms calculated to incite racial hatred.

He declared his intentions of supporting the Communist Party leaders who are on trial on charges of conspiring to subvert the United States Government.

And he found time to berate and abuse news photographers peaceably seeking to take pictures of his son's wedding.

Paul Robeson has said that Soviet Russia is his second country.

That is his own choice.

It was an accident unfortunate for America that Robeson was born here.

America owes him nothing, although he owes America much.

So let Paul Robeson, as a free man, exercise his preference and find his home in the Soviet slave state where he and his ungrateful and disloyal kind belong.

Purging of Catholic Priests

EXTENSION OF REMARKS

OF

HON. CHESTER C. GORSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News:

VATICAN SAYS REDS HAVE PURGED 1,500 CATHOLIC PRIESTS

VATICAN CITY, June 27.—Vatican sources said today that more than 1,500 Roman Catholic priests have been arrested or disappeared in Soviet-dominated eastern Europe since the end of World War II.

They said an undetermined number of priests had been executed. The rest, they said, had been imprisoned or deported, or had just vanished.

The campaign against Czechoslovak Archbishop Josef Beran is only the latest chapter in a long series of antichurch persecutions behind the iron curtain, a spokesman said.

In Prague, a defiant new pastoral letter from Archbishop Beran brought Czechoslovakia's bitter church-state struggle a step nearer a final show-down.

"HANG THE BISHOPS"

The letter, read in churches throughout the country yesterday, accused the Government of forcibly removing priests and nuns from Slovakia in freight cars and of otherwise destroying all religious freedom in the country.

It was issued at a time when the controlled Czech press was crying loudly for punishment of Archbishop Beran and his bishops. Hecklers interrupted the service after the reading of the letter in one Prague church with shouts of "Hang the bishops and their chief."

The Vatican said the church had been stripped of most of its authority in Hungary, Czechoslovakia, Albania, Poland, Rumania, Yugoslavia, and the Baltic States.

MAY BE HIGHER

"The exact number of Catholic priests who have been deported, jailed, or killed in eastern Europe cannot be known under present conditions," he said, "but 1,500 would be a conservative figure based on actual reports received. We fear the figure may really be higher."

Fears of Czech Catholics that Archbishop Beran's arrest may be near were strengthened Saturday by Justice Minister Alexei Cepicka's statement that the government already has enough evidence to convict Czechoslovak bishops of a hostile attitude toward the state.

The 4,000-word pastoral letter, apparently smuggled out of Archbishop Beran's police-occupied palace, formally accused the Communist government of:

Depriving the Catholic Church of the majority of its free rights and publicly and secretly persecuting it.

Censoring prayer books and placing agents in Catholic publishing houses.

Banning any assembly or teaching of Catholicism outside the church under threat of punishment.

Forcing religious teachers in Catholic seminaries to teach Marxism.

Seizing many church buildings.

Placing the residence (palace) of Archbishop Beran under the surveillance of the secret police, thus completely curtailing the freedom of the chairman of the bishops.

Women wept and groups of men screamed at each other after the pastoral letter was read from the pulpit of the small, ancient Church of the Crusaders in Prague.

When hecklers scattered through the congregation of 400 began shouting demands that the Czech bishops be hanged, the faithful drowned them out by singing hymns.

The California Vote

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. PHILLIPS of California. Mr. Speaker, reference has been made several times, during the debate on the bill now before this House, H. R. 4009, to the vote in California last November on the same subject. Initiative No. 14, on the November ballot, proposed to create a State housing agency, and to guarantee its operations up to $25,000,000 annually. It authorized a bond issue of $100,000,000, for loans for public housing. The other provisions had to do with tax exemptions, State and local government powers, and the customary regulations. One million forty-two thousand and eighty-nine votes were cast in favor of No. 14, and the vote against it was 2,372,646. Every one of the 58 counties voted against the proposed housing amendment, several by votes of 4 or 5 to 1. Even Los Angeles County, with its real need for housing, and its history of liking Government aid, voted 1,021,221 against and only 474,561 for the proposal. Since there were two other measures on the ballot at the time which were bringing out active campaigns, there was little organized effort against No. 14, and the customary effort on the part of planning groups, and present or prospective Government employees for it. This should be significant. Perhaps we misjudge the real feeling of the taxpayers when we say, with such confidence, on this floor, that the people are behind H. R. 4009, or bills like it, which propose to establish in this Nation those social and economic ideas which have wrecked other Nations, some of them now on the list of those the United States is supporting. The California vote follows:

Counties	Yes	No
Alameda	90,068	176,265
Alpine	20	76
Amador	608	2,303
Butte	3,987	14,304
Calaveras	850	2,523
Colusa	802	2,557
Contra Costa	29,002	48,906
Del Norte	396	1,813
El Dorado	1,134	4,072
Fresno	18,783	47,306
Glenn	621	3,759
Humboldt	6,386	12,040
Imperial	1,952	6,987
Inyo	653	2,333
Kern	13,891	33,814
Kings	1,889	7,159
Lake	797	3,466
Lassen	1,240	3,097
Los Angeles	474,561	1,021,221
Madera	1,483	4,853
Marin	7,093	21,160
Mariposa	422	1,301
Mendocino	2,500	6,872
Merced	3,036	10,188
Modoc	468	1,867
Mono	100	487
Monterey	7,710	20,826
Napa	2,839	10,765
Nevada	1,342	5,233
Orange	10,095	61,069
Placer	2,577	9,856
Plumas	1,276	2,608
Riverside	10,306	38,657
Sacramento	17,950	62,780
San Benito	740	2,982
San Bernardino	20,189	63,873
San Diego	55,048	127,997
San Francisco	121,172	165,901
San Joaquin	10,194	38,644
San Luis Obispo	5,019	16,881
San Mateo	21,258	53,780
Santa Barbara	9,077	21,973
Santa Clara	20,946	68,780

Tuolumne	827	3,226
Ventura	7,902	20,637
Yolo	2,195	5,225
Yuba	1,191	4,286
Total	1,042,089	2,372,646

Irving Dilliard, New St. Louis Post-Dispatch Editorial Page Editor

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. PRICE. Mr. Speaker, the community of Collinsville, Ill., in my congressional district, feels itself singularly honored through the selection a few days ago of Mr. Irving Dilliard, a native son, as editorial page editor of the St. Louis Post-Dispatch.

Since the Post-Dispatch is among America's greatest newspapers, Mr. Dilliard's new assignment places him in one of the most influential positions in the Nation. And Mr. Dilliard is well qualified to fill this post of such great importance.

I have had the pleasure of Mr. Dilliard's personal acquaintance since the summer of 1926 when, as a young student at the University of Illinois, he did some of his early newspaper work with me on the old News-Review at East St. Louis.

The Post-Dispatch has given to the Nation many of its foremost journalists. Irving Dilliard is another in the long list who have contributed to the greatness of the St. Louis newspaper. As an old friend I wish him a long, successful, and distinguished career in his new post.

Under leave to do so, I include herewith an article written by another great Illinois newspaperman, the Honorable James O. Monroe, announcing the appointment of Mr. Dilliard in Mr. Monroe's Collinsville Herald, June 24, 1949:

IRVING DILLIARD EDITORIAL EDITOR OF POST-DISPATCH

Irving Dilliard, 505 East Church Street, has been made editor of the editorial page of the St. Louis Post-Dispatch, it was announced Monday by the newspaper's executive office. He succeeeds Ralph Coghlan, who has held the chief editorial post for the past 10 years. Coghlan will go to Europe as a special correspondent for the newspaper.

Dilliard has been second in command to Coghlan on the paper's editorial staff for several years, after having been employed in other capacities on the paper since 1927.

Dilliard, born and raised in Collinsville, early developed a taste for journalism and cultivated it while in high school by writing articles for the Collinsville Herald and acting as local correspondent for the Post-Dispatch. In 1923 he entered the University of Illinois. He did reportorial work on the University-controlled newspaper, the Daily Illini, and in his senior year was editor of the editorial page. He also acted as Champaign-Urbana correspondent for the Post-Dispatch, and on his graduation in 1927 he took a position with the newspaper as a staff reporter. In 1930 he was assigned to "vacation relief" of the other writers on the editorial page, and his work proved so satisfactory that the assignment was made permanent. In 1939 he went to Harvard University for a year to study as one of the Nieman Fellows, a group selected from active newspaper workers for advanced study under the Nieman Foundation. Returning to his editorial work in 1940, he continued until 1943 when he entered the military service and attended the Army's Military Government School at Charlottesville, Va. Commissioned as captain, he served on the staffs of Generals Patton and Eisenhower in England, France, and Germany. Ten months before his discharge he was advanced to the rank of lieutenant colonel. In recognition of his war services the British Government last November, awarded him an honorary membership in the Military Division of the Most Excellent Order of the British Empire.

Dilliard returned Sunday, from 15 days of active duty in Washington under Lt. Gen. Raymond S. McLain, who is on the staff of Gen. Omar Bradley, Army Chief of Staff. His assignment was related to the prospective change-over of responsibility for American occupied areas in Germany from the Army to the State Department.

As a worker on the editorial page of the Post-Dispatch, Dilliard has been most zealous in carrying on the paper's traditional policy of prompting measures and reforms in the field of government. This often called for the direction of special correspondents who traveled throughout the country gathering the information required to understandingly present the facts to support the paper's policies.

A notable instance was the treatment of the scandal which developed in Illinois politics in 1947, involving Governor Dwight H. Green in the shake-down of coal mine operators for campaign funds. This disclosure by the Post-Dispatch was followed by a mine disaster at Centralia in which 111 men were killed. Dilliard was given charge of the news and editorial handling of this sensational affair, and the paper's revelations rocked the Nation.

For one not a lawyer, Dilliard, through his study of constitutional law, is recognized as an authority on questions of civil rights and jurisprudence. He enjoys the acquaintance of most of the members of the Supreme Court of the United States, being on intimate terms with some of them. His criticisms of decisions of the Nation's highest tribunal and also of the Illinois supreme court have been penetrating and persuasive. He is one of the stanchest defenders in Illinois of the Bill of Rights.

Dilliard has served as a trustee of the State Historical Library and a president of the Illinois Historical Society.

He is married to the former Miss Dorothy Dorris, daughter of Mr. and Mrs. C. H. Dorris. They have two daughters.

At 44 he has become one of Collinsville's most illustrious citizens.

The American Potential for Greatness

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Marshall Field, president and publisher, Chicago Sun-Times, at commencement ceremonies, Roosevelt College, Chicago, June 12, 1949:

It is an honor and a great privilege to be here with you today.

From the beginning I have been deeply interested in the ideals, the plans and the hard work that have made Roosevelt College a reality. It is not easy these days to establish and maintain an institution dedicated to the high principles to which Roosevelt College is committed. I congratulate all of you—administrators, faculty and students—on the substantial progress you have made. Let us hope that the example you have set here in Chicago may inspire other communities to duplicate the work you are doing—and to do it with the same principles and the same effectiveness.

The tradition of commencement day addresses is both ancient and honorable. I fear that it can also be somewhat boring to those of you who are graduating today and who are, presumably, tired of preaching and ready for action. The current state of the Union and of the world certainly indicates that your elders do not have many of the answers you would like them to have. We may have philosophies and points of view but we do not have all the answers—or even the wisdom and other virtues which are essential before answers can be formulated.

These defects, of course, do not prevent us from speculating on the achievements through which you, in the years ahead, may not only find the answers you seek but also the skills needed to apply those answers to world problems.

Perhaps we need a new perspective on achievement. By some standards the achievements of this country during the past 40 years have been substantial. We have made tremendous technological progress. We have performed amazing feats of industry. We have multiplied our creature comforts and we have increased the leisure time in which to enjoy them.

Yet our two greatest achievements have, through force of circumstance, been negative. Twice within the life span of many persons here today we have fought back enemies who would have destroyed the particular freedoms which make America unique among the societies of the world.

Twice we have proved our right to exist. We have earned a chance to survive. We have won for ourselves a chance to go forward, but we have not yet fully capitalized on that chance.

That kind of achievement may not be enough in the years ahead. No civilization can hope to perpetuate or extend its best features solely by armed force.

Spectacular as our achievements in the past have been, they have left us with the same challenge that faced the founders of the Republic—the challenge to develop the American potential for greatness.

Nearly 140 years ago, Thomas Jefferson wrote to his friend, Colonel Duane: "The last hope of human liberty in this world rests on us."

Those words have as much meaning for us today as they did in Jefferson's time. They state the central issue in the conflict between those who believe in the dignity of the individual and those who reject that dignity. The challenge to us today is to demonstrate how much can be accomplished in a system that prizes human liberty. If we can meet that challenge in America, our example will be the most persuasive force for peace that the world has ever known.

The simple fact is that America has never realized fully its potential for greatness. The essential greatness of this country will never stem primarily from its natural resources or even from its technological know-how or from its organizing ability. Its true greatness lies in the powerful Jeffersonian ideal of human liberty—an ideal that had been purely theoretical until it became the basic theme in the American way of government.

This concept of human liberty—of the dignity of the individual—has always been under attack. These attacks have not come exclusively from beyond our borders. Human liberty has always had enemies in its own home. It has them now. Not all of them are visible, but every one of them threatens to stifle the special characteristics that have made America great.

The great enemy of American progress is fear—unrealistic, unfounded fear. In March of 1933, Franklin D. Roosevelt rallied the American people with 10 words we would do well to recall today. "The only thing we have to fear is fear itself," he said. Today, only 16 years later, we are beginning to forget. We are in danger of yielding to a psychology of fear that can be more demoralizing than the greatest threat of physical force.

There is the pervading fear of communism, for example, a fear that is daily being compounded into hysterical attacks upon all nonconformists, whether they are Communists or not.

Of course, communism is bad for America. Of course, we do not want a communistic system in this country.

But why should we dissipate our energies in unworthy fear and suspicion? Who would dare to assert that our American system of human liberty cannot prove vastly superior to any other system, not only on the strength of its past record but also on the basis of any clear analysis of its future potential?

Instead of careful analysis we have expensive witch hunts that implicate not only the avowed Communists but thousands of others whose only visible crime is independent

thinking about the problems facing society today. Instead of clear thinking, we have irresponsible statements whose only result must be to convince the leaders of the Russian state that we welcome a contest of warmongering with them.

The citizen of Moscow today does not have to depend upon his own propaganda factories for evidence of our verbal aggression against Russia. We are contributing the evidence ourselves, every day in the year. It can be seen in the carelessly documented stories appearing in some of our newspapers. It can be heard in the innuendoes and distortions of some of our radio commentators.

In many ways we are talking and acting as if a show-down by force were inevitable. And we appear to be taking the initiative in precipitating that show-down.

We have succumbed to a new element in our national thinking. And that element is fear, a fear that has made us supersensitive in our foreign relations and not sensitive enough to our own ability to provide responsible world leadership.

It will be a terrible thing if we yield completely to this kind of thinking. Already there is evidence in Washington and other places that we are condoning a philosophy of guilt by association. We are no longer content to hunt for witches. We are now seeking out those who have been associated even remotely with radical or liberal thinking. And we are imputing to them all the unproved crimes for which we condemn the twentieth-century witches themselves.

A Washington lawyer reported recently that his firm had been retained by five separate clients to defend them from charges raised by overzealous agents of the Government's loyalty program. In only one of those cases, he said, did any of the accused Government workers have any knowledge of the basis for the charges.

In the fifth case the only evidence against the accused man was a single brief postscript to a routine letter. The postscript was interpreted maliciously by the man's secretary and reported to the loyalty board. The man's entire future was placed in jeopardy. It is not enough to say that he was innocent and that the malicious charge was withdrawn. The man had been accused of disloyalty to his Government. In the eyes of every bureaucrat who has access to his Government record, he will never be the man he was before he was investigated.

These are not isolated examples. Two weeks ago one of our leading nuclear-energy authorities told a press conference that at least 100 qualified scientists had been barred from atomic-energy research for security reasons, without knowing what the charges against them were. These men have not only been disqualified for Government research; they have also been handicapped in their search for employment in private laboratories. And they have no way of defending themselves because they do not know what security rules they are supposed to have broken.

Jefferson's concept of human liberty and human dignity has taken a bad beating when an American can be presumed guilty until he is proved innocent.

Our attitude toward the atom bomb is perhaps symbolic of the fears that are paralyzing us today and keeping us from constructive action.

Virtually every act involving atomic energy during the past 4 years has been negative or restrictive. We have committed ourselves to a policy that is completely untenable, and we have pyramided our efforts to contradict long-term common sense. We are trying to convince ourselves that the laws of nature and of physical forces in nature are, or can be, a long-term national monopoly.

By concentrating on the destructive power which we may some day wish to pour upon some other nation, we have blinded ourselves to the international potential for constructive use of atomic energy. We have forgotten that the first bombs were in no sense the result of exclusively American ingenuity. We have forgotten that science recognizes no national boundaries. We have tried to pretend that the secrets of atomic energy can be hoarded indefinitely.

We should know better. And we should convert our thinking to positive, constructive action. It is sheer folly to hope that the most rigid system of national security can prevent alert scientists in other countries from eventually acquiring the skill and the resources necessary for the manufacture of atomic bombs.

If we cling irrationally to this kind of hope, we do little more than breed suspicion of our motives. We invite reprisals—and we will be certain to get answers to our invitation, even though we may not be able to specify the precise date.

If our fear of communism and our fear of the atom bomb are keeping us from reaching our potential for greatness, there is one other all-pervasive fear that claims our thinking today.

That is the great fear we have for the future of our economic system. In spite of long-sustained abundance that cannot be matched anywhere else in the world, we seem to have lost faith in that system. We seem to have lost faith in its flexibility to meet changing conditions and in our own ability to modify the system continuously to provide the greatest good for the greatest number of our citizens.

We seem to expect the system to crack wide open at any moment. To put it colloquially, we don't seem to be quite sure that we can stand prosperity.

We keep harking back to periods of relative economic stress. At the same time we keep looking forward for omens of future distress. In our casual thinking we have wiped out of our minds the great gains made by Franklin D. Roosevelt in this long-range campaign to help our economic system operate the way it was supposed to operate.

In the darkest days of 1933 President Roosevelt saw clearly that it was not the system which had failed. He saw that the system had been sabotaged through abuse at home and in our economic dealings with other nations. Franklin Roosevelt had a vision of the American potential for greatness. But he was realistic enough to appreciate that this potential could not be achieved without practical safeguards.

Perhaps we are too close to recent history to understand how our economic system has been strengthened during the past 16 years. Perhaps we do not yet appreciate how many safeguards we now have against the abuses and the inequities which nearly stalled our economic machinery during the late twenties.

The important thing is that we have them and that they are working to stabilize our economic system. They have not only been written into legislation; they have also become a part of our social fabric.

Who today would want to revive abuses of child labor? Who would want to abolish the machinery of the Securities and Exchange Commission? or the Federal Deposit Insurance Corporation? or the vitally important Government credit agencies? or the common-sense policy of reciprocal world trade?

Our economic system did not have these and many other safeguards 20 years ago. There was reason, in those days, for yielding to panic and to fear in times of crisis.

We do not have that justification today. Yet, even before VE-day and VJ-day, a great chorus of pessimism and despair was heard from many reactionaries and a few timid liberals. It was predicted that the end of the war would bring a terrific economic slump. It was predicted that we could never maintain high levels of employment and that we must resign ourselves to a serious business slump.

We have been hearing those predictions and reading those predictions ever since. If talking and writing could cause a depression, we should all have been on breadlines years ago.

No business curve can continue to go up without an occasional setback. If we are honest, we will concede that, during the past 10 years, we have transacted a tremendous amount of business with relatively little effort. There is still a lot of business to be done in this country but from now on we are going to have to think and plan and work quite a bit more. These are hard facts for graduates of every class of 1949. But they are not necessarily unpleasant facts. The opportunities for important work were never greater. The rewards can be ample.

I think that a great deal will depend on the viewpoint you take with you when you leave here. If you are cynical about the future of America, if you are discouraged by the frequency with which the forces of reaction divert us from progress, you may find plenty of reason for pessimism in our imperfect society.

But if you believe in the fundamental theme of human liberty, if you will consider realistically the progress that has been made since Jefferson's time, I think you will be excited by the challenge to help develop our national potential for true greatness.

We have always tended to underestimate our capacity for greatness. We have let ourselves be sidetracked by many petty considerations until, in some period of crisis, we have proved again and again our ability and power to rise to unsuspected heights. Peacetime America today needs the same concept of greatness that united us and lifted us to victory in the last war. In more ways than one, we hardly knew our own strength until we were challenged to defend ourselves against a doctrine and a force that would have destroyed our ideal of human liberty.

Because the challenge is less obvious and less dramatic, we probably do not appreciate our own strength for constructive leadership today. The challenge now does not call for guns or tanks or planes or fighting ships. It is a challenge to raise the living standards of all the people in the one nation that is still capable of meeting that kind of challenge.

America has the potential strength to wipe out every slum, to provide a decent education for every child, combat ill-health, and to provide equal opportunities for men and women of all races, creeds, and colors.

Our potential for greatness will not be reached until we have met those challenges.

Those are jobs worthy of our mettle and our resources. Instead, we see our great strength being dissipated daily in time-consuming nonconstructive activities.

We have let red-baiting achieve almost the dignity of a profession in which petty men and women devote their entire energies to proving guilt by association.

We see the fundamental question of civil rights—human rights—become a partisan political issue in Congress and in some of our State legislatures.

We see courageous men and women in business and the professions shrinking from the assumption of public responsibilities to avoid being smeared as subversive or disloyal.

We see an America in which, for the first time, people are becoming afraid to think objectively and to speak frankly in the great liberal tradition of the Nation.

The cost of this kind of hysteria comes high. It costs time, money, and effort to set up "thought police" anywhere in the world. We could have built a great many schools with the appropriations that have been voted to loyalty investigating committees in America during the past decade.

Our fears and our hysteria are costing us dearly in terms of the ammunition they provide those nations which are opposed to our system of government. In a very real sense we are paying for the propaganda ammunition of our critics.

We are certainly cheapening our prestige abroad when we give such a convincing demonstration of our fear of the tiny disruptive minority in our midst. The good that we are doing with the European recovery program and the friends we may be winning through our Voice of America broadcasts are being offset daily by our apparent concern for our own survival.

The most important commodity we can export today is the prestige of American strength engendered by American democracy. That prestige is threatened and the work of our diplomats is hampered every time we betray our hysteria.

It is time we got on with our real job, the job of strengthening the principles of human liberty and making America a constructive force for good in world affairs. We must revise our thinking upwards in estimating the good that we can do not only for ourselves but as an example to all the peace-loving nations of the world. We did not ask for a position of world leadership; it was thrust upon us. As long as we have it, we must face up to a scale of responsibilities that requires more honesty and more courage than has ever been demanded of us in the past.

If we do not face up to our responsibilities, if we fumble them, world leadership may well pass to other peoples who may not hesitate to destroy us—and our principles—to suit their own ends.

Why should we be afraid?

We have proved our greatness many times in the past, always by raising our sights, by calling upon strengths we never knew we possessed. Today, facing tremendously greater challenges, we have still untapped reserves upon which to draw.

The challenge issued by Franklin Roosevelt—the only thing we have to fear is fear itself—remains to be met.

If we can conquer that, nothing can keep us from realizing the American potential for greatness in the crucial years ahead.

Strike in the Hawaiian Islands

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith a timely and pertinent editorial with reference to the continuing strike in the Hawaiian Islands.

This editorial emphasizes the need for President Truman to take action at an early date to terminate this calamity.

WHERE TOJO FAILED, BRIDGES SUCCEEDS

For a while after Pearl Harbor, the greatest concern of every American was the safety of Hawaii. Anxiety did not cease even with the Battle of Midway. Hawaii was not only the key base of the Pacific; it was a community of imperiled Americans—almost the forty-ninth State.

PRESIDENTIAL FRUSTRATION

Things have changed. After Pearl Harbor the Japanese never raided the islands and could not blockade them. But Hawaii is blockaded now. The CIO blockade is the most successful operation of its kind since the German U-boats very nearly starved out Britain, just before we got into World War I.

Mainland Americans seem to be strangely uninformed, or perhaps merely uninterested, in the Hawaiian blockade.

President Truman is excepted from this indictment, for he said that he is "very actively interested." But he also said, at the same time, that he has no powers to deal with the Hawaiian strike, which is imposed by the International Longshoremen's and Warehousemen's Union, Harry Bridges, president.

This is even stranger than the general indifference to Hawaii's plight. For President Truman also said, in the course of the debate over a new national labor law, that the injunctive power in the Taft-Hartley law is unnecessary because the President has an inherent power to deal with emergencies affecting the welfare of the American people. Well, then, injunctive power or no injunctive power, why doesn't Mr. Truman exercise his mandate? The Hawaiians are Americans in the same lawful standing as the citizens of Mr. Truman's State of Missouri, and their welfare should be equally Mr. Truman's concern.

As Commander in Chief of our armed forces Mr. Truman could authorize a multimillion-dollar air operation to feed our former enemies in Berlin, blockaded by the Russians. But, he says, in effect, his powers fall short of being able to maintain normal supply of beleaguered Americans.

THE ILWU STRATEGY

The strategy of the ILWU high command is simple. The strikers will not unload ships at Honolulu and the longshoremen of coast ports will not load ships destined for the islands. In consequence the Association of American Railroads issued an embargo against virtually all Hawaii-destined freight because the much-needed cars would not be unloaded at the coast docks.

The Hawaiian Islands cannot support their population without mainland supply. They are less able to produce food than England. They have a purely export economy, growing and processing and shipping cane sugar and pineapples. Cut the sea lanes and they die. No money crops go out, no food comes in. Few can work and everybody except the Army and Navy personnel face the threat of starvation.

Starvation of the islanders was in prospect when the ILWU graciously agreed to unload enough shipments of food and other emergency materials to sustain life. The act of mercy was a taunt. It declared to anybody who might be listening that the life, liberty, and happiness of more than half a million people—as many as there are in Arizona and Nevada together—are dependent on the line of a Kremlin-bound, CIO-affiliated union.

For there is no reason to doubt any more that the ILWU leadership follows the Communist line. Even CIO President Philip Murray has acknowledged the fact by his actions. Louis Budenz, the backsliding editor of the Daily Worker, said last August at a Honolulu hearing that Communists consider Hawaii the prime target for infiltration because of its role in the defense system. He added that the Communists probably had not been as successful as they would have liked, but 10 months later he might amend that observation.

STATEHOOD AFFECTED

Economic disorder and the threat of hunger are not the only penalties the ILWU has imposed on Hawaii. The union's command of the islands has very likely postponed the day when they will become the forty-ninth State. Last year the House passed a bill to admit Hawaii, and it died in the Senate. But the halfway success encouraged Hawaiians to think that they would do better this year. Yet the event is on the contrary, and it is not difficult, as the Cleveland Plain Dealer points out, to ascertain the reason:

"The fact is the Congress does not relish the idea of admitting to the Union a new State which might conceivably send to Washington two Senators and a Representative who either would be members of the Communist Party or dominated by the Communist-controlled CIO Longshoremen's and Warehousemen's Union."

That is no free speculation; two years ago the ILWU almost won control of the Territorial legislature.

This is probably the first time since Jefferson's day that an alien hand has exercised an effective influence in an important area of American affairs.

But Mr. Truman no doubt would call this hysteria.

Foreign Policy—A Game Being Played by Big Money Men and Politicians

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the people of the United States do not yet realize that our present foreign policy is being dictated by big-money men and politicians who profit personally. As down through history, so today, it is the ordinary man who fights the battles and gives his sons and daughters in war so they may continue their selfish ways. They are the ones who are sparking the global program of Truman and the State Department and at some future date our sons will go forth to battle again to protect the investments of the cunning rich.

Mr. Speaker, as part of my remarks I am including an editorial from the Chicago Sunday Tribune of June 19, 1949. It calls the turn of Democratic foreign policy:

WHERE WE CAME IN

There is a certain irony in contemplating a book by the late Prof. John H. Latane, of Johns Hopkins University, first published in 1918, and revised in 1922. The title is "From Isolation to Leadership." Mr. Latane felt on the date of first publication that "the United States was at the high tide of its power and influence." When Woodrow Wilson's League of Nations was rejected, he felt obliged to revise his earlier enthusiastic appreciation of what he considered America's assumption of world leadership. The United States had let him down.

"I do not regard the verdict of 1920 as an expression of the final judgment of the American people," he wrote in the 1922 revision. "The world still waits on America, and sooner or later we must recognize and assume the responsibilities of our position as a great power."

At the time of Professor Latane's death in 1932, his hopes seemed far from realization. Within a month after the professor died, Mr. Roosevelt, as a prospective candidate, was called upon to express himself on the League of Nations and internationalism in general. He rose to the call in a public declaration largely excised from his published papers. He asserted that he did "not favor American participation in the league" and that such

participation "would not serve the highest purpose of the prevention of war." Calling upon Europe to settle its war and postwar debts, he said, "Europe owes us. We do not owe her."

Mr. Roosevelt, as is now well known, subsequently underwent a decided change, put the United States into great wars in Europe and the Pacific, and invented a new league called the United Nations. The United States at the moment is fully committed to the kind of internationalism so highly prized by Professor Latane, and the professor, if he were with us, might consider with satisfaction that the United States had, indeed, by his terms, moved from isolationism to world leadership. Certainly we are promising to fight everybody's wars and pay everybody's bills.

The only thing wrong with the thesis is that we were never "isolationist" in the peculiar meaning coined by Mr. Roosevelt and former Secretary of State Cordell Hull, and that we are not now leading the world in foreign affairs and never have so led it. Mr. Roosevelt in 1932 did not think it wrong to endorse the policy of nonentanglement offered by George Washington and to maintain our international freedom of action. He could not regard the Monroe Doctrine, American intervention in three wars within 50 years in the Eastern Hemisphere, and participation in various international trade and other agreements as isolationist.

As to leadership through foreign policy, that was another figment of the imagination. John Hay was applauded as the father of the "open door" in China, but that policy was taken at English direction for English benefit. The Anglo-Japanese alliance of 1902, recognizing Japanese special interests in Korea, was followed 3 years later by the use of Theodore Roosevelt's good offices to hand over control of Korea to Japan.

Secretary of State Stimson's policy after the Japanese occupation of Manchuria in 1931 was portentous in the later development of American policy toward war and foreign intermeddling. It envisioned the imposition of economic sanctions, and close collaboration, if possible, with other nations in enforcing sanctions, together with a willingness to accept the practical certainty of war if the sanctions failed.

President Hoover would have nothing to do with it, but on January 9, 1933, after Roosevelt's election, but before he took office, and while Stimson was yet a member of Hoover's Cabinet, Stimson met Roosevelt privately and committed him to the Stimson "doctrine." That doctrine was a Wall Street lawyer's policy in support of English investments, which in China were many times our own.

Seven years after this meeting, Roosevelt took Stimson into his Cabinet as Secretary of War and there conferred upon him full power to employ the moral, economic, and military sanctions contemplated by the Stimson doctrine. Stimson later confessed his objective was how to maneuver them (the Japanese) into firing the first shot. A highly stationed naval officer charged with implementing this design admitted that war with Japan was sought primarily as a means of bringing "Germany into the war against us in order that we would be able to give strong support to the United Kingdom in Europe." In other words, the policy was to get into Britain's war with Hitler in the British interest.

Mr. Roosevelt's leadership at Tehran and Yalta and Mr. Truman's leadership at Potsdam, together with Roosevelt's lunacy in permanently shattering the European balance of power through persisting in the demand for Germany's unconditional surrender, have now brought us up against the terrible menace of Russia, aptly described by the late historian, Charles A. Beard, as one of the most ruthless Leviathans in the long history of military empires. The upshot is that we face a perpetual condition of cold war at vast expense and with no predictable outcome.

Plenty of Americans have profited and are profiting because of this idiocy. It brought unprecedented Presidential tenure to Roosevelt and the whole tribe of politicians who troop after him and now point to the United Nations and their asserted labors in the cause of peace as all of the evidence necessary to vouch for their good faith in having brought these calamities upon us. That was also Wilson's device when he created the League of Nations as a testimonial to his humanitarian impulses in having consigned America to the European slaughter.

The war contractors, the suppliers and brokers under the Marshall plan, the lawyers who work out the intricate details—these and many more also are cashing in on America's so-called world leadership, while the ordinary citizen foots the bill. Insofar as there is an American foreign policy, it is to take every risk and make every sacrifice for the politicians and the big money men who, alone among Americans, benefit from America's new world role.

Fallacy of Slum Clearance Shown by Local Marshall Heights Plan

---

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. PHILLIPS of California. Mr. Speaker, for 3 years the Subcommittee on Independent Offices, of the House Committee on Appropriations, has been trying to get information from the National Park and Planning Commission on what it really intended to do in a small subdivision called Marshall Heights, and just what was to become of the Negro citizens who now live there and who have committed the unforgiveable sin, to a professional planner, of having bought the land and built their own homes, without Government aid, help from the planners, loans, or mortgages. In other words, they represent a class of people who, if bills like H. R. 4009 should become law, would eventually become extinct. Their houses would be called substandard on a formula set up by the Planning Commission, and since the Commission, or one of the cooperating agencies—for Mr. Speaker, it is a little difficult to determine just which one of the several agencies involved is responsible—has put out a freeze order, it is more difficult than ever for the property owners of the district to improve their properties.

The subcommittee is also going to investigate the recent cancellations of insurance in that area, after years of writing policies without question. To quote from the hearings on the third deficiency bill, 1949:

Mr. PHILLIPS. Do you think there is any connection between the cancellation of these policies, and your refusal to go in with the plans of the Planning Commission?

The WITNESS. There is no doubt about that We think they work together.

Mr. PHILLIPS. You think that was not just a coincidence?

The WITNESS. No, sir.

These hearings contain interesting information. On page 507 you will read the paragraph quoted from the report of the subcommittee at the time it reported the appropriation for fiscal year 1950. Congress told the Commission we were still waiting for information, and disallowed all but $20,000 of the money requested. That item was to finish and print the report.

You will discover that the Commission calmly says that these citizens, who have bought and built their homes, must give them up, and make one of three choices, first, to take the pittance—possibly as low as $150—and move miles farther out; or second, apply it as a down payment on newly built houses, thus acquiring a nice large mortgage in the transaction, which I rise to remark is a poor substitute for a yard and green grass and fruit trees and a place for the children to play; or, third, they may move into the new Federal housing project which will shortly rise on the spot, and be renters from the Government, except of course, that these people may have incomes just too large to make them eligible for such a project. This is paternalism at its best, or worst.

Mr. Speaker, I am beginning to think it is more than that. Turn to page 519 of the hearings; read the statement there:

The Commission is not going to put a limit on how much can be spent by private bidders who may pick out this section and build $12,000, $13,000, or even $30,000 homes on it, or high-grade apartments on it. There is a lot of available land, and even some of the more responsible builders have indicated they are very much interested, because it is a potentially marvelous building site.

Yes, Mr. Speaker, potentially marvelous, but only if Congress acquiesces in the plan to kick out the home owners who were promised this area as a place to buy and build for themselves, and who now live there in their own homes, free of debt, unaided by professional planners, independent, in a spot only 20 minutes from downtown. Do not overlook this last item, Mr. Speaker; do you suppose the Commission would be so interested if it were less desirable for "$12,000 $13,000, or even $30,000 homes" which very obviously will not be the homes of the Negro citizens who thought it was theirs by the right of purchase, of development and of occupation?

There has just been uncovered another interesting phase of the situation which did not occur to the subcommittee at the time of the hearings on the third deficiency bill. The problem is now beginning to relate itself to the discussion on H. R. 4009, the so-called slum-clearance or housing bill. In the hearings, the engineer commissioner, General Young, testified:

The city is automatically required to put in sewers and water to serve any new subdivision of land.

Now look at this from two angles: In the case of Marshall Heights, the District has done no such thing. It has brought sewers and water to all the developments surrounding Marshall Heights, but has refused to give this service to that development. On the other hand, in connection with the hous-

ing bills, this cost of sewers and water is an additional cost, necessary in every building project, but not figured in the costs estimated on this floor in connection with H. R. 4009.

While I was trying to figure this out, Mr. Speaker, the mail brought me a little mimeographed paper, called the Wood Industries Weekly, the editor of which is shown as Floyd B. Quigg. It is evidently published here in Washington. Since it refers to Marshall Heights and also to this matter of sewer and water costs, not previously considered, I have asked unanimous consent to reprint the article in connection with my above remarks, almost in its entirety, as follows:

MARSHALL HEIGHTS

"Saving" the cost of distribution of lumber and plywood (and other home-building materials) by having Government housing officials perform the tasks of private distributors, and charging the cost of these services to the taxpayers instead of to the buyers, was disclosed as an essential feature of Government aid to private builders in the lowest-income brackets, at least, by testimony June 20 before the Thomas subcommittee of House appropriations.

It was not made public until Thursday noon, however, when the full committee reported out the third deficiency bill disallowing the $2,180,000 item for slum clearance and redevelopment in the District of Columbia. The money was asked to buy outright the all-Negro subdivision Marshall Heights, and one of the chief witnesses urging the appropriation was Maj. Gen. U. S. Grant III, whose National Park and Planning Commission had decided that Marshall Heights, with its debt-free homes and its voluntary segregation, is a slum.

The Board of Commissioners, governing the District, had agreed that the area is "substandard," and that had made it legal, because the Seventy-ninth Congress in the District Redevelopment Act of 1946 had provided that in the District of Columbia, "substandard" means whatever the Commissioners as a board may decide that it means. So here they were, trying to get money to put these official findings into effect. Testimony, however, developed the rather disturbing fact that the officials' idea on buying the homes in the area was to pay, in condemnation, twice the assessed valuation or $150 for a 25-by-100-foot lot and the house built on it. It was suggested by the Congressmen that this would not be enough to enable a man to buy or build elsewhere, and they asked what the Planning Commission or the Board of Commissioners might be intending, or be in fact able, to do for these families to help them get a new start.

General Grant had this answer: "Now, there are other things that can be done and which probably no one has thought of * * * ways in which the land agency could assist these people to rebuild houses. If they buy back a new lot or exchange a lot, perhaps without any cash payment beyond what they have, and they get a small cash payment for their house on the basis of its value, that cash payment would be enough for them either to make a first payment on a very low-cost house to somebody else, or the land agency could make arrangements for the purchase of materials for building a low-cost house and, by getting the wholesale prices on materials, these people could rebuild, themselves."

What sort of arrangements could and would the Land Agency make? How would they make the wholesale prices available, except as a subsidy? Then, having hidden the costs incurred by their efforts, within the unsearchable mysteries of Government bookkeeping, what might they say about the saving effected by not needing services of the distributors? Finally, just who would be supplied at these prices, and how would he have to part his hair or move his voting finger?

Important questions, these, because the housing bill now being debated in the House and nearing a vote, and already passed by the Senate, includes substantially the same formula for action as does the District law, for taking property away from one group of owners, replanning it, and turning it over to others, private and public, to sell it in a new incarnation.

"THEM AS HAS, GETS"

Brig. Gen. Gordon R. Young, the Corps of Engineers member of the three-man Board of Commissioners, doubtless was expected to be a tower of strength to the planners' cause, but as a tower he didn't do so well. It was he who put into the record just who besides the poor and downtrodden may be expected to benefit by the redevelopment. He quoted the Planning Commission as promising that it "is not going to put a limit on how much can be spent by private bidders, who may pick out this section and build $12,000, $13,000, or even $30,000 homes on it, or high-grade apartments on it. There is a lot of available land, and even some of the more responsible builders have indicated they are very much interested, because it is a potentially marvelous building site."

This process of taking choice property away from the poor, who presumably can't appreciate a beautiful view, and paying a miserly sum for a "potentially marvelous" site which somebody else sells at a high price, is what the word "redevelopment" really means. Congressmen wondered how the planners expected to have the new private homes financed, which they said would so surely be built, and asked about FHA. The nearest to a definite answer Mr. Thomas could get, to this direct question "Will FHA make any commitments out there?" was this from General Grant: "I do not see why not." It appeared that nobody had asked FHA officials about it. When, however, the chairman asked how the private builders could be assured of sewers, in a subdivision which has been refused sewers, General Young piped up with all the positive assurance anyone would ask.

"Oh, we do; the city does, out of the tax moneys," the Commissioner said, as to who would spend the money. "We will build at our own expense, with a certain assessment for sewers, and we will build whatever streets are necessary, put in the sewers, and put in the water to serve any new subdivision of land. * * * The city is automatically required to do that whenever there is a new subdivision. If you, as a private developer, bought a piece of land, had it subdivided, and get our O. K. on the subdivision, we would have to move in right away and give you water and sewers, which comes out of the water receipts and general fund."

PAYING FOR SLUM CLEARANCE

Lumbermen in all parts of America—or for that matter, any citizen—need to bear in mind a peculiar condition if they would appreciate the full beauty of that statement by the engineer commissioner. In one respect this is a local matter, but it is local to the Federal City and it is directly under the control of Congress, through committees of the Senate and the House. Residents have no vote, but express their views in resolutions by neighborhood associations of citizens, and by individual letters to Senators or Representatives of the respective States in which they hold voting residence. For whatever happens in the District there is therefore a national responsibility, very difficult to pin down through all this diffusion of powers. Possibly this law about financing utilities in subdivisions does not hold true in other cities.

Possibly it does, however, and to the extent that it does, the local equivalent of the "water receipts and the general fund" are in effect an extension of every cent the Congress may legislate and then appropriate for slum clearance under the housing bill now pending in the House.

Presumably the laws cited by the good general were intended to encourage builders who would be adding new areas to the city, resulting in presently unoccupied land being subdivided and sold, and then improved by city homes. This interpretation, by the custodians of the city funds, means that any time these custodians may decide to approve of a replanning of an area, which approval would be hastened by the plentiful publicity which the housing agencies seem always able to command, the city's taxpayers would be required to pay for a new lay-out of streets, and presumably whatever water and sewer facilities the redevelopers may desire.

What this will cost local taxpayers if and when the housing bill is enacted into law, is beyond the scope of my feeble imagination. Nobody even thought to ask what it would cost the taxpayers of the District, for this one subdivision, Marshall Heights, over whose potentially marvelous sites those unnamed redevelopers are now covetously drooling. Well they might; under the 1946 law they don't have to buy on competitive bids, but only by knowing the right people. Maybe it is not too much to suggest that Congressmen, who have some kind of responsibility to the continued solvency of their constituents in the home towns, might try to find out what this cost might be.

Bypass: Under the hammering of Representative JOHN PHILLIPS, Republican, California, who did the amazing thing of actually visiting the area and seeing for himself the attempted steal of ownership rights in the name of progress, the appropriations for buying this subdivision have been blocked in the past and they were blocked again this time in the third deficiency. It is pleasure to record that other members of the subcommittee had read this writer's report of a visit to the area, and on this occasion they moved in actively to join the Phillips attack. The committee, in its report of the bill, demanded that instead of asking for funds the District Commissioners should withdraw their approval from the project, and should give the present owners of property in Marshall Heights the same financial support in streets, water, and sewers that they would give the proposed new owners. Also the committee suggested that the ban on new buildings and major repairs in this area be lifted.

Does this look like virtue has come out triumphant? If the housing bill passes, the planners can laugh at the committee; then they can borrow from the Housing Administrator, and bypass Congress.

Please read that last paragraph again, Mr. Speaker, and carefully. That is what is in the Housing bill, H. R. 4009, now on the floor of this House and coming up for our votes.

Address of Hon. Dewey Short, a Representative in Congress From the State of Missouri

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the

following address which I delivered before the annual convention of the District of Columbia Bankers' Association at the Greenbrier in White Sulphur Springs, W. Va., on Thursday, June 16, 1949:

Mr. President, members of the District of Columbia Bankers' Association, distinguished guests, and friends, I didn't know that I would be called upon to suffer hearing my biography or obituary read. I don't know where you gathered all that information.

It is a high honor and a distinct pleasure to be invited to address the thirty-first annual convention of your distinguished association. It is always a relief to escape the madhouse in Washington, perhaps the only asylum on earth run by its inmates, to come from that belligerent atmosphere where we constantly breathe the air of disputatious contentiousness, to the quiet and peaceful hills of West Virginia.

My father happened to have been founder of the little bank in my home town down in the Ozarks of southwest Missouri; my brother was for years cashier of that bank. Several years later it was forced to close, but I am happy to say that we paid all depositors and discharged all obligations 100 cents on the dollar; and still, I think, have, perhaps, the respect of the people of that community, at least they have been voting for 18 years for me for Congress. So, though opprobrium has been heaped upon your heads at times and men in high places in recent years have referred to you as plutocrats, princes of privilege and economic royalists, I am thoroughly convinced that bankers, after all, are not the worst people on earth. So I am glad to be here this morning.

You have asked me to discuss economy in Government spending. There "jest ain't no sech animal," but it is high time we began practicing a little economy if we want to retain our freedom and to keep our American form of government.

Before I shall discuss some of the pressing issues of the hour I want to take a few minutes. I want you to pause with me long enough, to take a little inventory, see just where we are today. Twice in our generation we have fought and won two world wars at enormous cost. Over three decades ago the First World War ended. That conflict cost us $31,000,000,000, 334,000 casualties, and left a debt of $26,000,000,000 on our backs. Following the signing of the armistice we took care not only of our allies, the Belgians, and others, but we took care of our defeated enemies, the Germans and the Austrians. We loaned more than $13,000,000,000 to the different nations in Europe, and with the single exception of little Finland, not one dime of those billions has ever been repaid or will be. We got higher taxes, a greater debt, and many graveyards abroad out of that war, because we entered it without pride of power, without lust of ambition, without desire for imperial dominion. We came out of it and didn't ask for a dollar of indemnity or an acre of territory, and we got just what we asked for. We did get ten long years or more of a prolonged and paralyzing depression. We fought that war to make the world safe for democracy, but failed to achieve our objective.

As a Missourian who has to be shown, I saw with my own eyes, first-hand, as a student at Heidelberg, Berlin, and Oxford following that World War, democracy die all over Europe. I saw the rise of totalitarian governments. I saw freedom take wings and fly out the window. I happened to be in Rome when Mussolini, with his "black shirts" marched on the capitol to dissolve the Italian Parliament and set himself up as "Il Duce," absolute ruler. Day after day, week after week, and month after month, visiting Europe many times between the two World Wars, I saw the rise of nazism; like Mussolini, Hitler destroyed all political parties except one. You had a Fascist Party and only a Fascist Party in Italy; you had a Nazi Party in Germany. Wherever you have one-party government you have one-man rule, and he was court, congress, and executive all wrapped up into one. His word was absolute law.

The same thing took place in Soviet Russia, and enigmatic as that country and the people are, they are not so different from other people. I saw the rise of communism, Stalin coming forth just as these other totalitarian dictators, to set up perhaps the most ruthless and absolute authoritarian government that the world has ever known.

So after the vast expenditure of men and of money, we failed utterly to make the world safe for democracy. "As the dog returneth to his vomit, so the fool returneth to his folly." Many of us slipped back into the old grooves of selfishness and greed, of apathy and indifference, and we drifted during the late twenties and in the thirties until suddenly on that Sabbath morning, December 7, 1941, for the second time in your brief life and mine, we found ourselves suddenly plunged once more into the vortex of rebellion and slaughter, a global conflict more cruel and devastating in its consequences, more costly in human lives and the world's treasure than the war of a quarter of a century ago. We won this last global conflict at an astronomical sum. Your finite mind, as well as mine, even though you are bankers who deal with figures constantly, cannot begin to comprehend what this last war cost us, nor do the American people comprehend or appreciate the unbelievable burden that has been heaped upon us. This last conflict has cost the American taxpayers, or will when it is ultimately paid, if ever, $340,000,000,000, a sum approximately equal to the total assessed valuation of this Nation. It left upon our backs the crushing load of a $252,000,000,000 debt. It was really two hundred and sixty-eight billion, but we have reduced it to $252,000,000,000 to date. We suffered 1,061,000 casualties. Over 300,000 of the finest young men of America gave their last full measure of devotion; 750,000 of their comrades have come home with arms and legs blown off and eyes put out and hope killed in their breast and the light gone out of their brain.

As the ranking member of the minority on the Armed Services Committee, it has been my sad but necessary mission to visit many of our hospitals and asylums. I have seen these human wrecks, many of them neurotics who will spend the remainder of their days in psychopathic wards, mere shadows of the men they once were or might have been. Not only did we spend $340,000,000,000 during the war, but we furnished $50,000,000,000 in addition in lend-lease to our allies; thirty-one billion to Britain, eleven billion to Soviet Russia, three and a third billion to France, three and a third billion to other nations including China, and one and one-half billion to Italy.

Since VE-day and VJ-day we have furnished other countries in grants, loans, and gifts more than thirty-two and one-half billion dollars.

When you fight two wars in one generation you pretty well drain many of your resources. We pumped many of our oil wells dry, we dug out the lead and zinc down in the great tri-State area in my district around Joplin, Baxter Springs, Pitcher, and Miami, in Missouri, Kansas, and Oklahoma, where we produce 40 percent of the lead and zinc of the United States, where we have marginal mines today that are closing down, throwing thousands of miners out of work. I went only yesterday morning before the Rules Committee trying provide premium payments in order to keep thousands of miners off the relief rolls or to ease the burden of unemployment compensation. We dug out much of the copper in Arizona and Montana, we cut down our forests and are consuming lumber in this country today 10 times as fast as we grow it. And then you wonder why the high cost of housing. We consumed much of the iron ore up on the Messabi Range in Minnesota until industrialists in Cleveland, Chicago, and Detroit come to us, as well as from Pittsburgh, saying that at the present rate of consumption it is possibly only a matter of a few years until we will have to import iron ore into this country. Fortunately we have made significant discoveries of rich deposits in both Labrador and Brazil.

I have taken these few minutes to speak of these two World Wars and the enormous sums we have spent in both blood and treasure, to show that many of our natural resources have been depleted, some well nigh exhausted. We fought this second conflict in order that the little nations might determine for themselves without outside pressure or external influence, in free, open, and untrammeled elections, the kind of government which their people wanted. Mr. Roosevelt and Mr. Churchill both told us and we all agreed, that with the high ideal and the worthy objective, we were fighting this last conflict to respect the territorial integrity of the little countries. We were fighting in order that the little people in the little nations could choose the kind of government they wanted. Just before the surrender of Germany and the capitulation of Japan, one of our erstwhile allies seized a large hunk of Finland, Estonia, Latvia, Lithuania, Besserabia, Ruthenia, overran the Balkans as well as the Baltic, seized all of Poland, East Prussia, Yugoslavia, and Czechoslovakia, threatened both Iran and Greece in the Near East; and then out in the Pacific, raped, robbed, and plundered Manchuria. What they couldn't carry off they deliberately and wantonly destroyed. And, again, we have seen that with our own eyes; Russia's seizing the north half of Korea, the south half of Sakhalin, all the Kurile Islands, and vetoing as a member of the United Nations every reasonable proposal that has been offered by the Western Powers.

Just as we failed in the First World War to make the world safe for democracy, so in the second world conflict we failed to achieve our objective or reach our goal in respecting the territorial integrity of the little nations and making it possible for the small peoples and the small countries to determine for themselves in free, open elections the kind of government they should have. So, naturally, we are living in troublous and trying times. It is difficult not to give way to pessimism and cynicism. After all, these vast expenditures of men and money, fighting two wars, and now called upon to take care not only of our former allies, but our enemies as well during these years of peace, voting more this year than we did last for European recovery, try men's souls.

How much longer can we go on, gentlemen, without running on rocks? A nation is no different from an individual. A government is just an aggregate of individuals.

No government can continue to spend more money than it takes in without getting into serious difficulty. You bankers wouldn't dare run your business that way. And with all of our resources, our scientific skills, our inventive genius, our technological know-how, the United States of America simply cannot forever feed, clothe, house, and take care of the rest of the world. It's just too big and there are too many people. While I like to think I have the milk of human kindness in my veins, perhaps I am cold-blooded enough to realize that we must keep ourselves strong because a bankrupt America will never be able to help anybody if we go under. God knows, that's the last straw for the world.

Now we are pretty much "busted" and don't know it. When we came back at the first of the year, my fellow Missourian offered

quite a spending program to the Congress, and it's laudable in purpose. We all believe in good health for our citizens, we believe in fine education, we believe in Americans having decent homes; but we know that many of these objectives—that the promise to guarantee security from the cradle to the grave, laudable as it might be, is an absurd promise impossible of fulfillment.

Immediately following VJ-day, Walter Reuther and his associates were told that they could demand and get 30-percent increase in wages. At the same time the increase was promised in wages, the consuming public was told that we were going to keep prices down. Well, if you can increase wages and the cost of production and hold down the price of the finished product, you're good, but I don't know of anyone except a bankrupt haberdasher who would offer such a preposterous proposal.

Mr. Brannan comes forth now with a fantastic farm program. Oh, it would be wonderful to pay the farmer higher prices and then give the consumer cheaper products. Brother, if that can be done, he's the answer to our prayer. It's a good vote-getting scheme, but I think the American people want to be dealt with honestly. What is this Congress going to do? Well, I think I can safely assure you gentlemen that there will be no $4,000,000,000 additional taxes voted. My good friends HARRY BYRD, ED JOHNSON, and WALTER GEORGE are going to see to that over in the Senate.

Repeal the Taft-Hartley law? With all its shortcomings and mistakes, I think it has worked fairly well and proved itself satisfactory to workers, to the employee as well as the employer and the general public. It will not be repealed, and I seriously doubt if those who are clamoring for its repeal are honest and in dead earnest. They may change its name, they may accept a few corrective amendments which are acceptable to all of us, but the substance of the law will be kept.

Civil rights? Not as much chance to get that through either House of Congress as I have jumping over the moon. Lots of crimes have been committed in the name of civil rights. But I think the American people, Old Dealers, New Dealers, Democrats, and Republicans alike still believe in the Constitution and are not going to be led astray by a political slogan used for political purposes.

Federal housing? Well, I don't know whether they will shove it through or not. It is doubtful, but I hope not. We did pretty well on the continuance of rent control; we emasculated that or changed it. Where some semblance of justice is dealt out I have always believed that it was an honor to own property and not a crime, and I have always believed that a just return on an honest investment, whatever your money is invested in, is a perfectly legal and legitimate enterprise.

Federal aid to education? We all believe in education, but if they vote it, it is going to cost my taxpayers out in Missouri $1.57 for every dollar we get back and we just don't want it. It's bad business; that's bad banking.

Ah, we're spending tremendous sums. You know what this Congress already has voted? For the next fiscal year—it will begin in a few days, the 1st of July—we have voted $15,905,000,000 for our National Military Establishment. That's almost $16,000,000,000, and I voted for it and I believe in it. It's painful, it's a staggering sum, it's a heavy burden to bear; but if we are going to make cuts in appropriations, I think at this critical point, with the uncertainty that hangs over our heads, the last cut we should make would be in our Military Establishment. We must, out of sheer self-defense and for survival, remain strong on land, sea, and in the air until the United Nations becomes more firmly established, with an international police force to carry out its decisions. As long as there are brigands in the world, aggressors who would swallow up and divide not only the little countries in the world, but whose chief aim and primary objective is world-wide domination, more through psychological penetration and infiltration than by armed conquest, nevertheless the only language those aggressors understand is the language of force. They respect strength; they have only contempt for weakness. So, at least for the next year or two, we must have a strong Army, Navy, and Air Force, we must carry on our scientific research, technological developments, and hold fast to the atomic bomb, bacteriological, and other modern forms of warfare.

The Veterans' Administration will spend approximately $6,000,000,000 in the coming fiscal year, or as much money as it cost to run this Government before the war. To one agency we have voted $5,500,000,000 for European relief, and the interest on our Federal debt is approximately five and one-half billion. Now, then, add them up, four items: National defense, sixteen billion; Veterans' Administration, approximately six billion; European aid, five and one-half billion; interest on the public debt, five and one-half billion. There you have an annual budget of $33,000,000,000, without a single dime for any of the natural, normal, ordinary functions of Government; nothing for agriculture, forestry, merchant marine; nothing for all of the courts and judges; nothing for the legislative branch; and nothing for all the executive branches of Government. Thirty-three billions of dollars—mostly for wars of the past, threats of the present, or war that might occur in the future.

We all know we simply cannot carry that load indefinitely. Our budget—almost $42,000,000,000—more than four times more than any other peacetime budget. In 1933 the annual budget to run the whole Government was $5,500,000,000; in 1937, just a little over seven billion; and the greatest peacetime budget in all our history prior to the war was in 1939, when it was a little in excess of $9,000,000,000. Yet here we've got a budget of $42,000,000,000, and the President wants the Congress to give him $4,000,000,000 more taxes.

Gentlemen, it cannot be done. The first line of defense of any nation is its financial soundness. A bankrupt country never licked anybody.

I don't know all the reasons for this. Of course, two wars drained us and sapped us, but we spent too much money we didn't have even before the war came on. Back in 1939 I think we had about $7,000,000,000 of this lettuce, cabbage leaves, in circulation, a little over $7,000,000,000 of greenbacks in the pockets of the American people, and today there is over $28,500,000,000 in circulation. We've got more dollars, but what in the devil will they buy? It's getting to be cheap money.

I would that we would follow the sound advice and hard-headed judgment of the senior Senator from Virginia, HARRY FLOOD BYRD. Now we all know that in recent months farm prices have declined. Business has tapered off, and we are now threatened with a deflation more than we are by an inflation. The stock market slumped not too serious, but it's a little painful to me. Confidence has been shaken. Unemployment is on the increase. Why? Due to this enormous spending program.

How we have overworked the word "security," "security." I heard Mussolini on the Via Piazzia Venezia in Roma promise security to the Italian people. I heard Adolf Schikelgruber in Munich and there he promised security and full employment to the German people. Yeah. They got both, full employment and security for a little while. But remember that Benjamin Franklin, one of the wisest philosophers of all time, once said, "He who surrenders his liberty for temporary security deserves neither, and will soon loose both." That's history. History repeats, with instances that corroborate the accuracy of that statement.

Now they want to bring everybody under social security, giving them protection from the cradle to the grave. Ah, we've lost the adventurous spirit of our pioneer ancestors, we have grown soft and we are afraid to dare as did our fathers. In yielding for security and Government hand-outs, dishing out of doles we have lost many of our liberties.

When I was first elected to Congress 20 years ago as a baby member, of good pioneer ancestry, 98 percent of them Anglo-Saxon stock, whose forebears like mine came out of the hills of east Tennessee and Kentucky, down in my district they would have been insulted if anyone had offered to give them anything. But they too like so many Americans have been debauched and corrupted by this notion that the Government owes them a living and will take care of them whether they put forth any efforts for themselves or not. Consequently, they have lost much of their self-initiative, self-reliance, and self-respect. Today, before they do anything else they sit down and write me, "Dear Congressman:" They want to know if they can get a loan or a grant or a gift from Uncle Sam, a hand-out from Washington, weakening the moral fiber of the American people. I repeat they have been debauched and corrupted by an indiscriminate and ignoble philanthropy that is conducive only to the perpetuation of poverty and indolence.

Well, having traveled through Europe recently, and having traveled through Europe in 1931, I can appreciate the vast potential, almost unlimited possibilities of Russia, a vast country with 190,000,000 people in an area almost three times as large as the United States; in many ways richer than our own country in mineral production, in agricultural products, and millions of acres in Siberia that never heard the sound of the woodsman's ax.

It is closer from White Sulphur Springs to Leningrad, much closer than it is from Leningrad to Vladivostok. But I think the strength of modern Russia, of Russia even today with all three of her five-year plans behind her and the progress she has made, and she has made tremendous progress—has been overemphasized. She has produced some great men but the vast majority of the people are still pretty dumb. That is the fault of her leaders—not her people.

I do not want us to drop our guard and be lulled to sleep in a voluntary security because the air lift has been temporarily ended. I came back last December after traveling back and forth along that air-lift corridor in and out of Tempelhof, Berlin. It is a change in strategy and techniques, but there has been no conversion at all in the Russian leaders. The masses of the Russian people possess many splendid qualities and I have only sympathy for them, because for centuries they have been forced to live under the yoke of oppression and the heel of tyranny. You have a dozen or fourteen mad dogs in the Kremlin who are hell-bent on world-wide domination and they will resort to trickery, lies, deceit, chicanery, and employ any measures whereby to achieve their goal. We have too many of them here in this country. Yes, we are keeping our eyes on Russia, and the amount we spend on our own national defense will depend pretty largely on the behavior and conduct of the Politburo; that will decide how much we spend for real national security.

The amount we spend will depend on the behavior of others; but, you know, my friends, I don't fear attack from any foreign power half as much as I fear our own internal moral decay and weaknesses at home.

Abraham Lincoln once said in essence, "If this Nation is ever destroyed, it will not be from without but from within."

I think Edward Markham must have had that same idea in mind when he wrote 30 years ago, long before this last war:

"I fear the vermin that shall undermine
Senate and school and citadel and shrine;
* * * * *
"I fear the vermin that shall honeycomb the
walls and towers of state in unsuspecting
hours."

We have vermin in our midst. It is not a Hitler, but we have the rats in this country who are undermining the Senate, the school, the citadel, the shrine.

They are gnawing at the very foundations of this Republic, and the trials which are going on in Washington and New York now, with all of the ramifications which the public knows nothing about, are sufficient warning to put us on guard.

It is now 27 years ago, when I first visited Cairo, in Egypt—I have been back three or four times since then—only last November I again rode camels around the great Pyramid of Giza; I looked at the Sphinx and I dreamed of Napoleon addressing his men: "My soldiers, 40 centuries are looking down upon you." I wonder, if you could speak, what secrets you could tell, even of Mark Antony and Cleopatra.

I walked through the remains of the temple at Thebes and Karnak. I went up the Nile to Luxor and Assouan, to the tombs of Tut-Ankh-Amen and Egypt's other great, and when I returned to Cairo I walked through the National Museum, cluttered with a bewildering collection of archaeological discoveries, telling of the ancient Ptolemys and Pharaohs, the great builders whose works astonish man in the twentieth century, and I ask myself the question: "Oh, Egypt, as you grew rich and powerful, why has your great civilization crumbled and lies buried today beneath centuries of sand?"

And I had to answer: "Egypt, as you grew rich and powerful, you grew corrupt and tyrannical." She was not defeated by a foreign foe, but she crumbled because of moral decay and spiritual disintegration within herself. She once had a vision, but she lost it; and as King Solomon wrote in Proverbs: "Where there is no vision, the people perish."

Egypt was destroyed not by some conquering foe outside her border, but it was because of her own internal moral decay and spiritual disintegration.

Then I went down the Tigris and Euphrates Valley to Baghdad, and I saw the ruins of that great civilization of Babylon, and I dreamed of Hammurabi, who was second only to Moses as a lawgiver, and I asked: "Hammurabi's Babylon, why are you like Egypt, perished in the sands of decay?" And I had to answer: "Because as Babylon grew rich and powerful, she, too, grew corrupt and tyrannical; and she, like Egypt, perished. Babylon, too, could not endure prosperity."

You know, often prosperity is more difficult to endure than poverty. However, in the history of nations and civilizations, certainly the Christian church has made great progress and endured persecution and hardship in times of trial and tribulation.

Then I came to the classic land of Hellas, glorious Greece, a land that I have visited a half dozen times in the past quarter of a century. Only a few weeks ago I climbed the Acropolis and walked through the ruins of the Parthenon and looked out on Mars Hill where St. Paul addressed the Athenians, where he said, "Oh, men of Athens, I observe in all things you are most religious." And I went across to the opposite hill where Demosthenes spoke. I dreamed of the Golden Age of Pericles, from Anaximander down to Homer and Phidias to this present hour; of Socrates, Plato, and Aristotle, the great triumvirate of ancient philosopers; and I asked, "Oh, Greece, Greece, that has given the world beauty and music and philosphy and art and poetry, why have you, Greece, with your stately columns"—after which the Lincoln Memorial is copied—"why have you, with all your learning and ancient grandeur and glory perished and now come with hat in hand asking for help from America? Greece, now one of the saddest lands in all the world, weak and impotent?" And I had to answer: "Oh, Greece, you had an Alexander, who at the age of 33 wept because there were no more worlds to conquer; yes, you, too, were rich and glorious." I could hear the Muses and I could see the works of Phidias. "You have perished, and like the works of Egypt and Babylon, you lie buried today in ruins beneath the earth; and why? Because, as you grew rich and powerful, you became weak and corrupt."

Greece perished because she turned her back on the teachings of Socrates, Plato, and Aristotle, abandoned the teachings of her fathers to give herself up to hedonistic ethics and the Epicurian philosophy of "eat, drink, and be merry, for tomorrow we will die." And Greece did die.

Then I visited Rome and I thought, "Rome, Rome, mother of dead empires." I thought of the country which gave us law, order, and government, and through England we have inherited that. Rome with the legions of Caesar extended her far-off domains into Britain, conquered north Africa, destroyed Carthage; and yet this mighty Roman Empire, with its wealth, its glory, its luxury, that gave to the world law and order and government, crashed and went to pieces. Why? She was not sacked by barbarians. Rome broke and went to pieces on the rocks of materialism, selfishness, and greed. Caracalla and Caligula followed Augustus and Marcus Aurelius.

Then Nero came along, and he fiddled while Rome burned. He gave them free bread, free circuses, free entertainment. He was a Santa Claus who took care of everybody. Oh, the state was everything. He gave them security and full employment while he lighted up the city with blazing martyrs. That is why Rome fell, through her own internal political disintegration and moral decay.

I walked along the Appian Way toward the Catacombs of St. Calixtus, over the bridge across the Tiber, up to the Castle of Adrian and St. Angelo, toward the ruins of Romanum Forum, and I stood under the Arch of Septimius Severus, under the Arch of Constantine, and stood in the center of the Colosseum—but there they were, beautiful women, gorgeously gowned, bedecked in jewels, welcoming the deaths of the gladiators who were vanquished. That is why Rome fell, through her own internal political disintegration and moral decay.

Then this last example of corruption. I thought I knew Germany. I have lived among the German people, I have studied in their universities. I have traveled over their country in plane and train. I walked over much of beautiful Bavaria. I think it is one of the most beautiful countries in all the world. They are a great and mighty people, 80,000,000 people who made a mighty contribution to science, philosophy, music, and art. I knew the Germany of Kant, of Luther, of Goethe, of Schiller, of Hegel; I also knew the Germany of Bach and Beethoven and Wagner.

Look at Germany today, a heap of rats, rubble, and ruin, just what Hitler promised. You can go all the way down the Rhine from Mannheim and Ludwigshaven to Darmstadt, to Cologne, Dusseldorf, Bremen, Hamburg, on to Berlin, Leipzig, and Dresden, back to Halle, or down to far-off Stuttgart, Karlsruhe, and even Munich. And what is it? A shambles. I thought I had never seen such devastation until I visited those cities. Why? Because they turned their backs on the teachings of their fathers. They wanted full employment; they wanted security.

The man on horseback came along. They said no one else could do worse and he rolled into power, and the people went down the road to ruin because it was no longer the old Germany. It was the Germany of Hitler and Himmler, Goebbels and Goering, Heydrich and Hess, Terboven and Frank, and other derelicts drunk on power and thirsty for more power.

Well, perhaps this is a funny talk to be giving bankers. I hope, however, it is giving you a little pain in your mind. I hope it will cause you to pause long enough to ask this question:

Will this great Republic of ours go the same road that Egypt, Babylon, Greece, Rome, and modern Germany have gone? Will we grow soft and flabby in this great age in which we live? Will we become indifferent—the politicians sitting down and resting in a false security, thinking the Government will take care of us, whether we take care of ourselves or not?

Will we make free and independent men and not have a Federal bureaucracy over them, curbing their freedom and their liberty? My father never had a floor under him to hold him up and there was no ceiling over his head to hold him down. I am glad I was not born in these later days with all these things in effect. I happened to be born number eight in a family of ten.

I know we must have Government controls, rules and regulations, but I still believe in the great philosophy of the great Virginian, founder of the Democratic Party, Thomas Jefferson, from whom Lincoln borrowed most of his political philosophies and ideas.

I still agree with Jefferson that that country is best governed with a minimum amount of government and a maximum degree of individual initiative and private enterprise, which has made this Government supreme among all the nations of the world; and I have no quarrel with other countries as to the kind of government they want. If Russia wants communism, God knows she is welcome to it. Sometimes I think I should be a Communist because a Communist is a guy who has nothing and is willing to share it with everybody. [Laughter.]

I read in the paper where Paul Robeson was in Moscow and was coming directly back to the United States, and he said that was the country he loved above all others—Soviet Russia. Well, if he does, why the hell doesn't he stay there? I am willing to buy a one-way ticket for all of his kind. They come back with new ideas, new enthusiasm, and I think he said new inspiration. Well, if Russia wants communism, she is welcome to it. I have no quarrel with what she wants. We do not want it here. We want tolerance.

If our British cousins want to nationalize their industry, and they have their railroads, their banks, transportation, and communication—if they want state socialism, let them have it, but I don't think the American taxpayer should be called on to furnish them the billions of dollars of our own money to carry on their miserable experiments. [Applause.] They will nationalize, don't worry about that. They want us to do the same thing. The hour is closer than most people realize. Time is running out. Eternal vigilance is the price of liberty. It is an old saying but it is true and needs to be repeated. Who will take care of us?

We don't want nationalization in this country. We want to keep America free because in freedom there is strength.

It has been a pleasure to be with you bankers. I thoroughly enjoyed my trip down here. I rode down yesterday from Washington. Mrs. Short and I hope you will let us stay and I am going to come in and listen to some of the addresses, because I know I will learn a lot more listening to others than you have learned listening to me. [Applause.]

American Pricing Methods

EXTENSION OF REMARKS
OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, on June 22 the distinguished senior Senator from Wyoming [Mr. O'MAHONEY] delivered a vital address before the Chicago Association of Commerce and Industry on the general subject of American pricing methods.

For more than a year both Houses of Congress, the courts, American industry, and the people generally have been deeply concerned over this problem. The Senator from Wyoming in his able address has thrown considerable light on it. I therefore ask unanimous consent that the full text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN PRICING METHODS

Mr. Chairman and members of the Chicago Association of Commerce and Industry, I am happy indeed to have the opportunity of coming here, but I feel a bit intimidated as I arise to speak because by my place at the table there is a post card announcing that a wire recording is being made of everything that transpires, thus giving me complete assurance that anything I may say will be used against me. [Laughter.]

I think it very significant that the members of this association have been holding conference on this pricing method phase of the great economic problem which confronts all of the people of the United States, and all the people of the world. It is encouraging to note that today you are going to discuss what is competition. I assume from this choice of subject that your purpose is to maintain competition.

If that assumption is correct, and I know it is, it means that you are thinking of maintaining the familiar American system of business and economics—one in which the door of opportunity is open to everyone. I applaud that, because I say if competition disappears, either by the operation of business leaders who seek to promote monopoly, or if it disappears as a result of the operations of big Government, we will have lost the basic American system of opportunity for the masses.

The whole world is struggling today to maintain economic freedom in the face of such dangers. Too many, I think, do not clearly understand that the conflict between communism and free economy and free government will be won not by any warfare—not by a third world war, because such an eventuality would result, I am certain, only in the destruction of everything that we hold sacred now. It would result, I fear, in the destruction of civilization itself, because wars grow more terrible as science progresses.

So, our struggle to maintain a free economy and a free government must be waged here in America. It must be waged under the leadership of men in business and in Government, who appreciate the fact that we can and should maintain our system in such a manner as to promote the world's highest and most stable living standard among the people. In that way, we can demonstrate to the world the superiority of democratic institutions. If we fail to do it, we shall be inviting the totalitarian state.

These considerations were uppermost in my mind when I introduced the bill with regard to freight absorption and delivered prices that passed the Senate, as your Chairman has announced, and which yesterday was approved by the Judiciary Committee of the House of Representatives.

I had two main objectives in mind. The first of these was to abolish the uncertainty about the legality of independent pricing practices which found expression in the minds and in the words of officials of Government upon the one hand, and of leaders in business upon the other.

I was not above suspecting that there were some people who sought intentionally to promote confusion; but even if there were such, the fact that there was also a basic misunderstanding and uncertainty made it essential, to my mind, that the uncertainty should be swept away.

As I stated in my explanation of this bill to the Senate of the United States, when the Supreme Court, the last Court to interpret any law, finds a statute so ambiguous that it divides four to four in attempting to interpret its meaning, then certainly the time has come for the Congress of the United States—the only instrumentality of Government which can do it—to remove the ambiguity and make the law clear.

My purpose was to provide, by statute, a plain and simple declaration that delivered prices and freight absorption, when established independently by a seller, were not in themselves contrary to the Federal Trade Commission Act, which authorizes the Federal Trade Commission to move against unfair methods of competition, and unfair prices. So, the first provision of this bill stated in perfectly plain terms that such freight absorption and such delivered prices were not in themselves illegal.

But that was followed immediately by a proviso, the intent and purpose of which was to protect and safeguard the second objective, which I had in mind, namely, to preserve the antitrust laws and to make certain that in the declaration which legalized, so to speak, freight absorption and delivered prices, we were not making those practices the instruments of conspiracy or combination or monopoly.

It is important, I think, that this proviso should be read. I have the bill before me:

"*Provided*, That this shall not make lawful any combination, conspiracy, or collusive agreement; or any monopolistic, oppressive, deceptive, or fraudulent practice carried out by or involving the use of delivered prices or freight absorption."

In other words, freight absorption cannot, under this bill—and it should be clearly understood—be used as an instrumentality or a device by which to carry out monopolistic, oppressive, or fraudulent practices.

The result of the presentation of the bill under these terms was that it was passed by the Senate without a roll-call vote; and only one member of the Senate indicated on the 1st of June, when it was passed by that body, that he was opposed to the bill as it stood.

As I introduced this measure, it amended not only the Federal Trade Commission Act, with its power to declare what are unfair practices and deceptive practices, but it also amended the Clayton Act, with respect to discriminatory prices. There it ran into a twilight zone, a zone in which there was conflict of opinion and of purpose even among those who felt that the law should make it impossible for a seller to sell at so-called discriminatory prices in such a manner as to injure competition. The question arose whether the law prohibited not only that injury to competition which is the result of a deliberate intent to crush a competitor, but also that injury which is just an incidental result of meeting competition. And so the bill provided that a change of price, a lowering of price, made in good faith to meet competition, should be a defense against a finding by the Federal Trade Commission of price discrimination.

One of the Members of the Senate offered an amendment to provide that the mere change of price in good faith of itself should not be a complete defense if it had the result of substantially lessening competition; and in that form, the bill passed the Senate.

When it went to the House, however, the House subcommittee, before which it was considered, and which held hearings upon the bill, decided to eliminate those amendments. And they were eliminated in the bill as it was recommended by the Judiciary Committee of the House.

So, in effect, the bill which has been approved by the Judiciary Committee is the bill in substantially the same form in which I introduced it in the Senate. You may be interested to know that the next step will be for the House Rules Committee to determine when and how the measure is to be considered by the House. I am sure I need not tell this group that there are so many matters coming before the House of Representatives for consideration that the Rules Committee necessarily has to make a selection. Sometimes it takes the Rules Committee a little while to make up its mind. In times past the Rules Committee has pigeonholed bills; but in this Congress, at the very beginning, a provision was made, amending the rules so that the committee can no longer prevent bringing the bill to the floor if the Members of the House really want to have it considered. So, I rather imagine that we are going to have early consideration of the bill.

In my judgment, the longer action is delayed upon this measure, the worse it will be for small business. I say that because I know, as everybody must know, that our economy has begun to climb down from the high plateau of inflation, which raised prices to the highest level that had ever been reached in the history of the United States. And, as a result, if any action or inaction by Congress has the effect of promoting uncertainty in the economic sphere, that action will also have the effect of discouraging investment and promoting unemployment.

Members of the Federal Trade Commission in whom I have long had a great deal of confidence, during the discussions which took place after the decision in the Cement case was rendered by the Supreme Court, have declared, over and over again, that in their opinion freight absorption and delivered prices, per se, were not illegal; but other members expressed a contrary view.

It happened that there was, in the Cement case, a statement by the Supreme Court to the effect that the mere presence of proof in the case of a conspiracy was not to be taken as holding that in the absence of a conspiracy the same result might not be obtained. Now, as I read that it was not a finding of the Court; it was merely a declaration by the Court to make certain that the decision in the Cement case should not be used as a precedent against some possible case that might be raised in the future. So, it gave me no concern; but it did give great concern to many businesses, and the declaration was made by some, "This means that no business can operate except upon an f. o. b. pricing system."

Now there is nothing in the law to justify that inference, as I see it, and there was nothing in the decision to require it; but obviously, if we promote uncertainty by failing to pass this bill, that argument will continue; and because it continues, it will make the managers of businesses which are now operating in a satisfactory manner uncertain of what they may do, and the result might easily be upsetting to the entire economy.

I think that the economy of any country can properly be compared to a river. The waters of a river find their way from the mountains to the sea; and they go by the

route which is the easiest. They follow the line of least resistance. Sometimes a great storm arises, floods are caused, and then the river breaks its bounds and sometimes finds a new channel. When the river finds a new channel, the result is injury—injury both to those who are on the old channel and to those whose lands are submerged in the new channel.

Now the economic system is the result not of the laws which Congress passes from day to day or year to year. The economic system which exists at any one time is the result of the practices by which business and industry carry on their activities. So, here we have a system of delivered prices and freight absorption which grew up partly by the deliberate intention of those who were seeking to develop markets, and partly as the result of the natural movement of the economy.

But whatever the cause, the system, the economic river, as it flowed, brought about the settlement and construction of factories and industries in particular spots.

Now, if we change the river channel by the operation of a specific law or by a failure to pass a law, the inevitable result will be to place such industries and businesses in the very same position that the inhabitants living beside an old river bed would find themselves in if the channel were switched somewhere else. To make the example more simple, when a Federal-State highway is changed from a line upon which there are a half a dozen service stations to another route on which new service stations will have to be built, obviously the result of such a change is for a time to upset the economy, to promote unemployment, to reduce business, and, of course, to that extent, to do away with profit. At a time when the United States must, of necessity, stabilize the economy, it would, from my point of view, be utterly absurd to take such a risk. And that was one of the reasons why I introduced this bill.

After the decision of the Supreme Court in the Cement case, the Senate set up a special committee to study the problem. That resolution, when it came on the floor, didn't go as far as I thought it ought to go; so I offered an amendment to that resolution which had been presented by Senator CAPEHART; and under my amendment, which was adopted by the Senate, the committee was authorized also to study the whole problem of economic concentration.

The committee didn't have time to transact the latter part of its business and transacted only the first. As a result of it, in the New Congress, the Eighty-first Congress, when Senator EDWIN JOHNSON, of Colorado, succeeded to the chairmanship, a bill was introduced, the object of which was to clear up the uncertainties, and that bill became the subject of prolonged debate and discussion. Again, interpretations were vague and uncertain as to precisely what the bill would do. So lacking was the matter in clarity, or perhaps I should put it more politely in this way, so uncertain were the members of the committee of what the effect of that bill would be that they decided not to report it, and instead to report a bill which was called the "moratorium bill."

That bill provided that for a period of 12 to 18 months, any seller acting independently, who sold at delivered prices, or who absorbed freight, would not be in violation of the law. It seemed to me to be clear that this mere declaration through an act of Congress that for a period of 18 months a particular practice would not be regarded as in violation of the law was itself certain to prolong the period of confusion. The result of the passage of the moratorium bill, it seemed to me, would only be to make confusion worse confounded; and it was for that reason that I felt we should state the matter in simple language that nobody could misunderstand.

Before I became a Senator I used to practice law. I found then that my toughest cases were those in which I sought to convince my clients that they ought to reach a settlement. I have one in mind.

It was a hot summer day, and I was in my law office on the top floor of the First National Bank Building of Cheyenne, and my clients were there. They had come in the effort to settle the controversy among themselves. They were relatives engaged in a little restaurant business. As long as they were not making any money, they behaved as relatives should. But when they began to make money, then they fell into rowing among themselves. I liked them all, and I tried to convince them that their conflict should be settled.

The window was open in my office, and one of these gentlemen, after I had exhausted all my eloquence in trying to persuade him that he should settle, jumped up from his seat, ran to the open window, and turning to me, he said in a shrill voice, "Mr. O'MAHONEY, I like you. You tell me to jump out this window, and I'll jump out; but I won't settle with these 'so-and-sos.'"

As a lawyer I always used to marvel at the way people convey ideas, one to another, by a series of black marks on white paper, because, after all, printing and writing consist of nothing in the world except black marks on white paper. So it is no wonder that in every case that goes to court you will find some eminent lawyers who say that the black marks mean one thing, and others who say that those black marks mean something else again. In such situations, of course, the chief difficulty of a legislator is to find the black marks which nobody can misinterpret.

I have flattered myself, and I think all of those who cooperated in the drafting of this bill should be flattered by the fact that the measure was passed with only one dissenting voice in the Senate of the United States; and that now it is in the House waiting for definite action by that body.

I feel it is important that action should be obtained, but I want to say to business leaders as I say to Government leaders, that there will be no success in the enactment of this law unless at the same time leadership in industry and Government are agreed upon what sort of business system they want to preserve in the United States.

Arbitrary and monopolistic power in business leads inevitably to arbitrary and monopolistic power in government. The controversy that is raging now in the world is between two groups. Upon the one hand there are those who believe that the system of private property is too greedy to save itself, who believe that the leaders of the capitalistic system are so intent upon gaining mere profits that when they create monopoly, they do not see the danger to the system that they represent. Upon the other hand, there are those who believe that the capitalistic system can be stabilized at the same time that opportunity is kept free, and that we shall not have a managerial state as a result of a managerial economy.

Don't think that the danger is too far away. Let me give you an illustration.

The Atomic Energy Commission, established by a law of Congress, was granted complete power over the development of atomic energy. We had to make the atomic bomb to win the war and we're still making the atomic bombs, because the leadership in the armed services and the State Department is convinced that it's the best insurance against an aggressive attack upon us. And so the Atomic Energy Commission has broad powers not only to develop atomic energy as a weapon of defense but also to use this new source of energy for peaceful purposes.

The appropriation bill which was passed by the House this year, and which is now under consideration by the Senate, carries an appropriation in cash and contract authorizations for $1,090,000,000 for the Atomic Energy Commission alone. Never before we entered upon World War I, save one year at the height of the Civil War, did the Federal Government ever spend a billion dollars for all of its activities.

And now we have this Government commission created by Congress, without dissent, because it was the conviction of Congress that this great atomic energy should not be risked in private hands—and so the Atomic Energy Commission is carrying on its operations by contracts with some of the biggest industrial enterprises in America. I have in mind a contract which was made with one corporation for the management of the atomic-energy plant at Hanford, Wash. When that contract was made it carried an obligation of $175,000,000. In 2 years and a little more that obligation had been increased to $375,000,000. The point that I make is we have a managerial Government organization contracting with a managerial private organization in order to operate the most important industrial enterprise that was ever undertaken by mankind.

Managerial operations are necessary. The great resources of science cannot be utilized without management. But when you introduce management by paid experts, whether those managers are paid by Government, upon the one hand, or by private business, upon the other, the effect is the same—the managers say what is to be done, and not those who are affected by management. We pay the bill.

So, here is the issue right in our laps today. How are we going to handle the great technological and scientific advances of our time, in such a manner that the fundamental American principle is not forgotten that Government was established for the people, and that it must be controlled by the people. How are we going to keep alive that principle, unless we make up our minds that we're going to take the long view and not the short view?

When we undertake to manage business or when we undertake to manage Government, we must assess our efforts by their effect upon the masses of the people of the United States. If we do not do that, if we allow one group—I don't care what it is—to exercise the managerial function at the expense of all the others, the result will be the loss of the American system, and the establishment in Government, as well as in business, of the totalitarian method.

This, my friends, I think is a step—this bill is a step toward the preservation of the American system; but it is only a step. We must go a little bit further. We must, as leaders in business and leaders in Government, undertake to review all of the aspects of the economic system so as to make certain that we shall have a rule of order by which neither arbitrary monopolistic power nor arbitrary Government power shall be permitted to control the people.

You and I have the task of maintaining the American system, and let's be sure that we don't misunderstand what it is. It is Government for all of the people and business for all of the people. [Applause.]

Trial of Japanese War Criminals

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28 (legislative day of Thursday, June 2), 1949

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the trial of Japanese war crim-

inals, and comments by Justice William O. Douglas, from the New York Times of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAR TRIAL DOUBTS STATED BY DOUGLAS—OPINION OF THE SUPREME COURT JUSTICE HELD TO INVITE THOSE IN PRISON TO APPEAL

WASHINGTON, June 27.—Six months after he had sided with the Supreme Court majority in denying a hearing to convicted Japanese war criminals, Justice William O. Douglas handed down an opinion today terming the December action "potentially dangerous."

At the same time he virtually invited those serving prison terms for war crimes to raise the issue in lower United States courts as to whether they were being held legally.

Justice Douglas, in his long deferred opinion, today labeled international military tribunals—such as the one at Tokyo that convicted Japan's wartime Premier Hideki Tojo and 24 other war leaders—"solely an instrument of political power."

Although the Justice said that he still assumed that the Supreme Court lacked power to review the judgments of such courts, he said he was disturbed by that situation. He added:

"It leaves practically no room for judicial scrutiny of this new type of military tribunal which is evolving. It leaves the power of those tribunals absolute. Prisoners held under its mandates may have appeal to the conscience or mercy of an executive; but they apparently have no appeal to law."

The High Court's decision last December 20 sealed the fate of Tojo and six other top Japanese war leaders and they were executed 2 days later. Eighteen others are still serving prison sentences.

At the time of the December 20 decision, Justice Douglas said that he would hand down his opinion later. Justice Wiley B. Rutledge reserved decision and said he would announce his vote later. It has not been announced to date. Justice Robert H. Jackson, who helped prosecute the German war criminals, took no part in the case.

Justice Douglas' action in apparently inviting a new court test came about this way: He said that while the Supreme Court lacked power to review decisions of international tribunals, other United States courts can decide whether those convicted by such tribunals were being legally held—provided their jailer was an American.

"If an American general holds a prisoner, our [legal] process can reach him wherever he is," Justice Douglas declared. "To that extent, at least, the Constitution follows the flag. It is no defense for him to say that he acts for the Allied power. He is an American citizen who is performing functions for our Government. It is our Constitution which he supports and defends. If there is evasion or violation of its obligations, it is no defense that he acts for another nation."

He said the way to bring such a test was to file an application for a writ of habeas corpus in the United States District Court for the District of Columbia.

New England's Skyscraper

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Post, Boston, Mass., Sunday, June 26, 1949:

YANKEE SPIRIT PROVEN IN HUB—26-STORY BUILDING OF JOHN HANCOCK DISCREDITS PESSIMISTS—NOVEL FEATURES IN STRUCTURE

(By William E. Brennan)

To those pessimists among us who continually prate that New England is making no progress and is living in the glory of its ancestors who carved out financial empires the country over, there is just being completed an outstanding example of Yankee progressiveness in the new and ultramodern 26-story office building of the John Hancock Mutual Life Insurance Co. on Berkeley Street, Back Bay, next door to police headquarters.

Thousands of Bostonians and visitors to the Hub have watched the great tower as it thrusts its way up into the sky of the Back Bay to lord it over its neighboring structures of the downtown city. Few, however, even begin to realize the marvels of engineering that have made this great building the most modern in the world, with so many firsts over even the great skyscrapers of New York.

More than $30,000,000 has been the cost of this skyscraper that is nearing completion. Even outside modern engineering has done its bit with the wide, steam-heated sidewalks, a political joke a generation ago, serving to keep the concrete pavement free of ice and snow in winter, and the line of new trees on Berkeley Street, Stuart Street, and St. James Avenue, fed by water from an underground system.

SIGNIFICANT MURAL

As one enters the lobby the beauty of the choice stone of the marble quarries of the world make a beautiful scene. There are marbles from France, Italy, Belgium, Spain, and Portugal. There is the French Rouge Antique with the snail shells still imbedded in it, Portenelle rose marble from Portugal with sea shells visible, Tournelle Perla from Italy, Rose de Brignolles from France, Rojo Alicante from Spain, Belgium Black, and Rosara, the latter from Italy.

Topping this is the beautiful mural depicting the day of decision by the forefathers of our country when they agreed to sign the Declaration of Independence. This is by the noted painter Barry Faulkner.

NEW ENGLAND'S GREATEST

To try and describe the many marvels of this magnificent building will require hundreds of pages but for Post readers we will try and outline a few of the things that make this building New England's greatest and to prove that New Englanders are still marching forward, at least with, if not ahead of the rest of the country.

For instance, 150,000 tons of steel were required for the skeleton of this skyscraper, which will have both summer and winter air conditioning. One astonishing figure of engineers is that 30,000,000 cubic feet of clean, fresh air will be drawn into the building every hour. Controlled by a giant 86-inch panel board a constant stream of fresh air will be always present from the subbasement to the twenty-sixth floor, 495 feet above the street level.

The giant compressors of this cooling system are capable of producing 1,640 tons of ice every 24 hours. The enormous amount of materials for the air conditioning system alone gives an indication of its size. One can realize the magnitude of the air conditioning system when it is pointed out that 498,000 pounds of sheet aluminum, 390,000 pounds of galvanized iron and 60,000 pounds of iron plate were used for air ducts.

MANY MARVELS DEVISED

In the ultramodern theater known as John Hancock Hall at Berkeley and Stuart Streets, and in the beautifully appointed ballroom in the basement under the theater known as the Dorothy Quincy Suite are many of the marvels wrought by clever architects and engineers. It has the largest electronic control board in the world for illumination, the largest volume of theater fluorescent lights in existence and the largest number of cold cathode lights, 1,132 of them.

Great banks of speedy elevators, more than a score of them operating from the basement to the twenty-sixth floor with others running to the twentiteth floor, will swiftly move not only the 5,400 employees but thousands of daily visitors to the various floors.

Electric stairways operating from the basement to the eighth floor, traveling at 90 feet per minute and capable of handling 4,000 persons an hour, are now in operation. A feature of these stairways is that by the flip of a key at each floor their direction can be reversed upward or downward as the need arises. Thus as the thousands of employees are reporting for work all the stairways will run upward and at closing hour or in time of emergency all can travel toward the street level.

The building is the first completely air-conditoned business structure in the world. All windows are of double glass, containing one-half inch of air insulation between the panes. This new system of insulation was hit upon back in 1930 in a midwestern city by Charles D. Haven, a refrigerating engineer, while riding on a streetcar on a bitter cold day. Glancing out a window of the car and noticing the frost-covered windows of stores, he hit upon the air-insulation idea that was to result in this ultramodern window glass.

One usually thinks of fluorescent lights in small numbers but there is nothing small in this great structure of Yankee progress. There are, in fact, 32 miles of these lights, enough to provide a continuous string from Boston to Attleboro, or to Plymouth or Gloucester. There are 20,000 such light fixtures. These represent one of the world's largest installations of recessed fluorescent lighting, and the biggest in New England. This great number of lamps are another product of Yankeeland, coming from factories in Lynn and Ipswich

VIRTUAL CITY WITHIN SELF

Except for sleeping quarters, the new structure is a city within itself for the 5,400 employees. One of the most up-to-date cafeterias in the world takes the greater part of a floor at the head of the electric stairway on the St. James Avenue side of the building. Delicious lunches are served here at medium prices for the employees, so they can remain inside in summer heat or winter snow.

Just above the cafeteria is a modern store where the employees can buy anything from a needle to an anchor and at reduced prices. Already steps are being taken to prevent use of the store by outsiders as officials of the firm have expressed their firm purpose to insure that its operation does not hurt local merchants.

On the St. James Avenue, side of the building workmen are now completing a drive-in branch for one of the big banks of the city. The huge steel vaults, encased in reinforced concrete, are all in and workmen are putting the finishing touches on the banking rooms.

For the present the company business, vast as it is here in the home office, will not be sufficient to fill all the space in the building and some of the upper floors are being rented until such time as expanding business makes it necessary to take them over for the firm's work.

Reaching from the sidewalk to the top of the television mast, the building towers over its neighboring seven-story police headquarters 573 feet in the air. It is truly a tribute to Yankee ingenuity and progress

and to view it should give food for thought and a change of mind to those doubters of the great future that lies ahead for New England.

Radford Mobley

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 28 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Radford Mobley," written by Paul R. Leach, of the Washington Bureau of the Miami Herald, and published in the Miami Herald of June 18, 1949. Mr. Mobley is a distinguished representative of the Knight newspapers, especially the Miami Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEN BEHIND THE COLUMNS—RADFORD MOBLEY

(Another behind-the-byline sketch, one in a series of profiles on Miami Herald columnists by their working contemporaries who know those personal qualities which make these men outstanding in their profession.)

(By Paul R. Leach)

WASHINGTON.—If you've got a trying job of reporting on hand, just call Rad. It gets done.

Of all of the Washington press gallery and a lot of people in the Federal Government and Congress know, Rad is Radford Ellis Mobley, Jr., a pint-and-a-half-sized redhead who has been in Washington so long he qualifies as an old settler.

Mobley, of course, is the representative of the Miami Herald in the Washington bureau of the Knight newspapers. He has a failing, which you should be let in on at once. He just can't completely dislike anybody. Sure, he knows who the first class so-and-so's are in this town. But even while he's satisfying himself that a so-and-so does fall into that category and why, he'll go to considerable pains to discover the guy's decent qualities, too. Although an old Washingtonian, Mobley's a youngster as this press corps of some 800 persons goes. He was born 44 years ago last April. He's a southerner, as you discover after visiting with him for a while.

EXCEPTION TO RULE

Mobley is the envy of every young newspaperman in the country who has been told the way to get to be a Washington correspondent is first to work for 20 years at everything else a newspaper home office has.

Rad made it in one jump—from the University of Alabama to the Potomac.

He was graduated from Alabama in 1927. Incidentally, he made Delta Tau Delta there. Also the right to wear a vest with a watch chain adorned with a Phi Beta Kappa key. You don't get those keys for cutting classes. Does he wear the key? Shucks, he doesn't even wear a vest.

It was law that attracted Mobley, not newspapering, when he packed up a derby hat—which he still wears when Barbara Martin Mobley, his Wisconsin-born wife, isn't watching—and a spare shirt or two, and headed for the place where lawyers run everything.

He enrolled at George Washington night law school and got a daytime job in J. Edgar Hoover's FBI fingerprint division. He put in 2 years at studying law before he made a great discovery. That was: There's not as much money in newspapering as lawyering, but a whale of a lot more satisfaction.

So he joined up and later bought out Ralph G. Sucher who had what Washington calls a string of newspapers to write pieces for.

One of the papers on Mobley's string was the Akron Beacon Journal. That's where he became acquainted with John S. Knight. It's been a close relationship since. Knight bought the Miami Herald, then the Detroit Free Press, then the Chicago Daily News.

As Knight interests in Mobley's Washington string expanded, Mobley dropped other papers.

ON HIS RECORD

One sure way for a young reporter in Washington, especially a "string man" to capture respect of other reporters is to do an outstanding job of reporting. In 1929, shortly after he had started on this line, Mobley got irritated with the United States Senate.

There had always been a practice there of confirming Presidential appointments by secret vote. The press was shooed out of its gallery. The doors were locked. The Senators would go into a huddle.

They would later announce whether the appointee had been confirmed or not—not a word on who had voted yes or no.

The nomination of Senator Irvine L. Lenroot, of Wisconsin, to be a Federal judge was the last to be so confirmed. Mobley dug out the secret roll call and published it.

It raised a very devil with senatorial dignity. But young Bob La Follette, another Wisconsin Senator, saw the light. He started a campaign that resulted in public confirmation votes thereafter.

During prohibition, when Mobley was doing string work for the old New York Evening World, he was nosing around the Old House Office Building one day when he got acquainted with a man. The man was a notorious bootlegger.

Mobley got out of him an exclusive story on how he was peddling his stuff right in the office building to Members of Congress.

Mobley's sensational story was widely reprinted over the country. It pointed up what a sham voting dry and drinking wet by Congressmen really was. Prohibition was repealed shortly afterward.

If you're a pushover for three beautiful intelligent little girls, you need look no further than the home of Rad and Barbara Mobley. Their daughters, Kuulei, Patricia Ann, and Kate, take after their mother.

It is typical of both the elder Mobleys that they chose that Hawaiian name for the eldest child.

Sam King, who preceded JOSEPH R. FARRINGTON as delegate in Congress from the Islands, was Kuulei's godfather. It was he who suggested it. The name means, "Dear Little Wreath of Flowers."

Federal Taxation in Puerto Rico

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 24, 1949.

Hon. NOAH M. MASON,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN MASON: May I take the opportunity to make reference to some concepts included in your address to the House on June 16, and to allow myself the liberty to clarify the situation of Puerto Rico in respect to Federal taxation.

Sovereignty over the island of Puerto Rico was ceded to the United States under the Treaty of Paris at the end of the Spanish-American War in 1898. In fulfillment of obligations, accepted under the treaty, the Congress of the United States in 1900 determined the political status of the inhabitants of Puerto Rico. They were declared to be citizens of Puerto Rico. A body politic to be known as the People of Puerto Rico was also created. At that time Puerto Rico had a population of about 1,000,000 inhabitants.

Theretofore Puerto Rico had been an integral part of the Spanish realm. It was a province therein with parliamentary representation in the Spanish Cortes to the same extent as any of the provinces of which the kingdom was composed. In addition, Puerto Rico had self-government; it had its own local parliament and a cabinet responsible to the parliament; the latter was elected under universal suffrage. The Governor-General who was appointed by the Central Government, represented the national interests in the province. The situation was in many ways comparable to that existing today between Northern Ireland and Great Britain. Northern Ireland has its own responsible government and local Parliament which at the same time it is represented in the British Parliament. The London government appoints a governor-general for Northern Ireland.

The power to tax and to legislate tariffs was reserved to the Puerto Rico Parliament. The proceeds of all taxes were covered into the Treasury of Puerto Rico.

After the transfer of sovereignty from Spain to the United States, the act of Congress of 1900 provided for changes in the political and economic structure. The relations between Puerto Rico and the new metropolis were not kept the same as those which had existed with the old metropolis. Puerto Rico did not become a State of the Union with due participation in National Government. It was declared to be unincorporated territory (with a small t) subject to sovereignty of the United States. A body politic was created within the unincorporated territorial area over which Congress had acquired sovereignty and Congress determined that tariff rates equal to those payable in the United States for imported goods, were to be paid in Puerto Rico, while no customs duties would be paid on merchandise shipped into Puerto Rico from the United States or vice versa. A virtual customs union between the United States and Puerto Rico was thereby established in place of the previous system of separate tariffs and preferential treatment between the island and the old metropolis. The principle that duties paid by the people of Puerto Rico upon merchandise imported into Puerto Rico should be considered as local revenue, was nevertheless maintained.

We were not, under the United States regime, to have taxation without representation. The same principle was applied to internal revenues. United States internal-revenue laws were not made applicable to Puerto Rico, although the burden of excise taxation on goods exchanged between the two areas was required to be equal.

Puerto Rico endeavored to adjust its economy to this new pattern of economic relations which Congress adopted for the island. It would be idle now to speculate on what the economic development of Puerto Rico would have been if Puerto Rico had continued to exercise authority over its commerce and tariffs, and a preferential system had been set up between Puerto Rico and the United States as it existed with the old metropolis. We cannot today guess the results if the United States had retained the tariff arrangement and adopted the preferen-

tial system which had previously existed between Puerto Rico and Spain.

What we have before us now is the pattern of developments in the 50 years during which the new arrangement has been functioning. Let us examine it:

The sugar industry developed greatly in Puerto Rico, bringing prosperity to owners of land suitable for the cultivation of sugar cane and to owners of sugar mills—prosperity which had its effects on land values, wages and distribution throughout the whole island. But the development of a sugar industry was not an unmixed blessing.

In spite of Federal law to the contrary, absentee corporations were allowed to acquire land greatly in excess of the legal limit of 500 acres. Profits from the sugar industry, for many years, left the island. No reinvestments to enrich the island's economy were made out of sugar profits, to an appreciable extent, except for the ever-expanding acquisition of land, or for improvements of the sugar mills themselves or for research in scientific agricultural methods affecting sugar cane and cane sugar.

By 1935, the evil results of absenteeism and land concentration were everywhere apparent in Puerto Rico. Taxes were low. Wages were low. The level of life of the people at large was low. Participation of the people in the sugar industry was limited mostly to farmhands, seasonally employed.

The application of modern scientific public health methods has lowered the death rate, but the social pattern of life on large sugar plantations did not create the proper circumstances for a parallel decrease of the birth rate. To the characteristic seasonal unemployment in the sugar industry there was added the chronic unemployment of that part of an increasing population which was in excess of needs in the cane fields. There were more workers than there was work.

In 1936, at long last, enforcement of the Federal law limiting to 500 acres the amount of land in any one corporation's control was begun. Since then the people of Puerto Rico has been reacquiring the land hereto illegally held by the sugar corporations.

Nevertheless the results of several decades of absenteeism were still to be coped with.

Farming skills, other than the simple operations necessary for planting and harvesting sugar cane, lagged far behind or were lost altogether. They must be regained now after half a century in which opportunities to engage in farming other than the cultivation of sugar cane were sorely neglected.

While sugar prospered, coffee declined. This crop which was Puerto Rico's export mainstay before 1900, is a product of the hills. It is the chief means of conserving the upland's soils and watershed. But when Puerto Rico came into the United States system, coffee found itself, in respect to the mainland market, on the free list, while coffee growers found themselves subject to costs shaped largely by a protected United States market. This situation, worsened by the shortage of dollars after World War I in a Europe where Puerto Rico coffee had found its chief market, led to a persistent decline of coffee production, a decline which has gravely and chronically depressed the hill country of Puerto Rico. Without a national policy adequate to the needs of this region, the hill economy of Puerto Rico has languished.

The shift of Puerto Rico from the Spanish to the American economic system also coincided with the decline of a local handicraft industry. United States factory-made goods tumbled into the Puerto Rico market tariff-free, at prices which local craftsmen could not match. Their skills, therefore, quickly disappeared. The natural development from handicraft to machine industry did not take place.

Many of these conditions remained for many years unanalyzed. Consciousness of them as problems to be solved was not awakened until the needs of a rapidly growing population and the adversities of the great depression conjoined to force proper recognition and awareness. The need to industrialize became evident. It was seen that only by rapid industrialization could a social calamity in Puerto Rico be forestalled. The Government of Puerto Rico therefore commenced its desperate efforts to industrialize with the same justification and with the same rights as any other organized community under the American flag.

An inventory of industries in operation was easily taken. Aside from those which were geared to the local market, the only industries worth mentioning were those engaged in the production of rum, needlework, and sugar. Rum was, and except for the war years has been, an unimportant source of revenue and employment. Needlework gave employment to tens of thousands whose low wages, because of a low tariff and the competition of foreign wages, were held in a vise. The production of refined sugar was specifically limited by Federal law. Sugar refining has been practically prohibited. It still is. Puerto Rico may ship, in refined form, only 126,000 of its quota of 910,000 tons of raw sugar. Conditions such as these limited, shaped, and made necessary the resolute effort to industrialize in other directions.

But at the same time, Puerto Rico has become, and is now, conscious of the need for additional governmental revenues. Local tax rates and revenues have been increased substantially. We have to take care of the education of our children and provide medical services for 80 percent of the population whose incomes are too low to afford private medical treatment. We have to learn the modern methods of diversified agriculture. We have to develop more hydroelectric power for our industries, our cities, and our rural communities. We must resort to irrigation to develop our precious land. We cannot suffer a single inch of land in Puerto Rico to remain idle and unproductive. More than 2,000,000 American citizens in Puerto Rico look to our 3,500 square miles for their support. Much of it is untillable. Nevertheless, that which is usable must each year provide food and employment for a greater number than last year.

However, with all the need we have for more revenues, our need is even greater for more jobs. Since it appears that we cannot expand both revenues and jobs at a rate which seems desirable and necessary, we are foregoing more revenues from new industries in order to create new jobs. Therefore, the Legislature of Puerto Rico has declared tax exemption for certain new industries coming to the island. This is an Insular law, not a Federal law. Puerto Rico is a self-governing community of 2,000,000 United States citizens under an organic act adopted by Congress. Citizens of Puerto Rico were declared to be citizens of the United States in 1917. It is not a Territory under the direct administration of the Federal Government. It is a 400-year-old, non-metropolitan community of 2,000,000 citizens represented in Congress by a Resident Commissioner without a vote.

Puerto Rico last year was a market for mainland producers to the tune of $337,000,000. Because of especially favorable circumstances which the market of Puerto Rico offers to mainland producers (tariff protection and no direct Federal taxes), the Puerto Rico market must be classed as one of the most important markets, outside of the United States mainland, in the entire world, for mainland producers.

United States internal revenue tax laws do not apply, naturally, to merchandise shipped from Puerto Rico to the mainland. It is proper that it be so, since they do not apply either to merchandise shipped from the mainland to Puerto Rico nor to goods produced and consumed in Puerto Rico.

But if matters had been left at this stage, the Puerto Rican producer would find himself in a privileged position in the mainland market, because the mainland producer does pay internal revenue taxes to the United States Treasury. In order to reconcile the principle of no taxation without representation with the need to protect the mainland producer from unfair competition by the Puerto Rican producer shipping merchandise to the mainland, within the customs union, Congress determined, in 1900, that merchandise shipped from Puerto Rico to the mainland should bear a tax, payable to Puerto Rico and equal to the United States internal revenue tax required for sale on the mainland.

This is the explanation for what is often erroneously described as a remittance of taxes. This tax is covered into the Treasury of Puerto Rico. It is not earmarked for any specific purpose. It is not earmarked for an industrial commission. It is a regular revenue of the Government of Puerto Rico, just as much as are proceeds from the estate tax or from excise taxes levied by the Legislature of Puerto Rico.

I may add, that in accordance with our organic act, the expenses of the government of Puerto Rico are to be borne and paid out of the treasury of Puerto Rico, only, and that no annual appropriation is ever made by Congress for the maintenance of any part of the government of Puerto Rico as is the case with the incorporated Territories of Hawaii and Alaska. The Federal Government pays only for Federal services in Puerto Rico such as the military establishment, the Federal Court, Immigration Service, etc. Of late, about $7,000,000 a year have been granted in Puerto Rico under such Federal grant-in-aid laws as apply therein. Although not all grant-in-aid nor tax laws apply to Puerto Rico most other United States laws do apply there as in the States, including laws on military service. Seventy-five thousand men from Puerto Rico answered the call to service under the Stars and Stripes during the last war.

Industry is developing in Puerto Rico in the same way that it is developing in many communities in the South. Industrialization is not an exclusive right for any one section or segment of our political system. It is only natural that it may extend over the whole Nation.

Textron, a New England industrial concern, has established a new plant in Puerto Rico. My information does not bear out the statement that it has moved a plant into Puerto Rico from New England. (It was announced some time ago, however, that Textron was intending to open up, in the South, a plant producing the same line of goods as was one of its New England plants, the closing of which it had under consideration.)

The purpose of this letter is to bring to your attention the fact that the 2,000,000 American citizens who live in Puerto Rico, are existing under such economic arrangements as have been created for them by the Congress. Within those arrangements their life is economically precarious, whatever opinion we may hold as to cause and effect. They are doing their best to help themselves by developing their economy. By doing so they are making their own important contribution to the prosperity of the national economy as a whole.

There is no intention to take away from any area on the mainland its established industries. As a matter of fact, it is a rule of the government of Puerto Rico that no tax exemption will be granted to any concern which may seek to establish itself in Puerto Rico by transferring its plant from the mainland. Tax exemption is only

granted to new plants, the operation of which represents an expansion of industry.

The 2,000,000 citizens in Puerto Rico solicit the heartfelt cooperation of their fellow citizens on the mainland in their struggle for existence. Puerto Rico is a national responsibility, accepted since 1899. I am sure you would be among the first to agree that the efforts of the Puerto Rico community to raise itself by its own bootstraps from the very depressed economic condition therein obtaining should be commended. As they succeed they will be helping the Nation fulfill its obligations towards the people of Puerto Rico.

Also you surely will agree that the insular government would be derelict in its duty if to the limit of its resources and imagination it did not make a frontal assault on poverty and hunger, if it did not do its level best to wipe out the diseases which accompany substandard living conditions, if it did not create jobs—useful ones, needed ones—for those who, although able and willing, cannot find work, if it did not build schools for the thousands who should be learning but cannot because there are barely half enough schools, if it did not meet for its people the challenge of changing conditions in a changing world. I am sure you share a similar concern for the welfare of the people in the district you represent, although fortunately fate has been kinder to your people than to mine.

I am well aware of your deep interest in matters of public importance and of the thorough and tireless study you give them. I know, too, of your open-minded readiness to accept a new viewpoint when you are convinced of its worth. It is for that reason I have taken the liberty to write you as I have and at such considerable length, hoping to dissolve misunderstandings and to assure you that there is no conflict of interests between the people of Puerto Rico and the people of Illinois or Massachusetts or any other State.

Most cordially yours,

A. FERNÓS-ISERN,
Resident Commissioner of Puerto Rico.

Townsend Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of the Townsend Club, Fort Collins, Colo., in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

FORT COLLINS, COLO.

Hon. W. S. HILL,
Washington, D. C.:

We the undersigned citizens of the Second Congressional District of the State of Colorado respectfully request the passage of H. R. 2135 and 2136 known as the Townsend plan, and respectfully request your cooperation and help.

Mrs. William Moore, Mrs. William Podell, Fort Collins, Colo.; Mr. and Mrs. Baylis, Mr. and Mrs. L. W. Freeland, Mr. and Mrs. R. W. Cochell, Longmont, Colo.; Mr. and Mrs. M. M. Hedges, Mr. William Podell, William Moore, Mr. and Mrs. A. B. Moore, Mrs. Ada Thompson, Mrs. J. C. Kennedy, Mrs. E. M. Ingerson, Mrs. A. R. Sheldon, Mrs. Frank Tracy, Mrs. Bertha Ruddick, Mrs. W. S. Dixon, Mrs. Jessie Brandis, Mrs. Fern Dixon, Mrs. O. V. Kieler, Mrs. K. Bright, Mrs. Jesse Morgan, Mrs. Elsie Winter, Mrs. J. L. Eastwood, Margaret Bovell, Myrtle Barker, Mrs. Neina Walk, Mrs. Rolland Moore, George Lindenmeier, Grace Lindenmeier, Frank Tracy, O. V. Kieler, M. T. Harned, Stella Hampel, Nellie B. Lucas, all of Fort Collins, Colo.

Mr. Speaker, following is a petition signed by members of the Townsend Club, Boulder, Colo., in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

BOULDER, COLO.

Hon. W. S. HILL,
Washington, D. C.:

We, the undersigned citizens of the Second Congressional District of the State of Colorado, respectfully request the passage of H. R. 2135 and 2136 known as the Townsend plan, and respectfully request your cooperation and help.

J. E. Ficher, Mrs. Elizabeth Jones, Kate Samuelson, Mrs. Maisie Albertson, Mrs. Laura Selden, Cora Carlson, John Latum, George Brierley, Mrs. Mabel Hill, Mrs. Della Clemens, Hattie Souders, Marie Heaton, Oscar Anderson, Jennie Blair, Elliott A. Van Dyke, G. D. Loomis, Mrs. Mattie Loomis, Hilda Mae Wilson, Viola M. New, Harold W. New, Nellie Dunsmoor, Belle Coon, James Farley, Lulu B. McAllister, Grace Leona Wilson, Ethel C. Kelley, C. Robert Gruen, Anita Gruen, Beulah Jones, all of Boulder, Colo.

Mr. Speaker, following is a petition signed by members of the Townsend Club, Longmont, Colo., in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

LONGMONT, COLO.,
May 15, 1949.

Hon. W. S. HILL,
Washington, D. C.:

We, the undersigned citizens of the Second Congressional District of the State of Colorado respectfully request the passage of H. R. 2135 and 2136 known as the Townsend plan and respectfully request your cooperation and help.

Margaret Tonne, Longmont; O. G. Horm, Littleton; T. W. Smith, Ft. Collins; Harry Fortune, W. H. Johannesson, Greeley; Verla Long, Berthoud; George W. Barrett, Longmont; J. E. Meader, Englewood; Albert B. Pace, Boulder; A. M. Walters, Greeley; Anna Thiebolt, Mrs. George Zimbelman, George Zimbelman, Loveland; William E. Long, Berthoud; Pearl Meader, Englewood; Harry M. Waller, Mrs. Ola Waller, Thomas Beebe, Fort Collins; Mrs. Madg Fortune, Greeley; Mrs. Joe Lee, Longmont; Mrs. Rozetta Sealock, Berthoud; Mrs. Elmer Iverson, Mrs. C. A. Smith, Lydia Briden, C. A. Smith, Elmer Iverson, W. P. Lewis, Etta Walden, Scott Walden, Katie T. Bennett, Kay Curry, Hattie Eaton, Marie Brooks, Longmont; Mrs. Eugene Webber, Hygiene; Mrs. Lillie V. Taylor, W. C. Campbell, Elmer Tonne, Fay Davis, J. E. Getzendaner, Edward Stack, Emma Titus, Clara Beach, Longmont; Florence Smith, Boulder; R. V. Babcock, Letta Alexander, Longmont; Mrs. Elvis Tower, Elvie Tower, Lyons; Mrs. Elsie Lauer, Boulder; C. W. Cannon, Thomas Higgins, Loveland; Charles Mast, Mrs. M. Hancock, Greeley; H. E. Edson, Loveland.

Northwest Demands Local CVA Hearings

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I again urge the desirability of the Senate and House Public Works Committees' visiting the Pacific Northwest this fall and holding hearings there upon the several pending CVA bills.

The 4,000,000 people who reside in the Columbia River Valley, which these bills would place under the control of a CVA, should be given the fullest possibility to be heard. Few of these private citizens have the time or money to travel across the continent to testify at hearings in the National Capital. Such being the case, the committees can render a great service to these people by holding CVA hearings on the Pacific coast this fall.

I include here an editorial on this subject from the Spokesman Review of Spokane, Wash., one of the largest daily newspapers of the Pacific Northwest:

NORTHWEST DEMANDS LOCAL CVA HEARINGS

There are two congressional hearings on the proposed Columbia Valley authority on in Washington, D. C., this week.

But who's doing the testifying? Whose opinions are being heard? Certainly not the average citizen of the Pacific Northwest, who will be most vitally affected by a CVA, if it should be authorized by Congress. The average citizen does not have the $300 to $500 necessary to go back to the National Capital to do his own lobbying.

But the prevalence of Federal and State officials in Washington for the hearings indicates that there are plenty of people willing and eager to speak for the average citizen, who, incidentally, has had little or no opportunity to study the Truman-Davidson-Mitchell bill and who has only a bare notion of the issues involved.

The purpose and effect of the House and Senate hearings should not be discounted. But it should be emphasized that such hearings should also be conducted throughout the entire Columbia Valley region, so that citizens may know what the bill provides for and what the official and unofficial interpretations are.

It is certainly in order for top-level administrators to expound their ideas. It is certainly in order for Congressmen and Senators to question these administrators and the other selected individuals who are testifying this week. But it is even more in order for the citizens who will be most vitally affected by such a proposal as the CVA to get a basic understanding of the measure and to realize its implications.

There has been no popular vote on the CVA in this area. There has been no election at which the issues were discussed. But there is an eagerness to understand the question fully and to get the answers at first hand.

That's why it is necessary that either the Senate Public Works Committee or the House Public Works Committee, or both, conduct popular hearings in at least 8 or 10 localities in the Pacific Northwest before the CVA bill or bills are reported out of the committee for congressional debate.

This area wants positive assurance now that its people will have a chance to be heard on the CVA proposal while the matter is still in the discussion stage.

Agitators Stirring Race Riots Throughout the Country

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. RANKIN. Mr. Speaker, it is certainly disturbing to see members of a racial minority stirring race riots throughout the country.

The Klein bill, to force Negroes into the white schools of the District of Columbia, is one of the most dangerous pieces of communistic legislation that has been proposed since I have been a Member of Congress, and the Celler resolution to investigate the white people of Alabama is not calculated to help the situation.

The people of Alabama and all the other Southern States are thoroughly capable of looking after their own affairs without any advice from the gentleman from New York [Mr. CELLER].

Such measures, if passed, would probably result in the most disastrous race riots this country has ever known.

I have pointed out time and time again that this is a movement of a racial minority that is attempting to destroy Christianity throughout the world. They have murdered at least 30,000,000 Christians in Europe in the last 30 years.

They came here right after World War I and stirred race trouble all over this country, resulting in race riots in Washington; Chicago; East St. Louis; Springfield, Ill.; Omaha, Nebr.; and elsewhere throughout the country.

These Communists stirred up a race riot in Detroit, Mich., a few years ago—the most disastrous riot the State of Michigan has ever known.

Last week they stirred one in St. Louis, Mo., with this same communistic drive pretending to wipe out segregation. They did the same thing in Youngstown, Ohio.

Yesterday they brought on race trouble in Anacostia here in the District of Columbia.

There are only four possible solutions to the race question where the white and blacks live together in large numbers—extermination, deportation, amalgamation, or segregation.

Extermination is too horrible to contemplate. Deportation is out of the question, and so is amalgamation.

The only chance for the white people and the Negroes to live together in peace and harmony is through the system of segregation that these intermeddlers are now trying to destroy.

They do not give a tinker's dam about the Negroes.

Recently Harry Winder, who is head of the District Recreation Board, and also head of the B'nai Brith in Washington, issued a crazy order wiping out segregation in the playgrounds and swimming pools of the District of Columbia, with the result that racial tension has been intensified, and race trouble has increased.

At this point I am inserting an article which appeared on the front page of the Washington Times-Herald this morning which I hope every Member of Congress will take the time to read.

It reads as follows:

CITIZENS DEMAND DISTRICT OF COLUMBIA POOL SEGREGATION—IN YOUR HANDS, KRUG WARNED BY FEDERATION—INSISTS INTERIOR DEPARTMENT RULING BE RESCINDED

(By James Colligan)

Declaring an "emergency state of racial tension" exists in Washington, the executive board of the Federation of Citizens Associations last night demanded that Interior Secretary Krug restore segregation in District swimming pools.

"This situation," the association warned Krug, "approaches that which created the recent racial explosion in St. Louis and Youngstown.

"We remind you that in your hands lies the power to prevent a similar explosion that can only reflect discredit upon you, your department, and upon the Federal Government.

ASK RESCINDING OF ORDER

"We demand the immediate rescinding of the Interior department's order establishing a policy of nonsegregation in those swimming pools of the city of Washington controlled by your department.

"We call upon you to do this as your public duty to prevent disorder in this city which, once started, would be to the eternal disgrace and sorrow of all residents of the District.

"It is our sincere hope that your interest in the safety of all people residing in our National Capital is the same as ours and that you will act at once to preserve peace in our city."

The demand on Krug was contained in a telegram sent by John H. Connaughton, president of the citizens federation, following unanimous approval of the executive board at a special meeting.

SIX POOL INSTRUCTORS QUIT

The meeting was called as the nonsegregation policy in swimming pools culminated in a decision by the District Recreation Board to withdraw all its swimming instructors and supervisors from pools operated by Government Services, Inc., unless they operate on a segregated basis.

Earlier in the day, six recreation department swimming instructors walked away from McKinley pool when Negro children insisted on attending free swimming classes. The pool is one of several at which free classes and supervised swimming are provided in the morning and swimming is on a free basis in the afternoon under GSI.

Previously, minor disorders had been reported at the Anacostia pool as a result of the Interior Department order that all pools under GSI supervision should operate on a nonsegregated basis.

GSI TO DECIDE TODAY

The citizens federation message to Krug explained the executive board is empowered to act for the federation in emergencies. It demanded that "you and your Department turn over all District recreation facilities, the land for which was mainly purchased with funds supplied by District citizens, to the District Recreation Board to be administered in the best interests of all the people of the District of Columbia, white and Negro alike."

The board of trustees of Government Services will meet today to decide whether to change its policies on swimming-pool operations.

One of the most dangerous men on the Federal pay roll is Oscar Chapman, Assistant Secretary of the Interior, whose activities in this connection have done as much to stir race trouble as any other individual I have ever known.

The best thing President Truman could do would be to remove him from the Department of the Interior, and remove this Harry Winder from the Recreation Board.

The article which I have inserted tells of the action of the executive board of the Federation of Citizens Associations of the District of Columbia.

For the benefit of the Members of the House I am inserting a copy of a letter, issued last night by that organization, and signed by its president, Hon. John H. Connaughton.

It reflects the views of an overwhelming majority of the people of the District of Columbia.

The letter referred to follows:

JUNE 27, 1949.

J. A. KRUG,
Secretary, Department of the Interior:

The executive board of the Federation of Citizens' Associations of the District of Columbia, which is empowered to act between meetings of the Federation, at a special meeting this date unanimously passed a resolution demanding that you and your Department turn over all District recreation facilities, the land for which was mainly purchased with funds supplied by District citizens, to the District Recreation Board to be administered in the best interests of all the people of the District of Columbia, white and Negro alike.

Your attention is called to the present emergency state of racial tension created in the District of Columbia by your Department's ill-advised interference in long-established pattern of segregation in the swimming pools of the District of Columbia. This situation approaches that which created the recent racial explosions in St. Louis and Youngstown. We remind you that in your hands lies the power to prevent a similar explosion that can only reflect discredit upon, you, your Department, and the Federal Government.

We demand the immediate rescinding of the Interior Department's order establishing a policy of nonsegregation in those swimming pools of the city of Washington controlled by your Department. We call upon you to do this as your public duty to prevent disorder in this city, which, once started, would be to the eternal disgrace and sorrow of all residents of the District. It is our sincere hope that your interest in the safety of all people residing in our National Capital is the same as ours and that you will act at once to preserve peace in our city.

JOHN H. CONNAUGHTON,
President, Federation of Citizens' Associations.

Housing Act of 1949

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. MILLER of Nebraska. Mr. Speaker, after the hearings and listening

to the debate on H. R. 4009 I find I am unable to support the passage of this bill. My reasons for reaching this conclusion are as follows:

First. It will commit the Government to the eventual spending of almost $20,000,000,000 of taxpayers' money. Once the bill becomes law the Congress will have no power to check these expenditures. It authorizes the Housing Administrator to issue notes or other obligations and directs the Secretary of the Treasury to purchase these obligations from the proceeds of funds from the sale of securities under the Second Liberty Bond Act. Although the bill talks about loans and self-liquidation the cost will finally come from taxes paid principally by those who will not benefit from it. Most people will find they are paying taxes to provide housing for somebody else. Since the people of Nebraska pay almost 1 percent of the taxes collected by the Federal Government our share of the cost will amount to $170,000,000.

Second. All our previous experience with Government built housing shows that costs will be excessive. Under this bill costs can reach $2,500 per room. For a 5-room unit that would mean $12,500. Can any one point to an instance where a Government operation was carried on at less than the maximum figure? There will be no low-cost housing under this bill.

Third. Private industry in 1948 built almost a million housing units. It will build a little less this year. This bill will put the Government into direct competition with private industry, and in such a way that private industry in building will dry up. The bill permits the payment of a rental subsidy up to $46.88 per five-room unit. If you could rent a five-room apartment with the taxpayer subsidizing you to the tune of $46.88 would you ever undertake to build a home of your own?

Fourth. Proponents of the bill admit that it would benefit only 1 out of every 130 farm families. Before he can receive any benefit from it the farmer who is successfully operating his own farm must convince the Government that he is unable to borrow money for building a home from any other source. If he is living on what it would determine was a "potentially adequate farm" he might, if he knew the right people and had sufficient political pull, get a loan and some additional cash. If it decides he will never be able to support his family on his farm—this refers principally to share croppers in the South—he might, if he is lucky, get money and a loan to improve his house. This puts a premium on shiftlessness and political pull. How many farmers in Nebraska could qualify under these conditions? Not many, I would say.

Fifth. State and local governments will be deprived of tax revenue under this bill since the project will be tax-free for long periods, except for small payments in lieu of taxes the housing authority is permitted to pay. Local officials know the troubles they have had in getting these payments from Government projects located in their communities. They have no voice in determining the amount the projects should pay for services they receive. The amount as determined by the Federal agency has never been adequate.

Sixth. The campaign to put this legislation over is based on misrepresentation and half truths. It will not result in slum clearance nor will it provide housing for more than a small minority of families that do not now have it. People living in slums cannot pay the rent, even with the subsidy, for the housing to be built under this bill and only one out of six or seven families that might qualify for residence will receive the benefit of this privilege.

Seventh. If this bill becomes law it will be a long step in the direction of the welfare state. The socialist mayor of Milwaukee, testifying before the committee, said he supports the bill because it is in keeping with the socialistic concept. Last year private enterprise in the building industry built almost a million new permanent dwellings. It will continue to do this if the Government with its deadening hand of bureaucracy does not enter the field. That is the solution to the housing shortage. Under Government housing, tenants will be chosen by political preference and their way of living will be controlled by Government agents. It will provide a very fertile field for building political machines the like of which has never been known.

Eighth. This bill sets the pattern for an imminent approach to socialism and the destruction of the American way of life as we have known it. We are within 7 percent of complete socialism today. No free enterprise system has ever prevailed after taxes have passed 35 percent of the people's income. Today Federal, State, county, and municipal governments are taking 33 percent of our income in taxes. Assuming we are stronger than any previous free government and could go to 40 percent we are still perilously near to complete collapse into socialism. How near we are was best expressed by James F. Byrnes, former New Deal spokesman in the Senate, ex-Justice of the Supreme Court and Secretary of State by appointment of President Truman, when he recently said:

> Where we shall wind up, no one can tell. But if some of the new programs seriously proposed should be adopted there is danger that the individual, whether farmer, worker, manufacturer, lawyer or doctor, soon will be an economic slave pulling an oar in the galley of the State.

It is time we called a halt. The defeat of this bill can be the first step.

Hon. Francis P. Matthews, Secretary of the Navy

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. STEFAN. Mr. Speaker, on the evening of Monday, June 13, 1949, Secretary of the Navy Francis P. Matthews was with his friends and neighbors in his home city of Omaha, Nebr. In his honor a testimonial dinner was given by the American Legion of Omaha, the Omaha Chamber of Commerce, the Knights of Columbus, the Rotary Club of Omaha, and the Greater Omaha Association. It was my great personal privilege to attend the dinner. The Secretary of the Navy is a native of Boone County, Nebr., and a graduate of the Albion (Nebr.) High School. He was born and received his early education in my congressional district. Mrs. Matthews, the former Claire Hughes, of Battle Creek, Madison County, Nebr., is likewise originally from the Third Congression District of Nebraska. I am proud of the Secretary and Mrs. Matthews. Nebraska is proud because a Nebraskan is Secretary of the Navy, but particularly proud of the kind of man she has contributed to national public service. Secretary Matthews spoke to his neighbors and friends in Omaha on the night of June 13. It is fitting that his remarks should appear here because they reveal a great and a good American:

ADDRESS BY FRANCIS P. MATTHEWS, SECRETARY OF THE NAVY

There is an especially significant emotion which animates the human heart in response to the implications of an occasion such as we are participating in this evening. A man would have to have a heart of stone not to experience a racing pulse beat and feel a lump in his throat on finding himself in the position where I am placed at this moment.

Permit me at the very beginning of my brief remarks to express my profound gratitude to those whose unselfish friendship has prompted them to arrange this inspiring and significant occasion. It would be utterly useless for me to hope to find words which would adequately indicate to you men and women in this audience the full measure of my appreciation of the compliment you are paying me by your presence here and by the sentiments which have been expressed by the various speakers.

To the Omaha Chamber of Commerce, to the American Legion, to the Knights of Columbus, to the Rotary Club of Omaha, and to the Greater Omaha Association, I extend my heartfelt thanks for their individual and collective efforts in originating and promoting the arrangements which have produced this, what to me will always be an outstanding and unforgettable event in my life. Try as I can, I fail to find any justification for the effort and energy which you have been called upon to expend to make this evening's program possible, other than an irresistible urge of friendship and good will toward a fellow townsman accidentally elevated to a temporary occupancy of high official position.

That you should react in that manner to President Truman's selection of me to serve as Secretary of the Navy is difficult for me to understand. That you should deem it fitting to manifest by this public demonstration your approval of my appointment to that post fills me with wonder and bewilderment. Mine has been a puzzled state of mind since Commander Morsman, of the American Legion, first suggested the arranging of a testimonial affair of this kind shortly following the White House announcement of the President's choice for the new Secretary of the Navy. However, though I can reason out no excuse for what you have done for me, I am all the more grateful to you on that account.

To you, Bob Storz, I express my sincere thanks for your generous references to me

during the course of your remarks as toastmaster.

To you, Tom Ashton, I am grateful for your kind and complimentary statements expressed on behalf of yourself and my many friends in the chamber of commerce. I shall always cherish the laudatory sentiments embodied in this resolution adopted and presented to me by the chamber's board of directors regardless of how little I merit them.

To you, Commander Morsman, and to the members of the American Legion, I offer my heartfelt thanks for your most liberal expressions of good will and confidence. The portion of our city's population for whom you speak represents the men and women who in their respective generations have held aloft the unquenchable torch of America's noblest patriotism in the periods of our country's greatest peril. To be the beneficiary of your and their good opinion involves a responsibility of most solemn implications. I am grateful for this tribute from the veterans of my country's armed forces.

To you, Admiral Denfeld, let me say I welcome this opportunity to express publicly my appreciation of your indispensable counsel and advice so generously made available to me since I have assumed the duties of Secretary. You have been a tower of strength to me in meeting the complex problems involved in the discharge of my official duties. If I can continue to merit your expert approval of my administration of the Office of Secretary I shall be most happy. It is a real pleasure to contemplate the privilege of working with you as the years go on. I am grateful for the confidence you indicated in me tonight.

To you, Archbishop Bergan, I am indebted in a most special measure. There is always an element of hazard for the spiritual spokesman who endorses an individual engaged in public life. I am conscious of the particular obligation which your all too generous words of endorsement and approval have imposed upon me. The only fitting return that I can think of is a never failing future effort to become consistently less and less unworthy of your faith in me and in my fidelity to the eternal principles which it is your conviction should guide all men at all times.

To you, Mayor Cunningham, I express my most sincere gratitude for your sentiments of approval proclaimed in your own name and in the name of all my fellow Omahans. Such official character given by you to this occasion enhances its significance and adds to its lasting importance.

A day like this in my life, set apart in my honor by the mayor's proclamation, the events which transpired on the courthouse square this noon and the things which we have witnessed and heard here this evening comprise another added reason why I regard Omaha as the most desirable place in all the world to have the foundations of my family's home so firmly anchored and the roots of our family life so securely embedded.

It is now almost half a century since I first arrived in this community, an inexperienced country boy from the rural atmosphere of Boone County, with my recently acquired diploma from the Albion High School tucked away in my shabby suitcase, seeking the career and the success which my widowed and self-sacrificing mother with such solicitude had taught me to believe could be attained in some measure at least as the fruit of hard work, studious effort and an uncompromising fidelity to God.

Our city in 1906 was not the thriving metropolis that it is today. The Middle West was not then the highly developed agricultural empire that it has since come to be. In that day the Nation's annual budget was just $600,000,000. The budget for the Naval Establishment was $110,000,000. The total budget for the Army and the Navy was $228,000,000. This year the budget for the Military Establishment is about $15,000,000,000 of which almost five billion is allocated to the Navy and the total national budget is approximately $42,000,000,000. Nothing could more dramatically illustrate the difference in the times between 1906 and 1949.

In 1906 we had approximately 85,000,000 people. Today, about 145,000,000.

The Navy in 1906 comprised approximately 265 ships. There are about 1,000 ships in the Navy at the present time.

In 1906, Jim Dahlman was mayor of Omaha. John Mickey was Governor of Nebraska. J. H. Millard and Elmer J. Burket were Nebraska's United States Senators. Theodore Roosevelt was President of the United States. At that time the State legislatures still elected the United States Senators because it was thought the people were not qualified to exercise such a high privilege. The Spanish-American War was a recent memory and its veterans were thought to have fought and won the war which through the liberation of Cuba had demonstrated the then compelling conviction that true democratic freedom would come to mankind when the gripping shackles of colonial subjugation were stricken from the minds and hearts and bodies of the unfortunate masses of people who paid unwilling tribute to the rich and powerfully imperialistic governments of that day.

At that time the British Empire could boast that the sun never set on her possessions as it daily encircled the globe. Ireland was still her unwilling and protesting satellite. Her ships sailed the seven seas in unchallenged dominance over the lives and fortunes of large portions of the world's people.

A vast transition has evolved since then.

My father died when I was 9 years of age. The gulf between what the world was in his day and is now is startlingly revealed when I remind myself, as I have frequently told my children, that he never saw a moving picture nor dreamed of a beautiful technicolored product from Hollywood with the human voice synchronized with the actor's portrayal of the picture story reflected on the theater's screen. He never listened to a phonograph or had a telephone in his home or place of business. The radio and radar were still buried deep in the bosom of the future. He never rode in an automobile. For him the electric light, then a faint reflection of its present-day magic, was a curiosity which we simple-souled country folk spent hours trying to blow out in our hotel rooms when we came to Omaha to see the sights.

In 1906 the Wright Brothers had made their first successful flight in an airplane only 3 years before. To my father the suspension of heavier-than-air modes of transportation above the clouds was a fantastic speculation. Last Friday evening, in 5 hours and 15 minutes, we flew to Omaha from Washington in a four-engined DC-4, weighing tons, with 10 of us Navy men aboard, and carrying the added weight and importance of Congressman and Mrs. Karl Stefan. And that was making only medium good time.

Oh, it is a long way back from tonight to the income tax-less days of 1906. And would you believe that it was 11 years after I took up my residence in Omaha that Congress passed the first billion-dollar budget for our country? However, let me hasten to disclaim any possible connection between the two events. The chamber of commerce would outlaw me tomorrow, brand me as public enemy No. 1 and gleefully shoot me at sunrise, if they could fix on me the hideous responsibility for laying that egg in the nest of our national economy.

Even these few reminders emphasize the vast transition which has taken place to turn the world of 1906 into the present prodigy of modern society which it represents. There is a big difference, too, between that Albion High School boy of 1906 and the Secretary of the Navy whom you honor tonight.

But in one respect at least that high-school boy has remained true and constant. In 1906 I met Claire Hughes, a sweet and desirable farmer's daughter, of Battle Creek, Nebr., and she, the sweetheart of my youth, is still and ever will be the cherished and beloved idol of my dreams—the sweetheart of my elder years.

I offer you no apology for paying reverent tribute to her this evening. Without her, life would be a dismal void. Would that God could find some way to make more young people realize what a sacred and beautiful thing the marriage relationship is. If the church and our country could impress upon our people a fundamental understanding of the spiritual and economic waste and moral disaster that comes from broken homes and parentless children, 90 percent of the battle to preserve the way of life that our forefathers fashioned here would be won.

Mrs. Matthews, as most of you know, has consecrated her life unselfishly to our six children. I think I can say with propriety, even on this public occasion, that, in my opinion, they edifyingly reflect the vocation of her motherhood to them. No higher mission can come to any woman than that she be a good mother to the children whom God gives her.

But, of course, while she is doing that, she shouldn't forget to direct an occasional solicitous and proprietary glance toward the boss of the house in the abundance of the leasure time she should have while raising the youngsters. After all, you men will know how important that is. Let me assure you that that precaution was amply respected in the Matthews household. Otherwise, how in the world do you suppose I managed to get here tonight that I might from this vantage point condescendingly glance down at her from time to time as she anxiously supervises the table manners of our adult progeny who at the moment so numerously surround her.

In the beginning of our life's partnership, while she stayed home and bathed the babies and did the laundry—you see, we didn't have the current flowerlike baby-laundry service in the baby-producing period of our married life—I forged out in the world to play the part of the struggling and hoping-to-rise young lawyer—most emphasis, of course, should be placed on the struggling part of the characterization. But I went forth on that adventure with her backing and impelled by the implicit faith which a self-effacing and courageous wife can always impart to her husband.

I wonder, do you really think that perhaps I may have achieved some slight measure of success, my friends? If case you do, then, I shall not attempt to dissuade you from that conviction because whatever that success may be, large or small, give full credit to this precious wife of mine; and, too, remember the credit due that widowed mother of mine who let her high-school boy utilize the fruits of his part-time labor for his own educational advancement instead of putting him to work to provide for her own support and comfort as she might well have done.

Remember, too, my alma mater, the Creighton University, whose Jesuit instructors implanted in my youthful and impressionable mind those never-changing principles of right and wrong and a sense of fundamental values based on the natural law of God and the essential dignity of man as His creature, which, if they were more appreciated and better championed by a sufficient portion of the world's people today, would bring victory to Western Christian civilization in its climactic clash with the esthetic ideology embodied in the abhorrent apocalypse of Karl Marx.

I know that I express your thoughts as well as mine when I say again this is an inspiring occasion. As recently as 6 weeks

ago it wouldn't have been possible. Personally, I haven't changed any in the meantime, nor have I suddenly done something to deserve such an outpouring of friendly good will and esteem from you, my neighbors and friends in Omaha, and its surrounding territory. You see, I realize full well that it is not I whom you honor but the exalted office I happen to hold.

And that office and the institution which it represents are worthy of your homage and your tributes. It is a great distinction that it temporarily is identified with our city through the person of one of Omaha's citizens. It is a sacred trust and you becomingly do it honor in this public manifestation of your consciousness of our local responsibility toward the momentary distinction that is ours. I am proud of my home city and of its people in their ability to grasp a sense of the fitness of things.

My personal part in this whole picture is quite incidental and unimportant. My greatest obligation as I interpret it is to safeguard the trust for which I have become responsible. In the performance of my duties as Secretary of the Navy may God grant that I prove worthy of the President's confidence in me; may I sturdily sustain the arm of my superior, the great Secretary of Defense, Louis Johnson, and helpfully support him in his valiant effort to unify the total armed forces of the Nation into an efficient, economical, and unbeatable protector of our country's precious liberties and principles in peace and in war, should war come. And at the conclusion of my service in Washington, in God's providence, may I be permitted to return to my home in Omaha and resume my life among you, my friends and neighbors, still meriting your esteem and confidence and with a heart and mind tranquil in the conscientious conviction that I have done my work well and that I have kept faith with you, my friends, with the President, with the Navy, with the people of America, and with Almighty God, the Common Father of us all.

Bronx Democratic Party

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to invite the attention of the Democratic membership of the House to the following address by Mr. Jerry Patterson, executive secretary of the special events committee of the Democratic County Committee of Bronx County.

Mr. Patterson delivered the address at Fordham University as part of the program to acquaint our young men and women with the background and principles of the Democratic Party. Mr. Patterson and the Honorable Edward T. Galloway, chairman of the special events committee, are to be commended for the splendid work they are doing in interesting our young people in their government, and in urging them to take an active part in the political activities of their communities. Mr. Patterson's address follows:

During the past 2 years, Edward J. Flynn, national committeeman from New York State and Bronx County Democratic chairman, opened the way for the young people of Bronx County to participate in the field of politics and government by becoming an active part of one of the two major parties.

Local district organizational clubhouses belonging to the Democratic County Committee of Bronx County appointed outstanding young men and young women to the special events committee, whose duty is to find a place in their local organization for these young people who believe in the liberal-progressive principles of the Democratic Party and to act as coordinator in local civic functions.

Assemblyman Edward T. Galloway, senior assemblyman of Bronx County, was chosen chairman of this special events committee.

It is evident that young voters and those who will soon be of voting age have a major political organization in which they may join. However, only those who believe in the following are encouraged to participate in this movement:

1. Good government.

2. True progressive liberalism as stated in the 1948 National Democratic Party platform.

3. Opposition to Communist and Fascist elements.

In order to facilitate joining, regular dues have been cut in half by district clubs and in many cases no membership fee is required, if you are below 25 years of age. The membership age has also been lowered to 17 in all Bronx Democratic clubs.

We feel that the Democratic Party offers the Bronx people who cherish progressive liberalism the only effective voice in the cause of good government. There is no need for these people to seek any other form of government or to seek any other political party to carry out this program.

The Bronx Democratic Party, under the conscientious direction of its elected executive members, is a stable, solid, recognized party that has no Communist or Fascist ties and does not seek them.

Our elected Bronx Democratic representatives, Charles Buckley, Isidore Dollinger, Christopher C. McGrath and Walter Lynch have constantly fought for a liberal-progressive program that would aid the average man. Our State legislators and city councilmen have also stood behind this democratic program of peace and prosperity with dignity for individual human rights.

Active participation by young people in politics and government means a better candidate for public office; an intelligent understanding of issues; an understanding of our American democratic form of government and the opportunity it affords its young people regardless of race, creed or color.

As Vincent M. Gougham, executive secretary of the Young Democrats of America, said: "There is no profession today which has greater need of an infusion of new blood, new ideas from young people with high and consecrated ideals of service to humankind than politics—for the members of no other profession shoulder such an awesome responsibility for the lives, security, and well-being of their fellow men.

Resolutions of the American Legion, Department of South Dakota

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions which were adopted by the thirty-first department convention of the American Legion held at Yankton, S. Dak., June 12, 13, 14, 1949:

Be it resolved, That the Department of South Dakota firmly endorses H. R. 2690, the intent of which is to create an Administrators Advisory Council for the purpose of reviewing appeals denied by the Board of Veterans Appeal; said House resolution creating such a board whose functions are: (1) to review such decisions; and (2) advise the Administrator as to what action he should take with respect to such decision—this board of review to be completely independent of the Veterans' Administration.

Whereas the American Legion is constantly trying to help each and every veteran, and it has come to the attention of many rural-minded Legion members that the Farm Home Administration has done a superior job in helping the farm veteran get reestablished in the farm: Now, therefore, be it

Resolved—

1. That the American Legion, Department of South Dakota, heartily endorses the work of this agency; and

2. That this department go on record in requesting the Congress of the United States to supply ample funds in order that veterans may be able to obtain necessary supervision and loans to which they are entitled; and

3. That veterans' applications have increased and are increasing rapidly; that copies of this resolution be sent to South Dakota's Senators and Representatives at once.

Whereas the National Rehabilitation Commission has gone on record as favoring a waiver of interest for reinstated, converted War Risk Insurance on the lives of World War I veterans, as being an equitable and just compromise on the accumulated amounts now due; and

Whereas H. R. 3638 of the first session of the Eighty-first Congress, introduced by Mr. PHILLIPS of Tennessee, provides legislation for such adjustments: Be it therefore

Resolved by the American Legion, Department of South Dakota, in convention assembled, That our congressional delegation be asked to support such legislation.

Whereas there are now a large number of persons in this country, native born, naturalized, and aliens who are in favor of destroying our form of government; and

Whereas infiltration tactics can be as dangerous or more dangerous than invasion from without; and

Whereas the situation is becoming more serious all the time and more serious and more dangerous activities are coming to light each day: Be it therefore

Resolved, That this thirty-first annual convention, the American Legion, Department of South Dakota, urge that the Congress and the executive department of our Government take such steps as are necessary to prevent further infiltration and to correct present dangerous conditions.

Whereas it has always been the position of the American Legion that our country should have an adequate national defense program; and

Whereas the American Legion has heretofore proposed and urged the adoption of a plan of military training that will most effectively insure our national defense: Therefore be it

Resolved, That this thirty-first annual convention, the American Legion, Depart-

ment of South Dakota, go on record as reiterating our stand, now as in the past, that the American Legion plan of national security training be adopted for national defense.

Whereas it has always been the policy of the United States that the National Guard should remain with the separate States; and

Whereas it would be in the interest of States' rights, in the interest of national defense, and in economy of operation: Therefore be it

Resolved, That all National Guard, both ground and air units, remain with the separate States, except in time of national emergency.

This resolution, submitted by Rapid City Post, was approved by the department convention:

"Rapid City Post, No. 22, American Legion, herewith renews their endorsement to any legislation with intent to emancipate the American Indians who served honorably in the armed forces of the United States, and free them from the present disabilities and limitations imposed by law, and which are discriminatory to the Indian.

"Rapid City Post, No. 22, American Legion, is located in the western part of South Dakota, where there are located five Indian reservations; and there is no locality which has a better opportunity to know at first hand the unjust and moral wrong which is now being done the Indian veteran by depriving him of the benefits and responsibilities of full citizenship.

"In our daily contacts, we are constantly reminded of the splendid record of the American Indian in both World War I and World War II; of the numbers who volunteered for service, the number who gave their lives, and those who are again with us—many of them disabled; and the loyalty and courage which they showed during the war, and still show under the handicaps of disabilities incurred in service. We feel that depriving them of the right to obtain full citizenship, which is accorded to every other race or people, is vicious and un-American.

"This was originally their country. We came as conquerors, and we are still holding them as a subject people, regardless of the individual's fitness to assume the duties of an American citizen. To us this holding of the American Indian as a subjected people, regardless of the individual qualifications or contributions to our country, savors too strongly of the political dogmas of our enemies in the last two wars.

"In a recent news report appeared an item stating that the President of the United States had pardoned and restored to full citizenship many of the conscientious objectors who refused to participate in any way in the recent war, and who had been sentenced to the penitentiary as a consequence of their refusal. Some of these men lived in our locality. To us, the American Legion, it seems strangely unlike the American principal to see comrades who have gone to service with us, and who have served well and honorably, subject to the stigma of an inferior people unfit to obtain the rights of citizenship, while those who have all but betrayed our country in time of distress are freely given this honor and privilege: Now, therefore, be it

"*Resolved*, That we, the members of Rapid City Post, No. 22, American Legion, Rapid City, S. Dak., earnestly urge the State Department of the American Legion of South Dakota at their annual convention of 1949, to use their every effort to secure for these subject people, the American Indians, the rights of obtaining citizenship with full rights and responsibilities, in the country of their fathers which they have served so well."

Address of Bertram J. Murphy

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Attorney Bertram J. Murphy, Reading, Pa., national judge advocate, Marine Corps League, at fourth annual convention, Department of Pennsylvania, Marine Corps League, Wilkes-Barre, Pa., June 18, 1949:

Marines and guests, I deem it an extreme pleasure and privilege to address the Fourth Annual Convention of the Marine Corps League, Department of Pennsylvania.

My theme will be the spirit of America as exemplified by the esprit de corps, of the United States Marines.

On last Memorial Day, Secretary of Defense Louis Johnson urged that we pledge ourselves anew to the unfinished task of paying the debt to our dead—the men and women who have died in our wars against injustice and aggression.

We make such pledges every Memorial Day, but there must be much more than lip service to bring peace to the world.

Mr. Johnson thinks we can have peace if we remain strong—that our goal must be "peace through strength." He believes that this can be achieved through the unified efforts of our Army, Navy, and Air Force. In past references to the services, including all through World War II, it was soldiers, sailors, and marines. So you will see that somewhere along the line since World War II they are already trying to drop the marines by the wayside.

We need a strong National Defense Establishment, to be sure, including the further perfection of the atomic bomb, and any improvements in guided missiles, jet planes, etc., but military might would only be one of the manifestations of real strength. Recently Chairman Lilienthal of the Atomic Energy Commission said, "We should not be bewitched by the magic of the atomic bomb and solely rely on it." National unity and the spirit of the American people which has been manifested in every war that we have ever fought, is the first essential, arms alone cannot maintain peace, nor insure victory in war.

In the past wars we have soundly defeated mighty military machines, only because the people of those countries were also machines; regimented, and dictated to by the military. The one fear of most sensible democratic Americans, is the likelihood that we may lose that good old-fashioned Americanism tnat has held us in such good stead in the past, especially if there is a delegation or abdication of the powers of Congress to the military, arbitrary dictation by some of the military; gag directives, cloture regulations, and the stifling of service spirit and morale, or any other denial of constitutional rights and privileges that have always been the heritage of free Americans either in or out of the services.

I might say that the Secretary of Defense on June 8 rescinded previous directives making it unnecessary thereafter for officers to submit any written material for policy and propriety review, now making individual officers responsible for the propriety of their remarks. This is as it should be so apparently the weight of public opinion is having some effect. However, among other things, we still have the recommendation establishing one National Defense Day, in 1949 it was April 6, formerly Army Day. Whatever the Navy may have to do as a result of this, the very forceful Navy League by resolution adopted by its officers at Chicago on June 1 stated it had celebrated Navy Day on October 27 for the last 27 years, and would continue to sponsor a civilian observance of this great anniversary. I am sure the Marine Corps League will continue to celebrate the corps' birthday on November 10, anything to the contrary notwithstanding. At this point I would like to forcefully remind all and sundry that fortunately neither the Navy League, nor the Marine Corps League are under military supervision, authority, or control.

We can still have a united defense team, and a sound purposeful defense establishment, but it should enjoy the united, intelligent support of the American people, who in the final analysis have the first and last say, if it is to measure up to its obligation. Unity is the basis of strength, and unity can only be achieved through the understanding and support of the American people.

After Pearl Harbor we mobilized our manpower and matériel for the sole purpose of the destruction of our enemies, but if the winning of the war solely depended upon the industrial might of America, or a regimented military machine acting like so many automatons, it is highly doubtful whether we would have won the war, or at least it would have been prolonged many more years.

The war effort of America was exemplified on the home front by everybody pitching in. Outside of the employment in the war industries, most of it was solely on a purely voluntary basis. The whole Selective Service System, outside of the top-paid officials, was on a voluntary basis. All the war-bond drives were voluntary; also the innumerable civilian defense organizations; I could go on ad infinitum with examples of the spontaneous spirit of America.

It was at the front lines that the individual spirit of America was sharply demonstrated all during the war, commencing with the individual courage at Pearl Harbor, and after that a small detachment of marines held Wake Island from December 7 until Christmas, against great odds, and unmerciful attack. The soldiers who fought the Japs against great odds at Bataan and Corregidor. The fliers who flew out from Midway to sink the Jap Fleet knowing the planes did not have sufficient gas to get back; the courage of the sailors who went down fighting on the *Wasp*, the *Hornet*, the *Yorktown*, and the *Lexington*. and the gunners' courageous battles on the *Boise* and *San Francisco*; the marines in the first land offensive of the war who seized and held Guadalcanal and together with Army troops, fought their way through all the islands of the Pacific in some of the bloodiest battles of any war. The innumerable deeds of courage D-day, Anzio, and throughout the whole European front. All of this was the spirit of America exemplified by individual deeds of heroism, and valor, plus the collective support of a free democracy at war.

Our American democratic spirit has always been misread, and misunderstood by foreign militarists, dictators, and other past enemies of the United States, who believed, and perhaps still believe, that as a people we are incapable of producing a real fighting force. They have overlooked two major assets—America has never lost its fierce, almost fanatical love of freedom, spearheaded in all wars by the United States Marines.

Bob Considine in the Washington Times-Herald on the occasion of the Marines last birthday, November 10, 1948, said: "The United States Marine Corps, 173 years old today, has proven times without number

that for sheer spirit, fortitude, and courage beyond the normal call, it has no equal through any prolonged stretch of military history; and the American fighting spirit has always been sharply demonstrated and exemplified in its esprit de corps."

But there are some men today who for selfish reasons or for their own personal aggrandizement and power, would destroy this basic democratic spirit by assassination of the United States Marines. Any current attempt to abolish the Marine Corps is only the latest of its kind. The first came in 1864, the last one, before the present one, in 1931.

Marine Corps history has been a series of fights with the external enemies of our country, alternated with fights with its internal political foes in times of peace. During the eightieth congressional battle, one marine said "we fight for the right to fight."

Marines have resisted against great odds all efforts to crush their identity. They have managed to overcome closed-door attacks by political and other enemies, and have managed to outlast many crops of congressional auditors who my meager appropriations sought to clip their activities.

All Americans know that if war were to come tomorrow and it became necessary to seize strategic enemy bases, the Marines would be the first called upon, and as in the past the Marines would be the first to respond. To abolish the United States Marines, or stifle its esprit de corps, would be to cut off a goodly portion of the tradition and heritage that is America. It would be like saying there will be no more Fourth of July; no Washington Monument; no Statue of Liberty; no more Brooklyn Dodgers; no more baseball; no Notre Dame football; no more Army and Navy annual classic; because they are all, and each of them, symbols of the American spirit.

Nothing I have said is meant to be a rap on the merits of other arms of our military, who also have a great history, tradition, and spirit, much of this competitive spirit and morale would also go into the discard, if some short-sighted people in Washington would have their way.

The marines have received help in the past, and they will receive help again. During the Eightieth Congress, the Veterans of Foreign Wars, American Legion, and other national veteran organizations were active on behalf of the corps. The Marine Corps League is proud, if for no other reason, of its past help and assistance in successfully combating all attempts to abolish the United States Marine Corps, or reduce it to a guard status.

The marines in service have been the first to fight all foreign enemies, the marines in civilian life, especially the Marine Corps League, will be the first to fight any encroachment on our liberties, no matter from what source, and if the military is gagged, we must assume the responsibility of telling the American people the truth.

Because the esprit de corps of the Marines, and the spirit of America have so much in common and are so intertwined, any attempt to abolish the United States Marine Corps, or set up a military dictatorship, or a military machine along Prussian or Hitlerian lines is not only a battle for marines, but for all Americans who believe their individual freedom should be in their own hands through democratic, legislative, judicial and executive processes, and not delegated to, or in anywise usurped by certain of the military.

The Marine Corps League has declared war on all enemies of the United States Marine Corps, and our first objective should be the Tydings Senate bill No. 1843 which passed the Senate without a public hearing, and the Vinson House bill No. 3845, both of which bills are now in the Committee on Armed Services, House of Representatives, and we should vigorously oppose the general provisions in those bills which could have the effect of abolishing the United States Marine Corps, or reducing its personnel, or appropriations, to a starvation minimum; unless they are amended, legally guaranteeing a certain minimum Marine Corps personnel, together with retaining the combat and roles and missions functions previously guaranteed in the National Security Act of 1947.

Last Saturday, June 11, I saw the first all-marine parade in Washington in 25 years. This was on the occasion of the annual reunion of the Fourth Division. The speaker was retired Fleet Adm. William "Bull" Halsey, who said, "You are the elite corps of the country," in addressing them after the parade, and then thundered, "That's a gross understatement; you are the elite corps of the world." He further said that Congress should put a fixed proportion of the Nation's armed force in the marines, thereby giving the corps perpetual strength, in the following language: "I believe that 6 percent of the personnel strength of the Army, Navy, and Air Force should be a flooring for the Marine Corps, so we will always have a Marine Corps of proper size; after that we will have no need for future legislation; we will have what the country needs, a perpetual Marine Corps."

To accomplish this would require an amendment to section 206 (c) of the National Security Act of 1947 in the following or similar language:

"The United States Marine Corps, within the Department of the Navy, shall be maintained at a personnel strength of not less than 6 percent of the combined personnel strength of the Army, Navy, and Air Force, and shall include land combat and service forces and such aviation as may be organic therein."

This is no grab for power or purse. Present authorized marine strength is 108,000. Under the 6-percent rule, it would be 90,000. In war or emergency, it would be only 600,000, with 10,000,000 in the services. If this amendment is made part of the National Security Act of 1947, corps strength could not then be cut over a conference table or by directives.

On this same subject, a most interesting article, entitled "Blueprint for Disaster," has been written by Walter Winchell in the June 18 issue of Collier's, now on the newsstand. It is recommended to all marines and friends of marines.

Some Americans may want to forget the battles the marines fought; but when most Americans forget what the marines fought for, then God help America.

In conclusion, paraphrasing our hymn:

"Here's health to the league and to our corps,
Which we are proud to serve.
In many a fight we fought for life,
And never lost our nerve.
Now we only have a change of scenes,
And will keep right on fighting
For the United States Marines."

I thank you.

Shall a Famous Motto Become a Sad Memory?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1949

Mr. RABAUT. Mr. Speaker, I am receiving many letters from constituents in my district relative to an increase in salaries for employees of the Post Office Department. Inasmuch as the Committee on Post Office and Civil Service has today started hearings to consider this legislation, I wish to make known my views on this subject through the medium of the CONGRESSIONAL RECORD.

The income of employees of the Post Office Department has not increased proportionately with that of workers in other fields of endeavor. The small increase in salary granted by the Eightieth Congress was not sufficient for postal employees in the lower-income brackets to maintain even a modest standard of living. This Eighty-first Congress should act to provide just remuneration for the loyal and conscientious postal worker who is deserving of a wage commensurate with his long, untiring efforts to maintain the efficient postal service everyone in these United States demands and has grown to take for granted.

The postal system is vital to our whole national economy, and in order for this essential department of our Government to operate efficiently, the trained and skilled employees must be paid on a level with the workers in other Government agencies and in private industry. It is a well-known fact that it is becoming increasingly difficult to recruit personnel for the postal service because of the low salaries and slow advancement. The standards of our post-office system will lower if we cannot retain and continue to recruit the best of personnel.

The motto of the Post Office Department is well known: "Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds." This motto may become a sad memory instead of an actuality unless Congress acts to give the postal worker his just due—a living wage.

"In Proportion as the Structure of a Government Gives Force to Public Opinion, It Is Essential That Public Opinion Should Be Enlightened," George Washington—The Greatest Threats to Freedom and Justice in America Today Are Character Assassination and Thought Control—The Last Best Hope of Earth Is an America Which Can Recover Its Common Sense and Put an End to Irresponsible Witch Hunting and Use of the Hitlerian Smear Technique

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Marquis Childs which appeared in the Farmers Union Herald on June 20, 1949. This article is timely, and is particularly im-

portant when we consider the attacks that have been made on men like Lilienthal and other progressive-minded citizens who hold public office.

President Truman appointed John Carson to the Federal Trade Commission last April, and we find the Senate Committee on Interstate and Foreign Commerce still sitting on the appointment. John Carson is a liberal Republican, who served for many years as secretary to that great liberal and progressive-minded Senator from Michigan, James Couzens. Recently, however, Carson was employed as a Washington representative of the Cooperative League, United States of America. So it would appear that the big business groups who are opposing cooperatives have more power than the President of the United States.

The situation is fast reaching the point where able, progressive-minded citizens are reluctant to accept positions in the Federal Government. It would appear that it is necessary to remind the big monopolies and powerful business interests that they did not win the election last November.

Mr. Childs' article follows:

Here in Washington nearly a thousand correspondents of press and radio are reporting and commenting on the news in the Nation's Capital. This is a mighty important assignment. It is important not merely to the Nation but to the world. Because the decisions taken in Washington from day to day affect all peoples everywhere.

I believe that the overwhelming majority of men and women on the Washington assignment try to do an honest job. They are aware of their responsibility. They know how much depends on an understanding of what is happening in this world capital.

But there are a few in the press and in radio who do not accept the responsibility of factual reporting; or of honest interpretation put in the framework of the commentator's conviction. There are some who seem to believe in distortion, in the half-truth and the half-lie. They practice a subtle form of character assassination dangerous to our democracy. It is dangerous because it is an irresponsible abuse of a power that is so far reaching and so nearly absolute.

By now this form of character assassination is fairly familiar. It is based on certain smear words and smear phrases that carefully skirt the laws of libel and slander. It is based on the sneering, jeering tone of voice when a quotation by the victim is read. It is based on the clever little chuckle. Oh, that clever little chuckle which is meant to say so much that cannot be said directly. Part of the technique is guilt by association and guilt by coincidence. Part of the technique is taking words and sentences out of context—taking incidents out of context—presenting some facts and carefully omitting other facts.

Mind you now, I'm not talking about honest and forthright criticism. All public servants must expect to be subjected to continual and searching criticism. That is one of the important functions of a free press and a free radio—to keep the light turned on so that every act of every public servant is open and above board.

A lot of us should have learned last November 2 that there are other opinions in this country. I'd like to talk about those other opinions a bit. With good reason, we here in America are proud of our blessings under our free competitive system. We like to think the reason the United States can do so much to help rebuild the shattered civilization of western Europe is because of the great productivity of our private competitive system.

But I think a great many people are beginning to wonder how competitive that system really is today.

These doubts aren't necessarily induced by radicals or so-called Reds at all. The great power of economic concentration is obvious enough.

The views on this subject of eminent and highly respected authority are well known. It was in 1931 that Pope Pius XI talked about how, and I'm quoting, "immense power and despotic dictatorship is consolidated in the hands of a few who often are not owners but only the trustees and managing directors of invested funds which they administer according to their own arbitrary will and pleasure."

In that famous Encyclical the Pope used the word sovereignty to describe the kind of domination exercised by certain economic forces. And so it is not surprising that some people have begun to wonder if certain forms of economic sovereignty—the monopoly, the trust, the cartel—have not actually exceeded the sovereignty of the government.

But we in America know how important competitiveness is—as a stimulus to production, to initiative, to inventiveness; in short, to all those things that have made America great. Therefore, if competitiveness in the older sense was restricted or limited or abolished, we were willing to experiment with other forms of competitiveness.

In my opinion, that is the motive behind such a New Deal experiment as the Tennessee Valley Authority. It is an effort to create a yardstick that will measure the cost of power production, and relate the cost to the price the consumer should pay.

Many will argue and they do argue—loudly and vociferously, and with potent instruments of propaganda at their disposal—that it is a totally unfair yardstick.

But since the competition of TVA, power rates have come down. And at the same time private power companies have made generous profits.

There are some people who believe that the cooperatives can provide competition, in this newer sense, for private business. In some countries that seems probable. In Sweden, for example, there is a private oil industry, a government refinery, and a cooperative oil enterprise, all competing with each other.

Many observers believe this has made for better service and lower prices.

Now there are those who say that the co-op competition in this country is unfair.

I don't know whether cooperatives will ever take hold in this country in a really large way. Private enterprise has pushed production and efficiency to a very high point.

But what I am saying is that Americans have a right to advocate cooperatives and the cooperative way of life without being subjected to smear and character assassination; smear and character assassination that hit at the fundamental integrity of the individual and the organization; the half-lie and the half-truth that can never be caught up with.

I am saying that Americans are going to have to do some hard thinking about these things if we are to keep our competitive system truly competitive. And if we are to keep our precious heritage of freedom.

This gets down to the right of free opinion and free expression; not just on a street corner, but through the remarkable new technology of radio and television. The competition of ideas is vital to a free society. It is vital to initiative and progress. In my opinion, there is a real danger today that Government is closing in on freedom of thought.

And mind you, I think that big Government is perhaps an even greater danger than big business.

That is why I tried to say in one of my columns that to apply a political test to young men getting Atomic Energy Commission fellowships was to risk Government domination and even Government control at scientific research. That seemed to me a greater risk than that one or two misguided or alien-minded young men should receive training or experience in wholly nonsecret work at Government expense.

Anyone who dares to say that is, of course, subjected to the smear technique. Curiously enough, those who use this technique also use the alien terminology of an alien class political system which they profess to despise. They apply the designation "left wing" to those with whom they disagree, and they give it an insinuation intended to mean something worse.

I am not a left-wing columnist. I am not a right-wing columnist. I am a reporter and a columnist believing in the free exchange and the free competition of ideas.

And that includes the right to dissent. The right to dissent is an inherent part of the American character and the American tradition.

Now, obviously, this doesn't cover the right of communism or fascism to preach the overthrow of our system of government. But in my opinion, those who subscribe to communism or fascism are a small minority. They are for the most part the sick-minded and the pathological. They are so filled with frustration and hate and sometimes despair that they are blinded to all that is good and noble in the American way of life. As we have seen, they are sometimes so blind, so sick, so wrong-headed, that they actually work to destroy the American way of life.

But I believe that our laws and our law-enforcing agencies can handle this tiny minority. Whipped-up hysteria merely feeds the disease. Thought control is the surest way to produce subversives.

In the past we have gone through periods like the present. There were the Red raids and the witch hunts that followed World War I. This attack of insecurity seems to afflict us after the tremendous strain and outpouring of a terrible war. Hanson Baldwin, the military analyst of the New York Times, has said that the Nation is suffering from a bad case of atomic jitters. And I guess that describes it pretty well.

But we've recovered our common sense in the past and I'm confident we will recover it again. We must recover it if only because so much turns on it. The future of western civilization depends on the leadership of the United States. That is said often enough but it is hard to realize what a momentous meaning it really has.

We cannot supply that leadership if we here at home are torn and divided, insecure, unstable, trembling before a shadow.

We cannot do it if we are so fearful of the competition of ideas that we apply thought control. And there are various forms of thought control. One is control and domination by government. Another is the domination by monopoly over the costly new technologies of radio and television; private monopoly that presents only one point of view. It is here that the responsibility of a free press and a free radio are of paramount importance.

Only with responsibility, accepted in the true sense, can we keep our freedoms. It is the irresponsibles today irresponsibly using their power who are helping to destroy the faith that has made the American way of life in Thomas Jefferson's phrase, "The last best hope of earth."

Amended Standards Law Another Plus for Anthracite

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Anthracite Institute Bulletin of Wilkes-Barre, Pa.:

AMENDED STANDARDS LAW ANOTHER PLUS FOR ANTHRACITE

The anthracite standards law has been amended by the 1949 session of the legislature so that, effective September 1, it will become mandatory for anthracite producers and Pennsylvania dealers to label all sizes of anthracite from broken to rice inclusive as "Standard anthracite" or "Substandard anthracite" as the case may be. The original law, effective September 1, 1947, permitted but did not compel producers and Pennsylvania dealers to attest that any particular sale or delivery of anthracite was "Standard anthracite" and likewise did not compel either to attest that any particular sale or delivery of anthracite was "Substandard anthracite." Being a Pennsylvania law, the amended standards law does not apply to out-of-State dealers but it does compel producers to label anthracite correctly as "Standard" or "Substandard" regardless of shipping destination.

Anthracite producers proposed these amendments to the standards law just as they initiated the original law. It is evidence of their determination that every possible step be taken to insure that anthracite consumers have a way of determining whether they are receiving a quality product. It represents a service and protection to anthracite consumers which should be reflected in greater consumer acceptance of anthracite.

Farseeing anthracite producers, who make up the bulk of the production of the industry, have long recognized that an important factor in the future of the industry is the delivery of a high-grade product to consumers. While the original standards law was a step forward, it was of a permissive rather than of a mandatory nature and left much to be desired. Now, starting September 1 every shipment or delivery of anthracite must be correctly labeled as "Standard" or "Substandard" by individual producers and Pennsylvania dealers, thus making it possible for anthracite consumers to know whether they are obtaining a quality product. While, in the past, more than 90 percent of the legitimately prepared anthracite shipped to market conformed to the standards fixed by law, the small percentage of substandard anthracite still reaching the market damaged the reputation of all anthracite. It was the necessity for correcting this condition which prompted the enactment of the amended standards law in mandatory form.

The industry now hopes that legislation similar to the Pennsylvania Anthracite Standards Law will be enacted in other States in the anthracite-consuming territory to the end that anthracite dealers in those States will be obliged to pass along to their customers the certification of the quality of anthracite they are receiving from Pennsylvania producers. To assist in the development of such legislation the anthracite committee is making legal advice available to all dealer groups who wish to use the service.

Let Us Be Fair

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the June 1949 Metropolitan Star, a publication issued by the Metropolitan Council of B'nai B'rith. B'nai B'rith is the organization which sponsors the Anti-Defamation League:

LET US BE FAIR

We Americans are a fair people. We are not given to the practice of indiscriminately labeling everyone who disagrees with our personal views as a subversive. Neither are we so gullible as to swallow the outraged cries of persecution by those elements seeking to supplant our Constitution and democracy with foreign ideologies.

The American people have the proud habit of making short shrift of the proponent who would attempt to instill totalitarian philosophies—be they Communist, Nazi, or Fascist—in the hearts of our youth.

We like to evaluate the evidence in each case, then form our opinions on facts—not reckless statements or unfounded charges.

In the totalitarian states, the individual does not count. He is the pawn of the state, subservient to the will of his master. He is not the master of his own soul and fate.

This is not so in America, where everyone has a fundamental concern for the human and civil liberties of the individual. Bitter lessons of the past and two world wars have taught us to entertain a healthy respect for the reputations of our neighbors and friends. This fate of the individual is the primary concern of every American, and any unfair name calling or resort to reckless abandon to pin unwarranted labels on other Americans strike at the very heart of our fundamental liberties.

No less an authority—and for of communism—than Dr. Leo Cherne, liberal executive of the Research Institute of America, found it necessary recently to caution America against the undemocratic practice of calling everyone who disagrees with them a Communist.

Or, let us consider the words of Dr. Mildred McAfee Horton, retiring president of Wellesley College and wartime commander of the WAVES.

Discussing her distress over an "age of fear," Dr. Horton observed there was "good reason these days for people to be afraid to have convictions" since "acts of faith are often dangerous."

Her warning is sufficiently serious to be carefully weighed by all who cherish the human liberties that helped make our country great.

Smearing reputations recklessly will not solve the problem. It is not the American way. Rather, let us take a leaf from General Eisenhower's sound thinking. We quote the General's words:

"Ignorance of communism, fascism, or any other police state philosophy is far more dangerous than ignorance of the most virulent disease. Who can doubt the choice by future Americans between statism and freedom if the truth concerning each be held before their eyes."

Let there be no turning from determined efforts to preserve our heritages against the totalitarian foe. But, let us not violate fundamental rights and democratic traditions by attaching subversive tags to Americans who do not belong in that class.

For, if we give light, the people will find their way.

Academic Freedom Is Not Independent

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial which appeared in the June 26, 1949, issue of the Worcester (Mass.) Sunday Telegram. This editorial places rightful emphasis upon the privileges and responsibilities of the academic freedom that is enjoyed by our teaching profession and, contributes much towards an exact definition of the true meaning of this term, which has been lately subjected to rather ambiguous use by some of our prominent educators.

The editorial follows:

ACADEMIC FREEDOM IS NOT INDEPENDENT

The exchange of letters on the subject of academic freedom, recently printed in the Harvard Alumni Bulletin, and released to the press, illustrates the possibility that a conflict of opinion between sincere and brilliant men may arise from differences of interpretation of terms.

The writers of the letters are Mr. Frank B. Ober (Harvard '13), a prominent member of the Maryland bar, President Conant, of Harvard University, and Mr. Grenville Clark (Harvard '03), a senior member of the corporation and a fellow of the college.

Mr. Ober wrote to Dr. Conant protesting the outside activities of two Harvard professors in connection with Communists or people sympathetic to them. Dr. Conant, acknowledging the letter, and properly referring to these interests of the professors as "extracurricular activities," said he had asked Mr. Clark to reply to Mr. Ober.

This Mr. Clark did, in what Dr Conant correctly identifies as "his account of the history and significance of the traditional Harvard policy." It may seem to the reader of Mr. Clark's letter that traditions established under one aspect of social and international conditions may require revision to bring them to the realities of new and violently revolutionary movements. Mr. Clark sees no need for revision.

Thus, and by the general treatment, the merits of that particular discussion become purely a treatment of what Harvard policy is, on the one hand, and an opinion of what Harvard policy should be, on the other. Both sides are well argued, but as they are approached from different basic convictions there is no chance for agreement. The Harvalu Alumni Bulletin accurately entitles the letters "Freedom at Harvard," but the significance to the public and the country as a political unit, and the undercurrent of assumption within the discussion, is that the matter at stake is academic freedom, which, unfortunately is not clearly defined by either side.

It is with this, rather than with the published discussion, that we are here concerned. Experience has shown, during many months and in a number of instances, that the term "academic freedom" has been in-

terpreted to mean the granting of a personal latitude by which an individual teacher can make his professional position and academic association give prestige and indirect support to his personal political opinions and activities. There would be little dispute that a man's distinction can fairly support his political opinions within the range of the American political pattern. The dispute has arisen as to a man's rights to use his academic connections—and the obligation of an institution of learning to recognize such rights—in outside activities believed by all, except those who indulge in them, to be harmful to and perhaps destructive of the American system of politics and of free government.

To us, this extension of a purely academic privilege to purely personal conduct seems to have no warrant, either in verbal logic or in the fundamental origin of freedoms. Freedoms are based not only on the protection of the individual but on the protection of the community and of the system of mutually sustaining rights by which freedoms are created.

Academic freedom is not a separate right, to be claimed and interpreted by institutions of learning. Nor are freedom of speech, freedom of the press, and freedom of religion separate rights. Not only are they interlocking parts of one free system, mutually supplementing each other, but they are dependent and interdependent upon certain clearly understood responsibilities. An abuse of one can be harmful to all.

Abuse can come about through loose interpretation of what such rights are. It is logical to suppose that where they infringe upon each other, or are potentially destructive of the system that created them and maintains them, they are exceeding their true limits. The term 'academic freedom" has of late received interpretations in which these threats are obvious. In some instances these threats have appeared in seductive liberal guises, as if the proponent might hold and protest his intense loyalty to the United States while, because of his being some kind of advanced thinker, he could express scorn for all its institutions and policies where they conflict with those of some other country.

The patience of common sense is tried when the country these men find so superior to our own denies—openly, forcibly, and relentlessly—every single right the advanced thinkers profess to admire. Thus, they foregather, for the enlightening of the world, with teachers who have been denied every academic freedom and ordered to teach even sciences from a political interpretation, journalists who dare not write a single free word, and artists who must write or compose or paint precisely and undeviatingly as they are ordered.

For the doing of this curious thing our advanced thinkers who are members of the teaching profession claim the protection of academic freedom. In these matters it is not their academic freedom that is challenged, but their claim to use, without challenge, the aura of a great institution to give dignity, culture, and the distinction of trained thought to their personal ideas in their personal capacity. An institution may refrain from rebuking, disciplining, or discharging them, but not because they have a mysterious academic freedom in acts not connected with the institution. It can be only because of the amiability or pliability or misconception of their employers.

If a member of a newspaper staff should organize a meeting of Communists, attend it, and address it, and such action is disapproved by his editor, who disciplines or discharges him, the freedom of the press is in no way involved. The freedom involved there would be the editor's freedom to employ or not employ whomever he wishes.

There is, of course, the further responsibility of an institution of learning in sorting out what is sound to teach and what is not sound. There is a responsibility to the way of life, form of government, national, state, and civic bodies which through charters grant privileges for the purpose of education. No institution, either by quoting tradition or professing liberalism, can free itself from the responsibilities implicit in these privileges.

The NAACP and the Communists

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. MULTER. Mr. Speaker, all minority groups at some time or other are accused of communistic affiliation, not because they are so affiliated but because some people will label every liberal and progressive movement as communistic. The Communists, of course, feed on the discontent that they can breed by playing up discrimination against minority groups. The following article is worthy of careful study by my colleagues. It appeared in the Crisis, official magazine of the National Association for the Advancement of Colored People.

THE NAACP AND THE COMMUNISTS

There is in progress a campaign of misrepresentation of the NAACP currently running in the Daily Worker, the Communist newspaper. All the old phrases are there. The name-calling has started all over again. The slanted and angled news stories appear. The half-truths and whole lies see print. The object is to discredit NAACP leadership, local and national; to tear the association apart through suspicion and strife; to take it over, if not obviously, then deviously, so as to control its elections, meetings, speakers, programs, policy, conventions, resolutions, and other public statements.

Back in the early thirties the NAACP was on the receiving end of some of the fanciest name-calling, and the most vicious, truth-defying misrepresentation and slander that has appeared in print. The campaign was carried on openly by the Communist Party and its various faithful, echoing groups. The occasion was the famous Scottsboro case which began in 1931.

After the Communists had accomplished their main purpose of building that case into a world-wide attack on western democracy, they found that all the defendants were still in prison with little likelihood of being released as long as the Communist Party stood as the official defenders. So a Scottsboro Defense Committee was organized, consisting of seven or eight organizations, including the Communists. An eminent clergyman, the Rev. Dr. Allan Knight Chalmers became the committee chairman and thereafter, almost single-handedly, effected the release of most of the defendants. With the passing years the Communists gradually dropped out of the picture.

By now the Roosevelt era of cooperation between Russia and America was in full flower. It is true the Soviets made a pact with Hitler and during that brief honeymoon Roosevelt won the favorite Communist title of war-monger, but with the German Army's attack on the Soviet Union, the line changed literally overnight and Roosevelt's America became the blessed friend and ally in the war on fascism.

As the political line changed, so did the line on Negro Americans. The Communists abandoned abruptly their widely-advertised fight for Negro rights. Nothing must interfere with the war effort, lest such domestic wrangles hurt the aid to the Soviet Union. The NAACP, believe it or not, was criticized as being "too militant" in its wartime fights. The Communists joined the Southerners in saying in effect "this is not the time to fight the race question, we must fight the war." So American Negroes fought their bitter battles against Jim Crow in the war (and rather well, too) without the dubious aid of the American Communists.

The watchword through those years was cooperation. The NAACP, which had been lashed as "betraying the masses," as "cooperating with the lynch-bosses," etc., ad nauseam, became tolerable, if not respectable, in the eyes of American Stalinists.

But now everything is changed again. America is in a cold war with Russia. The American Communists are busy stirring disaffection, dissension, and unrest in every segment of American life they can penetrate, such as labor unions, church bodies, youth groups, college campuses, community organizations, and Negro groups, including the NAACP.

The purpose in all this is not to build a better NAACP to fight more effectively for civil rights for Negres under the American Constitution, using legitimate American methods, but to operate one more front group to confuse and embarrass Americans and the American Government in the present contest of ideologies.

There is no mystery, except to the unthinking and uninitiated about the Communists' program on the Negro. Their characterization of the NAACP as "reformist" reveals the line: they do not believe American democracy can be improved or reformed, hence anyone who does, who keeps alive a faith in the American way of life, is a criminal and a "betrayer of the people." As long as the NAACP and similar groups exist and push programs of reform, the Communist doctrine takes root slowly, if at all, in the nation's largest minority group. Hence the NAACP must either be captured or destroyed.

We are not alarmed. In 1931 we were bewildered by the utterly unscrupulous and vitriolic attacks which had no relation to truth. We know now that everyone who says he is fighting for Negro rights is not necessarily doing so and if Scottsboro left any doubts, they were dispelled by the sell-out during the war. The truth is that the American Communists fight only for the Soviet Russia line and for nothing else. Any other contests in which they seem to be engaged are merely side efforts which have been (and will be) played up, played down, or abandoned altogether, according to the party line of the hour.

Our NAACP membership, therefore, should be on guard against this campaign. It should remember that the Communists do not hesitate to lie when lies will serve their purpose, that they are masters of misrepresentation through misinterpretation, that they prattle about democracy in other organizations while maintaining an iron-handed nondemocratic procedure in their own party, and that their aim is to use the Negro and his problems mainly in support of Communist Party policy and only incidentally in support of Negro rights.

This does not mean the Communists should be fought, as such. They constitute a political party and have rights under the Constitution as do other parties. Those

rights must be maintained. Free speech and free assembly must be maintained for all. Let them enjoy their rights in this democracy and push their program as well as they can in their own groups. But their campaign of infiltration, disruption, and destruction of other organizations such as the NAACP can be prevented if members will not be deceived by their words, and will elect the proper officers and committees, choose the right delegates to conventions, attend meetings faithfully and out-vote the party followers, and see that the resolutions and public statements adopted by NAACP groups are NAACP statements in truth, and not those of a group using our name for its own political purposes.

Military Aid Is a Dead-End Road

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Robert S. Allen's column which appeared in the June 13 edition of the Duluth Herald, and which relates to the folly of the proposed arms for Europe program:

"UNITED STATES SHOULD END FOREIGN ARMY AID," DONOVAN SAYS

(By Robert S. Allen)

WASHINGTON.—Maj. Gen. William J. Donovan, wartime OSS commander, vigorously opposes sending additional United States military aid to China.

Instead, Donovan, who has just returned from an extended tour of the Near East, urged that President Truman's point 4 plan to develop backward areas be used to combat the spread of communism in China and other Asiatic countries.

"We have many friends in China, India, Burma, Siam, Indochina, and Indonesia," Donovan declared. "They regard us far more highly than they do the colonial powers to which they are, or were, subject. In the light of what is happening in China, the soundest thing we could do would be to initiate the President's point 4 program in these countries.

"It would profit us immensely to build hospitals, clinics, schools, and industries in these areas to enable their peoples to develop their tremendous human and material resources. They are desperately anxious to do that if given a helping hand. And they will be eternally grateful to us for such help. That is the best way to build a bulwark against communism. It is also the only way we are going to acquire the moral bases that are so essential to thwart expanding communism."

Donovan laid great stress on his contention that raising the living standard of the peoples of the Far East is a much more effective way to resist communism than spending large sums on foreign armies. He held that by aiding in developing these backward countries, the United States will accomplish a double purpose: It will destroy the conditions on which communism spreads and at the same time create vast markets for American businessmen.

"Pouring out more billions to build up anti-Communist armies in China is no solution of the far eastern problems," he asserted. "We have been doing that for a long time to no avail. We have spent at least $3,000,000,000 in China alone in the last few years for arms and armies, and what is the result? The Communists, today, are the masters of most of China.

"In the interests of our own national security and economic welfare, it will pay us to abandon the costly and futile policy of financing foreign armies. That's a dead-end road. The thing for us to do now is to give the people of the Far East the technical assistance they need and want to raise their health levels, increase their food production, and better their living standards generally. They look to America for that kind of leadership, and that kind of leadership will make for lasting friendships."

Donovan expressed deep skepticism over claims made in various quarters recently that Russia will become bogged down in China if she attempts to intervene there.

"Statements of that kind," Donovan declared, "are based chiefly on the experience of the Russians in the 1920's, when they sent Borodin to China to take over the military forces of Sun Yat-sen. It is true that Borodin got nowhere. But the Russian of that day is a far cry from the Russian of today. I know. I was in Siberia during the counterrevolution after World War I and in China in the 1920's. I have been in China a number of times in recent years, and I can say from personal, first-hand knowledge that the Russians can consolidate their position in China unless we act wisely.

"That means that we cannot continue to follow the old policy of building up armies. That will get us nowhere now, and drain our own resources to boot. What we have got to do is to give the Chinese technical aid to deal with their tremendous economic and social problems. That will enable them to resist Communist pressures. That's the kind of aid that the Russians cannot give the Chinese or any of the other peoples of the Far East. But if we offer them this kind of help and maintain a strong anti-colonial foreign policy, we can convince these peoples that we mean what we say, that we seek peace, democracy, and progress in the world."

Donovan made a lengthy tour of the Near East following his attendance at the Athens trial of the murderers of the late George Polk, United States radio correspondent. Donovan expressed keen enthusiasm over the enlightened policies being pursued by United States oil interests in the Near East.

"I was surprised and delighted to find that American oil interests are taking a broad-gage view of the social conditions that confront them," Donovan said. "They are doing a great deal to cope with these conditions. That is the sort of thing that is building real friendship for us, friendships that we can count on in times of crises. We have every reason to be proud of the things American oil interests are doing in the Near East. That is the kind of enlightened diplomacy that will pay off in a big way in the future."

Donovan declared that the Russians are making no ideological gains in the Near East, and he pooh-poohed assertions of Communist influence in Israel.

"The people and the Government of Israel are building a vigorous freedom-loving democracy. I was profoundly impressed by the strength and appearance of the labor-union members who marched in the May Day parade. A small number of Communists also staged a parade, but they seemed merely a power-hungry faction. I see no possibility of their gaining in numbers. They undoubtedly will be a source of annoyance as long as existing economic hardships continue. Those hardships are many and difficult. The people and the Government know it and they are exerting every effort to solve their problems."

One situation that is very disturbing in the Near East, Donovan said, was the continued high state of tension in all the countries.

"In Egypt, Israel and the other countries," he said, "I saw troops being intensively trained. That is not a good sign of a healthy condition. These countries don't need more war; they need peace to solve their internal difficulties. Their military activities and expenditures represent a great strain on their economies and are holding back developments and other measures which would make for far greater economic stability.

"Housing is an acute problem throughout the Near East. That's what they ought to be spending their money for, instead of for arms and troops. But there is no security in the Near East, and it is of the utmost importance that a permanent peace be established in all those countries."

Point IV

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. JAVITS. Mr. Speaker, it is all too easy in the higher strategy to forget that in our foreign policy we are trying to help people, and that it is not some abstruse game to be played in chanceries. We are forcibly reminded of the impact of point IV—the program for helping to raise the standards of living of underdeveloped peoples by extending to them technological aid—in the appended editorial of the New York Times of June 27, 1949. It cannot be overemphasized that about two-thirds of the world's population—about 1,500,000,000 people—live in the underdeveloped areas, and that only about one-third of the world's population—something over 750,000,000—live in the developed areas and in the areas in transition to development. It is the peoples in the underdeveloped countries whom we are seeking to aid.

INVESTING IN "PEOPLES"

When President Truman sent his message to Congress on Friday urging the point 4 program, he put the right word first in describing the objectives. The program has been called one of aid for underdeveloped areas or regions, but the President didn't say it that way. He said "to assist the peoples of economically underdeveloped areas." In the approach to the program that word "peoples" should be underscored.

It is natural to think of this program of development primarily as an economic enterprise. That it does have vital economic significance is obvious. It is quite plain that the world's full productive and distributive equilibrium will not be achieved by 1952 and that something bigger will eventually have to take the place of Marshall plan aid. The point 4 program looks to the transfer of some of the burden for restoring that equilibrium from public to private means, and likewise to promoting that restoration by the development of new sources of materials and new markets. In that way it is essentially an economic program.

But the development of needy areas means also the development of needy persons, and through the rise in their standards of living supplying better conditions for us all. What is asked for, therefore, is not merely capital

investment in an oil field, a manganese mine, or a rubber plantation. What is required is an investment not merely of money but also of skill and understanding in human beings. It is that investment that will pay the big dividend.

We have had some considerable experience in that sort of investment and dividend in our relations with the Philippines. When we assumed control of the archipelago it was certainly underdeveloped, and even worse. Its people were miserable, underprivileged, disease-ridden, and poverty-stricken. But they, and not the sugar fields and gold mines, were the real wealth of the country. The richest thing in the islands was the Filipinos, as we readily found out.

Our investment of money, public and private, was relatively small. The machinery of government was self-supporting from the beginning and the funds that were used for amelioration and then for growth were largely of local origin. But there was an indirect investment in the policy of giving a preferential position in our markets to the islands' major products that, in turn, gave an economic advantage to the young country. Our trade was mutually profitable.

Above and beyond that, however, was the great investment in human skills. Some of that was American, some was Filipino. There were the political skills of men such as Quezon, Osmeña, and Roxas. There were the administrative skills of a Carpenter, a Forbes, a Wood, and a Hayden. There were the technical skills in the Bureaus of Science and of Animal Husbandry. There were the fiscal skills in the auditor's office. There was an almost incredible amount of skill, patience, and understanding, Filipino and American, in the Department of Education and Health.

The application of those skills wrought a transformation in the country in a comparatively short time. The dividend took a variety of forms. There was, first of all, that very raising of the standard of living that President Truman has now set forth as a goal. Thirty-two years after the American occupation Gov. Gen. Dwight F. Davis was able to report to the President of the United States that the Filipinos enjoyed a standard of living that was 300 percent above that of any neighboring Asiatic country. That statistical fact represented many human things. In 1903 the infant mortality rate in the Walled City of Manila was 85 per hundred. In 1933 in the same Walled City it was 56 per thousand. Cholera was wiped out. Smallpox disappeared. The population tripled in two generations. More than a million children were in school. The investment in the Philippines paid off in terms of human dignity and liberty and the use of it.

That sort of investment can be made in various parts of the world under the point 4 program. But it means more than dollar investment. It means giving enthusiasm and knowledge. It means coming to grips with realities, with courage, and patience. It means dealing with peoples and not just areas with genuine warmth of heart.

Congressman Andrew Jacobs and Westbrook Pegler

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. MADDEN. Mr. Speaker, our colleague, ANDREW JACOBS, representing the Eleventh District of Indiana, has been a victim of a very unfortunate article by Westbrook Pegler, which appeared in the June 17, 1949, issue of the Washington (D. C.) Times-Herald and other newspapers throughout the country.

I feel confident that if Mr. Pegler had made an investigation of ANDREW JACOBS among the people in his home community who are acquainted with him, both politically and otherwise, he would never have written the article which I am hereby submitting for the Members of Congress to read.

Everybody who has been following the career of ANDREW JACOBS will agree that his honest motives cannot be questioned and his opinions regarding legislation, whether it pertains to labor or other matters, are thoughts emanating from his own mind and conscience. His most enthusiastic political enemies will never say that ANDREW JACOBS is politically or intellectually dishonest.

In his active career as a lawyer and citizen interested in public affairs, he has never exhibited the slightest evidence of being a demagogue. His greatest attribute is his independence of thought and willingness to fight for what he thinks is right, whether it will add or detract from his political future.

The accompanying article by Mr. Pegler reveals that he made no effort to acquaint himself with the past career and the honesty and integrity of Congressman ANDREW JACOBS, either as a lawyer or a public official.

The accompanying editorials from the Indianapolis Times and Indianapolis Star and also the letter from attorney Asa J. Smith meet with the endorsement of everybody who is acquainted with ANDREW JACOBS' career.

[From the Washington Times-Herald of June 17, 1949]

FAIR ENOUGH

(By Westbrook Pegler)

It is hard to believe that any Member of Congress, for that matter, any layman, could be as naive, which is the French word for dumb, as a Democratic Congressman from Indiana, man named ANDREW JACOBS, pretends to be in his campaign to determine whether democracy prevails in unions and to make it prevail where it doesn't.

I read that Mr. JACOBS, a freshman in the House, is a labor lawyer. This could mean a professional parasite on the union movement and our industry and economy generally on the order of the late Joe Padway, the general counsel of the AFL, a ruthless predator, who had a large clientele of the dirtiest crooks in the union racket including Browne and Bioff and the Ecalise mob.

He was our most eminent labor lawyer of his time and was so highly regarded by Moosejaw I, that he sent the old faker to England during the war on some political mission, probably with a sideline of graft, and nearly scared him to death.

I want you to understand that I am not pouring it on Padway thus freely only because he is dead. I told him off during his life and when I caught him with $1,000 of dirty money from the Scalise mob and he roared, "Some of my friends tell me I ought to sue you," I said: "Well, if you aren't guilty you certainly should." There never was a more greedy, ruthless racketeer in labor than the general counsel of the AFL.

But he didn't sue. Nor did Judge Ben Moore, of the United States Court of West Virginia, who sat in the phony John Lewis freedom-of-the-press case last year and was going to nail me for contempt in asking him whether he hadn't been a partner in a law firm which had made enormous income from the United Mine Workers and the CIO.

He was going to give me that contempt business until I upped and proved it on him and he took to his heels and the hills and said nothing more about contempt.

There was no imposition on the power of the press in that. A newspaper reporter in actual contempt has no immunity that is not enjoyed by everybody else. Moore quit to the challenge because I had him dead to rights and if you want to regard that as a commentary on the quality of our Federal judiciary, help yourself.

I don't know what kind of labor lawyer this JACOBS is, but I don't know any good ones. Experts I do know. Yes. There is an old prejudice or snobbery in the law against lawyers who specialize in criminal practice, but I should say that the new practice of labor law is even a lower specialty.

My information has it that Mr. JACOBS comes from Indianapolis, which has been the home of the teamsters and carpenters unions of the AFL for many years.

So if it is true that he is a labor lawyer he must be kidding himself or trying to kid the public when he says he is going to study undemocratic practices on behalf of the House Committee on Labor and recommend steps.

There are no more "undemocratic" unions in the whole rotten racket than the teamsters and carpenters, and if JACOBS doesn't know that after practicing this specialty in Indianapolis he must be either an awful dummy or a not very artful faker.

And the fact is that this type of union is the true AFL type with ancient bullies with pot-bellied minds and bodies oppressing and suppressing the rank and file with an arrogance and immunity beyond the imagination of the ignorant idealistic outsiders.

I am suspicious of this move because when a Democrat on the House Committee on Labor makes like a reformer in this privileged field of racketeering he is flouting the traditions of this own great party and of humanity.

There are two Democrats left in Congress out of three who investigated union racketeering in the war camps and factories who were on the level, but they were southern Democrats, all three.

SAM HOBBS, of Alabama, and Judge SMITH, of Virginia, are still in action, but old Hatton Sumners, of Dallas, finally got disgusted and retired.

Mr. JACOBS, of Indianapolis, doesn't need to waste another dollar of our money investigating. The story is all in the evil record amassed by those three southern gentlemen and for more intimate sordid details and embellishments, JACOBS need only ask me.

This act, to me, has the appearance of a private act to get some publicity for Representative JACOBS. It has been so long since any Democrat, save those three southerners who would be Dixiecrats today, even pretended to be honest about unionism that this fellow will be regarded as a freak. Has the mugg got two heads?

I am counting ten—million ere I plump for Representative JACOBS and rush to help him with my great treasure of information about the absence of that which he calls "democracy" in unions.

There is one simple remedy for the want of "democracy." That is to apply the same criminal standards and laws to union racketeers that restrain or jeopardize crooks in other lines of crime and compel the whole bloody, brutal, sordid racket to revise its constitutions into compliance with the Constitution of the United States.

About June 9, 1949, and before the Pegler article was written the following article by Victor Riesel was published

throughout the country, including New York papers:

Victor Riesel says:

"ANDY JACOBS LIFTS LID ON SOME LABOR BOSSES"

WASHINGTON.—The national spotlight is finally on the union "boss."

In one outfit it found the leader such an iron man that he casually took $1,000,000 out of the treasury for his private investments and then drove those who protested right out of their jobs in plants across country.

In another there was such one-man rule that its president publicly humiliated his vice presidents by throwing their salary checks in their faces in a hotel lobby because they forgot to call him for breakfast.

In still another the "boss" resigned just before an audit disclosed that thousands of dollars in initiation fees were missing.

And in other national unions local outlets have been held prisoner by the national leader for as long as 23 years because they disagreed with the chief. The "boss" does this by dispatching a personal agent to dump the regularly elected regional officials and administer the unit.

It's all been happening in the last year—and when one freshman Congressman, Indiana's Democratic ANDREW JACOBS, took office he decided to fight for a law to protect the little working guy.

He sent questionnaires to every United States union asking them to report which of their locals are prisoners, which have no votes, which are run by a private lieutenant of the top man.

Those unions which answered—and the replies came in by the deskful along with letters from the rank-and-filers who for years have wanted just such a mouthpiece—are the democratic outfits. Those which ignored JACOBS probably will be probed this summer.

JACOBS, the freshman, is an Indianapolis labor lawyer who has fought for the little unionist against the union giants for years. Yet when he is pitching in Congress for the rank-and-filers who pay their dues and expect a clean break, he's accused of sabotage by another congressional freshman classmate Representative ROY WIER (Democrat, Minnesota), who doubles as a leader of the AFL's stagehands union.

The other day at the end of one of JACOBS' hearings on the misuse of $1,000,000 of the printing pressmen's funds, WIER got up and stalked out, sneeringly charging that "This is a swell job of sabotage."

JACOBS retorted that WIER is entitled to "his opinion, but the investigation goes on."

WIER'S attitude is part of an irritating philosophy that unions are immune to investigation—and that Congressmen like himself and JACOBS, backed by labor in the last election, should be the last to look into union democracy. That attitude gets all labor into trouble.

Why shouldn't JACOBS' fight for a law guaranteeing freedom from fear inside a union? Certainly there's much to be uncovered.

JACOBS informs me he discovered that the late printing pressmen's union president, George Berry, used fully $1,000,000 of the outfit's money for private investments not only in the now famous playing-card company ($893,000), but in a power corporation ($165,000); for income tax ($26,000); for part ownership of a newspaper ($7,000), and to pay a fine of $10,000.

Berry would invest the union's money. If the investments earned profits, Berry would repay the dough—without interest. If they turned sour—the union simply had made a bad bet. And if there were protests, such as the complaint from a Chicago local, Berry would suspend the honest rebels and send his own man in to take over. The Chicago outfit was prisoner for 23 years. That's oppression in my book. What's it sound like to WIER?

And as for unions Representative JACOBS has yet to look into, they provide more justification for his probing policies.

The union president who threw pay-roll checks in the face of his vice presidents ran the small AFL luggage workers' union until recently. He was boss. And he made his son a $6,000-a-year "crown prince" organizer. He telephoned wives of his vice presidents, and warned them to put heat on their husbands to take orders.

In one case he said, "If your filthy husband isn't here," etc., by a certain time, dire things would happen. Even in that small outfit he earned over $15,000 a year and expenses—all accounted for, of course—and ruled for 10 years.

There are hundreds of small outfits where the union leader and personal terror are synonymous. Or where strange things happen to funds. Such as in the Oakland (Calif.) teamsters union, whose secretary-treasurer resigned some weeks ago and, where later, Big Boss Dave Beck said thousands of dollars were missing out of the $100 initiation fees collected.

And there are the left-wing outfits such as the Henry Wallaceite CIO Farm Equipment Union, whose president, Grant Oakes, can now lift the charter of any local, suspend its officers and seize its funds if any nonleftists revolt.

Let's have a look at these—and more. Can't hurt anyone but the hard guys. And heaven won't have to help the little guys.

Again, the article to which Pegler referred in his column was published in the Scripps-Howard chain of newspapers on June 14, 1949, and it discloses that Mr. JACOBS has successfully opposed William L. Hutcheson's tactics, to which misconduct Pegler mistakenly insinuates Mr. JACOBS was a party. The article speaks for itself and is proof, not only of the falsity of Pegler's insinuation, but proof that Pegler knew it was not true.

UNION RACKETS FACE INQUIRY BY CONGRESS—INDIANAN TO PROBE DEMOCRACY IN LABOR

(By Daniel M. Kidney)

WASHINGTON, June 14.—Whether New York City unions are run democratically and what rackets—if any—are under union auspices will be investigated by a House labor subcommittee headed by Representative ANDREW JACOBS, Indiana Democrat.

In announcing today that he would conduct hearings in New York, Mr. JACOBS said he expected to do some sampling of union conduct "all the way from the waterfront to the tallest buildings."

Communist infiltration and efforts made to oust them also will be of committee concern, he said.

ELECTED FOR LIFE

"The type of thing I mean to investigate will include such reports as that Joe Ryan is elected for life as head of the longshoremen. My committee is not concerned about prosecutions, only in getting sufficient data to support a law which will require both union democracy and responsibility."

New York City seems a suitable place to conduct such an inquiry since nearly every type of bad union practice, even including strong-arm methods which lead to murder, has been reported as existing there," Mr. JACOBS said.

USE OF FUNDS

First hearings were held here into the alleged personal use of a million or more of union funds by the late President George Berry, of the Pressman's Union.

Mr. JACOBS has been flooded with mail from rank-and-file union members regarding their labor bosses. One letter from a miner in Pennsylvania who claims he was ousted from the union for some slight opposition to John L. Lewis.

Mr. JACOBS is an Indianapolis labor lawyer who won a $250,000 judgment against President William L. Hutcheson's, of the A. F. of L. Carpenters Union, for a Baltimore local whose treasury had been commandeered.

TAFT-HARTLEY SUBSTITUTE

Although a freshman, Mr. JACOBS' knowledge of labor law has been recognized by his colleagues. He hopes his findings will supply facts to support that portion of his own Taft-Hartley substitute.

This section of the Jacobs bill forbids penalizing of union members for criticizing the officers and demanding an accounting of them. It would prevent ousting of a union man without a fair trial by a board consisting of disinterested members.

[From the Indianapolis Times of July 7, 1948]

UNION MEMBERS DO HAVE RIGHTS

Back in April 1946, something more than 2 years ago, the carpenters' union national convention expelled one Gotthard Hanson, a member of its Baltimore, Md., local union, who had incurred the displeasure of William L. Hutcheson and the ruling clique of the united brotherhood.

Last week, in a decision that is likely to be much quoted in future, Marion County Superior Court Judge John Niblack ordered Mr. Hanson reinstated as a union member.

This action had nothing to do with the Taft-Hartley law which has a clause intended to prevent arbitrary expelling of members from unions and hence from jobs at the whim of union bosses. Even if it works as its authors meant it to work, that law can do very little for the casual, temporary kind of employment most carpenters and other building-trades workers have. If they are not members in good standing chances are they never even hear about job openings in the first place.

So, as ANDREW JACOBS, Indianapolis attorney and nominee for Congress, who represented Mr. Hanson argued, the expulsion of Mr. Hanson barred him from working at the only job he knew how to do. The court agreed, ruled in effect that his membership in the union was property in which he had legal rights and that it had been taken away from him without due process of law.

That, it seems to us, is sound justice. Mr. JACOBS, who is unenthusiastic about the Taft-Hartley law and believes it ought to be revised, contends that this remedy was available to any union member thus kicked around by a union boss and has been right along, without any Taft-Hartley legislation.

And, no doubt, it has. But for 2 years and a couple of months, Mr. Hanson has been "out," and deprived of his rights as a union member. It took nearly a year of costly litigation to establish his rights in court and get them restored to him. Mr. Hanson, like thousands of union members who have found themselves in the same spot, couldn't afford any such defense of his rights, and was able to defend them only because Mr. JACOBS was willing to carry the case through, without fees and largely at his own expense, in the interest of seeing justice done. Not every man who needs such help will be able to get it.

Judge Niblack's ruling does establish and reaffirm the basic right of a union member to his membership. It is a right that no union which seeks to control jobs or the opportunity to get jobs can properly deny. And Mr. JACOBS has performed a useful service to all labor in raising the point and in carrying the issue through to a conclusion.

[From the Indianapolis Star of June 9, 1949]

ANDY JACOBS' MAIN TARGET

Congressman ANDREW JACOBS, of Indianapolis, has a theory about labor unions which we think is based on sound reasoning. He believes that if union members are given the opportunity to manage and control their own affairs, if they get more democracy in their unions, the whole picture of labor-management relations will be improved. Mr. JACOBS has faith in the good sense and patriotism of the rank-and-file union member. He does not like the tough union boss who runs his union like a satrap, who bosses his underlings like a dictator, and who uses union funds for his own personal purpose.

Congressman JACOBS now heads a labor subcommittee in the House which is investigating democracy in labor unions. He has proposed legislation to protect the rights of union members against predatory bosses or Communist stooges. He seeks the sort of laws which will strengthen labor unions by making union leaders more responsible to their members.

We have not always agreed with Mr. JACOBS and we still differ from many of his views on revision of the Taft-Hartley Act. But we do agree that one of the most important jobs Congress can do is to return labor-union control to union members. There are many democratic and representative unions in America. But there are also too many union bosses who hold locals in virtual slavery, who permit no opposition to their rule, who use goons to enforce their orders, who misuse union funds.

These bosses are Mr. JACOBS' targets in his investigation. And when any so-called labor Congressman, like Representative WIER, of Minnesota, says that Mr. JACOBS is "sabotaging" labor by investigating these venal practices, he is only following blindly the labor-boss dictum that union leaders are sacred, even if they murder their own grandmothers.

As Victor Reisel said in his column in the Star "Why shouldn't JACOBS fight for a law guaranteeing freedom from fear within a union?" More of the so-called labor Congressman should join Mr. JACOBS' efforts to give union members the same sort of democratic rights they enjoy as American citizens. The union movement in America has been of immense benefit to the whole country, strengthened the whole fabric of the free-enterprise system. That sort of clean unionism Mr. JACOBS wants to foster and protect. So do we.

INDIANAPOLIS, *June 21, 1949.*

Mr. WESTBROOK PEGLER,
Care of Indianapolis Star,
Indianapolis, Ind.

MY DEAR MR. PEGLER: I am one who has always said "Westbrook Pegler expresses each morning my daily thought."

I am a Republican and a "reactionary," and don't like to be called conservative in that it sounds too liberal.

My only connection with any labor litigation was recently representing some employers and obtaining for them a permanent injunction against violence in a local strike.

So much for perspective.

However, in your article of a few days ago wherein you attacked ANDY JACOBS' motives, I know you to be wrong. I have known ANDY JACOBS for decades, seldom if ever agreed with him on anything politically, but that he is a pure-minded, fearless, and honorable man is beyond question.

His particular theme for years has been to mow down the great union barons, and as a "labor" lawyer, if that fits, he has successfully represented small locals against vast overtowering power, and made the big fellows pay great big sums and disgorge ill-gotten gains.

What he is attempting in Congress now is right down his lifelong alley, and neither fly-by-night nor publicity seeking. Anyone who knows ANDY JACOBS knows that.

Sincerely,

ASA J. SMITH.

The Rebuilding of Germany

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Gravediggers at Work," which appeared in the summer edition, May-August 1949, of the publication Prevent World War III, and which points out the failures of America's policy in western Germany.

GRAVEDIGGERS AT WORK

The 13th of April 1949 was gravediggers' holiday. With little ceremony except for the recital of a pious farewell to German reparations, the pledges to extirpate German war potential and Nazis were buried.

The gravediggers labored long and arduously. The grave they dug was deep. Deceit, half-truths, and cunningly devised propaganda were the instruments which broke the hard ground of reality. Yet the grave-diggers are worried. They fear lest the grave was not sufficiently deep—or worse—that the principles which they thought were laid to rest are still alive.

Before the last shot was fired in Europe, these funeral specialists were tearing to shreds the hopes of a war-torn, war-weary world. Cautiously, but determined, they gnawed at the fibers which held together the allied program for the demilitarization, denazification, and decartelization of Germany. They succored von Papen, the German spy; Schacht, Hitler's armament specialist, and the banker von Schroeder, nazism's "angel." Indeed, the whole gang which gave life and sustenance to nazism was sheltered from the wrath of their victims. They assigned one of their men, Herbert Hoover, to Germany so that he could report back to the people that western civilization would crumble without the ingenuity and dynamism of the Herrenvolk. Their agents invaded universities, crowded lecture platforms, and even reached our churches pleading for "justice" for the devil. They captured key posts in Government, undermining President Truman's pledge to carry out to completion the tasks set forth by his illustrious predecessor.

The cross was finally placed on the burial ground when they strangled the reparations program and lifted the ban on the prohibited industries. This infamous action is the concrete proof that Germany is again reaching for the sword.

Listen to what Mr. George Humphrey, whose committee was appointed to serve the gravediggers and to destroy the reparations program, has to say: "It (the committee) has recommended for retention some plants * * * necessary for war purposes." Isn't this plain enough to everyone, even those sentimentalists who prefer not to believe what is happening in Germany today? Isn't it plain that World War III is being spawned in Germany? Choosing our words with the greatest of caution to avoid exaggeration or unwarranted alarm, we declare that the reparations debacle has set in motion, in Germany, the machinery for World War III.

It is a German victory in the first place—a victory which they engineered through their mouthpieces and dupes in the Allied nations. Prof. Eric Noelting, minister for North Rhine Westphalia (the Ruhr), is exuberant over this German victory: "It is a good thing we did not lose our nerve then, but hoped that time would do its work and that in spite of everything reason would prevail. It is now clear how correct our procedure was to continue to urge competent agencies to delay dismantling until after the conferences in Paris, London, Washington."

By "everything" Herr Noelting is referring to the peoples victimized by German aggression and devastation. By "reason" Herr Noelting refers to the propaganda lies of the Germany Firsters—who do not speak German, but think German. By "competent agencies" Herr Noelting refers to the Hoovers, the Humphrey Committee, the Wolfs of United States Steel, the Drapers of Dillon-Read et al. These are the gravediggers of American security. These are the men who corralled American dollars and public opinion after World War I to help resuscitate the German war machine. These are the men who are celebrating today while the American people and their Allies are confronted with the ominous specter of a new militarized Reich.

It is not our intention, at this moment, to go into the background, which has led American security to the brink of a new disaster. For years, without let-up, we have tried to enlighten the American people regarding the intrigues and machinations which were squandering our precious victory gained by untold sacrifice in blood and treasure.

None of the glib phrases contained in the new agreement to junk reparations can erase the terrible fact of betrayal. The State Department's announcement justifying the drastic curtailment of reparations declares that the Government felt "that in view of the possibility which the ERP offered for new investment requirements in the Allied countries to an increased extent from new capital equipment" reparations became unimportant. This is a bald admission that the American taxpayers are supposed to compensate our allies for the billions of dollars worth of damages inflicted upon them by the Germans. Thus, the American people are not only obliged to pour billions into the German rat hole, but they are now going to be called upon to pay Germany's bills due her victims. Shades of World War I.

This gravediggers' action is unprecedented in the annuals of American diplomacy. For the first time, an organization created by an act of Congress was able to take over American foreign policy and force the State Department to scrap agreements solemnly entered into with 18 of our allies.

The British and French, at the behest of Mr. Paul Hoffman, finally succumbed to crude pressures and threats that Marshall plan funds would be withheld unless they signed on the dotted line. For 4 months the American negotiators used every trick in the bag, but the British and French delegates, fearful of the wrath of their own people, did not budge. It took only 1 week in Washington, however, to make them see the light. And in that one week, German power was reborn. This agreement is all the more astounding when it is noted that there are 16 other victimized nations involved in the Paris agreement on reparations. Were they consulted? Were they asked whether it is cheaper for them to accept the crumbs of German heavy industry or to become economically independent? Was the Inter-Allied Reparations Agency, which fought such

a courageous battle against this infamy, consulted? There hasn't been a word written or spoken in reply to these questions.

And what about the Germans? Are they happy? Herr Noelting, as we indicated, is very enthusiastic and Drew Middleton of the New York Times reports that "changes in the dismantling list will soothe industrialists in northwest Germany." But let us not be content with this illusion. The Germans can never be satisfied. The Hitlerian appetite is not dead. The Germans are seeking bigger game. Have you not already heard of their protests?

For example, they don't like the occupation statute. The Wall Street Journal, which has written editorial upon editorial bemoaning the plight of the Germans, says that their attitude "smacks of this kind of short-sighted politicking and even of ingratitude." Isn't that too bad? Just what does the Wall Street Journal expect? Shall the Germans act in any other way under an occupation which officially boasts about decartelization, and in fact does everything to strengthen the cartels? We are going to experience more of this ingratitude as the days go by.

As the Germans grow militarily and economically more potent, the United States and its Western Allies will become weaker. The more war power the Germans have, the more we shall be at their mercy. The gravediggers have opened the gates without any worthwhile restrictions on the German frankenstein monster. It is beginning to flex its muscles and to reassess the capabilities of its masters.

But the realism of the Wall Street Journal is far above our heads. After criticizing the Germans for ingratitude, they recommend additional changes which will assuage the hurt feelings of the former enemy. "The answer * * * is that in time the western German state will be somehow incorporated into the Atlantic Pact of the European rearmament program. At least the trend seems to be in that direction. If so, the occupation statute, with its military, scientific, and industrial controls becomes even more illogical." You see, there is a logic to the interment policy of the gravediggers. It is a cold logic which not only spells the remilitarization of a fourth German Reich, but even more. It will, in the long run, make German armed power a decisive factor.

To those who read German history with their brain, as well as their eyes, it is clear that such armed power will be used solely for German interests. Why should it be used in conjunction with the United States and not with Russia? The gravediggers have always evaded this question. They do not talk about the German arms striking west instead of east. They seem to have some mysterious premonition that pan-Germanism and militarism is directed against eastern countries. And we, the people, must shoulder the gamble.

If ever there was a time when this organization was justified in calling itself "The Society for the Prevention of World War III" it is at this moment in history. We are back in that period when east and west were building up their own Germanys which ended in the terrible war of 1939—when both were attacked by their erstwhile ally.

As early as 1945, Bernard Baruch, that eminent statesman, warned the Congress: "What is done with Germany holds the key to whether Russia, Britain, and the United States can continue to get along. It will affect profoundly the jobs and livelihood of everyone, everywhere, for none of the economic problems of the peace can be solved except in the light of German reparations policy and the measures taken to demilitarize Germany's traditional war economy."

This is the prophecy that the gravediggers think they have buried for good.

Federal Housing Bill

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks, I append a letter from the Norfolk Association of Commerce to me, and my reply, which states my position in opposition to the bill H. R. 4009, the Federal housing bill.

Under our system of private enterprise and private initiative, I have never conceived it to be the function of the Federal Government to furnish houses to private citizens or to subsidize the house rent of a particular group of citizens.

Aside from these considerations, I am deeply disturbed by the alarming trend of Government finances. During the present fiscal year Government receipts have been drastically reduced, while, at the same time, appropriations have been increased to the point that there will undoubtedly be a substantial deficit for the year ending June 30, 1949.

For the coming year 1950 proposed expenditures by the Federal Government are again increased over 1949, whereas the expected receipts of the Federal Treasury will again diminish.

We cannot maintain a sound Government on deficit spending and an ever-mounting Federal debt. It is a matter of simple arithmetic, which the Congress apparently is unwilling to take into consideration, when the cold figures conflict with the public demand for greater hand-outs from the Federal Treasury.

The figures given in the attached letter speak for themselves in terms too clear to be controverted.

NORFOLK ASSOCIATION OF COMMERCE,
Norfolk, Va., June 22, 1949.

Hon. HOWARD W. SMITH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SMITH: This refers to H. R. 4009, the Housing Act of 1949, which we understand will come to the floor of the House for action during the current week.

This association, from the very beginning, has been extremely interested in this important matter and desirous of seeing legislation enacted adequate to solve the problem intelligently and economically. We supported the Taft-Ellender-Wagner bill, and since H. R. 4009 embodies essential fundamentals, we are in favor of its passage. It appears to us to come nearer accomplishing the desired end than anything of this sort we have seen.

This association has upwards of 1,600 voluntary members representing a cross-section of the leading business classifications in Norfolk, and we, as businessmen, realize that it is imperative for all public programs to be scrutinized carefully; that it is to the interest, welfare and progress of a community to have adequate housing for all, including those of the low-income brackets, in order to relieve the terrific drain on the taxpayers that slum areas constitute. We are convinced that greater intelligence would be exercised in subsidizing modern, decent housing rather than in connection with slum areas with all their negative and uneconomical phases.

We hope very much that you will find it consistent with your thinking to support H. R. 4009 when it comes to the floor by vote.

Thanking you, I am,

Yours very truly,

W. S. HARNEY,
Secretary-Manager.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 24, 1949.

Mr. W. S. HARNEY,
Secretary-Manager, Norfolk Association of Commerce, Norfolk, Va.

DEAR Mr. HARNEY: I acknowledge receipt of your letter of June 22 soliciting my support of the bill, H. R. 4009, known as the Federal Housing Act.

It is surprising and disappointing to me that the Norfolk Association of Commerce, in view of the present state of the fiscal affairs of the Federal Government and in view of the further insistent general demand of business throughout the country for economy in government and reduction in appropriations, should now be urging Members of Congress to support legislation calling for huge appropriations that will inevitably result in further increase in the deficit.

I have long taken pride in the sound conservation of Virginia businessmen, so many of whom are constantly writing me to urge the reduction in Federal spending and to point out so insistently the obvious necessity of balancing the Federal budget if we are to avoid a disastrous financial collapse.

The bill which you urge me to support creates an obligation of the Government of between sixteen and twenty billions of dollars over a period of 40 years. The principal portion of this expenditure will consist of gifts to the localities of $400,000,000 a year for 40 years to subsidize private rentals.

I am wondering therefore if you are cognizent of the present trend in Government finances which have developed during the fiscal year. For the first time in this period, we are confronted with a decrease in revenues and a simultaneous increase in appropriations.

For the first 11 months of the fiscal year 1948 our receipts were	$37,351,000,000
For the first 11 months of the fiscal year 1949 our receipts were	33,478,000,000
A decrease of	3,873,000,000
For the first 11 months of the fiscal year 1949 our expenditures were	32,478,000,000
For the first 11 months of the fiscal year 1948 our expenditures were	29,773,000,000
An increase of	2,705,000,000

This amounts to a decrease in net balances of approximately $7,000,000,000.

For the year 1950, the estimate of receipts is $40,984,000,000 and the estimate of expenditures is $41,857,000,000, indicating a tentative deficit of $873,000,000 which is based upon a higher estimate of receipts than either of the two preceding years, when it is well known that our revenue receipts are diminishing.

In addition to the budget estimates, we have the proposed items of:

Military aid to implement the Atlantic Pact, $1,440,000,000. To be expended in the 1950 fiscal year	$350,000,000
Aid to Korea	150,000,000
Total	500,000,000

This raises the estimated budget deficit to $1,373,000,000.

Now, in addition to the items contained in the budget, the following authorizations for

appropriations have been passed already by one or both Houses:

Military pay increase (per annum)	$302,000,000
Radar screen defense	85,000,000
Long-range guided missiles proving ground	75,000,000
Supersonic wind tunnel	361,000,000
Total	823,000,000

Other pending bills which have been reported by the appropriate committees include:

Reforestation program	$173,000,000
Mining subsidy	100,000,000
Miscellaneous (including pay increases for sub-Cabinet officers, CCC grain storage, national Science Foundation), approximately	500,000,000
Total	773,000,000

We cannot balance the Federal budget and begin the payment of our huge national debt by crying out for economy generally while urging large appropriations for those special projects that may give some special benefit to our own areas.

I have not discussed the socialistic implications of this proposed Federal housing program, but I am deeply concerned about the dangerous financial situation of the country which far outweighs any minor local benefits that may dribble down to the States through the distribution of Federal largess.

The tendency to regard the Federal Treasury as a Christmas tree and ignore the fact that everything that comes from the Federal Treasury actually comes from the pockets of all the taxpayers of the United States has been leading us down the road to bankruptcy for a good many years.

Requests such as your letter contains are deeply disturbing and discouraging to those Members of Congress who are seeking against such great odds to put the finances of your Government on a sound and solid basis.

Very truly yours,

HOWARD W. SMITH.

Counting Our Blessings

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader and Evening News:

COUNTING OUR BLESSINGS

The emphasis that has been placed on the 20,000 jobless of the community in recent weeks, as a preliminary to the campaign to raise $350,000 for the construction of a building for industrial purposes, should not obscure the advantages of Wyoming Valley and Luzerne County.

It is common practice to magnify a failing or a mistake to the exclusion of all else. This is as true in a community as it is in an individual. While we make no claim of perfection for this region, it has far more to its credit than it has against it.

We think this area compares with any in the country in scenic attractions and in climate. We are conveniently located, where markets and recreation are concerned. Living and working conditions here are desirable. With three full-time colleges, excellent public schools and numerous private institutions of learning, we have adequate educational facilities. Other cultural needs are supplied as well.

The health of the region, thanks to our hospitals and the generosity of the late Fred Morgan Kirby, is amply safeguarded. We have power and water in abundance as well as coal and other raw materials. Agriculture is a big business in Luzerne County. In churches, banks, shops, clubs, and other essentials, we have what it takes to make for comfortable living.

While there is room for improvement and progress must never stop, it is reassuring to pause occasionally and count our blessings.

Increase of Railroad Freight Rates

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a recent article from the Gardner News, Gardner, Mass., setting forth my request for suspension of proposed boosts in railroad freight rates affecting the New England furniture industry.

PHILBIN ASKS SUSPENSION OF PROPOSED BOOSTS IN RAILROAD FREIGHT RATES—ICC WILL INVESTIGATE—INCREASES WOULD AFFECT GARDNER AREA INDUSTRIAL LIFE

WASHINGTON, D. C., June 15.—Congressman PHILIP J. PHILBIN, Democrat, of the Third Massachusetts District today vigorously protested proposed increases in railroad-freight rates for shipments of furniture in less than carload lots, stating that the new rates would have serious effect upon the important New England furniture industry, particularly in the northern Worcester County area.

In conferences with officials of the Interstate Commerce Commission, PHILBIN pointed out that the increases would result in definite hardship to the furniture industry in his district placing it in a less favorable competitive position than similar industries located in other parts of the country. The Clinton Congressman specifically requested that the new rates, which become effective July 15, be suspended by the Interstate Commerce Commission pending full investigation of the matter. It is expected that the ICC suspension board, which now has the PHILBIN request under study, will review the case in the near future.

This question grows out of the original establishment of rates for smaller furniture rail shipments. In 1932, railroads serving the New England area began moving furniture in less-than-carload lots at special rates in order to meet motor-freight competition. Recently, these railroads asked the southern, southwestern, and western trunk lines to join with them in increasing rates on furniture shipments emanating from their respective areas, but this request was refused by the latter roads.

As a result, under the new order, the furniture industry in the South and West will continue to ship at their present rates to a destination like Chicago or St. Louis, while a Gardner furniture manufacturer will find his freight rates increased anywhere from 7½ percent to 107½ percent even though both shipments are being moved over the same railroad trunk lines.

"The skilled work, craftsmanship, designs, and managerial services featuring Gardner furniture products are known and recognized throughout the trade," said PHILBIN. "Consequently, our Gardner industry has always enjoyed an excellent competitive position in the wholesale market all over the country. Should the increase in freight rates become effective, Gardner manufacturers may find it necessary, because of substantial differentials, to relinquish their distant markets and limit their sales activities to trade outlets within a radius of 2,000 or 3,000 miles.

"This intolerable and discriminatory result would undoubtedly cause threat of unemployment for a group of workers whose skill and ability to produce have done so much to make Gardner a byword for quality furniture throughout the country. Naturally, I will press for remedial action with every possible zeal and in every possible means open to me. I hope that we can obtain early favorable adjustment of this vital problem.

"The Interstate Commerce Commission should recognize the inequities of these discriminatory rates. Clearly, the advantage given the southern roads will have crippling effect upon the furniture industry not only in Gardner, but throughout the whole northeastern region."

Resolution of Robert Emmet Club, of Leominster, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a resolution adopted by the Robert Emmet Club of Leominster, Mass., protesting the dismemberment of Ireland, denouncing the Ireland Act which creates artificial Irish boundaries and setting forth definite views in favor of an autonomous Irish Republic. The resolution is entitled to the careful, sympathetic, consideration of every member of the Congress. Obviously, this Nation cannot stand for freedom in every other part of the world and partition for the Irish nation which has contributed so much to civilization and the cause of freedom.

Resolved, That we earnestly request the United States Senate to amend article 4 of the Atlantic Pact in such a way as to keep the Government of this country from becoming a supporter of the English Government's policy of promoting division and discord in Ireland, because the provision in article 4, if it should be approved by the Senate, would pledge the Government of the United States and this country's armed forces to assist in maintaining the dismemberment of Ireland and in defending and supporting for the next 20 years the subordinate puppet government which the English Imperial Parliament has established in the six counties of northeast Ulster, now separated by an unnatural boundary from the rest of Ireland, a boundary which, according to democratic principles, violates the right of the Irish people to the political and territorial control of all Ireland; and be it also

Resolved, That we draw the attention of our American fellow citizens and the Members of both Houses of Congress to the fact that the English Government is using part of

the vast sums in gifts and loans which it has received and continues to receive from the United States Government to promote economic recovery not for that purpose but to subsidize and support the bigoted despotism known officially as the Government of Northern Ireland and maintain an English garrison in the northeast corner of one of the Irish Provinces, thus keeping the people of Ireland from uniting under a free native government at a time when the English Government is playing the role of unifier of the nations of western Europe against the threat of communism; and be it also

Resolved, That we, believing that the liberty-loving people of the United States do not wish to be taxed for the purpose of subsidizing bigotry and oppression in Ireland or anywhere else, protest against this misuse of the money of the American taxpayers, including our own contributions to taxation, and we demand that the flow of gifts and loans from the United States public funds into the English Treasury be halted while the Government of England misuses any part of the and continues to violate established American principles in its dealings with Ireland; and be it further

Resolved, That we denounce the Ireland Act, which has been passed in the English Parliament at the instigation of the Socialist-Labor Government, which hypocritically professes its attachment to democratic principles everywhere in the world except in Ireland, as an attempt to give permanence to the artificial Irish boundary dedicated to hatred and intolerance, the establishment of which was not only unjust to the people of Ireland but was an affront to people of Irish blood everywhere.

The National Housing Act

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. BOLTON of Maryland. Mr. Speaker, I am opposed to H. R. 4009 for a number of very good reasons, not the least of which is the staggering cost of this program of Federal subsidization of housing. This bill authorizes the erection of 1,050,000 units of public housing with subsidies of $16,000,000,000 in direct Federal grants. It should be kept in mind that these are grants and not loans, and are to be paid out at the rate of $400,000,000 a year for each of 40 years. No one will deny that, if the Federal Government embarks upon such a vast program, it will be only the beginning. Each of the units so constructed will become an argument and a justification for additional units costing many more billions of dollars; three and a half billions additional in loans and grants for slum clearance and farm housing would be authorized, nineteen and one-third billions in all.

First. I believe that faith, good credit, and solvency are just as important in Government affairs as in business, and burdened as we are with a $25,000,000,000 national debt and a $45,000,000,000 annual budget, with declining economy, I honestly do not believe this country can afford this and other proposed administration expenditures and remain solvent.

Those urging this legislation say they seek to house the lowest income third in publicly subsidized housing units. This is on the theory that private enterprise cannot erect new homes for these people. I think we should all recognize that an effort to house the lowest third in new housing, namely, the Federal subsidy route, when added to all of the other programs for social welfare now being advanced, would bankrupt our Federal Treasury.

According to the Bureau of the Census, approximately 12,500,000 families are in the lowest income third. Is the Federal taxpayer to supply housing for all these people, as is now being urged? If the Federal Government were to subsidize, let us say, 12,500,000 units, this would mean a cost to the taxpayer of $156,000,000,000. It is certain that if we construct 1,000,000 public-housing units in the next 7 years, we will soon be urged and perhaps forced by political pressures to erect sufficient additional units to accommodate all the others in this group, in order to give fair and equitable treatment to this entire class of people.

As members of the Democratic Party now in control of the Government, we have a most serious obligation to administer our trust in a manner which will not bankrupt the Nation for the sake of political expediency.

When this bill is passed the Housing Authority will be authorized to make commitments in the amount of $400,000,000 per year for 40 years, backed by the faith and credit of the United States of America. Therefore, future Congresses will be without any discretion when it comes to appropriating funds for this program, and will be compelled to do so even if it proves unwise to do so.

Will our national income in future years sustain the tax burdens so imposed? In 1948 our national income was two hundred and twenty-five billions. But keep in mind that in 1939 the national income was only seventy-two and one-half billions. Our national economy is now undergoing a serious adjustment. We have no way of knowing how extensive that adjustment may be either in the near future or during the next 40 years. If we have a serious decline in national income, which appears possible, how can we be expected to raise sufficient money for these welfare programs without imposing crushing taxation which will destroy initiative and further reduce the national income. In Maryland today, we have 50,000 persons out of work and no one knows what the future may bring. I, for one, am firmly convinced that the Democratic Party should not be saddled over 40 years with the responsibility for inaugurating this expensive, long-term experiment in national socialism.

Some people seem to have the idea that the American economy provides inexhaustible supply of tax revenue. This naive belief can cause irreparable damage not only to our national economy but to our social and political institutions as we know them. There is a bottom to the tax well, and we are just about scraping it now without taking on a nineteen-and-one-third-billion-dollar program of Federal housing, which is only a starter. And may I emphasize that this is only a starter.

In substantiation of this point, I call your attention to the statement of one of the witnesses who appeared before the House Banking and Currency Committee on April 27 in favor of this legislation. He said, in part:

> Although we are strongly of the opinion that the number of units of public housing called for in this bill should be increased substantially * * * we are prepared to endorse the attenuated proposal * * * our belief is that once this program is well under way it will develop sufficient political momentum of its own so that the Congress will automatically in the future increase and extend this authorization to whatever extent may be necessary.

I think I am opposed to this bill also because it is a socialistic program. Karl Marx once said that the quickest way to bring about socialism was for the Government to become the landlord of all the people, and this bill is the beginning of just that. This bill is loosening the moorings of the Ship of State, which will ultimately crack on the rocks of socialism. Do we want a repetition of what happened in England in their socialistic building program? "A home for every family group that wants one" was the battle cry of the Labor Party in 1919. By 1939 they had 1,469 housing authorities to service a population of 41,460,000 people in England and Wales. Only a guess can be hazarded at the political influence of these nearly 1,500 authorities, each armed with the power to buy land, construct buildings, admit tenants, and the approval or disapproval of all construction in its assigned area. The Government had the power to draft labor into the building industry, to requisition homes if it was the Government's opinion that the homes or the rooms were not fully utilized. The Government was completely in charge of the purchase, release, and distribution of every type of building material; and, of course, the Government could determine what tenant would move into which building and when. In an official release by the British Information in November 1945, the housing plan was cited as "another installment of socialism in England." Today a home owner cannot buy a board to mend his fence or porch without an order from the housing authority.

Fourth. Advocates of this bill have succeeded in convincing many kindhearted and well-intentioned people that this is a slum-clearance bill, but that is just a brazen attempt to pass a public-housing bill under the guise of slum clearance. No one is more interested in slum clearance than I am. I have studied and worked on slum projects for 40 years. I have seen lovely homes erected and occupied by the finest kind of people for 25 or 35 years and then develop into a slum area because of lack of enforcement of the laws. The enforcement of the law, of course, is the responsibility of the local politicians and too often have I seen their financial interest in slum property interfering with the enforcement of the law. Investment in slum properties produces the most lucrative return of any type of real estate and in many instances you will find the politician or his friends in-

vesting in this kind of property or receiving the insurance premiums from large estates, which own slum properties. Therefore, when we talk of slum clearance, we are in many instances striking at the pocketbooks of the local politicians.

When a child, I lived in very humble circumstances and I feel I know how the people in the slum areas feel, talk, and act. I know their problems and God knows my heart goes out to those living in these pools of poverty, filth, and disease-breeding masses of humanity, and I am sure there are many Members of Congress who feel the same way and who are going to vote for this bill because of the slum-clearance feature it is supposed to contain, but does not, because there is not a single mandatory provision in this bill which would eliminate a single slum. It is a cleverly written bill, wrapping up a public-housing program under the guise of slum clearance.

What does the bill provide?—

The Administration may make capital grants to local public agencies for the clearance and preparation of land for redevelopment equal to two-thirds of the cost of the project.

You will note there is no provision that the public housing units shall be built on slum areas, and my colleagues have stated on this floor, that it is not the intention of the Public Housing Authority to build public housing units on the areas cleared under this provision. There are now in existence, worth-while plans already in operation in many cities, accomplishing this same purpose without cost to the Federal Government, but I am ready to vote for this part of the bill if it is amended to reimburse the Federal Government. To clarify this point, it means that slum areas can be purchased, buildings demolished, and land prepared for resale and experience has shown that the write-down between the cost and the sale price of these properties can be recaptured by the local political units in 10 years, by means of increased taxes. It therefore does seem equitable that the Federal Government should participate in this reimbursement when the money is recaptured. This provision is the only part of the bill that deals with slum clearance, and from here on, the advocates of public housing are loading the kind-hearted citizens on a slum-clearance bus and joyriding them into a public-housing camp.

The rest of the bill, with the exception of the provisions granting aid to farmers and that pertaining to research, deals exclusively with public housing, and the Public Housing Authority does not want tenants from slum areas and neither do they want widows, the indigent nor the very poor. People without funds and in dire straits are not acceptable to the Public Housing Authority. Reports show that the tenants are from the groups who make on an average of $1,752 per year. Most Congressman have referred to housing families in the $2,500 to $3,000 income groups. The New York courts have decided, that a man earning $4,500 is in the low-income group and therefore an acceptable tenant in a public-housing unit.

A statement made by Mr. Thomas Danahey, at one time president of the Detroit Housing Commission, is correct. He said:

In the first place, it must be made clear that the housing projects will not be rented to slum residents or welfare clients. The tenants in these buildings will be people with definite minimum incomes and to be eligible to move in they must prove that their incomes are steady. There seems to be an impression that the slum residents are going to take over the buildings. Such is not the case.

The public-housing provision does not eliminate one unit in the slum area and specifically avoids the necessity of destroying slum units by amending the 1937 act, striking out the provision that one slum unit shall be destroyed for every public housing unit built.

I feel so deeply about this slum problem, that I am moved with a very deep religious desire, wherever and whenever possible, to help the human derelicts floating in this sea of misery but when I discover a bill such as this, prepared deliberately to deceive the public into believing that this is a slum-clearance bill, when it is in reality a public-housing bill, I cannot help but protest vigorously. I can see these families in squalor. I can picture how they live and then, to think the proponents of this bill are using their misery to influence Congress to vote for a public-housing bill, knowing full well that the public-housing feature of this bill will not demolish one single slum unit, nor provide shelter for one single poor family living in the worst slum areas, I cannot help being annoyed. There is no income limitation for the occupants of public-housing units provided in this bill. It is left entirely to the discretion of the local public-housing authorities, with the approval of the Public Housing Authority in Washington. In some cities these limits have been set so high that persons of substantial incomes can and do occupy these units. The so-called safeguards stipulation in the bill are a sham because: First, the local determination of housing needs will be made by the agency standing to gain most by erecting new public housing; second, the establishment of maximum income limits by local authorities is no guaranty, because those local authorities are under the political control of those who will benefit by the admission of persons of their own choosing, irrespective of their income. I recently heard of a man making $17,000 a year occupying one of these public-housing units.

Great emphasis has been laid in the committee's report, on the mayors of the cities supporting this bill. I can readily understand any politically minded mayor taking this action. It means that millions will be spent in his city without the cost showing on the local tax bill. From a political angle, he has no particular concern with the cost to the Federal Government, because the Federal expenditures do not show up on the local tax bill. You can readily realize how a politically minded mayor can be influenced when he sees the opportunity of dishing out to his friends, commissions, attorney's fees, insurance premiums, broker's fees, and the selection of the tenants. It is certainly unnecessary for me to call your attention to the fact that the local public-housing authority is under the influence of the local politicians and, as I have said before, local politicians are responsible in many cases, for the development of slum areas and to attempt to class this bill as a slum-clearance bill, is just plain fraud.

To prove conclusively that this is a public-housing bill, you will note in the title dealing with research, that it sets up the administrator as a czar of the building industry and repeals that portion of the present law that has been on our statute books for more than 30 years, preventing any department from using their office for propaganda purposes, giving the Administrator a free hand in the matter of disseminating information in the way of propaganda to the home-building industry and in this manner accelerates the Public Housing Administration program.

My interest in slum clearance prompted me to send my colleagues in the House of Representatives pictures of what the Baltimore plan has accomplished in slum clearance without cost to the Federal Government, because I thought they would be interested in carrying this story back home.

Finally, this bill is class legislation and extremely unfair. In our country there are 39,000,000 homes; 20,000,000 of them are owned by the people living in them, the other 19,000,000 families are renters. Those 39,000,000 families will be helping to pay the rent of the favored million selectees who will be selected under this bill. In other words, 39,000,000 families will be paying local and Federal taxes in order to subsidize the rent of the million families living in houses which they probably could not afford, and occupied by persons whose income may in many instances be higher than theirs.

The following letter, which I wrote to the mayor of Baltimore may be interesting. While the figures mentioned therein apply to Baltimore City and my congressional district, they may be applied to any section of the United States in a relative degree:

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 21, 1949.

Hon. THOMAS D'ALESANDRO,
Mayor of Baltimore City,
Baltimore, Md.

DEAR MR. MAYOR: I am in receipt of your letters of June 16 and June 17, advocating the passage of H. R. 4009, the so-called housing bill. After carefully studying this bill, I am wondering if you have actually read the bill and know what it provides. If you will read the bill, you will find that it authorizes the erection of 1,050,000 units of public housing with subsidies (gifts) by the Federal Government of $16,000,000,000. I note from today's paper that President Truman says it means an expenditure of only $10,000,000,000, but the bill provides grants of $400,000,000 per year for 40 years and 40 times $40,000,000 comes to $16,000,000,000, according to my arithmetic, but if you wish to use the President's figure, then divide the following figures in half. It further provides loans of $3,500,000,000 which, added to $16,000,000,000, makes a total of $19,500,000,000. But note that $16,000,000,000 is an absolute gift, so that means that every man, woman, and

child in the United States will contribute $115 to this program if enacted into law.

In other words, Baltimore County would be asked to contribute $28,750,000, Harford County $6,900,000, Carroll County $4,600,000, and that portion of Baltimore City lying in my district $34,500,000. Baltimore City as a whole would contribute $115,000,000.

The bill further provides that housing units may cost $2,500 per room, which is not out of line with present costs, so a four room and bath unit would cost four and one-half times $2,500, or $11,250. Add to this cost the cost of the land of at least $1,250, making a total of $12,500 per unit, which the Government is supposed to subsidize for 40 years. In other words, people of Baltimore City are called upon to put up $115,000,000, Baltimore County $28,750,000, Carroll County $4,600,000, Harford County $6,900,000 to help pay rents for families living in units costing $12,500 in Baltimore City. Further, there is nothing in the bill that confines the occupants to the lowest income groups.

Then there is another calculation worth noting. The bill provides that not more than 10 percent of the annual rent (a considerable portion of which is paid by the Federal Government, as aforesaid) shall be paid the city in lieu of taxes to cover schools, police, fire, garbage, streets and other public utilities.

It is reasonable to assume that a $12,500 unit will be assessed at not less than $10,000 and, calculated at the Baltimore city tax rate of $2.82 per hundred, if such unit were owned by someone who worked and sacrificed to pay for it, would mean $282 whereas these $12,500 units will only be paying $62.40 per year. I arrive at the $62.40 in this manner: The bill provides that these units shall rent for 20 percent less than comparable property of adequate volume. It is reasonable to say, I believe, that comparable property in adequate volume in the neighborhood would not rent for less than $65 per month and 20 percent under $65 would be $52 per month or $624 per year. You may say, of course, that these units may not rent for as much as $52 because they are supposed to be rented to low-income families. (Note: A New York court recently ruled that a man making $4,500 per year is in the low-income group.) The answer then is that the lower the rent, the worse the comparison. So let us use $52 per month or $624 per year as an example. Ten percent or $624 is $62.40 which will be paid in lieu of taxes on each of these housing units. In other words, the families in Highlandtown and Canton or anywhere else in the city, who have worked and struggled to own their own modest homes, will be called upon to contribute their portion of $219.60 for every unit built in Baltimore, because, certainly, if you do not collect the proportionate tax from these units, the difference will have to be made up by other home owners in Baltimore city.

I understand you hope to provide 7,000 housing units in Baltimore. So, if we multiply $219.60 by 7,000 it would mean that the home owners in Baltimore would have to put up $1,537,000 annually in addition to the $115 for every member of the family, which will be paid in Federal taxes. For a man and his wife and two children, that would be $460 for every family of four in Baltimore, Harford and Carroll Counties and every political subdivision in the United States.

Statistics of the Bureau of the Census show that there are 12,500,000 families in the lowest-income third living in substandard houses in the United States. (Your records show 396,000 people in Baltimore city.) Why should this 28,000 who will occupy the 7,000 units in Baltimore city be preferred? Is the Federal taxpayer to supply the housing for all these people? If not, why not?

If the Federal Government were to subsidize 12,500,000 units at $12,500 each, it would cost $156,000,000,000. It is certain that if we construct a million public housing housing units in the next 7 years, we will soon be urged and perhaps forced by political pressure to erect sufficient additional units to accommodate all others in this group in order to give fair and equitable treatment to this entire class of people.

To understand the magnitude of the cost of housing for the low-income group, compare this $156,000,000,000 with the present national debt of $251,000,000,000 for all government obligations, and, if we are concerned with the solvency of the Nation, add to that the $45,000,000,000 annual budget for National Defense, veterans, ECA, education, welfare, and so forth and whatever President Truman wants for socialized medicine, Federal aid to education, the Brannan farm program and other money-spending schemes now in the hopper.

I can understand you, as mayor of Baltimore City, urging the passage of this bill, because this cost may not show up on the right-hand corner of the city tax bill, but it certainly will be on Federal tax bills, and I am interested in this matter from a Federal level.

Speaking of slum clearance, I note that the Health Department of Baltimore City has rehabilitated 10,000 units in the slum area at a very nominal cost since 1941, by simply enforcing the law and making the owners who derive the income from the property, foot the bills. Don't you think this far more equitable than making the industrious family who struggled to buy their homes, pay the cost? Are you not discouraging thrift?

I am as much interested in slum clearance as anyone else but this bill does not answer that question. It does not require the building of a single unit for slums. It even strikes out of the 1937 act the provision for demolition of a slum unit for each new housing unit built.

I cannot help but be irked by governors and mayors who talk of State's rights and then petition the Congress for aids and assistance of all kinds which is the very thing that would destroy the last vestige of State's rights.

Very sincerely yours,

WILLIAM P. BOLTON.

Mack Sets National Precedent

EXTENSION OF REMARKS

OF

HON. NEIL J. LINEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. LINEHAN. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by V. Y. Dallman, editor, which appeared in the Illinois State Register, Saturday, June 25, 1949:

MACK SETS NATIONAL PRECEDENT

Thrilled, tired and happy, the 101 school children who were taken by Congressman PETER MACK on a week's trip to Washington, today are telling their friends and relatives all about it.

For them, as one of the youngsters from Springfield said, the trip has been the thrill of a lifetime. Nor were the thrills of the trip confined to the children. Washington made a deep impression upon them, but they likewise made a strong impression on Washington.

Majority leader SCOTT W. LUCAS broke precedent by welcoming them in an address from the Senate floor. Vice President BARKLEY, who made it a point to meet the group, talked to them for more than 10 minutes. Attorney General Tom Clark and FBI Director J. Edgar Hoover were happy to greet them.

The trip was a great success for everyone concerned, including Congressman MACK, who probably got the biggest thrill of all. The eager, courteous, interested young people inspired those whom they met with their good manners and enthusiasm. The lawmakers were proud of them as young Americans, and PETER MACK was especially proud because they came from his district, and were there as the realization of one of his most treasured projects.

Folks of the Twenty-first Illinois District would like to think of those 101 youngsters as exceptional—a little above the average of children in other sections, and probably Congressman MACK would, too. But actually it isn't true. They are typical of all the fine, intelligent boys and girls of the Nation.

In view of this fact, it would be a fine thing if the precedent PETER MACK has set was copied not only in other Illinois congressional districts, but in every State of the Union.

Significant of its citizenship-building importance is the fact that some of the biggest men in Government found time to extend greetings, and that all stressed the educational values which the pilgrimage offered.

That trip, coming as it has at the most impressionable period in many of the youngsters' lives, will never be forgotten by them. Tinged by the glory, the idealism, and the fresh perspective of youth, it is something that could never be duplicated in adult experience.

This is an age of thrills. Modern entertainment and recreation offer a variety of gaudy, synthetic, and sometimes macabre ones—but those 101 children of the Twenty-first Illinois District thrilled to the meaning and hope of democracy.

They thrilled as the men who signed the Declaration of Independence thrilled to the high ideals of liberty and justice; as Patrick Henry and Andrew Jackson, Henry Clay, Abraham Lincoln, "Teddy" Roosevelt, Woodrow Wilson, and Franklin Delano Roosevelt thrilled to the glory of the Republic.

As they visited the greatest capital of democracy in the world today, they were at one with the patriots of the Nation. There can be no greater strength to citizenship than that!

Voice of Alameda

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Alameda Times-Star of June 17, 1949:

VOICE OF ALAMEDA

Recent statements by Congressman GEORGE P. MILLER that cost should be no factor in the matter of distributing shipbuilding contracts as widely as possible among the Nation's shipyards are eminently logical.

The construction of tankers, other cargo vessels and passenger ships develop and retain techniques and plants that are invaluable to the country in time of war. Here on the west coast we have the remains of a

tremendous shipbuilding industry, one that furnished 53 percent of the bottoms used in the recent war. But as things are now, have been for some time, and from present indications will continue to be indefinitely, what is left of our once mighty shipbuilding industry will have about as much animation as an arthritic octogenarian.

The ostensible reason for this unhappy condition in west coast shipbuilding is that it is more economical for the country, and therefore for taxpayers, to have whatever new ship construction there is carried on in the ports and harbors of the East.

The real reason, however, almost certainly is not that of economy at all, but rather that of a steady, powerful and mounting political pressure.

Congressmen from the eastern States are naturally anxious to win as much business from the Federal Government as possible for their own districts—a highly laudable and proper desire in many cases.

But when it comes to putting on pressure to have the country's shipbuilding industry concentrated on one coast during the present days of fitful, uneasy peace, we fail to see anything praiseworthy about it.

The plain, stark truth of the matter today is that economy is not served by a concentration of shipbuilding along the eastern seaboard.

Quite the contrary. Such a policy may well prove to be one of the most costly the country has ever been asked to bear.

When the next war comes it will probably burst upon us with appalling suddenness. The likelihood is that the enemy will endeavor to attack our industrial ports and harbors at the earliest possible moment in order to destroy our shipbuilding potential. It may be true that other industrial units will be attacked at the same time, but regardless of that, we may count on all-out efforts to smash our shipbuilding industry soon after the opening of hostilities.

Only one thing would prevent such an attempt, or materially cut down the chances of its success. That would be to disperse the shipbuilding industry of the Nation on both coasts and along the Gulf.

If that were done, the chances of successful attack would obviously be greatly lessened.

This theory of dispersal is not one for application to shipbuilding alone. For some years now it has been widely talked about in relation to many other vital industries, notably that of aircraft production, and already there has been a widespread attempt, though for additional reasons as well, by many industries to get away from the big industrial centers.

The shipbuilding industry should be made to take the lead in the matter.

From a viewpoint of safety of the country alone the work of building the Nation's ships should be evenly distributed, regardless of cost, among the wartime shipbuilding centers of the Nation.

The fact that it might involve an outlay of an added few million dollars is wholly incidental to the problem involved.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. McCARTHY. Mr. Speaker, repeatedly in the debate of the last 2 days, the charge that this housing bill is socialistic has been made. It follows then, according to the argument, that it is fundamentally unsound and contrary to the American tradition. It is necessary in these days, when in public forums and in communication generally there is so little regard for accurate use of words, to insis[t] upon definition. Home ownership by the state is not a major objective of any of the important Socialist theories. Home ownership by the state has not been a practical objective of any of the socialistic states that exist or have existed in history. Historial definition does not apply. Do the opponents of the bill call it socialistic because it embodies a social approach to the solution of a social problem. If this is their intention, and it seems that no other interpretation is warranted, then we are advocating in supporting this bill, an approach to a social problem which is in the best American tradition.

Even before the much-criticized New Deal, when rugged individualism was in full bloom, when free enterprise was to most free, the social method of solving social problems was accepted. In providing roads, education, fire and police protection, in insuring adequate and safe water supplies, sewage-disposal facilities, and many other facilities and services necessary to the good society, individual efforts were pooled in the common cause.

But even older than these, is the tradition of socialized housing in America. When the first settlers came to America, individual families did not go off alone to cut the timbers for their houses, it was not expected that each family would alone perform the work of constructing its own home. There was community participation. When a new family joined an established pioneer community, either as an immigrant, or through the normal social process of marriage, the community joined in helping to provide shelter for the new family. The house raising and the shingling bee were a regular part of early American social life. Undoubtedly there were some members of the community who were too busy in their own interest to help. Some who said these new families should provide their own homes. Some who said that if these young people wish to marry and raise families they should, at least wait, until they can provide their own houses. These critics and shirkers were in the minority. The community accepted responsibility.

Today community ties have been weakened. Urbanization, the increased mobility of the American population, have made strangers of people living in adjacent houses. The false philosophy of individualism has destroyed the sense of social responsibility. Carl Snyder, in his book, Capitalism the Creator, states boldly, that avarice and greed have been the great driving forces in the building of America. We have learned, by painful experience, that a society which is based upon the inordinate pursuit of the objects of these two vices, cannot be sound. It may for a time deceive us by the appearance of prosperity, but under strain it will show the defects of the motives which have operated in its growth.

This bill is founded upon the acceptance of social responsibility. It is an attempt to make up for the failures of the past. To establish in our highly complex and interdependent society machinery through which social responsibility can be expressed in action, and social participation in the solution of a social problem expedited in the best and oldest American tradition.

Why I Oppose H. R. 4009, the Present Public Housing Bill

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 28, 1949

Mr. POULSON. Mr. Speaker, we are now finishing the fourth day of debate on this important legislation. Therefore, I do not want to take the time of this House to review the many arguments advanced in opposition or to refute the many statements made in suport of the bill. However, I would like to dispute some of the statements made by a few of my colleagues from California pertaining to the analysis of the election in California on this very important subject, and in conclusion to summarize my main objections to this legislation.

An attempt has been made to show that the people of California overwhelmingly defeated the housing bill in 1948, not because they were opposed to socialized public housing but because the bill was improperly drawn and the sponsors were irresponsible people. Those statements made by my colleagues on the face of it are ridiculous. However, I feel just as competent as any Californian to interpret the meaning of the people's vote in 1948, and especially in my district where the bill was defeated by a more than two-to-one majority. I found in talking to people in my district during the campaign, that they were not only opposed to socialized public housing but they resented the idea of having to pay, through the medium of taxes, for public housing which would benefit only a very few persons. Now, let us see if H. R. 4009 will not fit into the same category.

In evidence brought out in these debates it has been shown that less than 6 percent of our people would be in the class available to benefit by the legislation, and less than 7 percent of those available could be selected. In other words, out of every 1,000 people you know, only 4 could qualify. The limitation placed in the bill provides for those four. The other 996 persons will get nothing but increased tax bills. So few to be benefited to imperil so many. Those selected occupants must expect to pay $50 to $60 per month in addition to the Government contribution. No one unable to pay $50 could qualify. The Government subsidy would bring it down to this rental. People able to pay $50 a month rent should find little difficulty now in

getting a home, built by private enterprise. It is the group who cannot afford to pay as much as half that $50 rent whom we should worry about. There is no relief in this bill for them. It appears to have been drawn only for the benefit of a few people in the present administration, and has little concern for slum clearance.

Yesterday, the sponsors of H. R. 4009 voted against a bill that would have had slum clearance only. I voted for this slum clearance only bill. What does this mean? It reminds me of an analogy. As a boy you can remember many times going out with a bucket of oats to catch a horse which would not be caught in any other manner. After the horse had fallen for the oats and was eating them out of the bucket, you immediately slipped on the halter. Then what did you do? You didn't even let him finish the last of the oats. You had him caught and you led him into the barn. That is exactly what is happening under this bill. This slum clearance is nothing else but a catch vote to get the people of the United States tied up and then they will be led in the direction the administration wants to lead them.

Now we know that laws will not build houses. It takes men, materials, and money. Up to this time it is well known that we have used all available men and materials under our free-enterprise system, and a socialized bill, or a law, could not increase either the manpower or the materials. The argument that the Government could subsidize this labor and material down to a basis of low cost to all is impossible because this bill, which is going to cost the Federal Government from sixteen to nineteen billion dollars, will take care of only 4 out of every 1,000. The impossibility of such an idea is obvious. Furthermore, the records show that we have approached in many localities, and are rapidly approaching in the few remaining sections, the point where the supply of housing equals the demand.

What about the financing? We have had a bill introduced in Congress by my colleague, Mr. HOLIFIELD, and sponsored by the American Legion group of southern California, to substantially liberalize the loans to veterans on houses, with the idea that this liberalization would grant the opportunity to these veterans to build their own homes. What has happened to this bill? The administration leaders and the committee have not even held hearings on it. They prefer this socialistic housing bill.

Going further, we can observe that the other governmental agencies are working against the free-enterprise system of building homes, in favor of the socialistic public-housing idea. I positively know from contacts I have with some large builders in California that FHA has used every known device of stalling to delay housing projects for which all financing has been arranged and materials, supplies, and labor made available. This point was brought out by Mr. Gilbert E. Morris, Los Angeles superintendent of building, on April 9, 1949, in an article in the Los Angeles Evening Herald Express of that date. Morris said that when he spoke of low-cost housing he had in mind one of a type recently built in Long Beach, Calif. An eight-family building there was financed outside the normal lending agencies and cost $900 a room. It passed inspection under the city building code, although it would not meet FHA requirements. The builders said each unit, including living room, dinette, bedroom, kitchen, and bath, could rent for $45 a month and return a profit to the investors. In support of this, Mr. Rollins MacFadyen, technical liaison housing adviser, Department of California, the American Legion, said: "We have worked with and agree with Mr. Gilbert Morris right down the line."

It is the same old story of this administration trying to get everything under Government control so that they will have their fingers in everybody's business and will absolutely control the destiny of each citizen.

Now, let us develop the difference in the principle between the Holifield bill and the public-housing bill, H. R. 4009. It is said that the Holifield bill probably liberalizes loans to such an extent that it is questionable whether it is a good business transaction from the standpoint of the Government. Assuming this to be partially true, and that it goes so far as to practically insure a veteran that he, with any reasonable effort on his part, can keep his home, the bill still retains the fundamental principles of the free-enterprise system. First, the veteran would have to have the initiative to start the procedures to obtain the financing and to build the house. Then he would operate it under the formula of the free-enterprise system, which gives him the opportunity to have a home which is really his. Not so with this public-housing bill. The Government builds the homes and then says to a select group of people: Come, take your chance in the public lottery and we will rent you a $100 house for $50. Of course, we can take care of only 4 out of 1,000 of you, but what we are doing is changing the system of operation in this country and eventually the other 996 of you can come and live in a Government house. Naturally, you will not own your house. The Government will own it.

I do not believe in that theory and I will not vote for any legislation which encourages the kind of philosophy contained in H. R. 4009.

Forgetting all the other arguments, let us look at the cold facts and see if we can afford this public-housing program, whether we like it or not. In a speech yesterday, Mr. WADSWORTH, of New York, brought these startling facts to our attention. Government revenue has been declining for the past 3 months and the most conservative estimate is that we will run into a deficit of at least $4,000,000,000 in the next fiscal year. At present, our national debt is $252,000,000,000 and that means an additional increase in the debt. These figures are based on the regular operation of Government and not on the many additional programs now before Congress, such as public housing, Federal aid to education, European arms and additional foreign relief. This housing program the sponsors even admit will cost from sixteen to nineteen billion dollars over a 40-year period, which means that for 40 years we are obligated to pay from four hundred to five hundred million dollars each year, or increase the debt by that amount. Let me quote from my colleague, Mr. WADSWORTH, of New York, who has spent 18 years in the House and 6 years in the United States Senate:

> This bill provides that these contracts involving, amongst other things, the $400,000,000 annual subsidy, are based on the "faith and credit of the United States." They cannot be voided. The Eighty-second Congress, the Eighty-third, the Eighty-fourth, the Eighty-fifth, the Eighty-sixth, the Ninetieth, the Ninety-fifth, the One Hundredth Congress must appropriate the money. No control is left in the Congress of the United States from time to time as its Members are elected by the people. Come flood or famine, peace or war, the Congress must pay. I may be wrong about it, but I cannot recollect any such statute ever having been passed by the Congress of the United States.

Therefore, at this time I intend to vote not only against this public-housing bill but against the other legislation I mentioned above, which will but increase our debt and further weaken the security of our Nation. Furthermore, I intend to vote for the Senate resolution calling for a 5 to 10 percent reduction in all expenditures.

Light Without Heat

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1949

Mr. LANE. Mr. Speaker, Father Coakley, author of the following article on public schools and Catholic schools, is pastor of Sacred Heart Church, Pittsburgh, Pa. His parish elementary and high schools are recognized as among the most modern and well equipped in the United States.

LIGHT WITHOUT HEAT

(By Rev. Thomas F. Coakley, D. D.)

The debate over Federal aid to education seems to engender a considerable amount of cross-fire emotionalism. But it should not; it need not; it would not if two essential facts were kept in mind.

The first is that Catholic school pupils are American citizens. All American citizens, including Catholics, are entitled to equal treatment under the law. America is not America if this fact is ignored.

The pupils in Catholic schools were born in America, they have lived all their lives in the United States; their fathers and mothers were born in the United States, or else they became naturalized citizens of the country; their fathers and brothers entered the armed services just as other American citizens. They paid taxes, engaged in civic undertakings, bought farms and homes, took part in American sports and elections, entered into American business organizations. They became doctors, lawyers, dentists, engineers, teachers, professors, nurses, aviators, architects, musicians, just like other American citizens.

If we keep this tremendous fact in mind that Catholic school pupils are American

citizens, we would be far along the road to a swift solution, both amicable and just, of the whole problem of Federal aid to education.

The second fundamental fact to be forever remembered is that when a child goes to a Catholic school he is fulfilling a civic and a State obligation. He is obeying the law of the land which requires all pupils to attend school for a certain number of years. Compulsory school attendance is statute law all over the United States. The law says the child must be educated, but it does not say where. It very wisely permits parents to select the schools to which they will send their children.

NEED OF COMPULSORY EDUCATION

The prime purpose of compulsory education laws is social; it is for the benefit of the State; it is legislation enacted by the State to insure that all American citizens of tomorrow will have the proper basic training in order to intelligently exercise their duties as citizens, and to be an asset and not a burden to the community.

The State has made compulsory education the law of the land to enable American citizens to make a living, so that they may increase thereby the total prosperity of the Nation. The State realizes that educated children are better able to found a home and raise a family and to cooperate with others in community enterprises. Education enables them to conform to American ideals of living; it equips them with knowledge to enable them to vote properly and intelligently, and to form a sound public opinion, and to bear arms when necessary to defend the Nation when its very life is imperiled. In other words, the State wants an educated, intelligent body of citizens for tomorrow's America.

The public schools have carried the burden of educating American citizens, and they have done a remarkably fine job, and they are still achieving a striking success in this difficult task. But the public-school system has not carried the burden alone. Catholic schools have educated millions of American citizens, indistinguishable in their patriotism and their learning from the millions of American citizens who received their training in the public schools. These Catholic-trained citizens entered the Army and Navy and marines and air forces, fought and bled and died side by side on all the seven seas, and in every test, at every point where there could be a comparison, the pupils of Catholic schools have shown themselves just as much loyal and intelligent and progressive Americans as the products of public schools.

PUBLIC SCHOOLS NOT WHOLE SYSTEM

The public-school system is not the American-school system. It is only a part of it. The Catholic schools are a very important section of the American system of education. Therefore, when the question of Federal aid to education arises, it should be solved in the American way, the fair way, the just way, the equitable way. That means it should include all pupils being educated in American schools, whether in public or private schools, because all citizens are entitled to equal treatment under the law, just as all American citizens are expected to share equally the Nation's burdens.

Not to give Catholic pupils equal advantages with public schools is unfair, it is unjust, it is discriminatory, it is un-American. Catholic schools have performed this notable service of making educated American citizens out of millions of young men and women, but they have done so under an enormous handicap. They are compelled to go down into their pockets twice for education in this country; once to educate all American citizens who are not Catholics, by submitting to taxation to support the public schools; then again they must find many millions more as a voluntary tax upon themselves to educate their own children for the benefit of the State and Nation, and for which neither State nor the Nation contribute a single dollar.

American citizens are accustomed to fair play; let us have fair play in Federal aid to education. When our fellow American citizens know and realize the stupendous double burden of taxation Catholic Americans are carrying to make good American citizens, we feel sure they will make fair play not a theory but a fact.

More than four score and seven years ago a great American, Abraham Lincoln, on the blood-drenched battlefield at Gettysburg, said that this country would enjoy a new birth of freedom, so that government of the people, by the people, and for the people might not perish from the earth.

Thus far we have not yet realized that new birth of freedom because there is as yet no equality in education. Today this country is a Government of some of the people, by some of the people, for some of the people. As long as that condition endures democracy is a delusion and a snare, and a defense in its behalf a hypocrisy.

The Protest of Loyal Allies

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by Gen. Carlos P. Romulo, Philippine Ambassador to the United Nations and Chief Delegate to the Far Eastern Commission, on the question of Japanese reparations. It is the protest of the Philippine Government against a recently announced policy of our State Department cancelling the payment of reparations by Japan.

The Filipinos were our loyal allies during the last world war and they fought heroically against Japan. Because they were loyal to us and they fought stubbornly against the Japanese hordes, their country was devastated. Among those who showed his loyalty to the United States on the battlefield is General Romulo. Later he served with us in this House as the Delegate from the Philippine Commonwealth. Because we know so well his loyalty to the ideals of American democracy, it will serve us well as Americans to read and ponder what he has to say. There is a note of disillusionment discernible in his statement that should make us think.

Before the Japanese sneak attack on Pearl Harbor Ambassador Romulo wrote a series of articles warning us against Japan. Years later he was awarded the Pulitzer prize for those articles, but when he wrote them nobody paid attention to his warning. Will history repeat itself as a result of failure to heed the warning in the following statement:

Mr. Chairman, on May 19, I made a preliminary statement on the question of Japanese reparations on behalf of the Philippine Government. Upon further instructions from my Government, I would like to present today the following arguments and observations in further elucidation of the Philippine attitude.

This attitude is based primarily on the following points:

1. The reversal in reparations policy is a flagrant repudiation by the United States of its commitments under the Potsdam Declaration.

2. The Philippine claim for a share in Japanese reparations constitutes a valid entitlement duly recognized in the basic post-surrender policy for Japan.

3. The United States decision would nullify both the letter and spirit of the terms of reference of the Far Eastern Commission, as well as the series of policy decisions on the problem of reparations laid down by the Commission, particularly those bearing on the disposition of interim reparations assets covering 11 categories of Japanese industries.

4. The United States decision would be contrary to the general intent of the Philippine Rehabilitation Act of 1946 which was approved by the United States Congress before the independence of the Philippines, and which was premised in part on the payment of Japanese reparations.

5. Of all the Asian countries, with the probable exception of China, the Philippines sustained the heaviest loss and damage from enemy action and is therefore entitled to preferential treatment in the matter of reparations.

6. Japanese reparations assets have been assigned a vital strategic role in the implementation of the postwar industrial development and recovery program of the Philippines, and the cessation of the expected reparations payments would cause a serious disruption in the economic development timetable of the Republic and a grave dislocation of its economic structure.

In connection with the first argument, I cited in my preliminary statement the pertinent provisions of the Potsdam Declaration, which categorically set the pattern for the exaction of reparations in kind from Japan.

In support of the second argument, I quoted the applicable provisions of the basic postsurrender policy for Japan, which established the validity of the reparations claims of the Philippines and other allied countries under section 4 thereof. I also recalled the various policy decisions on reparations adopted by the Commission, which laid down the basic principles governing the apportionment of reparations shares among the different claimant countries. In particular, the Far Eastern Commission policy decision of May 8, 1947, Division of Reparations Shares, in setting up the criteria to be used in determining the shares of each country, explicitly recognized the valid entitlement of the Philippines and the other allied countries to reparations from Japan, in these words:

"The shares of particular countries in the total sum of the reparations from Japan shall be determined on a broad political basis, taking into account the scope of material and human destruction and damage suffered by each claimant country as a result of the preparations and execution of Japanese aggression, and taking also into due account each country's contribution to the cause of the defeat of Japan, including the extent and duration of its resistance to Japanese aggression."

On both counts—the material and human destruction suffered by each claimant country and its contribution to the war effort against Japan—my Government affirms most categorically that its entitlement to reparations is beyond doubt or cavil and cannot be impugned on grounds of mere prudence or convenience.

The American decision also constitutes, in the view of my Government, a violation of the terms of reference of the Far Eastern Commission relative to the grant of unilateral interim directive powers to the United States, specifically section 3, paragraph 3 thereof, which reads as follows:

"3. The United States Government may issue interim directives to the Supreme Commander pending action by the Commission whenever urgent matters arise not covered by policies already formulated by the Commission." Etc.

The suspension of further removals under the interim reparations program clearly violates this proviso since the United States declaration of May 12 would not only rescind the United States unilateral decree of April 4, 1947, but would have a similar effect upon the interim reparations policy decisions unanimously approved by the Far Eastern Commission, including the policy decisions adopted long before the United States directive to SCAP was issued; in particular, the s ries of policy decisions of May 13 to December 6, 1946, earmarking residual equipment in 11 categories of Japanese industries as available for reparations.

In support of the fourth point concerning th› Philippine Rehabilitation Act of 1946 I would like to go back to the historical basis of that enactment. In fulfillment of the repeated pledges of liberation and material assistance which he had solemnly given to the Filipino people in wartime President Roosevelt called upon the United States Congress on October 6, 1943, "to make provision to determine the adjustments necessary in the existing provisions of law which govern the economic relations between the United States and the Philippines so as to assist in making the Philippines, as an independent nation, economically secure."

Accordingly the United States Congress after the war approved the Philippine Trade Act of 1946 and the Philippine Rehabilitation Act. The prevailing sentiment of Congress was expressed by Majority Floor Leader Congressman JOHN MCCORMACK in these words:

"America, speaking through their President in the early days of the war, uttered no mere idle words. The help to be extended to the Filipinos to enable them to live in peace and independence was to be real, not imaginary, actual, not theoretical. America has never broken bond. America will not fail in the matte: of Philippine rehabilitation."

In signing these enactments on April 30, 1946, President Truman recalled the previous pledges of President Roosevelt, including the recommendation to Congress already cited. He said:

"That recommendation was made in the heat and desperation of struggle. It climaxed promises made to the people of the Philippines that not only would their land be liberated from the tyranny of the enemy, but that they would be given their full independence and would be rehabilitated from the ravages of war."

Now, the act itself, while authorizing the appropriation of $520,000,000 for war damage payments to the Philippines, public and private, provided only for partial compensation of such damage and did not constitute a quitclaim or waiver of reparations. The Philippine Government, considering its total reparations bill of $5,000,000,000, exclusive of goods and services obtained by the Japanese occupation forces, could not have agreed to such a waiver and no such consent may be implied from the Philippine acceptance of the benefits under the act.

Indeed, the act itself envisaged the payment of reparations. Section 106 (b) of the act provides that any money or bullion received by the United States from the Japanese Government by way of reparations shall be paid into the United States Treasury until it shall have fully reimbursed itself to the extent of the $520,000,000 in war-damage payments to the Philippines. The act goes on to say that any such Japanese reparations in excess of the amounts paid out by the United States shall be used to satisfy in full the unpaid balance of any private or public claim of the Philippines.

Under long-established rules of international law, the Government of the Philippines would normally have had the right, on its behalf and on behalf of its citizens, to claim and collect reparations from Japan. However, by virtue of the Rehabilitation Act, the United States Government took it upon itself to advance certain funds to the Philippines on the understanding that the first reparations received from the Japanese Government should go to repay the United States Government before being used for any other reparations claims. It therefore modified the normal rights to reparations of the Philippine Government and of the citizens of the Philippines by subrogating their claims to the prior claim of the United States.

Under the act, therefore, the Philippine Government agreed that the United States shall have a priority in reparations payments from Japan. It thereby, in effect, gave the United States Government full power and authority to act for it in connection with its claims for reparations against the Japanese Government; and in return the United States Government implicitly undertook to act as such agent and to collect reparations at least to the extent of the balance of the war damage claims of the Philippines, public and private, not paid for out of the United States Treasury.

The United States decision to halt all further reparations from Japan deprives the people of the Philippines of their just rights. Although the Philippines Rehabilitation Act represents an act of unprecedented generosity, it must be remembered that it at the same time deprived the Government and people of the Philippines of rights to reparations which they would otherwise have against Japan, and in return it involved an implicit agreement by the United States Government that it would undertake to act as agent for the Philippines to collect reparations to the extent of the balance of the war damage claims not covered by the $520,000,000 advanced to the Philippines by the United States under the act. That balance amounts to $4,500,000,000.

This, Mr. Chairman, is the sum—$4,500,000,000—which the United States Government in principle obligated itself, under the Rehabilitation Act, to collect for the Philippines in reparations from Japan. This is the sum of which the Philippine Government and the citizens of the Philippines who suffered property damage at the hands of the Japanese would be deprived by the United States decision to halt reparations.

I have laid special stress upon this argument because, as Philippine Resident Commissioner to Washington when this law was passed, I was able personally to examine and follow the underlying principles of this enactment.

With respect to the fifth and sixth points, the United States decision would in effect raise insurmountable obstacles to the economic recovery program of the Philippines. The gravity of this problem can be seen in the following figures:

The Philippines has so far received in reparations removed from Japan, machine tools and pilot-plant equipment valued at $11,000,000. This is an infinitesimal portion of the over-all reparations claim of the Philippines, estimated at $8,000,000,000. Of this over-all reparations bill, as stated before, $5,000,000,000 represents damage to private property and industrial establishments, while the balance of $3,000,000,000 represents the value of goods and services obtained by the Japanese during the occupation of the Philippines and paid with Japanese military notes.

The various amounts that we have so far received in reparations from Japan, valued at $11,000,000, in Japanese assets expropriated in the Philippines valued at $50,000,000, and in war-damage payments and other benefits received from the United States amounting to $600,000,000, together total less than three-quarters of a billion dollars, or about 9 percent of our total reparations bill.

The severity of the destruction, both human and material, wrought by the Japanese aggression in the Philippines cannot be matched by any country in Asia, with the probable exception of China. The Philippine position after World War II is comparable to that of Belgium after World War I, and the Philippines would be logically entitled to the same preferential treatment that was accorded to Belgium. At that time Germany's resources were also considered to be inadequate to meet the total reparations claims of the Allies. However, because of the extraordinary damage sustained by Belgium, the reparations claims of that country were given priority. Equity would dictate that the claims of the Philippines be accorded similar recognition.

The American declaration halting further reparations payments to the four Allied countries, including the Philippines, would jeopardize the peacetime economic recovery program of the Republic. The Philippines has launched a 5-year industrial program in the hope of attaining a modest industrial level and evolving a fairly self-sufficient economy in the years to come. We are now in the midst of a total industrial and economic mobilization, the signal for which was dramatically given by President Quirino early this year in a supreme effort to brace the Philippine economy against such contingencies as the cessation of United States war-damage payments next year and the curtailment of free trade relations with the United States in 1952. The grant of the Philippines' share of Japanese reparations, to be sure, will not of itself solve our current economic dilemma; neither can Japanese reparations equipment be expected to furnish all the requirements of a going industrial concern in the Philippines. However, Japanese reparations assets will materially help plug the gaps in our war-torn economy. Japanese reparations, particularly those scheduled for future disposition, including thermal electric power, steel and chemical plants, would serve the purpose of a modest industrial base whereon the Republic may build an industrial structure commensurate with its requirements and to meet the pressure of more highly industrialized economies in the Pacific area, including Japan's.

The argument in the United States statement of May 12 that allied countries have already profited through the proceeds from Japanese overseas investments that have been confiscated and through the territories already in the possession of the Allies does not apply to the Philipines. Japanese properties in the Philippines with an aggregate value of $50,000,000 have largely remained in the hands of the Allied Property Custodian and have not yet been transferred to the Philippine Government. We only have usufructuary rights over these properties and the title thereto shall not vest in the Philippine Government until after the treaty of peace with Japan has been signed. No Japanese territory has been ceded to or fallen into the possession of the Philippines.

The comparative reparations figures for Germany and Japan after World War II are instructive. The value of German factories and other properties removed from Germany, exclusive of the Saar, by the Allies as of December 1947 was approximately $25,000,000,000. The corresponding reparations actually removed from Japan proper, exclusive of Manchuria, and received by the four claimant countries, including the Philippines, was approximately $70,000,000. Even if it be granted that the industrial wealth of Germany was five or six times as great as that of Japan before the war, that relative disparity would, in any event, have been canceled by the much heavier damage which German industry sustained during the war. That would leave the disparity in reparations paid out by Germany and Japan con-

siderably in the latter's favor and to the disadvantage of those states that have reparations claims against it.

The Philippine Government fully appreciates the special responsibility of the United States in Japan which has imposed upon it the enormous burden of shouldering by itself the costs of the occupation. The Philippine Government also appreciates the United States insistence upon the principle that the recovery of Japan is essential to the recovery of the rest of Asia. However, as mentioned in my previous statement, we believe that it should be possible to reduce the burdens of the occupation without suspending the reparations program by exploring the resources of the Japanese economy itself and exploiting those resources toward self-support. On the basis of the testimony of American observers in Japan, I have raised the issue that the Japanese industrial leaders—the Zaibatsu class—may have deliberately conspired to create an economic crisis in order to embarrass the occupation and to arouse American sympathy and assistance. I believe that this point should be clarified, since my Government considers that it would be manifestly unjust to demand restraint and further sacrifice on the part of the victims of Japanese aggression so long as there is evidence that the Japanese themselves are deliberately tampering with their economy, slowing down production, and creating monetary inflation, in order to make their country an object of pity, to whose rescue the American people would then be expected to come.

The Philippine Government is unable to understand why the United States should so suddenly come to the conclusion that the needs of the 11 member nations of the Far Eastern Commission should be subordinated to the needs of the former enemy country. The Philippines shares the United States concern for a just peace with Japan, but a just peace does not mean a soft peace. A just peace does not mean leaving the victims of Japanese aggression to shift for themselves while Japan is to be coddled and permitted to reestablish itself as the dominant industrial power in the Far East. A just peace means that the Japanese people will be afforded full opportunity to reform their political and economic structure so that they may live up to that solemn provision of the Japanese constitution under which they have renounced war forever as an instrument of national policy.

The bitter lessons of Versailles are still fresh in the memory of all nations. It is a favorite argument of American foreign policy that the reason for the failure at Versailles was because the treaty guaranteed justice for the Allies and left nothing but despair and misery for defeated Germany. We do not want a repetition of this tragic failure. We want justice for Japan, but justice within the framework of a policy that will provide for the victims of Japanese aggression the opportunity to rise and to stand on their own feet, free from the domination of Japanese industrial power as well as from the menace of Japanese military might.

In my previous statement to the Commission, I made an observation which is a commonplace in history that military power is a concomitant of industrial power and that the "Zaibatsu class, which is engineering the reemergence of Japan as an industrial power, will soon * * * be clamoring for an army and navy." In the issue of the New York Times of May 24, 1949, there appeared a news item under the headline "United States pushes plan to rebuild Japan; formation of defense unit studied." I quote from the item:

"The United States is determined to push strongly ahead with plans for the economic rehabilitation of Japan despite some doubts and objections by other Allied powers in the Pacific.

"At the same time it has become known that the plan first proposed by Lt. Gen. Robert L. Eichelberger, former commander of the United States Eighth Army under Gen. Douglas MacArthur, for the formation of a Japanese national defense force is under what is described as 'vigorous study' here."

This so-called defense force numbering 125,000 to 150,000 men, without an air force, navy, or heavy weapons, is modest indeed compared to the Japanese military juggernaut of the last war, but this is only a beginning. Presumably it will be composed of veterans of the last war and officered by the same men who planned and executed the Japanese invasion of the South Pacific and gained all the knowledge they need to have on the beaches and jungles of Asia. Nobody knows better than American technicians themselves how easy it is to retool so-called peacetime industries for wartime purposes, and American generals should know better than anyone else how equally easy it is to convert a so-called national constabulary or police force of experienced fighters into the live core of an expanding military establishment.

I have referred to the fiasco of the Treaty of Versailles. That failure was due less to the onerous terms of the treaty itself than to the fact that the Allied Powers too soon grew weary of the burdens of occupation and too quickly relaxed the controls that were necessary to give the German people time to remold their political and economic institutions along peaceful and democratic lines. If, because of the shifting power relations in Asia and the Far East, the United States should feel compelled to accelerate the rebuilding of Japan, we who are Japan's immediate neighbors and former as well as potential victims have yet a right to insist that our interests and our welfare be not sacrificed too readily to the calculations of one group of men, however well intentioned. We have a right to demand that we be consulted, that our views be considered in order that policies which involve our very existence may be carefully examined in the light of the threats that confront us from various directions.

All the countries in the Pacific are thus confronted by dangers, internal as well as external. Of the last kind, there is more than one that we fear. We of the Philippines who know Japan as the Americans can never hope to know it have reasons of our own to insist that this natural and logical fear of Japanese power be not ignored as if it were a mere figment of the imagination, unworthy of serious attention.

The solicitous concern of the United States for Japan does credit to the generous goodheartedness of the American people. It is, however, proof also of a possible miscalculation that can have the most terrible consequences. It does the American people great honor to be able so soon to forget Pearl Harbor, Corregidor, and Bataan. But have we any right to assume that the Japanese people have equally forgotten the two atomic bombs that the United States dropped on Hiroshima and Nagasaki? We Filipinos think we know both the Americans and the Japanese equally well, and we would be very much surprised indeed if an identical attitude of forget and forgive has replaced the bitter resentment and vindictive spirit which is natural in all defeated peoples but which is greatly accentuated in a people as proud and arrogant as the Japanese have shown themselves to be throughout their history.

So, if we help Japan to stand on its own feet once more and, on top of that, place in its hands the weapons of war as a faithful and valiant ally, we run not only the peril of having those weapons turned against ourselves by an unregenerate nation, but short of such treachery, we run the additional peril of placing Japan in a position where it can use, for purposes of blackmail, its newly acquired strength to wrest further concessions from us and to play against each other the two powers that are now competing for its adherence and support.

Beyond the legal rights and moral obligations that are implicit in this question, I would like to express the keen regret of my government that the United States Government should not have considered it practical and wise to have given us advance notice of its intentions. It is customary, I believe, for countries that regard each other as allies, and it is certainly almost obligatory for countries so closely related to each other as are the United States and the Philippines, to seek mutual counsel and reassurance before a policy of such far-reaching importance as this is publicly announced and embarked upon.

The United States Government has, no doubt, rightly expressed concern for the American taxpayer. But we may well question the implication that the American taxpayer, who is spending billions for the Marshall plan, is so unwilling to pay 1 cent more for the occupation of Japan that he would approve of any measure whatever that would relieve him of this obligation, even if it should mean condemning his friends and allies to a life of fear and potential subjection to the self-same enemy against whom so lately they fought together. I refuse to believe, Mr. Chairman, that American generosity toward a former enemy can go so far as to cancel or displace the loyalty of the American people to their friends and allies.

In the meantime, my Government finds itself in the difficult position of having to allay an aroused and embittered public opinion in the Philippines. For us, unfortunately, it is not merely a question of pleasing overburdened taxpayers. It is a question of telling people who lost all they had during the Japanese occupation, who sacrificed parents, children, and all in the struggle against the enemy, who kept the American flag flying in their hearts for three long, desperate years on Bataan and in the hills—it is a question, I say, of telling them and making them believe that America has not abandoned and forsaken them for the favors of a new-found friend.

The Voice of Freedom that spoke to them over the radio from Corregidor during the Battle of Bataan and that continued to speak to them from America after the surrender, calling upon them to keep up the struggle against the enemy because America would redeem her pledges when victory was won—that voice is silent now. What are we going to tell them, and how?

What Next?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, it is extremely difficult to retain the opinion that the Supreme Court of the United States is qualified to and will administer equal justice under law when two members of that Court will descend from the bench, travel to a United States district courtroom and there testify as character witnesses in behalf of a defendant who is on trial for perjury alleged to have been committed in a proceeding where a charge of disloyalty was being investigated.

Yet that is just what Justices Frankfurter and Reed did in behalf of Alger Hiss.

Should Hiss be convicted and appeal, would these two Justices disqualify themselves? Will they privately express an opinion to their Associate Justices as to Hiss' character, as to his truth and veracity?

Assuming that Hiss is convicted, that his appeal reaches the United States Supreme Court and that the two Justices refrain from any participation, direct or indirect, if that be possible, in the making of the decision—what right have they, by disqualifying themselves, to deprive the people of a Court of nine Justices qualified to pass upon each case presented?

How can the members of the Supreme Court expect to retain the good opinion of the people when individual Justices depart from that line of conduct which in years gone by has entitled the Court to the respect and confidence of the American people?

The kind of a purported disgraceful situation we are in is outlined in an article by Westbrook Pegler printed in the morning press, which reads as follows:

The trial of Alger Hiss must be viewed with a cold eye of suspicion by citizens who have studied the machinations of the Harvard Law School cabal and the intrigues of Eleanor Roosevelt.

During the trial Mrs. Roosevelt felt emboldened to say in print that Chambers, admitting perjury in some trivial points, was an incredible witness for the prosecution. Therefore, she moved, in effect, that the case be thrown out.

This condemnation seemed inconsistent coming from a woman who had falsely stated that she had never had an automobile accident when, in fact, she had had three smash-ups. Had she told the truth about these three wrecks, the licensing authority might reasonably have concluded that she was unfit to drive and this would have been a serious inconvenience to her.

Each person may make his own test in this. It is this: Could you forget three previous automobile accidents in which you had participated as a driver? And would you regard a driver with a record of four serious accidents as a safe risk on the road?

Although, of course, there is no charge of perjury against Mrs. Roosevelt in the Hiss case, she is a codefendant in a figurative sense because Hiss is a protege of Felix Frankfurter, who has been a power behind the throne ever since the New Deal began.

Hiss is a member of their crowd, their clique. Frankfurter is an old, intimate partner in politics, not always in the open, of David K. Neyhaus or Niles, the Boston political fixer, who was planted in the White House in the role of a selfless secretary with a passion for anonymity early in the Roosevelt reign.

A brother of Niles, known variously as Elias and Elliott Niles or Neyhaus, was commissioned a captain in the Army early in the war and, as recently as last winter, was still safe and comfortable in the Pentagon. There he had spent the war. Now he has risen to the rank of lieutenant colonel.

Frankfurter, David Niles, and Harold Laski, of London, who has been openly called an apologist for communism, have been close associates for many years. Niles is hardly to be classed with Frankfurter and Laski in the intellectual sense. But little is known about him.

Were he an outspoken fellow he might be relegated to unimportant status. But, being quiet almost to the extent of furtiveness and yet hanging on tenaciously long after Roosevelt, Niles arouses questions.

Whom does he represent in the White House? What does he do? Is Truman afraid to fire him?

The judge in the Hiss case is Samuel H. Kaufman, a Tammany politician who was counsel for the notorious Bessarabian draft-dodger and stock manipulator, Serge Rubenstein. Rubenstein finally went to prison as the most disgraceful slacker and ingrate of the American war, but ere he was laid by the heels he had repeatedly been formally invited to the White House by Mrs. Roosevelt.

He had pull in the Roosevelt administration and household. He enlisted also the friendly consideration of BRIEN MCMAHON, the Democratic Senator from Connecticut, and a deportation order was reversed by the Board of Immigration Appeals.

This is the same bureaucratic rescue squad which saved Harry Bridges after the decision to deport him had been sustained by the district and appellate courts.

The Association of the Bar of New York City found so little to recommend Judge Kaufman for his job on the district bench that it refused to recommend his confirmation. And the Federal Bar Association of New York, New Jersey, and Connecticut rescinded an earlier indorsement for the same reasons.

The Senate Judiciary Committee refused to approve him. Therefore, Mr. Truman eluded the Senate by giving him an interim appointment, a device used for the appointment of marshals, postmasters, and the like but not to impose on the courts judges who can't pass inspection.

After Truman was reelected and got his own Congress he sent Kaufman's name through again, and this time the Democrats in the Senate confirmed him.

By what process it fell out that the Hiss case came before Kaufman I do not know but will inquire. It was postponed several times but finally Hiss could not have wished for a more considerate judge. A suspicion of partiality could arise from the fact that the whole Frankfurter cult and the Roosevelt myth are on trial before this political protégé of the regime, Judge Kaufman.

Before the Thomas Committee on Un-American Activities Hiss pleaded that he be not required to name Frankfurter as the man who brought him into the Government. He was willing to indict Jerome Frank, now a judge of the circuit court of appeals, sitting in the same courthouse downtown in New York where this trial goes on.

Frank was then general counsel for the Agricultural Adjustment Administration, a hotbed of communism and a mass of traitorism. It was crawling with graduates of Harvard Law and late students of Frankfurter's sly counsel and sidelong thought.

Hiss didn't mind saying that Frank was his sponsor. But he seemed to think it would be a betrayal of his chief to denounce Frankfurter in the same way.

At last, in anguish, he was forced to admit that Frankfurter inducted him into the Government for the career which led to charges of betrayal of his country to a Soviet spy. Incidentally, although the statute of limitations may have run out on some of the acts of betrayal alleged against him, Hiss need not avail himself of this immunity.

If he really wants to clear his name on the evidence rather than by a technicality he can waive the statute and face trial.

At last Frankfurter and Stanley Reed, another Justice of the Supreme Court, were presented as character witnesses for Hiss. They came on their own initiative, without subpena. They are officers of the highest court in the land and officers of the Government which the Communists have undertaken to destroy.

Judge Kaufman was cordial to them far beyond the requirements of courtesy. Frankfurter here was no better than any other citizen.

He was the patron of the man on trial. Yet, when Thomas F. Murphy, the prosecuting attorney, tried to question him about others whom he had planted in the Government, about the mysterious "invisible government" of the Harvard law pro-Communist, anti-American cult, Judge Kaufman shut him off.

Murphy had a right to discredit, if he could, the character of Hiss' character witnesses. When Frankfurter went there he put his own character up for questioning for the first time since he was nominated for the Supreme Court and brought Dean Acheson, the present Secretary of State, to the Senate hearings as his mouthpiece.

He was the only nominee in the history of the Supreme Court who needed a lawyer before the Senate Judiciary Committee. And the facts that were known about him then were trivial as compared with the evidence that has come to light since.

Yet Kaufman entered the play so that Frankfurter's endorsement of Hiss was allowed to stand just as though Frankfurter's own character could be taken for granted.

There seems to be an assumption that Frankfurter and Reed will disqualify themselves if the Hiss case comes before them on appeal.

But that is based on a mere tradition of honor and not a rule. In its present corrupt condition, one justice of this Court has openly abused another for failure to disqualify himself, in similar circumstances. Douglas openly courts the CIO, a political body which often has interests before the bar.

And, in a previous case Frankfurter wrote the majority decision upholding the Norris-LaGuardia Act which he, himself, had written.

It has been a sordid spectacle from the standpoint of Americans who retain their innocent faith in the motto carved across the facade of the Supreme Court of the United States: "Equal justice under law."

The Housing Bill

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mayor D'Alesandro, of Baltimore:

CITY OF BALTIMORE,
June 23, 1949.

STATEMENT OF MAYOR D'ALESANDRO

With his deliberate, selfish misrepresentation of the contents of the housing bill, Congressman BOLTON has shown himself to his constituents in his true colors.

I say selfish misrepresentation because Mr. BOLTON himself is a builder and perhaps the voters in his district should know that. I say deliberate misrepresentation because he simply is acting as the mouthpiece of the real-estate lobby, which unquestionably prepared his letter for him in its entirety.

As the tool of the real-estate interests, Mr. BOLTON not only is trying to fool the people of Baltimore and the counties of his district about the "Baltimore plan," but he is trying to fool his colleagues in Congress, as well by showing them motion pictures made by the real-estate interests of "before and after pictures" of houses improved by the Baltimore plan.

If Mr. BOLTON knows anything at all about the housing situation, and that seems doubtful from his letter, he knows that the Baltimore plan is little more than a clean-up, paint-up campaign, good enough in its limited field, but far from an answer to the housing shortage and slum clearance.

Mr. BOLTON says he is irked that a mayor of a large city is taking an active interest in getting better housing for the people. To that I must say that I am more than irked by the atitude of a Congressman who thinks of nothing but his own private interests.

He is called a Representative, but I would like to know, representative of what? As I told Mr. BOLTON in my letter to him, his opposition to the bill is a disservice to Baltimore and to the welfare of the entire country.

THOMAS D'ALESANDRO, Jr.,
Mayor.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 21, 1949.

Hon. THOMAS D'ALESANDRO, Jr.,
Mayor of Baltimore City,
Baltimore, Md.

DEAR MR. MAYOR: I am in receipt of your letters of June 16 and 17, advocating the passage of H. R. 4009, the so-called housing bill. After carefully studying this bill, I am wondering if you have actually read the bill and know what it provides. If you will read the bill, you will find that it authorizes the erection of 1,050,000 units of public housing with subsidies (gifts) by the Federal Government of $16,000,000,000. I note from today's paper that President Truman says it means an expenditure of only $10,000,000,000, but the bill provides grants of $400,000,000 per year for 4 years and 40 times $400,000,000 comes to $16,000,000,000, according to my arithmetic, but if you wish to use the President's figure, then divide the following figures in half. It further provides loans of $3,500,000,000 which, added to $16,000,000,000, makes a total of $19,500,000,000. But note that $16,000,000,000 is an absolute gift, so that means that every man, woman, and child in the United States will contribute $115 to this program if enacted into law.

In other words, Baltimore County would be asked to contribute $28,750,000, Harford County $6,900,000, Carroll County $4,600,000, and that portion of Baltimore City lying in my district $34,500,000. Baltimore City as a whole would contribute $115,000,000.

The bill further provides that housing units may cost $2,500 per room, which is not out of line with present costs, so a four-room-and-bath unit would cost four and one-half times $2,500 or $11,250. Add to this the cost of the land of at least $1,250, making a total of $12,500 per unit, which the Government is supposed to subsidize for 40 years. In other words, people of Baltimore City are called upon to put up $115,000,000, Baltimore County $28,750,000, Carroll County $4,600,000, Harford County $6,900,000 to help pay rents for families living in units costing $12,500 in Baltimore City. Further, there is nothing in the bill that confines the occupants to the lowest-income groups.

Then there is another calculation worth noting. The bill provides that not more than 10 percent of the annual rent (a considerable portion of which is paid by the Federal Government, as aforesaid) shall be paid the city in lieu of taxes to cover schools, police, fire, garbage, streets, and other public utilities.

It is reasonable to assume that a $12,500 unit will be assessed at not less than $10,000, and calculated at the Baltimore city tax rate of $2.82 per hundred, if such unit were owned by someone who worked and sacrificed to pay for it, would mean $282, whereas these $12,500 units will only be paying $62.40 per year. I arrive at the $62.40 in this manner: The bill provides that these units shall rent for 20 percent less than comparable property of adequate volume. It is reasonable to say, I believe, that comparable property in adequate volume in the neighborhood would rent for less than $65 per month and 20 percent under $65 would be $52 per month or $624 per year.

You may say, of course, that these units may not rent for as much as $52 because they are supposed to be rented to low-income families. (Note: A New York court recently ruled that a man making $4,500 per year is in the low-income group. The answer then is that the lower the rent, the worse the comparison. So let us use $52 per month or $624 per year as an example. Ten percent of $624 is $62.40 which will be paid in lieu of taxes on each of these housing units. In other words, the families in Highlandtown and Canton or anywhere else in the city, who have worked and struggled to own their own modest homes, will be called upon to contribute their portion of $219.60 for every unit built in Baltimore, because certainly, if you do not collect the proportionate tax from these units, the difference will have to be made up by other home owners in Baltimore City.

I understand you hope to provide 7,000 housing units in Baltimore. So, if we multiply $219.60 by 7,000, it would mean that the home owners in Baltimore would have to put up $1,537,000 annually in addition to the $115 for every member of the family, which will be paid in Federal taxes. For a man and his wife and two children, that would be $460 for every family of four in Baltimore, Harford, and Carroll Counties and every political subdivision in the United States.

Statistics of the Bureau of the Census show that there are 12,500,000 families in the lowest-income third living in substandard houses in the United States. (Your records show 396,000 in Baltimore City.) Why should this 28,000 who will occupy the 7,000 units in Baltimore City be preferred? Is the Federal taxpayer to supply the housing for all these people? If not, why not?

If the Federal Government were to subsidize 12,500,000 units at $12,500 each, it would cost $156,000,000,000. It is certain that if we construct 1,000,000 public-housing units in the next 7 years, we will soon be urged and perhaps forced by political pressure to erect sufficient additional units to accommodate all others in this group in order to give fair and equitable treatment to this entire class of people.

To understand the magnitude of the cost of housing for the low-income group, compare this $156,000,000,000 with the present national debt of $251,000,000,000 for all Government obligations, and, if we are concerned with the solvency of the Nation, add to that the $45,000,000,000 annual budget for national defense, veterans, ECA, education, welfare, etc., and whatever President Truman wants for socialized medicine, Federal aid to education, the Brannan farm program, and other spending schemes now in the hopper.

I can understand you, as mayor of Baltimore City, urging the passage of this bill, because this cost may not show up on the right-hand corner of the city tax bill, but it certainly will be on Federal tax bills and I am interested in this matter from a Federal level.

Speaking of slum clearance, I note that the Health Department of Baltimore City has rehabilitated 10,000 units in the slum area at a very nominal cost since 1941, by simply enforcing the law and making the owners who derive the income from the property foot the bills. Don't you think this far more equitable than making the industrious family who struggled to buy their homes pay the cost? Are you not discouraging thrift?

I am as much interested in slum clearance as anyone else but this bill does not answer that question. It does not require the building of a single unit for slums. It even strikes out of the 1937 act the provision for demolition of a slum unit for each new housing unit built.

I cannot help but be irked by governors and mayors who talk of States' rights and then petition the Congress for aids and assistance of all kinds which is the very thing that would destroy the last vestige of States' rights.

Very sincerely yours,

WILLIAM P. BOLTON,
Member of Congress.

JUNE 23, 1949.

Hon. WILLIAM P. BOLTON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BOLTON: After reading your letter of June 21 presenting your version of what the housing bill will cost, I went back over it a second time to check the figures. The box score: 3 correct figures and 35 wrong or misleading figures. This makes a batting average of 0.079, or about normal for opposition figures.

There is nothing particularly striking about the errors you have made since they have all occurred so often in statements opposing the bill that I can only regard them as efforts at deliberate misrepresentation. I have seldom, however, seen these errors pushed to such extravagant lengths.

I do not have the time to refute each one of your many erroneous statements, but I will call your attention to some of the major ones.

You have lumped loan, grant, and annual subsidy amounts into one stupendous total (which, incidentally, is wrong even if such lumping were proper). This is much as though you repaid me a loan of $10 with interest and I were then to claim that the whole transaction cost me $10. A loan repayable with interest is not the same thing as a grant, but your letter does not seem to indicate that you are aware of the distinction.

You assume that an authorized expenditure is the same thing as an actual expenditure. This may be true for most public activities, but it is not true for low-rent public housing. The record bears me out on this. In no year in the past history of low-rent public housing have actual expenditures for Federal subsidies been as much as authorized expenditures. Last year actual expenditures were only 24 percent of authorized, and over the past 10 years they have averaged only 58 percent. For the bill under discussion in Congress it has been estimated that actual expenditures would average 77 percent of authorized expenditures for 29 years instead of the 100 percent for 40 years stated in your letter. This is a fundamental error affecting about half of the cost figures in your letter. For example, you place the total cost of Federal subsidies for low-rent public housing at sixteen billion. Making allowance for the reduction in the size of the bill from 1,050,000 units to 810,000 units, agreed upon after you wrote your letter, the sum total of anticipated annual Federal subsidies for low-rent public housing becomes $6,900,000,000. This is a sizable difference from your $16,000,000,000.

It might be asked why, if actual expenditures are to be less than authorized subsidies should not be authorized subsidies be reduced? There are two reasons. First, the amount of subsidy needed will vary from year to year with our level of prosperity and in a few depression years it may be necessary to use the full amount. Second, the relatively high level of authorizations, even though not actually used, will permit local housing authorities to secure low interest rates on their bonds, thus saving money for both the local authorities and the Federal Government.

You assume that all dwellings will cost $2,500 per room. This, however, is a maximum cost set to permit construction in the most expensive section of the country (presumably New York City). Costs elsewhere

will be substantially less so that the average cost per room will be well under $2,500. Experience with the original low-rent program bears out this statement.

You state that public housing will rent for 20 percent less than private housing. Again, this shows a complete lack of understanding of this housing bill. The bill states that there must be at least a 20-percent gap between the top rents in public housing and the lowest rents in decent private housing—an entirely different matter. President experience in Baltimore indicates that rents in new public housing projects will average around $30 per month (including utilities), instead of your figure of $52 per month.

You state that "there is nothing in the bill that confines the occupants to the lowest income groups." You have apparently overlooked several important sections of the bill which require that each community shall set its own income limits for occupancy. There are ample provisions in the bill for insuring that those limits will permit occupancy only by low-income families. The bill does not, itself, attempt to establish such limits for the obvious reason that no one set of limits could apply with equal effectiveness to all sections of the country, or over a period of years when income levels were changing. Let me again call your attention to the fact that the average income of families admitted to Baltimore's low-rent projects in 1948 was only $1,410.

You compare payments in lieu of taxes from low-rent projects with what would be paid in taxes on a privately owned house assessed at $10,000. This is an absurd comparison since low-income families could not possibly, under any circumstances, afford such large tax payments and nobody expects them to. A fairer comparison would be between proposed payments in lieu of taxes and the taxes now being paid by low-income families on the quarters they now occupy. On this basis, the loss in taxes to the city would be either negligible or nonexistent and in any event would be far less than the benefits accruing to the city from public housing. Furthermore, no discussion of the municipal tax situation should lose sight of the fact that our present slums represent a heavy drag upon all taxpayers in the city. The Baltimore Planning Commission has estimated that our blighted areas represent a loss to the city of $14,000,000 per year. If I were to adopt your methods I should multiply this figure by 40 years. The result would really startle you.

You state that our records show 396,000 low-income families living in substandard housing in Baltimore. Our records show nothing of the sort. They do show that in 1940 some 396,000 persons (not families) were living in our blighted areas but nobody has claimed that all of these people are low-income or that all of them live in substandard housing. I cite this not to prove that we have a small number of low-income families living in bad housing—we have a large number—but rather to show again how inaccurate and unreliable are your figures.

Your own figures demonstrate how great is the need for decent housing. But you then throw up your hands in despair at its magnitude and declare that we should do nothing. If the problem is big, there is all the more reason for doing what we can as soon as we can.

You reveal a complete lack of proportion in considering the costs involved in the bill. The low-rent public housing provisions of the bill will cost the Federal Government an estimated $238,000,000 a year. This is only a fraction of 1 percent of the total Federal budget and compares favorably with many subsidies now commonly paid by the Federal Government to undergird our private enterprise system. For example, the Federal Government now subsidizes the operations of air lines and shipping companies. It makes substantial contributions to the cost of distributing privately published magazines and newspapers. Any one of these subsidies could be multiplied by 40 years and divided by the population of Baltimore City or County so as to produce "scare" figures comparable to those in your letters.

You make no detailed reference in your letter to the redevelopment sections of the bill. Are you opposed to urban redevelopment? If so, you will find that the overwhelming majority of Baltimore citizens do not agree with you. As you know, a redevelopment loan was approved by our voters last fall by 4 to 1. Are you in favor of redevelopment? If so, you should realize that there can be no slum clearance until new quarters can be found for the low-income families now living in the areas to be cleared and that this can only be done through additional low-rent public housing projects. As I notified you several days ago, the Baltimore Redevelopment Commission has endorsed the housing bill.

I am surprised at the implication in your letter that our law-enforcement program is an adequate substitute for the housing bill. Opponents of the bill may have been able to deceive a few persons outside of Baltimore into thinking that this is the case, but this argument will certainly not make any headway in Baltimore where people can more accurately evaluate this type of program.

You object to the extent to which cities and States are depending upon the Federal Government for various forms of assistance. As a purely theoretical concept I can agree with your objection but a reduction in the present levels of Federal assistance must depend upon some reapportionment of tax sources. Until some such reapportionment has taken place the only practical approach to the problem is that provided in the present bill. I see no point in postponing action now while our slums continue to rot. This is no time to debate academic abstractions.

My support for the housing bill is based upon the fact that it is the result of long and exhaustive study over many years by competent committees of the Congress and upon my conviction that it represents the best possible method presently available for solving one of our gravest domestic problems. I can only regard your opposition to the bill as a disservice to Baltimore city and to the welfare of the entire country.

Sincerely,

THOMAS D'ALESANDRO, JR.,
Mayor of Baltimore, Md.

Jim Has His Say

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a recent article from the Bangor (Maine) Daily News, entitled "Jim Has His Say," citing with approval some recent views of my old friend, Hon. James A. Farley:

JIM HAS HIS SAY

Call it apostasy, treason, or heresy, but these words were uttered not so long ago by a lifelong Democrat.

We have said the same thing several times, but never so well. So we yield the floor without interruptions.

"Undoubtedly there are many of you, and I think I share your views on this subject," he said in part, "who fear that in the multiplication of services we shall load down our Government and taxpayers with financial obligations that will ultimately destroy our way of life.

"There is a place, economists tell us, where taxation not only yields a diminishing return but also stifles the productive activities that in the long run support the Government. I do not know exactly where that point may be in this economy. I do not even know whether we have approached it at the present time.

"But I do know that there must be ever-increasing caution, lest we do reach that point without anticipating it.

"Therefore, we face, as a Nation, the serious dilemma of a demand for increasing governmental services on the one hand and the danger of excessive taxation on the other. As a businessman I am keenly aware of the second of these circumstances and as a former member of the Government I am keenly aware of what the public expects.

"When a man in his private affairs is faced by a necessity of supporting a large and expensive family and his income is barely able to meet increasing costs, he has to make one of three decisions: First, he has to consider whether he can eliminate some of his financial responsibilities; second, he has to consider the possibility of working harder and earning more; and, third, and most important, he must consider whether without earning more and without dropping any of his responsibilities he can make his dollars serve their purpose with greater efficiency.

"In our Federal Government we have reached the point where we must meet this problem by one of three decisions. The first, which is the elimination of direct services to the people, will be difficult if not impossible to adopt. The November election largely settled that.

"The question of greater productivity is, of course, a concern of every American and every American business, and much can be done in that direction. But we cannot hope for anything except a steady but rather relatively small increase in what we produce as a nation.

"We must, I believe, in this situation come to the third of these decisions. We must get more public service for every dollar that Government collects for the taxpayer. An that means greater efficiency in government.

"This is not a partisan issue. I know a great many Republicans and a great many Democrats. I am frank to say that I find no difference of opinion about the fundamental desire of both Republicans and Democrats to increase the efficiency of our Government.

"This is well shown by the fact that a Republican Congress and a Democratic President created a Commission on the Organization of the Executive Branch of the Government, the purpose of which was to inquire into the efficiency of our Federal Government. It is a significant indication of the nonpartisan nature of this that a former Republican President and, I might add, a great American, Herbert Hoover, was chosen to head this study. It is also significant that he has had the wholehearted cooperation of a Democratic President—Harry S. Truman.

"The findings of this Commission are now beginning to appear, and every American owes it to himself and to his country to consider these findings and to join the effort to have the major recommendations of this report enacted into law and into administrative practice."

That was James A. Farley speaking before the New York State Bankers Association.

These would be strange words from administration Democrats currently in Washington, for they preach economy and efficiency.

But they are not strange words from the astute Mr. Farley. They conform entirely to his personal belief.

Development of Synthetic Fuels Industry

EXTENSION OF REMARKS
OF

HON. HARLEY M. KILGORE
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report on the urgent need for the development of a synthetic fuels industry in the United States. In this report I attempt to outline some of the accomplishments of the Bureau of Mines in coal research and synthetic liquid fuels. Although it is not generally known, the synthetic liquid fuels laboratories and demonstration plants of the Bureau have made substantial progress toward the foundations for a new American industry—an industry based on the conversion of coal and oil shale to oil.

In recent years our Nation has become aware of the fact our petroleum resources are not unlimited, and that in this field we cannot grow and harvest a new crop at will. Fortunately synthetic liquid fuels from coal and oil shale offer an assured supply for hundreds of years from known reserves within the borders of the United States.

Bear in mind such an industry of adequate proportions hardly can be built during an emergency, if we have to start from scratch. Pioneer commercial units first must be established by private industries to serve as a foundation for this new industry. Common sense dictates we must not wait until an emergency arises to delay the first difficult, time-consuming step—the construction of initial plants.

For maximum progress toward self-sufficiency in oil, three or more commercial-size plants should be built now as prototypes, using both coal and oil shale as the raw materials. These model plants should be built and operated by private industry.

Congress should act now to clear the way for plant construction initiating this new and vital industry. Through proper Government assistance, as proposed by legislation now pending before Congress, we can assure our Nation self-sufficiency in liquid fuels regardless of what emergency may arise.

I believe my report clearly demonstrates this is a practical program—one that may easily prove of tremendous value to our Nation in the future.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

A NEW AND VITAL INDUSTRY

Much time and discussion have been devoted in recent weeks to the question of atomic energy. That is entirely fitting since great new vistas are opening up before us through the promise of development of that tremendous source of energy. But we must not lose sight of our existing energy resources for there is no such thing as an universal fuel to supply all our energy needs.

Today the mineral fuels are the most important of our energy sources—they contribute 96 percent of the energy we consume annually and I feel quite safe in predicting that the demands of our domestic and industrial furnaces, our railroads, automobiles and airplanes, and our power plants will keep our mineral fuels in their preeminent position as suppliers of energy. With that in mind and with the realization that adequate supplies of energy are essential to our commerce, our industry, and our people, we have learned to pay particular attention to our fuel supplies.

The inroads of our wartime consumption and present and prospective demands for fuels have changed our attitude toward the fuels resources situation from the bland unconcern of not so very many years back to a mounting apprehension for the availability of future supplies. Evaluation of our reserves of coal, petroleum, and natural gas, and the achievement of maximum efficiency in utilization of those reserves have become a primary responsibility of our Government. This responsibility is vested in the Department of the Interior, and in particular, in its Bureau of Mines.

Through the years the fuels research of that Bureau has been of marked assistance to industry and to the Nation, and it is of two major segments of that research that I wish to speak today. The first is research on coal which is the greatest of our fuel reserves and the probable raw material for the production of synthetic liquid fuels when our supplies of crude petroleum are exhausted. Actually, the production of synthetic liquid fuels will come to pass long before all our petroleum has been used. The Bureau of Mines' work on synthetic liquid fuels is the second item that I should like to call to your attention.

Let me outline briefly the Bureau's coal research program.

We find that coal mining investigations have been going forward emphasizing conservation, improvement in mechanical mining methods and equipment, and determination of minable reserves of coking coal and of coals in strategic, fuel-shortage areas. Study of the extraction of pillars with mechanized equipment in bituminous coal mines in Pennsylvania, West Virginia, and Wyoming has indicated the difficulties and advantages of increasing recovery by extracting pillars mechanically. A German shearing machine has been successfully adapted to pillar removal in the anthracite region of Pennsylvania, and other new pieces of mechanical mining equipment for use with anthracite have been designed and are under construction. One of these, a scraper-shaker loader is to replace hand loading of coal and another, a vibrating-blade planer, is designed to cut and load coal in a single operation without the use of explosives. The improvement in mining conditions and safety that can result from development of this type of equipment must be encouraged. Upon completion of the mechanical mining equipment, expected in the next fiscal year, it will be taken into mines for test and development under actual mining conditions.

Mounting concern over this Nation's reserves of coking coal led to initiation in fiscal year 1949 of an investigation by the Bureau of Mines to determine minable coking coal reserves. This investigation is providing information essential alike to our welfare in peacetime and to our national security, since metallurgical coke is a major basic requirement for continued operation of our steel industry. This study was begun in the Appalachian coal fields of Pennsylvania, West Virginia, and eastern Kentucky, which are still major coking coal producing areas, though their thicker and higher-grade beds of metallurgical coking coal have been depleted considerably. Four field parties are engaged in obtaining data regarding the number, thickness, and areal extent of coal beds, and analyses of the coals. This field work has been completed in two counties in Pennsylvania, and one in Kentucky, and is in varying stages of completion in seven counties in Pennsylvania, in eight counties in West Virginia, and in eight counties in Kentucky.

In Alaska, the Bureau of Mines is core drilling in the Wishbone Hill area of the Matanuska coal field to determine whether there are in this area sufficient reserves of bituminous coal to warrant establishment of a new, large mechanized mine to augment the present inadequate coal production in the Territory.

The Bureau plans to continue its mechanical mining investigations, coking coal reserve investigation, and determination of minable reserves of coal in Alaska during the next fiscal year. There are now 36 engineers and others engaged on these programs conducted mainly in the field, but with headquarters at Pittsburgh and Schuylkill Haven, Pa. Appropriations for coal mining investigations in 1949 amounted to $386,020.

Bureau of Mines research on coal preparation has included a study of commercial preparation plants for both bituminous coal and anthracite to evaluate present practices and provide a basis for recommending improved methods of control and operation. Methods of upgrading high-sulfur and high-ash coking coals to make them suitable for use as metallurgical coking coals have been studied as a means of extending available reserves of coals for this use. The preparation characteristics of the coals of the Pacific Northwest and of the Southeast have been investigated at the Seattle, Wash., and Tuscaloosa, Ala., experiment stations, and specialized equipment developed or tested for use on these coals, including new processes for washing and recovering fine sizes of coal. Two commercial plants in Alabama are now using the new process developed at the Bureau's station at Tuscaloosa for washing fine sizes of coal.

A study of commercial washing plants was conducted in Illinois during 1949, while upgrading studies have been going on at Pittsburgh, Pa. For the next fiscal year, the Bureau proposes to extend its investigation of commercial preparation plants to those operating in western Kentucky. Major emphasis at Pittsburgh and at Tuscaloosa will be given to methods of upgrading marginal coking coals to make them suitable for production of metallurgical coke, while at Seattle the Bureau is developing a method of producing a very low-ash coal for electrode carbon manufacture. Personnel at the 3 stations and elsewhere, engaged in coal preparation research, totals 30, and appropriations for 1949 amounted to $123,330.

The urgent need for additional data on the carbonizing properties of American coals, as new mines are opened or substitute coals are sought to supplement or replace depleted sources, is being met by an increased program of test work on carbonizing properties of coals and coal blends at the Pittsburgh, Pa., station and by installation and operation of an experimental oven at the Southern Experiment Station at Tuscaloosa, Ala.

At Tuscaloosa, the new experimental coke oven, completed during fiscal year 1949, will be used to test a number of Alabama coals, which if found satisfactory to use alone or in blends, will eliminate the need to import high-cost, low-volatile coking coal from outside the region.

These programs, employing 21 persons with an expenditure of $157,750, are being correlated with the coking coal reserve study and the coal preparation studies to provide an integrated picture of coal reserves that can be used for the production of metallurgical coke. Research will continue on additional coals and coal blends from West Virginia, Pennsylvania, Kentucky, and Alabama in fiscal year 1950.

Seeking maximum efficiency in burning coal, the Bureau of Mines has just finished a study showing why failures occurred in large pulverized-coal-fired boilers, and how these boilers should be operated to avoid such failure, and data have been developed for use in designing more efficient boilers and stokers. This and related work on the combustion of fuels in various types of equipment and the properties and effects of coal ash slag on the performance of fuel-burning equipment have been conducted at the Pittsburgh, Pa., station and at power boiler plants in the field with five employees and an expenditure of $25,415 in 1949.

The potential value of the huge reserves of low-rank coals in the western plains and Rocky Mountain States has not been ignored, and we find that the Bureau of Mines is developing methods of improving the fuel value of these coals and means of converting them to more useful forms.

A method of rapidly drying fine sizes of these low-rank, high-moisture coals has been developed during the past year at Golden, Colo., first in a laboratory-scale apparatus and later in a pilot plant designed to dry a ton of coal per hour. Additional drying tests on various types of Rocky Mountain coals will be conducted in the pilot plant during 1950, and a test program to determine feasibility of moving the dried coal with air in pipe lines will be undertaken.

Meanwhile, at Grand Forks, N. Dak., the gasification of lignite to produce gas for industrial and domestic use is being investigated on a pilot plant scale.

There are 40 employees at Golden and Grand Forks, and appropriations for fiscal year 1949 were $132,110.

With the $450,000 appropriated in 1948 for the construction of a research laboratory to conduct research on the mining, preparation, and utilization of anthracite, the Bureau of Mines is now building a laboratory at Schuylkill Haven, Pa., which is expected to be ready for occupancy by October 1949. This laboratory, constructed in accordance with the recommendations of the Federal Anthracite Coal Commission, is planned as a research center for the improvement of mining and preparation of anthracite, the development of new chemical and technical uses, and new and extended markets and outlets for anthracite and its products.

The Bureau of Mines is seeking the sum of $74,000 for fiscal year 1950 to recruit key personnel for the laboratory and to undertake studies of the fundamental physical characteristics of certain underground mine supports, of the washing and drying of anthracite fines, and of the gasification of anthracite fines to produce a gas suitable for domestic and industrial use and for use as a chemical raw material.

Following authorization by the Eightieth Congress for establishment of a research laboratory in the North Dakota lignite-consuming region, and appropriation in 1949 of $200,000 and $550,000 contract authorization, the Bureau of Mines has accepted a site upon the campus of the University of North Dakota at Grand Forks, N. Dak., and designed a laboratory. Start of construction is expected this summer. When completed, about June 1, 1950, the laboratory will be used for research on the mining, preparation, and utilization of lignite and to develop new uses and markets.

For almost 40 years the Bureau of Mines has been sampling and analyzing fuel for Government agencies, a service which provides Federal coal-purchasing agents with necessary information on the quality of coals offered for purchase by the Government. Since the Government purchases about $60,000,000 worth of coal annually, this work has been productive of marked savings, but since last fall the Bureau of Mines has not been able to keep up with requests to sample mines from coal producers who wish to sell to the Government. The Bureau needs $129,000 for 1950 in addition to the $35,560 appropriated for this activity in 1949 to carry the work load in a satisfactory manner. Eight more sampling trucks and men to operate them are required to meet the demand.

Another service of long standing rendered by the Bureau is its assistance to Government agencies in operating its fuel burning and boiler plants. Bureau of Mines' engineers advise other agencies on specifications, choice of proper fuel, coal storage, smoke abatement, and boiler-plant equipment. Boiler water samples from Federal boiler plants are analyzed by the thousand every year and appropriate treatment recommended. An appropriation of $57,950 in 1949 for this activity permits savings to the Government that add up to millions of dollars in long-term maintenance.

Serving these research activities as well as other Government needs, there is at Pittsburgh, Pa., a highly efficient coal analytical laboratory, with only 40 employees and funds amounting to $164,655, which analyzed over 17,000 samples of coal, coal dust, and other materials in the first 9 months of fiscal year 1949.

I have detailed these coal research operations at some length because I feel that the work the Bureau of Mines is doing in that field is extremely valuable toward the Nation and should not be ignored, even though the Bureau goes about its business with due modesty. Its contributions to the conservation of our fuel resources make up a far longer list than those I have just mentioned.

SYNTHETIC LIQUID FUELS

Turning now to the problem of synthetic liquid fuels, we find that through research and development, the synthetic liquid fuels laboratories and demonstration plants of the Bureau of Mines have made substantial progress toward providing the foundations for a new American industry—an industry based on the conversion of oil shale and coal to oil.

Under authority of the Synthetic Liquid Fuels Act of 1944 a pattern of scientific, engineering, and economic knowledge thus is being wrought that ultimately will free the American people from dependence on foreign oil sources and from further anxiety about shortages of gasoline for their cars or heating oil for their homes.

Our reserves of oil shale and coal are not limitless, but they are more than substantial. Recoverable shale oil in western Colorado alone is estimated at 200,000,000 barrels—6 times as much oil as the United States has used since our first discovery well was sunk in 1859. Even this reserve is minute, however, in comparison with our great beds of coal which comprise more than 90 percent of this country's minery fuel-energy resources.

I wish to sketch a few high lights of the Bureau of Mines' progress toward the development of industrial methods for producing synthetic fuels. The first of these methods is the production of oil from shale.

Shale-oil production in any commercial installation will consist of three distinct operations—mining, retorting or extraction, and refining.

In the Bureau's experimental mines in the naval oil-shale reserves near Rifle, Colo., striking advances have been made toward developing lost-cost methods and equipment for mining the oil-rich shale formations of Colorado, Utah, and Wyoming. It was evident from the beginning that production of shale oil would not be economic until shale could be mined at a very low cost. Large-volume operations and a high degree of mechanization are necessary.

During a recent test run under actual commercial operating conditions in the Bureau's mine an incredible total of more than 100 tons was produced per man shift of underground labor as compared to an average of 5½ tons per man shift in deep coal mines. Total mining costs were under 60 cents per ton of shale.

After the oil shale is broken by dynamite Diesel trucks are driven directly into the mine and loaded with an electric shovel. New equipment has been developed that makes it possible to carry on drilling, blasting, and other underground mining operations on an unprecedented scale.

Under cooperative agreements signed with more than a score of large industrial and educational research organizations the Bureau is supplying oil shale and shale oil for oil extraction and refining tests. Information acquired through these pacts will be correlated with the Bureau's own research findings and applied to the problem of determining how our abundant reserves of oil shale may best be converted to useful liquid products.

By heating or retorting, organic material in oil shale can be cracked to yield oils and gases. As this is a direct heating operation, there are many ways in which it can be carried out, but the real problem is to handle the large volumes of shale rapidly and at low cost. The shale being mined at Rifle now yields an average of 30 gallons of oil per ton, which means that 1⅓ tons of oil shale is required for each barrel of oil. It is evident that shale must be retorted at less than a dollar a ton if this is to be an economic operation. Tests show that this can be done.

In the Bureau's experimental retorting program at the oil shale demonstration plant near Rifle work now is concentrated on a pilot plant for continuous operation known as the gas-flow retort. Concurrently with tests of the gas-flow retort, the Bureau is making engineering and cost studies of continuous retorts of other designs. Oil shale also is being provided for test work in retorts designed by the Standard Oil Development Co. and the Union Oil Co. of California. Research programs outlined for these three types of retorts are expected to show that one or more is suitable for the economical recovery of oil from American shales.

Construction of an experimental shale-oil refinery at the demonstration plan has just been completed, and it soon will be producing finished products from the crude shale oil. This unit is very flexible and can be used to subject shale oil to all conventional thermal refining processes.

Refining of shale oil into high-grade products presents numerous problems because of the chemical character of the oil which is quite unlike petroleum. At this time, hydrogenation appears particularly adaptable to shale-oil refining, offering high yields of good quality products—Diesel and jet fuels, among others. It is possible to combine thermal refining and hydrogenation. By these methods good quality gasoline, Diesel fuels, and domestic heating oils have been made.

Small laboratory or bench-scale studies of both refining and retorting processes are being conducted at the Bureau's Petroleum and Oil-Shale Experiment Station at Laramie, Wyo. There, scientists are at work on the fundamental research—the prosaic but essential spadework—that must precede any successful new industry. Oil shale and coal are the only raw materials on which any large-capacity production of synthetic liquid fuels could be based, and I can assure you that the Bureau of Mines has not neglected the possibilities of coal.

Two coal-to-oil demonstration plants—the first units larger than pilot plants in the United States—were dedicated last May at Louisiana, Missouri, less than 100 miles above St. Louis on the Mississippi River.

Built on the site of a wartime synthetic ammonia works, made available by the Office of the Quartermaster General of the Department of the Army, the first of these two plants for converting coal into liquid fuels is

complete and in operation. This, the hydrogenation demonstration plant, is a 200- to 300-barrel-per-day unit erected under contract with Bechtel Corp. It incorporates numerous innovations not found in European hydrogenation plants. For example, automatic pressure, temperature, and flow control replaces hand control wherever possible, promising accurate reaction conditions, higher capacity and efficiency, and lower personnel requirements and production costs.

Coal from Rock Springs, Wyo., is being used in the initial operations because it is exceptionally well adapted to the hydrogenation process. Later, when plant operations become stabilized, coals from other major fields will be tested.

Early in 1948, a contract was let to Koppers Co., Inc., for the design and construction of a second plant at this site. This, the gas synthesis demonstration plant, is a 100-barrel-per-day unit that will gasify pulverized coal with oxygen and superheated steam, purify the gas, and convert it to liquid fuels by a modified Fischer-Tropsch synthesis process. It is scheduled for completion this year. The first unit of this plant—the coal gasification unit—now has been completed and successful test runs have been made. Synthesis units now are being erected.

Radical new process improvements under development in the coal-to-oil laboratories and pilot plants at Bruceton, Pa., offer promise of advancing the day when the United States can shift a part of the growing burden of oil and gasoline demand to its immense coal reserves. These research activities were centered in the past year on fundamental improvements in the gas synthesis process, since a very efficient conversion of synthesis gas to liquid products is necessary. Toward this end, two promising methods were developed at Bruceton, Pa. Both offer high yields of oil and are being incorporated into the demonstration plant at Louisiana, Mo.

A departure from the conventional high-pressure process for the direct hydrogenation of coal also is under investigation. With the parallel objectives of reduction in the two major cost items of this process, hydrogenation, which now constitutes 40 percent of the total cost of the liquid fuels, and capital charges on the investment in and maintenance of equipment.

The problem of obtaining cheap synthesis gas and hydrogen, which is the key to the entire problem of producing competitive liquid fuels from coal, is being attacked from another salient at Gorgas, Ala. There, the Alabama Power Co. and the Bureau of Mines jointly have undertaken a second field-scale experiment in the gassification of coal underground. This experiment, under way for several months, has attracted wide attention in industry. Gases produced by burning unmined coal offer not only raw materials for synthetic fuels manufacture but a potential source of fuel for electric power generation. In addition, underground gassification holds promise as a method for using coal veins now difficult or uneconomic to mine.

This field-scale experiment is being directed from the Synthesis Gas Production Laboratories at Morgantown, W. Va., where the procedures were worked out in a small model simulating a bed of coal in place underground. There, too, other coal gassification methods are being investigated in the first of such pilot plants ever operated in this country. One process employs steam superheated to unprecedented temperatures of 3,600° F. and more.

Engineering studies and cost estimates for coal hydrogenation plants of commercial size have been made by Bureau of Mines engineers. These figures, in turn, have been used to arrive at synthetic gasoline prices both with and without taking credit for byproducts at prevailing or anticipated market prices. For example, in a 30,000-barrel per day hydrogenation plant operating on different types of coals and lignite, gasoline manufacturing costs would range from 12 to 15 cents a gallon if credit is taken for liquefied petroleum gas at 8 cents per gallon. If credit also is taken for phenols at 10 cents per pound—and there is a large market for this material in plastics manufacture—these gasoline costs would be reduced by approximately 4 cents per gallon or virtually to competitive levels. With little or no change, this plant could be used for producing aviation gasoline base stock, jet fuel, or a good Diesel fuel. Coal hydrogenation is a versatile process offering a choice of any one or a full range of fuels from heavy fuel oil to aviation gasoline.

Another cost estimate was based on the production of heavy fuel oils for the steel industry in a 10,000-barrel-per-day plant in the Great Lakes area. Again the figures indicate that, with the assumption of reasonable process improvements already developed but unproved, synthetic fuel oil costs are near those for the same product from petroleum.

Significantly, the United States became a net importer of oil in 1948. When coupled with these imports, domestic petroleum production last year was adequate—although only by a narrow margin—to meet the unprecedented requirements. In the United States, per capita consumption rose to 622 gallons as compared to 608 gallons in 1947 and 367 gallons a decade earlier in 1938.

Until fairly recently, domestic reserves generally had been regarded as adequate for the expanding requirements of our industrial economy and for any conceivable military need. Doubts now have arisen—grave doubts well founded in fact.

CONCLUSIONS

It has become apparent that our petroleum reserves are not unlimited. When compared with the current rate of withdrawal, the estimates of proved reserves and even the estimates of the total potential oil in this continent indicate inevitable shortages within a comparatively few years. Therefore, in prodigally increasing the rate of withdrawal now, we are merely hastening the day of virtual depletion. Our petroleum resources cannot be replaced. We cannot grow and harvest a new crop at will.

On the other hand, synthetic liquid fuels from oil shale and coal offer an assured supply for hundreds of years from known reserves within the borders of the United States—self-sufficiency under any conditions that may arise in these times of international uncertainty. Synthetic fuels can fill any gap between anticipated demand and supply, but only if immediate steps are taken to establish the initial commercial plants.

A synthetic fuels industry of adequate proportions hardly can be built during an emergency, if we have to start from scratch. Instead, as in other basic industries, the pioneer commercial units first must be established to serve as a foundation on which to build—and on which to expand rapidly if necessary. To delay this first difficult, time-consuming step—the construction of the initial plants—may well jeopardize this Nation's welfare.

Even if these initial plants were authorized today, it would require a year or two to complete the design and engineering. Any process improvements developed during that period still could be incorporated in the final designs. Meanwhile, a goal and a deadline would exist to spur even more rapid research achievements.

Although the research programs of the Bureau of Mines and industry are aimed at further revolutionary improvements in processes, a fear of obsolescence should not deter the erection of these initial model plants. Perfection is never achieved, and it is foolhardy to wait for it. In any event, approximately 80 percent of the equipment required for synthetic fuels plants is of a more or less standard nature and would not be changed by process improvements.

Sufficient data already are available from the research and development work of industry and the Bureau of Mines to permit an immediate start on design work for these initial commercial plants. For maximum progress toward self-sufficiency in oil, three or more commercial-size plants should be built as prototypes now, using both oil shale and coal as the raw materials.

These model plants should be built and operated by private industry. If necessary, financial assistance should be provided by the Reconstruction Finance Corporation to overcome any reluctance on the part of industry to undertake plant construction with the competition of petroleum prevailing.

Two bills were introduced to Congress during 1948 to clear the way for plant construction initiating a synthetic fuels industry, but the session was adjourned before their passage could be completed. Identical measures (H. R. 566 and S. 6) have been submitted to this Congress. It is hoped that favorable action can be completed on this or similar legislation at an early date.

In conclusion I wish to urge my colleagues to study this report on the accomplishments and programs of a Government agency that is carrying out a most worthwhile function in a highly commendable manner. I urge you to give it adequate support, both financially and for needed legislative authority to carry on its vital work.

Legalizing Discrimination

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial that appeared in the Tablet, Brooklyn, N. Y. Saturday, June 18, 1949:

LEGALIZING DISCRIMINATION

The approval of the Barden bill (H. R. 4643), providing a quarter of a billion dollars of taxpayers' money for public schools, regardless of need, by the Subcommitee of the House Committee on Education and Labor has been proclaimed a victory by the forces which are single-minded and tirelessly aggressive in their anti-American campaign to isolate Catholics, and particularly little children in Catholic schools, from their fellow Americans. The referral of the bill to the full House committee is no less a sad reflection upon the apathy of American Catholics in the face of a challenge to their rights and privileges as citizens.

In the present session of Congress several measures for Federal aid to schools have been proposed. The Senate passed a bill flagrantly discriminatory against children in nonpublic schools, but loopholes permitted funds for some services at the discretion of the various States. Representative GRAHAM A. BARDEN, of North Carolina, took over the questionable assignment of plugging up those loopholes in a House measure which completely eliminated any child in a Catholic school from benefitting from Federal funds. The measure was sent to the House subcommittee of which none other than the North Carolina gentleman is chairman. Only a limited

number of persons were heard and Mr. BARDEN closed the hearings. The subcommittee then approved two amendments guaranteeing the expenditure of more Federal, or taxpayers', money and rejected one proposal to restrict Federal largesse to needy States and two which might have permitted a stray dollar to provide health, bus, or some other service to a boy or girl attending a nonpublic school.

The organization formed a few months ago to isolate Catholics from their fellow citizens, "Protestants and Other Americans United for Separation of Church and State" (hereinafter referred to as POAU), has spearheaded the drive against children in Catholic schools. After Mr. BARDEN'S successful strategy in the subcommittee, POAU took full credit and now boasts that it has won to date a significant battle. It confidently predicts that the Barden bill is almost certain to become law and calls upon all who support its anti-Catholic program to write now to your Congressman urging that no bill be passed which provides public funds for private and sectarian schools."

We need not elaborate on the obvious fact that the drive to force passage of the Barden bill is but one maneuver in the whole strategy of POAU and its allies, namely, the destruction of Catholic—and ultimately all Christian—influence in the United States. Bishop OXNAM, Glenn Archer, Guy Emery Shipler and others in the vanguard of the anti-Catholic fight are to be pitied, perhaps, for their blind and unwitting service to the cause of rampant Godlessness, yet they must be halted before their reckless, aggressive attack ends in widespread hate, intolerance, bigotry, and fatal division among the American people.

The hour is late, but not at all too late, for Catholics throughout the United States to act to defeat the forces of division and hate behind the Barden bill. We do not share the confidence of POAU that the bill is almost certain to become law. We are confident that the bill will be defeated and that it will be defeated by the fundamentally sound Americanism of the Congress under the leadership of American Protestants, Jews, and Catholics alike. Many, many times in the past the interests of Catholic Americans have been fought for and protected by Protestant and Jewish Members of the Senate and House of Representatives. Our confidence in them is not lessened, but we do call upon our Catholic mothers and fathers to support and encourage them in their fight to defeat H. R. 4643.

Every Catholic parent must write at once to his or her Congressman insisting that the Barden bill be defeated; every Catholic affiliated with a nonsectarian organization, whether it be a labor union or a chamber of commerce, should insist that that organization publicly oppose the Barden bill—if not to prevent an act of legalized discrimination and bigotry, at least to stop tax funds from being wasted as they will be in this irresponsible bill—and no Catholic should rest until H. R. 4643 is consigned to the congressional wastebasket.

The evils of the Barden bill, as well as those of a similar bill (S. 246) adopted by the Senate, have been enumerated and exposed in the tablet over the past months. Here are a few of them, in summary:

The accomplisment of a tremendous stride toward complete Federal control of education and a consequent limitation of local control; in other words, a big step toward a Socialist America.

The almost explicit denial of the natural right of American mothers and fathers to educate their children according to their convictions and the adoption of the totalitarian and antidemocratic concept that the only school meriting recognition is that which is controlled by the State and from which religion and morality are excluded.

The calculation of Federal funds needed for the education of all children in all schools and then distribution only to public schools, giving no help at all to children in Catholic and other nonpublic schools and an inequitable share (according to the bill of the Congressman from North Carolina) to children in schools in the South for Negroes.

The emphasis on handing out Federal tax monies to schools and no emphasis at all on helping children attending the schools.

The indiscriminate allocation of Federal funds to any and every public school, with no distinction between schools in wealthy States and communities and those in poor sections where assistance is urgently needed; here it may be noted that the slogans adopted by advocates of Federal aid do not apply to the many Catholic mission schools—many of which have predominantly Protestant enrollments—and the latter will still be obliged to appeal to the charity of Catholics whose taxes will be increased further to finance schools under Federal control.

To stop these evils and others in the Barden bill from being imposed upon America, we urge our readers to act and to act now by writing to their Congressmen—whose names can be learned from the neighborhood political club, from the World Almanac and other convenient sources—and insisting that he not only make public his stand against the Barden bill but that he speak out strongly and emphatically against it when, and if, it is brought up for debate in the House of Representatives and that he vote against it. To quote from a message sent by the POAU to bigots and anti-Catholics all over the country: "It is highly important that we act now!"

Eighth Annual Science Talent Search

EXTENSION OF REMARKS
OF
HON. JOHN C. DAVIES
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. DAVIES of New York. Mr. Speaker, it was my privilege and stimulus a few weeks ago to meet and learn something about a group of 40 of our young citizens who have earned for themselves an important honor, and an honor that I think is important in its implications to the welfare of the country.

They were the finalists of the eighth annual Science Talent Search, who were in the Capital in final competition for college scholarships that will aid them to go forward toward an education in science. These 40 youngsters, 9 girls and 31 boys who are seniors in secondary schools in 18 of our States and the District of Columbia, were selected to come here from some 16,000 high school seniors who entered this search at the beginning of the school year last fall. By a rigorous, scientific system of qualification and elimination, this group was narrowed down to the 40 who, in the opinion of the board of judges, display the greatest aptitude for useful careers in science, and so are deemed worthy of assistance along the difficult road to a scientific education.

The Science Talent Search is the joint effort of two great American organizations. They are Science Service, a news agency for the dissemination of information about science, which conducts the Search through Science Clubs of America; and the Westinghouse Electric Corporation, which through the Westinghouse Educational Foundation provides the financial support for this adventure in education.

I believe the House is and should be interested in this activity. It reflects what I consider a manifestation of good citizenship on the part of one of our major industrial companies and that company's foresight and economic courage in inspiring and supporting a program to help young people become more useful to themselves and to their country. Westinghouse's able president, Mr. Gwilym A. Price, deserves the acclamation of this House and of his fellow citizens for this and for the many other educational activities which his company so generously and wisely supports.

The faith in and support of our industrial organizations in the educational and career advancement of our youth is obviously an important factor in the growth and stability of an industrial economy such as ours.

If the 40 young people who represent the cream of this year's crop of potential science talent—and I have seen them and talked with them—are a fair sample of the raw material with which our colleges and universities must work to turn out the qualified adult scientists on whom our progress and position in the world so much depends, then I have no fears for our future in that regard. They are fine young people, mentally and socially awake, and a credit to their country.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo (N. Y.) Courier-Express of June 23, 1949:

DOCTOR BACKS HEALTH BILL, QUESTIONS CLAIMS OF AMA

WASHINGTON, June 22.—A New York doctor who said he spoke for about 1,600 physicians today endorsed President Truman's national health insurance program. Dr. Bernard Meyer also said "it is quite impossible" to substantiate any contention "that an overwhelming majority of American physicians is opposed to national health insurance."

His endorsement of the Administration health bill was laid before a Senate labor subcommittee for the Physicians Forum. He said it is "a national organization of physicians, all of whom are members of the American Medical Association or the National Medical Association."

STRONG OPPOSITION

The American Medical Association itself is vigorously opposed to Truman's program, which would be financed mainly by a payroll tax.

Meyer, a psychiatrist, said the Physicians Forum has between 1,500 and 1,600 members, most of them in the East.

Meyer told the subcommittee the Administration bill "makes every attempt to safeguard the professional integrity and individuality of the physician."

In contending "it is impossible" to substantiate any contention that most American doctors are against national health insurance, Meyer added:

"No effort has been made to establish by secret ballot a trustworthy poll of the doctors on this subject. Experience in seeking an expression of opinion in open debate and vote on the floor of the county medical societies indicates that character assassination, intimidation, fear of reprisal, and so forth, discourages a frank repudiation of many society-sponsored policies."

HURT PROFESSIONALLY

Meyer said that "as an active member of the minority group in the Medical Society of the County of New York, I can assert that it is professionally unhealthy to champion the medical program of the President of the United States."

Dr. Joseph M. Babcock, vice president of the American Optometric Association, urged that any health bill enacted should not "place the profession of optometry in the status of an auxiliary service subservient to medicine."

The Anti-Christ in Action

EXTENSION OF REMARKS

OF

HON. CHESTER C. GORSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 28, 1949:

THE ANTI-CHRIST IN ACTION

The thing now happening to the Roman Catholic Church in Czechoslovakia is all part of the vile pattern of action that has come to characterize the Communists wherever they have forced their way into power.

First, as a conspiratorial minority acting on orders from the Kremlin, they worm their way into strategic cabinet positions giving them control of such powerful instruments as the police organization and the propaganda machine.

Next, as soon as they are well established in those positions, they manufacture a crisis, stage a coup, and set up a dictatorship, after which—step by step, through every form of fraud and terroristic coercion—they wipe out the political opposition.

Finally, when they think the time opportune, or when Moscow so decrees, they set out to smash God. What they stand for and what God stands for are mutually repugnant, and so they undertake to shatter the clergy, suppress the churches and make religion bend its knee to the supermaterialistic, truth-butchering, liberty-destroying tyranny which they describe, with indecent brazenness, as the new democracy.

It is this last stage that has now been reached in Czechoslovakia. Archbishop Beran apparently is to suffer much the same fate as the one suffered by Cardinal Mindszenty in Hungary not long ago, or by Archbishop Stepinac in Yugoslavia in 1946. About 75 percent of the Czech people are Catholics, but the Communist regime at Prague is so strongly entrenched that it is not hesitating in its attempt to break up their church directly before their eyes. After all, how can they resist? They have only prayers to fight back with, and a good Marxist laughs at prayers.

And so we may expect that Archbishop Beran and a number of his colleagues soon will be dragged before a court and tried on false charges in another typically obscene Communist mockery of truth and justice. The church, as the Czech bishops declared in their courageous pastoral letter on Sunday, has already been robbed, deprived of the majority of its freedoms and rights, dishonored, soiled, persecuted secretly and openly. Not much more needs to be done by the Prague tyranny to complete the dirty work.

But none of this should come as a surprise to anybody. Everywhere behind the iron curtain, communism has been openly at war not only with genuine political democracy but also with religion of every type that recognizes man as a child of God and not the creature of the state. It is an inevitable kind of war. The godless tyranny, by its very nature, is driven to do battle against God-fearing freedom because the two cannot coexist side by side.

In other words, being self-avowedly anti-spiritual and judging man to be nothing but an animal to be regimented, Red totalitarianism must fight any political philosophy that gives him dignity and makes him free. And it must also fight any religion that endows him with a soul, teaches him standards of goodness, and tells him that God alone is his true master, not Caesar.

There is thus a black but powerful sort of logic behind the Communist drive to destroy the influence of the church. What we have here is an evil that will continue to plague the world until somehow, some day, the source of it is overthrown or withers away. The anti-Christ simply cannot live at peace with Christ.

Negative Gains

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus (Ohio) Sunday Dispatch of June 26, 1949:

NEGATIVE GAINS

Some of the wags who have been calling the present Congress the "Eighty-worst"—among whom are some who, a year ago, were agreeing with President Truman that the Eightieth Congress was the "worst in history" are not being conspicuously fair. Thanks to a Republican-conservative Democratic coalition, what might be called its negative record is pretty good.

It is granted that the present Congress has talked more than it has legislated. But look at the potential legislation urged on it by the White House it has fended off.

If the Truman program had been enacted as called for in January we would have the spectacle of anti-inflation controls in effect with no inflation to halt. The Taft-Hartley law would have been wiped off the books and the one-sided Wagner Act revived in toto to the consternation of business, industry, and all but the more irresponsible segments of labor alike, not to mention an overwhelming majority of the rest of the public. Displaced persons would be pouring in from Europe at a higher rate than they are at present to compete for jobs and swell the ranks of the unemployed. The Army would be spending additional billions on totally unnecessary politically reprehensible universal military training. The medical profession would be on its way to socialization. Taxes would be up $4,000,000,000 in new levies and the social-security bite due to be doubled or tripled to pay for it and other items in the administration's pet "cradle-to-grave" scheme modeled after the plan that currently is helping to bankrupt Great Britain.

What the United States needs and what President Truman prescribed to meet those needs 6 months ago have no recognizable resemblance. Maybe the Eighty-first Congress hasn't done too much affirmatively, but at least it has kept us out of the very hot water into which slavish submission to unrealistic White House demands would have plunged the country.

Address by Hon. Kenneth S. Wherry at Seventy-fifth Anniversary Celebration of Creighton, Nebr.

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by me at the seventy-fifth anniversary celebration of the town of Creighton, Nebr., on June 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, fellow Nebraskans, and fellow-Americans, it is a genuine pleasure to take part in Creighton's seventy-fifth anniversary celebration.

We are assembled to give thanks for the wonderful progress made by this community; to note the many blessings that have come to Creighton over this long span of years, to honor the founders of this town and the pioneers who began the march of its progress, and to pay our respects to those courageous, industrious, thrifty men and women who have vigilantly kept the faith.

My heartfelt thanks go to the committee on arrangements for inviting me to participate in this diamond anniversary; for, I am proud to be a Nebraskan, and as a Nebraskan I am proud of Creighton.

Creighton looks ahead. Contrast the sound, good sense of the builders of Creighton, those generations who have developed this thriving, happy community the American way, with the alien ideologies of government that are now infiltrating our country.

You must be shocked, as I am, by the daily disclosures of Communists and their fellow travelers, who have burrowed into every branch and activity of our Government.

To cite a few examples:

Gerhard Eisler, No. 1 Communist of them all, slipping through the fingers of the law after being convicted and sentenced to prison; disappearance of highly secret atomic bomb ingredients; Communist revolutionaries on trial in New York; a Department of

Justice employee on trial in Washington, charged with espionage; evidence turned up by congressional committees on Communists infiltrating into every walk of life; admission by Henry J. Wadleigh that when he was a Department of State official he passed out top secrets to Russian spies.

All together these disclosures are a national scandal.

I ask you, is it a red herring, an act of postwar hysteria, to see that the atomic bomb secrets are securely guarded, or that disloyal persons be driven out of the Government, and demand punishment for their unlawful acts?

Why of course not. Cooperation by all departments and agencies of the Government, including the administration, in stamping out this menace is what we all want, and insist must be done.

Here we are, a nation of one-sixteenth of the world's population and only 6 percent of the world's area, and yet we produce nearly half the world's goods.

We own 46 percent of the world's electric power, 48 percent of the radios, 54 percent of the life-insurance policies, 85 percent of the automobiles, 92 percent of the bathtubs, 99 percent of all the television equipment, with the best health record of any major country, the best schools, the most churches, the highest standard of living, in short, most of the good things in life, which people in other countries dream about.

All of this, my fellow Nebraskans, did not just happen. It is the fruit of the best kind of government on earth. In spite of all these blessings there are among us agitators, who are infiltrating and advocating a dictatorship by all-powerful departments and bureaus in Washington.

This is not imagination, it is not just a myth. This administration is attempting to pass legislation which will socialize America and slide us into a socialistic state. Oh, no, they never tell you the cost, the cost in hard-earned dollars. They sugar-coat their quack remedies with high-sounding words such as security, prosperity, peace, and contentment. They are the pied pipers of today.

The master planners at Washington pretend these things are as free as water, as free as the air. But you know there is no free medicine, free hospitals, free schools, free pensions, free security, no free anything. They all cost money. They all come out of the income of the people in direct taxes, and indirectly in the cost of everything we buy.

But more important is the cost in lost freedom. The socialistic planners have a deep yearning to regiment our people in the name of social welfare, to make each individual a robot.

This issue transcends all partisan lines. The programs recommended by the President in compliance with the promises he made to the radical pressure groups strike at the foundations of our Republic.

The Honorable James F. Byrnes, former Secretary of State in the Roosevelt and Truman administrations, in an address at Lexington, Va., last week, said the administration's welfare state proposals are leading the country down the road to statism.

Mr. Byrnes, himself a former Justice of the United States Supreme Court, and a former United States Senator, said further, and I quote:

"Where we shall wind up, no one can tell. But if some of the new programs seriously proposed should be adopted there is danger that the individual, whether farmer, worker, manufacturer, lawyer, or doctor, soon will be an economic slave pulling an oar in the galley of the state."

And yet, squarely in the face of this ringing warning, the President insists that Congress approve his new programs, under the social welfare label, which, over a period of 50 years would cost $1,250,000,000,000. One trillion, two hundred fifty billion dollars in silver dollars would make seven stacks reaching to the moon, with enough left over to pay all our 1948 taxes and wipe out the present national debt of a quarter of a trillion dollars.

Fantastic? Yes, but it is true!

You people of Creighton know what happens when an individual goes on and on spending more than he earns. Well, the same thing happens in the case of a nation. History is full of examples of countries that have gone on the rocks through loose fiscal policies.

Your Federal Government again is operating in the red. Gone is the handsome $8,000,000,000 Treasury surplus, that was rolled up in the banner year 1948, when the budget was balanced the first time in 16 years.

Uncle Sam again is borrowing money for deficit spending. By the end of June, the end of the present fiscal year, the deficit will be nearly $1,000,000,000; more than three billion in fiscal 1950, and double that in fiscal 1951.

The only sound, sensible course is to balance the budget by cutting waste out of government. There still will be ample funds, through efficiency and economy to provide a strong notional defense and carry forward our essential Federal activities.

The measure was introduced by me to authorize and direct the President, to reduce expenditures for the fiscal year 1950 by not less than 5 percent, nor more than 10 percent. It provides a definite formula for making the reductions which Congress has full authority in the Constitution to prescribe. All the President has to do is carry out the formula as chief administrator of the executive branch.

Under the terms of this legislation, the President would be directed to cut the overall expenditures by the percentage point that will balance the budget, balance outgo with income.

This means a balanced budget. It means no increase in taxes. It means an end to deficit spending. And, it places the Federal Government on a pay-as-you-go basis. This is the way we Nebraskans finance our State, and the Federal Government would do well to follow the example of Nebraska.

A balanced Federal budget would do more to reverse the present downward trend in national income and rising unemployment than any other action the Government could take. It would thrill the whole country. It would enable businessmen, farmers, workers, everybody to plan ahead with confidence. All of us are thankful that we are Americans, living in a country where every citizen has equal rights, and all together holding the sovereign power to direct their representatives in government.

This is liberty, the maximum of freedom for every individual consistent with the rights of every other individual to the same. This is the essence of our Republic. It is the source of the initiative, skill, and genius, which we cover in the phrase, "free enterprise."

The destructive, paralyzing opposite is the philosophy of government in which the state is all-powerful and everybody is regimented completely.

These two systems of government won't mix. One or the other will be destroyed. There is no room for compromise, no room for me-too.

For example, there is being waged in Congress a contest over federally subsidized housing. It is called a slum-clearance bill and advertised by its supporters as a low-rent housing bill. The heart of the bill is the provision to have the Federal Government draw upon all the taxpayers, to contribute to the cost of homes for some of the people. Already, new groups, a little higher in the income bracket than those subsidized by the pending bill, have begun lobbying for free houses.

Another example of creeping socialism is Federal aid to education.

Offhand it sounds good. We are all for education. But here is an intrusion by the Federal Government into the responsibilities of local governments and families. It is the most sinister proposal of all, because when the schools of the Nation, the minds of our children, are controlled by the bureaucracy in Washington, the last act in the tragedy of lost freedom will be over.

The administration seeks to nationalize industry. It has asked for power to build and manage factories and mills to produce steel and other products.

This is socialism in action. Another socialistic grab for power is the demand for compulsory health insurance, a program that would cost the people $10,000,000,000 annually.

Then, there is the proposal of the President that he be given power to put ceilings over prices and wages, and floors under prices and wages.

Undismayed by the cold reception the people have given to these socialistic programs, the administration recently presented the grandfather of all the schemes to regiment the people, the so-called Brannan farm plan. Secretary of Agriculture Brannan asks for power to put Government controls on every producer of every agricultural product, to control everything from a heard of cabbage to a head of cattle. And, all the while he talks loosely of serving freedom and abundance, and high income and low prices.

He is asking for power to decide how much you shall plant and how much you shall sell; how much you shall receive and whether you shall receive anything at all.

His plan is an economic monstrosity. It is impractical. Its costs to the Government, to the farmers, and to the consumers, are prohibitive. It won't work.

Certainly, the farmers of America see through Mr. Brannan's political hocus-pocus.

This is the same Mr. Brannan who told the farmers last fall that he did not have authority to provide farm crop storage bins. And he is still spreading that falsehood.

For years, the Commodity Credit Corporation has had full authority to provide crop storage bins on the farms. The Commodity Credit Corporation Charter, passed by the Eightieth Congress and approved by the President June 29, 1948, provided that the CCC:

"May contract for the use, in accordance with the usual customs of trade and commerce, of plants and facilities, for the physical handling, storage, processing, servicing and transportation of the agricultural commodities subject to its control."

That was the law at the very time President Truman, Secretary Brannan, and others were telling the farmers the Republican Eightieth Congress had repealed their authority to provide grain storage bins for the farm.

Get this: everything Mr. Brannan announced June 7, 1949, to provide storage bins for the farms could have been done at any time in 1948, 1947, and before 1947.

This is not the whole story on their callous disregard of the needs of the farmers. At the very time they were telling you they could not provide the bins, they were actually selling steel and wooden bins that the Government owned, selling thousands of them for nonagricultural purposes.

Mr. Brannan is guilty of misrepresentation and gross negligence of the responsibilities of his office. Congress authorized the storage bins in plenty of time for last year's crops, and for this year's crops. There is a moral obligation on the part of the Government to compensate the farmers who have

suffered losses as a result of Mr. Brannan's negligence.

Those farmers should be compensated for any losses they suffered due to lack of farm storage bins. That's been my position right along and now Senator ELMER THOMAS, a Democrat, and chairman of the Agriculture Committee, has introduced a bill to compensate the farmers who lost hundreds of dollars because of the negligence of Mr. Brannan.

This is typical of the campaign of misrepresentation that is being made by the administration on behalf of the Brannan farm bill. For my part, I am for continuing the present law, which provides price support levels at 90 percent parity support as you farmers now understand it. At least, this should be done until there is adopted a farm policy, which turns away from controls and regimentation and Government management of the farmers' business, to a program for full utilization of the products of agriculture. We must have a new approach to the whole farm surplus problem, a program that squares with free enterprise.

Diversion, not destruction, is the key to solution of surpluses of grain and other starchy commodities, diversion to hundreds of industrial uses, chiefly diversion of alcohol to supplement and improve gasoline as a motor fuel.

Use of grains and other starchy commodities as a motor fuel in the form of alcohol is not an idle dream. Alcohol is being used in a dozen countries as a supplement to gasoline to make a premium grade of motor fuel. Injection of alcohol into automobile and truck motors develops greater power for quick starting, passing, and hill-climbing.

The Department of Agriculture has made extensive, practical tests. This is what G. E. Hilbert, Chief of the Bureau of Agricultural and Industrial Chemistry, reported last January 4:

"It is evident that through conversion to alcohol any grain surplus that might develop in the future could easily be absorbed in the market for motor fuels.

"This market is so tremendous that a surplus would disappear, figuratively speaking, practically overnight."

There is plant capacity now to consume 200,000,000 bushels of grain. And with expenditure of only $30,000,000 additional capacity to utilize a billion bushels could be built in a few months. It is urgent that oil reserves be conserved in the interest of national security.

Here is the 8-point production-for-use program I propose as a free-enterprise, free-markets solution to the haunting specter of bigger and bigger surpluses and the threat of bigger and bigger government:

1. Conversion of grains and other starchy commodities to alcohol for blending with gasoline, thereby making a premium motor fuel of low-grade gasoline, and for injection into motors thereby adding to the power of high-octane gasoline.

2. In new industries utilizing farm products give farmers priority in their ownership and development, with such industries to be located as feasible in rural areas.

3. Stockpiling by the Government of foods, feeds, and natural fibers for national security and as a reserve to maintain stability of livestock production. A permanent reserve of 1,000,000,000 bushels of feed grain could be a capital asset more precious than gold in times of need.

4. Establishment of peril points in the tariff on agricultural commodities at domestic parity price levels to protect farmers against ruinous importations.

5. Expansion of exports of foods, feeds, and natural fibers, under a two-price system, through which countries short of dollars may buy from our surpluses for development of their respective economies. Loans of foods, feeds, and fibers to other countries, enabling them to develop their own resources and contribute to world commerce.

6. Improvement of processing, storage, and distribution of foods, feeds, and natural fibers through cost-saving procedures, thereby contributing to stability of farm income and lower prices to consumers. Farmers receive only 49 cents out of every dollar consumers spend for food.

7. When production of a given perishable farm commodity, such as fruits and vegetables, is in excess of normal demand, due to bountiful yield or other temporary cause, authorize special sales campaigns in which producers, processors, and distributors may cooperate, subject to conditions prescribed by the Secretary of Agriculture in the public interest.

8. During the period of transition from a regimented farm economy, to a program of full utilization of farm commodities, continue provisions of existing farm-aid laws.

This production-for-use program repudiates the defeatist approach. It recognizes abundance of crops as a blessing to be used by the people. But we have not been wise enough to fully utilize these crops. Agricultural abundance is essential if we are to retain our free competitive system. If we now admit defeat in the face of abundance, and retreat to the mirage of security in Federal controls and red-tape regulations, we will have betrayed those who built such solid communities as Creighton, Nebr., on the foundations of opportunity, initiative, and the dignity of the individual.

America is going forward, conquering adversities on the way. Orin Bruce, and his little band of about 20 families, who formed a caravan and came up here from Omaha in the early seventies to establish Creighton as a permanent community, did not flinch from the trials and tribulations they knew were their destiny.

They were builders and pioneers. They turned prairies into fields of golden grain. They built roads and they opened shops. They set the pattern for a way of life that made possible the diamond aniversary we celebrate today.

There are among us many who recall the celebration Creighton held in 1934, the sixtieth anniversary of the founding of the city. It, also, was a great occasion.

But during the intervening 15 years many changes have occurred. We have gone through a Second World War, and now are witnessing the aftermath of seething unrest around the globe. First fascism challenged us, and now we are at grips with communism. Back in 1934 the socialistic planners were just beginning to spread their alien ideology. In the past 15 years they have become bolder and bolder; openly flaunting our hallowed institutions; planting seeds of discontent among our people only for the purpose of posing as their champion; belittling our ideals and institutions.

There, fellow Nebraskans, is the paramount issue of today, the crucial challenge. When given the facts the people will make the right decision.

Here, in this assemblage we have visual evidence of the grim determination of our people to meet this challenge.

And, as we hail Creighton, we take new courage and gain new confidence, that the spirit of this community is the spirit of America.

We will not be sidetracked, either to the left or to the right.

Our course is forward, forward in "life, liberty, and the pursuit of happiness," to a greater Creighton, a greater America.

The Civil Rights Program

EXTENSION OF REMARKS
OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able statement relating to the civil-rights program, made by the distinguished junior Senator from Virginia [Mr. ROBERTSON] before the Committee on the Judiciary this morning. The Senator from Virginia is one of the ablest constitutional lawyers of the Senate, and I commend his statement to the consideration of Senators.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am opposed to S. 1725 because it represents a dangerous trend in our National Government. It is the type of legislation which undermines the foundations of our Constitution and threatens to overturn the structure of Government so carefully raised by our forefathers. It could lead to the exercise of local police powers by Federal officials. It would permit Federal interference with the conduct of elections. It would nullify sections of State constitutions and local statutes. It would strike at patterns of social behavior which the citizens of this country always have regarded as part of their inalienable right to choose their associates.

In short, it would breach the wall separating State and local powers from those delegated to the National Government in so many important places that this bill might appropriately be subtitled "An act to repeal the tenth amendment."

I have not had an opportunity to prepare a complete analysis of the bill, and so today I shall merely touch on some of its features which I regard as most obviously objectionable. Before this subcommittee takes final action, I hope I shall be given an opportunity to outline my reasons for opposition in more detail.

To appreciate the significance of what this bill would do if enacted into law, it is necessary for us to recall the history of Federal-State relations and the attitude which has been assumed at various periods toward what are commonly referred to as States' rights.

In the period of the federation, before our present Constitution was adopted, State supremacy was unquestioned. Drawn together by the common danger of the war with Great Britain, the colonies were, in effect, a league of sovereign States, operating jointly through a Congress that was more of a diplomatic assembly than a legislative body.

After the Revolution was over, the economic disadvantages of this system and its weakness from the standpoint of defense against other nations became obvious. The Convention of 1787 was called to seek a remedy. On the one hand were those who felt the answer should be a strong central government dealing directly with individual citizens throughout the Nation. On the other were those who feared that any government strong enough to act in this way would become a tyrannical superstate.

The tension that existed between those holding these opposing views was illustrated by the statement of George Washington, who

was later quoted by Gouverneur Morris as saying: "It is too probable that no plan we propose will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and honest can repair. The event is in the hand of God."

The result of these disagreements, as I need hardly remind you, was what has been called "the great compromise" in our Federal Constitution—a plan under which the central government can deal with individuals but only within carefully circumscribed limits. As is explicitly stated in the tenth amendment which was adopted the first year after the ratification of the Constitution, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

It is our obligation to remember that if it had not been for the assurances of men like James Madison and Alexander Hamilton that the balance of power would be preserved, the Constitution probably would never have been ratified. And when the Federalists, who believed in extension of centralized powers, tried to press their views in the early 1800's, they were met by Thomas Jefferson's Republican Party.

What happened then is well described by the recently issued report of the Council of State Governments on Federal-State Relations. This report, prepared for the Hoover Commission, says (at p. 7): "In the earlier years of the nineteenth century, the Supreme Court was heavily weighted with Federalists who successfully sought to extend the national power at the expense of the States. Their object was the unification of the Nation, but their efforts stimulated the States to become increasingly aware of their side of a dual-power system. In the later years of the century this duality was emphasized by the Court in quite a different way. The Court, in the postbellum years, was more inclined to pare down the national powers and reserve more rights to the States. In this later period, the Supreme Court tried to set the National and State Governments at arm's length. Thus, in the long run, the Supreme Court's decisions during the nineteenth century show a strong tendency toward dual federalism—toward carving out separate fields of authority for the National Government, on the one hand, and the States, on the other hand. This tendency persisted until the 1930's. An obvious struggle for power between the National and State Governments followed."

Discussing the period from World War I down to the present, the study from which I have just quoted says that emphasis was on cooperative activities of State and National Governments. It points out that the Supreme Court gave its approval to cooperative legislative effort by State and National Governments for carrying out public purposes common to both which neither could fully achieve without the cooperation of the other. But, the Council study adds: "The Supreme Court has not destroyed State powers acquired as a result of nineteenth-century decisions. In several important ways it has fostered States rights. * * * In sum, the Court has given more scope to legislative discretion, with the result that the State and Federal jurisdictions interpenetrate each other with a flexibility and freedom unknown since the first days of the Republic."

While the chief concern of the study from which I have quoted is with taxation, welfare and other programs I feel the principle of accepted cooperation between Federal and State governments has an application to the problem immediately before us.

We have progressed from a loosely knit federation of practically sovereign states to a stage where the States are truly united through a process of compromise and by recognition of the general advantage of this course. On the one occasion when force was substituted for the effort to promote voluntary cooperation the result was a bloody fratricidal war.

My first and most vehement objection to this proposed bill is that it is aimed at coercion of States and of localities. It is built, in large part, on the foundation of statutes which were passed in the heat of anger after the end of the War Between the States and which were modified or abandoned when calmer judgments prevailed.

As the Attorney General of the United States points out in his analysis of S. 1725, the thirteenth, fourteenth, and fifteenth amendments, adopted between 1865 and 1870 became the authority for various civil rights statutes which were enacted but, to quote his brief: "Over the years, through decision of the Supreme Court and Congressional action in 1894 and 1909 the laws implementing the three amendments were reduced in number and scope," to the residue on which this bill is based.

The Attorney General contends that, and I quote his brief, "The existing civil rights statutes fall far short of providing adequate implementation of the amendments protecting life, liberty, and property."

With all due respect to this opinion, I think it may be questioned whether life, liberty, and property in this Nation will be better protected by restoring to these statutes some of the authority originally sought by Thaddeus Stevens and his vindictive followers. I think it also may be argued that any such effort may jeopardize that very precious thing which Daniel Webster referred to as "Constitutional American liberty."

Let us consider, briefly, what this bill purports to do.

Part 1 of title 1 would create a Commission on Civil Rights composed of five members appointed by the President. Three members of this commission would constitute a quorum. The duty and function of this commission would be to gather information and—please note this language: "to appraise the activities of the Federal, State and local governments and the activities of private individuals and groups, with a view of determining what activities adversely affect civil rights."

In his analysis of the bill the Attorney General says the commission would act "as an educating and informational agency" and that it would "act for the Federal Government in working for and cooperating with the States and local governments in the solution of civil rights problems, offering advice and assistance where desired or needed."

What all of this means is that the President will be furnished with a propaganda agency, composed of personnel entirely of his own choosing, although subject to confirmation by the Senate, which may be completely partisan or sectional and which will be supplied from the public treasury with funds for a full-time staff and reimbursement of such expenditures as, in its discretion, it deems necessary and advisable.

This agency, which might at times be highly competent and useful but which at another time might just as easily become the tool of political expedience, would be authorized to appraise, that is to evaluate and pass judgment, not only on the activities of the Federal Government but those of State and local governments and of private individuals which might in any way be classed as concerning civil rights.

I do not have to remind you of the role official propaganda agencies have played in the support of totalitarianism in other nations. I do urge that we consider carefully the possible results of placing such a weapon in the hands of the executive branch of our own Government and of giving as few as three men, responsible only to the one who appointed them, facilities for stirring up discord between sections of our Nation and exposing any community, official, or individual to widely circulated criticism.

I suggest also that it is unwise to authorize such a commission to "accept and utilize services of voluntary and uncompensated personnel and to pay such personnel actual and necessary traveling and subsistence expenses," as is proposed in section 103b of this bill. This would enable the commission to ally itself with and in some degree to support various pressure groups which are completely free from Government control. In the end the commission, instead of using these groups, might be used by them as a subsidized, official mouthpiece.

Then, in part 2 of title I there is authorization to enlarge the Civil Rights Division of the Department of Justice and to increase the personnel of the Federal Bureau of Investigation to the extent necessary to carry out effectively the duties of such bureau with respect to the investigation of civil-rights cases under applicable Federal law.

How much of a force will the FBI regard as necessary for this purpose? Will a staff be set up merely to handle investigation of cases clearly requiring Federal intervention, or will this authorization be used for creation of a national Gestapo which will overshadow local police forces?

An indication has recently been given by the action of the Attorney General in sending FBI agents into Alabama to investigate operations of Ku Klux Klan and possibly to attempt Federal prosecution of members of the Klan alleged to be guilty of flogging citizens of Alabama.

There is no Federal law on that subject but there is a State law on the subject of assault and battery. Both the Governor and the legislature of Alabama have promptly come to grips with that problem and legislation has been passed which will make it difficult for those who commit crimes of assault and battery either individually or collectively to conceal their identity behind a mask of any kind. If without the provisions of the pending bill the Attorney General thinks it is the function of the FBI to participate in local matters of this character how long would it take some succeeding Attorney General to build up a Federal Secret Police Force to operate in every State in the Union and what will become of personal liberty should that occur?

And may I also add in this connection that if what happened in Alabama was a proper concern of the Federal Government where only white citizens were involved why was not the race riot in the swimming pool in St. Louis, Mo., where 20 persons were injured and which it took 400 police a whole day to quell not a proper subject for FBI investigation also? The issue in St. Louis was not any illegal misconduct but was precipitated solely by the efforts of Negroes to share a public swimming pool with whites. It was a race issue pure and simple.

Some further hint of what may happen can be found in the part of the Attorney General's brief dealing with this section of the bill.

The brief says that due to limitations under which the Civil Rights section of the Department of Justice has operated, it has not undertaken to police civil rights, but has handled only those cases brought to its attention by complainants either directly or through Government agencies.

Note that if you please. The implication could be that the exercise of police powers, where civil rights are involved has not been undertaken simply because the staff to do so is lacking. There is no concession that even if there were an unlimited staff this might be a function best left to local au-

thorities. There is no apparent recognition of the limitations of article IV section 4 of the Constitution which says that the Federal Government shall protect the States against domestic violence only on application of the legislature or of the executive if the legislature cannot be convened.

I would direct your attention also to the portion of the brief (p. 13) in which the Attorney General says the civil rights enforcement program would be given prestige, power, and efficiency which it now lacks, and then quotes the statement of the Executive Secretary of the President's Committee on Civil Rights to the effect that with an expanded staff the civil rights section could search out violations. The brief also points out that this bill would enable the Attorney General to enjoin threatened infringements.

In other words, we are asked to set up a Federal force of unlimited size which not only can go into any locality and investigate and prosecute alleged violations of civil rights, but which may guess at the possibility that such violations may occur and try to prevent them by resort to Federal injunction. We have heard argument for days in the Senate recently on the question of whether an injunction should be allowed in the case of a labor dispute which involves national safety and welfare and now it is proposed to give the Attorney General a legal tool which he says he could use at will (p. 14) to resort to injunctions whenever he considers that the rights of one individual might be threatened by another individual.

Part 3 of title I would establish a Joint Committee on Civil Rights which might serve a useful function but which, like the Commission proposed in part 1, might be subverted to political use by the party in power at any given time. Having the power to subpena the attendance of witnesses and production of documents, this committee could harass without limit citizens or local officials whose conduct it did not approve.

Let us come now to title II which deals specifically with civil rights guaranteed by law.

Some of the changes proposed in part 1 are technical and might improve the existing civil-rights statutes but a major change is made by the addition to section 241 of title 18 of the United States Code a new subsection extending the conspiracy provision to cover individuals.

It is true that the courts have upheld as constitutional the Federal prosecution of two or more persons who conspire to injure, oppress, threaten, or intimidate a citizen in the exercise and enjoyment of his constitutional rights.

But, it also is true that from the decision in the civil-rights cases in 1883 on down to the present the Supreme Court has held that actions of individuals against other individuals are not subject to Federal jurisdiction. As Chief Justice Vinson said in the case of *Shelley* v. *Kraemer* last year, "the principle has become firmly imbedded in our constitutional law that the action inhibited by the first section of the fourteenth amendment is only such action as may fairly be said to be that of the States. That amendment erects no shield against private conduct, however discriminatory or wrongful."

This whole theory must be reversed if we adopt the philosophy of S. 1725. If the Federal Government can punish an individual for injuring, threatening, or intimidating another individual where no official action is involved and no State line is crossed in a civil-rights case, the whole field of police power is opened up. It is equally logical for the Federal Government to prosecute a man who steals another's purse or who commits a simple assault.

There may be some difference of opinion as to the significance of the changes which this bill would make in section 242 of title 18 of the code, dealing with actions of officials or others "under color of any law."

It may be true, as I understand the Attorney General argues, that the bill merely clarifies matters which have been settled in effect by court decisions. It seems to me, however, that there is also a possibility that these changes, especially when they seek to clarify such controversial issues as were involved in the Screws case—where four separate opinions were written—may open up more channels of controversy than they close.

For example, on the basis of the Screws case it has been held that willful intention to deprive a person of a specific constitutional right must be shown. This bill prescribes punishment not only for anyone who willfully subjects another to deprivation of rights or privileges but also for anyone who causes another to be so subjected. That might open up a whole new field for Federal interference.

Then we have the new section 242A, in which "rights, privileges, and immunities" of citizens are enumerated. The Attorney General's brief says this section does not create any new right not heretofore sustained by the courts. If nothing new is added, then why is the enumeration necessary? One theory might be that such enumeration would persuade the courts to recognize as rights of a citizen of the United States and therefore subject to Federal jurisdiction, matters which the Supreme Court has recognized ever since its decision in the Slaughterhouse cases as privileges and immunities of the citizens of the several States and hence subject to protection by State authority.

For example, would the statement in this bill of the right to be immune from punishment for crime except after a fair trial be interpreted as the equivalent of antilynching legislation which many of us have regarded as unconstitutional?

Would the statement of the right to vote as it is set forth here be interpreted as a basis for outlawing poll taxes?

Or would the right to protection of person and property without discrimination be construed to cover those matters previously dealt with in FEPC bills?

If we are to face these issues, I would prefer to do it head on rather than to pass an omnibus bill without being sure what it covers and then wake up to find that we are plagued with the same unconstitutional features that have characterized individual civil rights bills in the past.

Similarly part 3 of the bill dealing with equal enjoyment of accommodations of public carriers contains the phrase "and all facilities furnished or connected therewith." Does this mean that in a city where segregation is the rule it will be a criminal offense to provide a station with separate rest rooms for the races? Here again the intent is evidently not merely to enforce the Federal law where interstate commerce is concerned but to extend its jurisdiction into every locality.

It seems only too plain that this bill is aimed at a region of the country and is based on political expediency.

Recently I visited the State of North Dakota and attended the dedication of the Roosevelt Memorial National Park. In an assembly estimated at 25,000 to 30,000 I did not see a single colored person and in conversation with a native of North Dakota I was informed that there were not more than 600 Negroes in the entire State.

The pending bill would cause no domestic discord in a State like North Dakota but forbidding a State which has a large colored population to continue such simple practices of segregation as providing separate rest rooms in railroad and bus stations is quite another matter.

We do not need this bill at the present time. We do need to rededicate ourselves to the fundamentals of democracy. We need to recall the philosophy of James Monroe, who so clearly pointed out the relation of the States to the Nation in one of his messages to the Congress, in which he said:

"The Constitution of the United States was formed by a convention of delegates from the several States, who met in Philadelphia, duly authorized for the purpose, and it was ratified by a convention in each State which was especially called to consider and decide on the same. In this progress the State governments were never suspended in their functions. On the contrary, they took the lead in it. * * * There were two separate and independent governments established over our Union, one for local purposes over each State by the people of the State, the other for national purposes over all the States by the people of the United States. The whole power of the people, on the representative principle, is divided between them. The State governments are independent of each other, and to the extent of their powers are complete sovereignties. * * * In thus tracing our institutions to their origin and pursuing them in their progress and modifications down to the adoption of this Constitution two important facts have been disclosed, on which it may not be improper at this stage to make a few observations. The first is that in wresting the power, or what is called the sovereignty, from the Crown, it passed directly to the people. The second, that it passed directly to the people of each colony and not to the people of all the colonies in the aggregate; to 13 distinct communities and not to one. * * * What produced the Revolution? The violation of our rights. What rights? Our chartered rights. To whom were the charters granted, to the people of each colony or to the people of all the colonies as a single community? We know that no such community as the aggregate existed, and of course that no such rights could be violated. It may be added that the nature of powers which were given to the delegates by each colony and the manner in which they were executed show that the sovereignty was in the people of each and not in the aggregate. They respectively presented credentials such as are usual between ministers of separate powers, which were examined and approved before they entered on the discharge of the important duties committed to them. They voted also by colonies and not individually, all the members from one colony being entitled to one vote only. This fact alone, the first of our political association and at the period of our greatest peril, fixes beyond all controversy the source from whence the power which has directed and secured success to all our measures has proceeded. * * * By article IV, section 4, the United States guarantees to every State a republican form of government and engages to protect each of them against invasion; and on application of the legislature, or of the executives when the legislature cannot be convened, against domestic violence. * * * Of the other parts of the Constitution relating to power, some form restraints on the exercise of the powers granted to Congress and others on the exercise of the powers remaining to the States. The object in both instances is to draw more completely the line between the two governments and also to prevent abuses by either. Other parts operate like conventional stipulations between the States, abolishing between them all distinctions applicable to foreign powers and securing to the inhabitants of each State all the rights and immunities of citizens in the several States. * * * The great office of the Constitution of the United States is to unite the States together under a government endowed with powers adequate to the purposes of its institution, relating, directly or indirectly to foreign concerns, to the discharge of which a national government thus formed alone

could be competent. * * * The Constitution forms an equal and the sole relation between the General Government and the several States, and it recognizes no change in it which shall not in like manner apply to all."

Commencement Address by Bernard M. Baruch

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Bernard M. Baruch at the commencement exercises commemorating the twenty-fifth anniversary of the formation of the Industrial College of the Armed Forces, in Washington, D. C., June 28, 1949.

As a former chairman of the Senate Committee on Military Affairs, I deem it not inappropriate to assume that Mr. Baruch would not object if I associated myself with him in his tribute to the great military leaders who represented America in the occupied territories. America can and does take pride in her representatives.

Mr. BYRD. Mr. President, I had intended to ask to have inserted in the Appendix of the RECORD the very outstanding address made by the Honorable Bernard M. Baruch at the commencement exercises, commemorating the twenty-fifth anniversary of the formation of the Industrial College of the Armed Forces, which the Senator from Utah has asked to have placed in the RECORD. I am glad he has done so, because anything that Mr. Baruch has to say, is always worthy of the attention of the American people, and this address, particularly so.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Usually my Industrial College talks have centered around the problems of economic and industrial mobilization. Today I intend to include in my text a somewhat different subject.

Not that there is less urgency for the immediate adoption of a plan of total mobilization. The necessity never was greater. If war is to be prevented, we must be ready to see the Atlantic Pact through. With its ratification the United States will be formally committed to go to war in event of aggression. Let no one have any doubts on that score. Yet, with the cold war dragging into its fourth year, we still lack any effective plan for the swiftest possible mobilization of our resources to insure reaching our allies in time.

At the close of the war Congress created an agency to draw up and recommend mobilization plans. When this agency attempted to act, it was, as you know, prevented from doing so. It has still to be heard from.

What needs to be done is well known. The mobilization experience of the last two wars should be embodied in the best possible plan that can be devised as of today, and promptly enacted into law, ready to be put into effect on proclamation of the President, with the concurrence of Congress.

What is lacking is a will to decision. The Congress and the American people are entitled to a full report on the status of these mobilization plans. The responsibility for this neglect should be made clear—before it is too late. Additional delay is a needless gamble with our national security—a needless invitation to disaster.

But, as I remarked earlier, I am not here merely to talk mobilization. Its importance is obvious and imperative. Of even graver consideration are the types of men who operate our Military Establishment.

And, so, I should like to say a few kind words for the so-called brass hats, who are being sneered at and sniped at so unjustly. They deserve better at the hands of the public.

We should stop thinking that the soldier is set apart from the rest of the people. This is bad thinking. A soldier, whether he be an officer or a private, is still a citizen. In fact, he is first of all a citizen. So is a veteran.

The whole thesis that there exists some deep fundamental cleavage between civilians and military in American life breaks down on examination. The soldiers who have been called upon to function in spheres apart from their profession of arms have rung up enviable records. Our occupation commanders—MacArthur, Clay, Clark, Hodges—have handled themselves with ability and tact, with justice and firmness. They, their officers and enlisted men, have won new respect for the United States.

In Bedell Smith we had an excellent Ambassador to Soviet Russia. Admiral Kirk is a worthy successor.

There has been no more capable administrator of veteran affairs than Gen. Omar Bradley. Less conspicuous, but no less real, was the ability shown by Marine General Erskine as retraining administrator in an impossible situation.

No Secretary of State has been less militaristic and more devoted to searching for peace than General Marshall.

Our civilian life has been greatly enriched by the addition of professional soldiers, General Eisenhower being only the most recent example.

There is no basis for the accusation that our military leaders think exclusively in terms of war. Today the professional soldier is trained in the arts of peace as well as those of war. That, as you know, has been one of the objectives of this Industrial College.

I know of no group who have been so loyal to the country as a whole. The question never arises of protecting one region—say New York or Texas—at the expense of others. The military has always thought of the whole national interest, which is more than can be said for some of their critics.

By whom have American liberties been threatened in the past? By the military? Or by reckless civilian politicians and rabble-rousers? The role of the soldier in the United States has always been that of the protector of our liberties. In times of peace all too many people have tended to jeer at members of the armed forces, to laugh off their warnings, to give little heed to what they have sought for defense. Then, suddenly, war erupts. The much-maligned military are expected to spend billions in furious yet efficient haste, to recruit and train in a matter of months millions of men who never held a rifle before, to organize global operations touching places most Americans had never heard of. Certainly it is one of the marvels of American history that our armed forces have not failed us in time of war, despite the treatment given them during peace. This story is told in Kipling's "Tommy Atkins."

The pay we civilians give our soldiers has never been commensurate with the responsibilities we thrust upon them. That is particularly true now, when inflation has slashed the real value of all pensions, savings, and salaries. Grave responsibilities with inadequate reward and exposure to unfair criticism is too often the lot of occupants of the Pentagon—which I hope to see renamed the James V. Forrestal Building.

Not all who have been wounded in the service of their country wear purple hearts.

Were today's abuse of the military merely a question of the specific charges being made it would be of small concern since the evidence refuting these accusations is so readily at hand. However, the outcry against the brass is the outward sign of something deeper.

In ancient, more primitive times it was often the practice to beat or kill a courier who brought bad news. That is somewhat the plight of the military in America today. Because of the cold war, the atomic bomb, and other ocean-shrinking weapons, the collapse of European and Asiatic power, preparations against war intrude ever more insistently into all our lives. Before Hitler, defense appropriations cost each American only a few dollars a year. We now pay $100 annually—each of us. For the first time in our history, young men have been drafted before actual war.

These and other actions being forced upon us clash violently with the traditional American hatred of war. Is it surprising that some people should lash out at the messengers bearing the sad tidings which make these changes necessary as if the messengers, themselves, were to blame?

Bear this fact in mind—the American people are currently in the throes of tormenting, frustrating readjustment. Both as a Nation and as individuals we grew up accustomed to regard war and peace as distinctly separate states, like day and night. Today we live in an around-the-clock twilight of neither war nor peace. Reared to think of war as a brief emergency to be rallied to temporarily, we find ourselves confronted by a continuous threat of war, which requires something Americans have habitually lacked—a see-through constancy in action between peace and war.

This necessity to adjust to the inexorable continuity between peace and war which prevails in our world will force revolutionary changes in the thinking of the military as well as civilians. In the past, for example, defense appropriations fluctuated wildly in a feast-and-famine cycle. Unfortunately, our budgetary habits are still attuned to that cycle. For the cold war we must scale defense expenditures so they can be sustained indefinitely—paced to the needs of changing world developments—without overburdening our economy.

So much is being spent by all nations today in fear of war. If these resources were turned to peaceful uses, how many of the world's problems could be solved.

Our military strength cannot be permitted to lapse to where it invites aggression. Neither dare we overload our economic system with destructive, unnecessary taxes or to divert so large a proportion of our resources from productive use so that living standards cannot continue to be lifted. The cold war is as total as actual war. It requires not military readiness alone but a strategy embracing all fronts, a strategy which rises above the race of selfish groups who seek to better themselves at the expense of others, even to where it endangers our very Government.

To arrive at the proper balance will require painful decisions by both the military and civilians. Within the defense establishment a unified strategic concept must be agreed upon, with expenditures restricted to what is absolutely needed—not what is wanted or even desired.

On the part of the civilians, there must be an end to prevailing indecisions. An overall global strategy for prolonged peace waging

must be formulated. I have always believed in civilian control of our national life, both in war and peace. But civilian dominance has its price—a readiness to make the decisions which the military must have to carry out their assigned duties. The failure to enact a mobilization plan is only one instance of this vacillation and neglect.

Lack of self-discipline and weird economics, strange ethics and perverted logic, if persisted in, will surely destroy us. These internal dangers are as great as the external ones. Still I have never seen a situation that could not be cured by competence. And that holds for our problems today.

Materially, we have all that we had yesterday—and more. The test is one of choosing between the wisdom and follies in man's experience.

For more than half a century I have been associated with members of the armed forces. In all that time I have never met a so-called military man who was not as fervently desirous for peace as the ordinary civilian. I have watched the defense agencies spend billions and, while there have been lapses, on the whole the record has been better than any comparable operation in civil life. Nor have I ever detected in the military any tendency to usurp power or to do anything other than safeguard our freedoms.

The men who commanded on land and sea and in the air and those whom they commanded, gave new dignity to the spirit of America. I resent the implication that these war leaders are less able or less willing to discharge their duties in peace. I reject the theory that they think narrowly and rigidly in terms of war. I oppose any effort to force them into secondary citizenship.

You gentlemen can leave this institution with pride in the training you have received and with greater pride in what you symbolize—the ability of the American democracy to fuse professional soldiering with a love of liberty. If at any time in the future you find yourself being called a brass hat take it as a compliment. I would be proud to be known as one.

Pinchot National Forest

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pinchot National Forest," from the Scranton Times of June 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PINCHOT NATIONAL FOREST

When Gifford Pinchot, twice Governor of Pennsylvania, first came into national attention it was as a forester and conservationist rather than a political leader. He is credited by some at least as having made the people forest-conservation conscious. Now his achievements along that line have been recognized. President Truman has signed an order conferring the name Gifford Pinchot National Forest upon a large tract of virgin timber in Washington State formerly known as Columbia National Forest.

The Williamsport Sun says the choice of a forest as his memorial is fully appropriate. It was while he was in Federal conservation service Pinchot helped establish the forest which is to perpetuate his name and the memory of his great service to conservation.

So far as Pennsylvania is concerned Governor Pinchot's name won't be forgotten, especially by farmers. His Pinchot road plan to take farmers out of the mud did much to promote highway building generally throughout Pennsylvania and to give this Commonwealth one of the finest road systems of any State in the Union.

Memorial Day Address by Lt. Comdr. William G. Earles, United States Navy

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Lt. Comdr. William G. Earles, United States Navy, delivered at the City Hall Plaza, Portland, Maine, on May 30, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I approach this occasion possessed with humility—with humility because I have been invited to actively participate in one of the most significant of all American days of patriotic recognition.

To ask from what time and circumstance sprang such a day, this Memorial Day of ours, is not unnatural.

Let us thumb back through the pages of our history. Eighty-one years ago, as a veteran of the Civil War, as commander in chief of the Grand Army of the Republic, John A. Logan focused his thoughts upon his comrades, the valorous dead of that war, determined to perpetuate their memory, and thereupon issued a general order designating May 30, 1868, "for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country during the late rebellion," and thus created Decoration Day.

From its birth in a veteran's gratitude for the grave-terminated sacrifices of his comrades, Decoration Day of May 30, 1868, has grown in significance and observance until it is the Memorial Day of all gallant fighting men and women whose lives have safeguarded our country and our freedom.

Now we have Memorial Day, a day imperishably enshrined in the grateful hearts and loyal minds of all Americans; a day unalterably dedicated to commemorate the unrivaled patriotism of those who in defense of the United States fell in war that we, their countrymen, might stand secure in peace within that United States; a day unalterably dedicated to solemnly reaffirm a national act of faith in the United States and its sacred principles of justice, freedom, and democracy for which our comrades perished and we must persevere.

If this be true, if our Memorial Day be one not only of commemoration but also one of reaffirmation, is it enough that we assemble here in profound respect? Is it enough that we bow our heads, place the wreath of gratitude and love upon the memorial plaque, and quietly disperse until another year, another Memorial Day?

It is not enough.

The bodies of these comrades are mortal; they are destructible and pass to dust. Their monuments and statues? Ultimately they, too, become dust in the crucible of time. But their mind, their spirit can be eternal, can be preserved, not by sepulcher and tomb, but by the integrity of character and behavior of us who imitate them, who give our energies, our sinews to preserve their mind and spirit.

In other words, we must not be content to extol the past and remain indifferent to our times.

Is it necessary to remind ourselves as veterans that we enjoy benefits to self and family of Government hospital and medical care, of preference in employment, of the GI bill of rights with its unemployment insurance, education at Government expense, Government loan guaranty for home, farm, or business, of pension rights of the disabled, the widowed, the orphaned? How do you think these benefits came into existence? Do you think that they "just grew," like Topsy? If so, you are wrong. They were won largely through the unceasing, the unrelenting efforts of the American Legion.

Is it necessary to remind ourselves as veterans that these benefits, often unappreciated, scoffed at, abused, may be lost—at least, so emasculated as to be inadequate?

You say "ridiculous"? You say "impossible"?

Have you ever heard of the National Economy League which advocated Government economy yet apparently never directed their propaganda except against the veterans? Have you heard of the Economy Act of 1933, the so-called "bill to maintain the credit of the United States," which simply asked Congress to give the President complete power to reduce expenses applicable to the veteran, a bill setting forth no sums of money, no rates to be reduced, no percentages of savings, thus astutely excluding practically all basis for discussion or debate?

Do you know that $400,000,000 was struck from the veterans' budget? What did this $400,000,000 define in terms of suffering and injustice for veterans, their wives, their children? The tubercular, the neuropsychiatric, with service-presumed disabilities, were knocked off the Federal compensation rolls and left to the mercy of their State, county, or municipal charities. Take the veteran with one leg, rated as 60 percent disabled, receiving $60 per month, was economized to $20 per month.

Oh, that is not all. The Spanish-American War veteran, yes, even the Civil War widow, had their pension mite sliced.

If this cruel and heart-rending situation could occur in 1933, when the Nation had over 5,000,000 veterans of World War I, isn't it logical to assume that a similar situation will occur now that we have over 15,000,000 veterans of World War II?

As a matter of fact, we need make no assumption. Though the problem of the disabled veteran is humanitarian, economic, and political, he may again become the casualty of a pencil-eager statistician and be interred as an item in a column of Government figures.

If you are still doubtful as to whether or not our benefits may be terminated or curtailed, focus your attention upon the national and State legislative fronts. Economy at the expense of the veteran has been alerted; the reconnoitering has been done; the intelligence units have reported; the battle salients have been selected; the heavy artillery has begun the softening-up process; the attack can be expected.

Are we going to "slough off" on our deceased comrades, their families, desert the headquarters echelon of the American Legion and other veterans' organizations, or are we Legionnaires and other veterans going to level our gun sights and mow down the opposition?

It can be done just as the Economy Act of 1933 was defeated by the Legion's concerted war of attrition, whose victory was the veterans' benefits as we know and utilize them today.

Is it necessary to remind ourselves that we are citizens of these United States, that we veterans are back again on civilian road, peacetime, United States of America? Certainly we cannot expect the nonveteran to understand and assist us in our needs and our problems, if we should ignore the common good, the needs and rights of others, and fail to be just and cooperative with all.

Certainly we cannot expect to better life for ourselves and others unless we make good government a definite objective through honest and intelligent use of our voting franchise. Furthermore, we cannot hope for success for ourselves and country, if we should discredit individual rights, if we should ruthlessly pursue privileged objectives to the detriment of community, State, and Nation.

Thus, in love for our departed comrades, in gratitude for their sacrifice, in respect for their cherished ideals for country, family, and self, we who are in reserve must step forward, close ranks, and assume our ordained role of American citizenship.

Conditions in Hawaii

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding conditions in Hawaii, from the Honolulu Advertiser of June 20, 1949.

There being no objections, the editorial was ordered to be printed in the RECORD, as follows:

WE GOTTA KEEP THINGS QUIET, JOE

We see, Joe, where the lousy morning sheet is trying to get enough dough donated to pay for putting Hawaii's story before the public in Washington.

Sure hope they don't get to first base on that deal.

One of our biggest advantages in pulling this community tie-up in Hawaii has come from the fact that we are so far away, and haven't any votes in Congress, so no one much has taken any interest in our plans for making Hawaiian business meet our terms—or else.

And we got the "or else" part of it pretty well under way.

But, Joe, if the public really puts up enough dough and these ads are printed, so that the American public demands that Congress do something, promptly, it might cause a number of things to happen.

You know, busy as they are back in Washington, Americans are still for Americans and Congress might get touchy and decide after all what we are doing to Hawaii, in our own quiet way, ain't American.

That it ain't decent. That it ain't right, even though it is all legal.

Of course, we'll claim this advertising scheme is just another hysterical plan, and talk it down everywhere, and in every way that we can.

You know that, Joe.

But, people is getting so desperate, they might go for it, and in that case there is nothing we can do but sit back and hope that it won't be effective.

Trouble is, Joe—it will cause much conversation. Much indignation.

And that ain't good, Joe. Not for us. The quieter we can keep things, the better it will be.

You know—work in the dark. Hide our real motives—just like we have been taught all these years.

Is Public Housing a Responsibility of the Federal Government?—If It Is Where Does It Start and When Should It Stop?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. McDONOUGH. Mr. Speaker, if the Federal Government assumes the responsibility and obligation to provide shelter to 810,000 low-income families throughout the Nation by the passage of H. R. 4009, it logically follows that it is the responsibility and obligation of the Federal Government to supply the other two necessary basic essentials, food and clothing. Everyone agrees that adequate food, clothing and shelter are the minimum necessities for the health and well being of all families in the Nation, but why should the Federal Government, if it is its responsibility and obligation, supply one of these without the other two.

It is estimated that it will cost $16,000,000,000 to provide shelter for 1,050,000 low-income families for 40 years presuming of course that there will never be more than 1,050,000 low-income families in the Nation in the next 40 years, which of course is not true because there are many more than 1,050,000 low-income families in the Nation today. The Bureau of Census 1947 record says there are 10,214,446 families that earn less than $2,000 per year, but we are only going to take care of 810,000 of them with H. R. 4009 at a cost of $16,000,000,000.

If the Federal Government starts by taking on the job of providing shelter for some of the low-income families throughout the Nation, we will not stop there. The cry of discrimination and political favoritism will be heard from all parts of the Nation: "If he gets aid, why can't I have it. I helped to elect Congressman Joe Blow and he better get me into one of those low-rent palaces or I'll start a Don't Vote for Joe Blow for Congress Club and beat him. I got influence. I'll show him."

And what about the poor ambitious fellow who gets a small increase in pay which results in the eviction of his family, or the fellow who declines to be ambitious and never gets a raise in pay so he can stay in Federal housing indefinitely.

This bill will place a premium on indolence and a penalty on ambition. It will bring about the rankest kind of discrimination between all classes of people; those who are in and do not want to get out; those who want to get in and cannot; and the poor overburdened taxpayer who is paying the bill and going broke so fast that he will soon be eligible for low-rent housing and no vacancies after he has paid his share to create and maintain it.

The fundamental question involved here is whether providing low-rent housing to low-income groups is an obligation and a responsibility of the Federal Government. And if it is, where does it begin and where does it end? Does it end with providing low-rent housing for 810,000 or is that just a start? Does it end with providing housing, or will it eventually include food and clothing, and for how many and for how long?

These are not idle questions nor are they intended to be cynical.

Personally I do not believe that providing low-rent housing for low-income groups is a responsibility or an obligation of the Federal Government. My convictions on this question are not based on the invasion of the Federal Government into the field of free enterprise nor are they in the least influenced by the greed or avarice of some of those engaged in the real-estate business who would stand to lose by this legislation.

My greatest concern is the unending responsibility and obligation the Federal Government would be assuming and the untold billions it would cost plus the dangerous political and social repercussions it would bring about by creating the beginning of the welfare state and a definite and positive step in the direction of national socialism, political preference, political discrimination, social stigmatism, indolence, and demoralization.

There would be no need for this kind of legislation if the States, counties, and cities enforced their building codes for safety, from fire, and for health and sanitation. What pride can a State, county, or city have when it neglects its own law enforcement to the extent that the Federal Government must consider doing the job for them and making a large part of the citizens obligated wards of the Federal Government by providing houses for them to live in. Where is the pride of State's rights? Why should they raise a cry against an invasion of the Federal Government or against a centralization of power in Washington when they brought it about by their own neglect?

Minneapolis High-School Pupils Interested in World Peace

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 28, 1949

Mr. WIER. Mr. Speaker, the youth of the Minneapolis public high schools have taken a significant step toward se-

curing a better understanding with the school-age boys and girls of the world. They realize that a world peace can be secured only through a better understanding of the teen-agers in all nations.

These Minneapolis high-school pupils not only live in a democracy, they have studied a democratic form of Government in their school textbooks and thoroughly understand a democratic way of living. Now they are going beyond their classrooms, their neighborhood blocks to share their ideas, interests and activities with 100,000 boys and girls throughout the world. They have dug into their allowances to finance their own miniature Marshall plan in order that they may send their high-school year books to 45 foreign countries. These young citizens are laying a foundation today that will carry the seed of future lasting world peace.

I feel certain that the following article which appeared in the Minneapolis Star, June 20, will be inspiring to all of those who read it:

CITY PUPILS TO SEND YEARBOOK ABROAD

A high school yearbook-exchange system on an international scale was started in Minneapolis today, with the hope of drafting 100,000 pen-pal peace pacts.

Father of the idea is world-travelled Harry S. Genung, social science teacher at Vocational High School. He has taught in the Philippines and has traveled in 25 countries. He believes that the gospel of understanding will take root around the world if enough seeds of information are planted.

"We'll send our yearbooks from the 11 Minneapolis high schools to 45 foreign countries, and let the boys and girls over there see what the young people of America are really like," Genung said.

He has rounded up dimes and quarters from some 300 to 400 pupils in each school to finance purchase and shipping of 20 yearbooks from each school.

With each yearbook will go from 6,000 to 8,000 names of pupils. Altogether, contacts for 100,000 pen-pal relationships will be set up, he figures.

Dr. H. B. Bruner, superintendent of schools, is sending an enclosure: "To the youth of all countries—our greetings."

"This book is sent to you from boys and girls in Minneapolis as an expression of their friendliness and good will toward youth in your country," Bruner's letter says.

"We hope you will enjoy looking at the pictures and reading about the activities of pupils in this American high school.

"Our young people are greatly interested in learning more about you and your country. They would appreciate it if you would write to them so that they might have further opportunity to share ideas with you. Your letter will be given to one of the pupils who had a part in sending this book to you."

The plan has the pupils' own all-city student council heads behind it, being endorsed by Lyall Schwartzkopf, Roosevelt High School, retiring all-city student council president, and by Richard Taylor, Vocational, new president.

Genung will offer his plan for national adoption at the American Federation of Teachers convention in Milwaukee, Wis., in August.

His name for the project: "Y. O. U."—the initials for yearbooks offer understanding.

The Strike Situation in Hawaii

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two editorials relating to the Hawaiian strike situation, one from the Los Angeles Times of June 26, another from the New York Times of June 25.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times of June 26, 1949]

HAWAIIAN RELIEF, COURTESY OF BRIDGES

(By Kyle Palmer, political editor)

Depressing news dispatches and indignant reports by returning mainlanders; statistics on dangerously low food supplies, on business failures and job losses; and slow strangulation of the economic life of an American community of more than 500,000 men, women, and children are incidental items in the tragic story of strike-bound Hawaii.

Merits in the dispute between striking dock workers and their employers are secondary considerations.

In the light of the far greater issue raised by the situation in Hawaii—an issue as vitally related to the welfare of all the people of this country as to that of the helpless Hawaiian population—the question of which side is right, or partly right, in arguments for and against wage increases loses much of its significance.

Hardships of those in faraway places, the sufferings we read about, but do not ourselves experience, even the distress of a distant community in which our own friends and relatives are among the hapless victims, never seem quite as real or as unbearable as the ills and evils we share or have immediately before us.

But the fact remains that the country's mainlanders are sitting by complacently while more than a half million of their fellow citizens are experiencing an ordeal—now well into its second month—which would not be tolerated overnight by public opinion within the continental United States.

Whether Harry Bridges represents to you a species of Red devil bent upon destroying the economic, political, and social system of this country, or in your estimation is an inspired defender of the rights of his underprivileged fellow man, Mr. Bridges by calculation and design has been able, for all practical purposes, to isolate the Hawaiian Islands from the rest of the world.

Again, it seems to me that his motives are relatively unimportant; whether he seeks to better the lot of his union members, as he maintains; whether he is carrying out a deliberate Communistic scheme to dominate Territorial politics and economics, as many believe, or whether he merely intends to solidify his position as a dominating figure in management-labor relations.

The important thing, from the standpoint of any citizen who has due regard for his own rights, freedom, and welfare, is that Bridges has been able to accomplish his objective; that he has been permitted to accomplish it, first by an unaroused public opinion, and, second, by a remarkably and inexplicably indulgent national administration.

A dock strike in Hawaii, backed up by refusal of dock workers on the mainland to handle cargoes destined for Hawaiian ports, represents in all respects what a joint shipping, trucking, and railway strike would mean to a mainland community. To Los Angeles, for instance.

And in view of the distances involved, the Hawaiian dock strike is even more crippling; for Honolulu and all other Territorial areas are absolutely dependent for adequate supplies of virtually all essentials upon waterborne commerce.

Not a freighter may be loaded or leave port or discharge its cargo except by the grace of this union boss; and while one branch of the Federal Government marshals its forces to prove him a perjurer and an active Communist leader, whose original alien status should be restored preliminary to his deportation, other divisions of the Government profess themselves powerless to interfere with his destructive program.

And once again a discussion of this situation need not inquire into his reasons, nor seek answers not related to the basic question that should appeal to all:

"If Harry Bridges and his union members can bring the people of Hawaii to their knees by reckless and ruthless exercise of arbitrary power, what is to prevent him—or others—from exercising that power elsewhere?"

True, neither Bridges nor any other union leader, even with the collaboration or collusion of a prolabor national administration could get away with such tactics on the mainland now.

But how about next year, or the year after that, or 10 years hence, if the Hawaiian experiment succeeds?

The dock strike in Hawaii is an object lesson, both of what is happening and of what can happen. Yes, what can happen here.

Dock strikers have demanded a specified pay increase and their employers, offering less than the union demands, must eventually come to a decision.

Compulsion by Government agencies exerted against either side wil not meet the issue, nor will a one-sided victory by either prove beneficial. Somewhere along the line a fair meeting ground can be discovered.

In the meantime, Bridges keeps his thumb on the jugular vein of the Hawaiian people—their maritime commerce.

And in the meantime the constructive and productive activities of the islands are withering.

Pineapple and sugar industries in Hawaii are big business. That such industries are periled is not, perhaps, a matter of great concern to Bridges and his island lieutenants.

Yet the economy of the islands rests upon those two major operations, and the livelihood of tens of thousands of families depends upon their success.

There were less than 10,000 persons listed as unemployed in Hawaii when the strike of longshoremen and warehouse workers started on May 1. Now the unemployment number almost 20,000.

And this expanding army of the enforced idle may suddenly reach disastrous proportions if unionized sugar and pineapple workers—controlled by Bridges—carry out threats of strikes in those industries.

The Federal Government is ever on the alert to break up and penalize the threat of industrial monopoly, but here is a monopoly—a monopoly of power, of political pressure, and of economic control—that can say "stop" or "go" not only to business but to the workers, to the politicians, and to government itself.

Surrender to such a threat, on any basis, might bring temporary labor-management peace to Hawaii and a resumption—on Bridges' terms—of the commerce of the islands.

The evils thus halted for a time in Hawaii, however, would reappear in more malignant form. Their spread could not be stayed.

Thus, Harry Bridges has challenged the right and the capacity of the people—not of the Territory of Hawaii alone but of the Nation itself—to conduct their ordinary and proper affairs unhindered by the particular interests or the special objectives of any man or set of men.

Make no mistake about this dock strike in Hawaii. It goes far beyond the limits of an employer-employee dispute; is more fundamental than any struggle between capital and labor. It is a supreme bid for power by a resourceful and highly intelligent man who, if he succeeds, will never be satisfied by one or two such triumphs.

The solution to this puzzle does not lie primarily in Hawaii, where the people are under siege. It is really up to the people on the mainland to take cognizance of an unbearable and an insufferable condition which, as it affects the fundamental rights of a few, affects the rights of all.

How far shall the oppression of Bridges be tolerated?

To date, milk production in Hawaii has been curtailed about 10 percent.

More than 350 business establishments, in the face of dwindling supplies and dying trade, have been forced to lay off hundreds of workers.

Salaries have been reduced in some firms by managements hoping to weather the storm without curtailing their staffs.

For the first time in many years, dividend payments to investors have been cut.

Many little businesses either hang upon the edge of bankruptcy or are about to take the plunge.

In some instances poultry growers have slaughtered flocks, destroyed baby chicks and hatching eggs because of empty feed bins.

Passengers and mail arriving on transpacific ships are being unloaded off the port of Hawaii and lightered ashore.

The record of petty annoyance and major outrage is endless.

A relief ship is on the way. Harry Bridges permitted it to be loaded and allowed it to sail. The ship will be unloaded, Bridges willing.

[From the New York Times of June 25, 1949]

STRIKE IN HAWAII

Since the war Hawaii has become one of the most highly unionized areas under the American flag. Labor strength is concentrated in Harry Bridges' International Longshoremen's and Warehousemen's Union, CIO, which has reached out from the waterfront into the vital sugar and pineapple industries. On their part, Hawaii's employers have long formed a well-integrated united front, creating what the Labor Department has called "a strongly centralized industrial structure * * * extending not only to the economic but even into the social and political aspects of island life."

In this situation when a labor-management controversy arises it is likely to be long and bitterly fought, while the ordinary citizen of the islands suffers from curtailment of supplies and collapse of the area's peculiarly vulnerable economy. Such a condition exists now; and it is, so far as the islands are concerned, a struggle of the titans. On May 1 the 2,000 stevedores belonging to ILWU struck, thus effectively tying up the shipping on which Hawaii is absolutely dependent. On its face the dispute is a simple one; but beneath it is a show-down struggle between labor and management.

The union demands either a wage increase of 32 cents an hour, bringing the hourly rate to $1.72 (10 cents less than the rate for stevedores on the Pacific coast), or arbitration of the dispute. The seven stevedore companies involved have offered a 12-cent increase, and have consistently and emphatically refused arbitration. Their objection to arbitration rests on the grounds that third parties do not know as much about their business as they do, that arbitration will bring west coast conditions to Hawaii, and that, while grievances arising out of a contract are properly subject to arbitration, such procedure is not the way to settle wage negotiations. To the union argument that stevedoring pay in Hawaii should be equal—or nearly equal—to that on the west coast, the employers reply that conditions in Hawaii are different, and that pay in one industry should not be thrown out of line with other island wage scales. The broadening of the strike to include sugar and pineapple plantations is a possibility.

Eight weeks have elapsed since the stevedore strike began. No one on the islands has starved or been seriously threatened with starvation; relief ships carrying necessary food imports have been unloaded, as have vessels bringing supplies to the military establishment. But there is no question that the Territory has suffered severe economic damage; business has been curtailed; the tourist trade has dropped; unemployment has mounted; some foods such as butter and eggs are in short supply; and relations between labor and management have been seriously exacerbated. Some ILWU leaders have been accused of preaching a hate-the-boss campaign; some employers have been accused of being labor haters. The extraordinarily rapid growth of an aggressive union has aroused much bitterness.

The Communist issue, too, has played its part. Only this week Senator BUTLER, of Nebraska, urged that statehood for Hawaii be deferred until the Territory stamps out Communist influence, which, he said, was personified by the Bridges union. However, even if the ILWU is actually under Communist control, its economic demands should not be dismissed on that ground alone. That would be playing right into the hands of the Communists. A wage dispute of this nature should be settled on its merits.

There must be very valid reasons why the union's demands cannot be granted—but the charge of communism is not one of them. We think that the Governor's fact-finding board, which will report next week, was right to rule out the Communist issue at its hearings. Recommendations of this board will not be binding, but should carry moral weight in the effort to reach a solution of this devastating strike.

Statement by International Chiropractic Association on National Health Bills

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement by the International Chiropractors Association with reference to the position of that organization on national health bills.

The statement was forwarded to me by Dr. A. A. Adams, second vice president of the International Chiropractors Association and chairman of its national legislative committee, of Tacoma, Wash. Dr. Adams and his associates believe that chiropractic health care should be recognized in any national health plan which may be enacted.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INTERNATIONAL CHIROPRACTORS ASSOCIATION PRESENTS CHIROPRACTORS POSITION ON NATIONAL HEALTH—ICA BOARD OF CONTROL RESOLUTION SPEAKS FOR CHIROPRACTIC PROFESSION AND ASKS EQUAL RECOGNITION WITH ANY OTHER HEALING ART WHICH MAY BE INCLUDED IN FEDERAL HEALTH PLAN

PREFACE

Various proposals are before Congress designed to increase the availability of adequate health care to the people of the United States. None of them make specific reference to chiropractic, and presumably a citizen would have no right to request chiropractic care under any of said proposals if adopted in their present form. Attention is invited to the accompanying resolution adopted by the officers and board of control of the International Chiropractors Association. This brief has been prepared for the purpose of presenting the need to include chiropractic in any national health plan which may be enacted into law.

CHIROPRACTIC PROFESSION SERVES LARGE PROPORTION OF POPULATION

More than 30,000,000 people in the United States have accepted chiropractic health service, served by the second largest of the healing arts professions, chiropractic, comprising nearly 20,000 practitioners located in every section of the country.

If a national health plan is adopted, the 30,000,000 chiropractic patients must be provided for in a way which will permit freedom to choose chiropractic care as well as medical and dental care, and on the same equal basis.

CHIROPRACTIC SEPARATE AND DISTINCT FROM MEDICINE

Chiropractic has approached the problem of the cause of disease from an entirely new and fresh viewpoint from that of medicine. It was developed independently from medicine, and does not employ medical procedures.

Furthermore, chiropractic offers a type of health service not otherwise available. Medical doctors do not practice chiropractic * * * chiropractors do not practice medicine. The two types of service are entirely separate and distinct. This separate and distinct, coequal and independent, status of chiropractic has been recognized by State legislation and licensure without reference to medical licensure.

SCOPE OF CHIROPRACTIC PRINCIPLE AND PRACTICE

Chiropractors limit practice to the adjustment, by hand only of the articulations of the human spinal column for the purpose of removing interference to the transmission of nerve energy between brain and body.

Briefly, chiropractic holds that human ailments are caused by interference to the natural flow of nerve energy between brain cell and tissue cell. Thus, if an organ of the body is failing to receive normal quantity flow of nerve energy, this is manifested in the particular organ affected by either lack of function or excess of function—which is disease.

Interference to free flow of nerve energy occurs most frequently in the nerve trunks passing through the spinal column. The interference is produced by misalinement (called subluxation) of the vertebral segments composing the spinal column.

SCIENTIFIC CHIROPRACTIC ANALYSIS

The chiropractor detects subluxations by use of palpation, X-ray, and other scientific instruments. The chiropractor determines whether interference to natural flow of nerve energy is present. From this analysis, the

chiropractor decides whether the particular case is a chiropractic case, or whether the individual should be referred to another type of practitioner. If, in the opinion of the chiropractor, there is a chiropractic case, the chiropractor will make an adjustment of the subluxated vertebra or vertebrae in the manner indicated by the analysis, thus removing the interference to natural flow of nerve energy between brain and body. Function of the affected organs of the body is thereby restored to normal—which is health.

Chiropractic services do not depend on medical diagnosis for a proper application. None of the analytical procedures above outlined are medical procedures. However, the chiropractor is adequately trained to recognize the various diagnosed conditions for the purpose of complying with health laws, rules, and regulations.

CHIROPRACTIC REGULATED BY SEPARATE LICENSURE

The chiropractor is an expert in a particular field of practice, as evidenced by licensure recognition in the various State jurisdictions, the District of Columbia and Territories of Alaska and Hawaii. Thus, the people are assured of qualified practitioners, and the maintenance of high professional standards. Wherever legislators have failed to provide coequal status with medicine, the regulations are frivolous, unrealistic, and unenforceable. Medical students are not examined to test a knowledge of chiropractic principles; chiropractors are not trained to practice materia medica. Studies of sciences which are dissimilar in theory and practice are bound to be poles apart. For these reasons, the national health plan must give recognition to the independent status of chiropractic.

CHIROPRACTIC RESEARCH

Science is a body of provable facts. Science, therefore, is not the subject of belief, but the subject of observable phenomenon. Chiropractic is a science and has demonstrated the indisputable fact that correct application of the chiropractic principle restores health to sick people in the vast majority of cases in which chiropractic care is indicated. Therefore, it is of no consequence that a particular group of individuals believe in or do not believe in chiropractic. Chiropractic is performing a vital health service to the Nation, and a vital health service to the people, and that service must be recognized by including chiropractic in the national health plan.

THE PEOPLE MUST BE SERVED

Public sentiment is the most vital constituent of our democratic society. No law can endure against public opinion.

The chiropractic profession has continued to grow because the science of chiropractic gets sick people well. The same people will demand that chiropractic be accorded a proper coequal status in Federal health legislation. Not only chiropractic patients, but all who believe in justice and equality before the law, insist that in any issue as important as the Nation's health, full consideration must be given to the rights and privileges of all citizens.

RESOLUTION

Whereas the Government of the United States of America, acting through its authorized agencies, has made an exhaustive and comprehensive survey of the Nation's health needs; and

Whereas the welfare of the people of the United States requires that the Congress inquire into the problem of making adequate health care available to all people regardless of economic status; and

Whereas a large portion of the people of the United States now regularly depend upon chiropractic for their health care; and

Whereas the practice of chiropractic is separate and distinct from the practice of medicine; and

Whereas the Congress is now considering various national health proposals; and

Whereas some of the proposals now being considered by the Congress would not permit the people to exercise freedom to choose the particular type of health care to be employed in their respective cases; and

Whereas freedom of choice is the bulwark of a democratic form of government: Now, therefore, be it

Resolved by the officers and members of the Board of Control of the International Chiropractors Association, That the Congress of the United States be respectfully petitioned to include the practice of chiropractic on an equal basis with other branches of the healing art in any national health plan which it may hereafter enact into law, to the end that every person shall have the unqualified right to the selection, use, and benefit of chiropractic health care; be it further

Resolved, That copies of this resolution be furnished to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, the chairman of the Senate Committee on Labor and Public Welfare, the chairman of the House Committee on Interstate and Foreign Commerce, and to the Federal Security Administrator.

In witness whereof we have hereunto subscribed our names this 30th day of April A. D. 1949.

Officers: B. J. Palmer, D. C., Ph. C., president, Davenport, Iowa; L. George Grupe, D. C., first vice president, San Angelo, Tex.; A. A. Adams, D. C., second vice president, Tacoma, Wash.; Herbert R. Reaver, D. C., third vice president, Cincinnati, Ohio; M. E. McDermott, secretary-treasurer, Davenport, Iowa.

Board of control: Ernest S. Grandchamp, D. C., Ph. C., Holyoke, Mass.; Walter O. Peterson, D. C., Ph. C., Pueblo, Colo.; C. F. Aumann, D. C., Ph. C., Indianapolis, Ind.; Charles Heiss, D. C., Ft. Lauderdale, Fla.; A. E. Lill, D. C., Belleville, Ill.; E. R. BeBout, D. C., Ph. C., Indianapolis, Ind.; G. M. O'Neil, D. C., Ph. C., Fort Wayne, Ind.; L. K. Griffin, D. C., Fort Worth, Tex.; Walter Gingerich, D. C., Reseda, Calif.; Elmer G. Green, D. C., Ph. C., Seattle, Wash.; Fred C. Sears, D. C., Worcester, Mass.; R. W. Tyer, D. C., Ph. C., Jackson, Miss.

Congress Leaders Asked To Investigate Americans Involved in German Cartels

---

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent that the statement released by the People's Lobby, Inc., Washington, D. C., dated June 29, 1949, and entitled "Congress Leaders Asked To Investigate Americans Involved in German Cartels," be printed in the Appendix of the RECORD. It includes a letter by Executive Secretary Benjamin C. Marsh.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CONGRESS LEADERS ASKED TO INVESTIGATE AMERICANS INVOLVED IN GERMAN CARTELS

ALBEN W. BARKLEY and SAM RAYBURN, Senate and House majority leaders, have been asked by People's Lobby, Inc., to investigate Americans involved in German cartels, as a basis for legislation to deal with them.

The lobby quotes a letter it received from the Department of Justice of July 29, 1947: "The basic charges contained in the pending cartel indictments in Germany are not comprehended by existing legislation in the United States. To that extent, therefore, the only recourse is to Congress."

The letter by Executive Secretary Benjamin C. Marsh reads:

"The current campaign of innuendo, seeking to enmesh innocent, as well as not yet proven guilty, people, in the spy dragnet, carefully avoids reference to American industrialists and financiers, who as participants in, and beneficiaries of, German-controlled cartels, which worked against our country before and during World War II, were at least as guilty as the Germans.

"On May 9, 1947, People's Lobby wrote the President:

" 'If American nationals are found at the forthcoming trial of German cartellists, or by other means, to have been involved with German and other nationalists in activities and practices giving aid and comfort to the enemy, is there any direct law, or have you authority under war powers, to confiscate their property for the American people, or for relief of all victims of German action? If not, are American citizens found guilty of the same practices as Germans to be punished in any other way?'

"The President referred the letter to the Department of State, and Mr. Raymond Vernon, Assistant Chief, International Resources Division of the State Department, replied June 12:

" 'There is no law or war power authorizing the confiscation of property of American citizens whom United States military tribunals in Germany at the forthcoming trial of German industrialists may find to have been involved with Germans in activities and practices giving aid or comfort to the enemy.'

"He also wrote us:

" 'Whether proceedings can and should be taken against American citizens who may be guilty of the practices of which Germans are now being indicted in Germany is a question which can best be answered by the Attorney General. Accordingly, we have transmitted a copy of your letter to him for further consideration.'

"On July 29, 1947, Mr. John F. Sonnett, Assistant Attorney General, in reply to our question, wrote People's Lobby, Inc.:

" 'The basic charges contained in the pending cartel indictments in Germany are not comprehended by existing legislation in the United States.

" 'To that extent, therefore, the only recourse is to Congress.'

"This entire correspondence was sent Hon. J. PARNELL THOMAS, then chairman of the House Committee on Un-American Activities, giving a list of informed witnesses.

"Mr. THOMAS wrote us he had referred it to the committee, but nothing was done.

"There is a widespread suspicion that highly profitable subversive activities, and even treason, is not regarded as heinous as that of small fry, particularly if those accused are large campaign contributors.

"The House Committee on Un-American Activities is now also under too much suspicion to be taken seriously by thinking people, including nearly all educators.

"The Department of Justice, as you note, states: 'The only recourse is to Congress,' to get legislation to deal with Americans who helped the Germans against America.

"We, therefore, urgently request that you, as legislative leaders of your party, ask the appropriate committees of both branches of Congress to conduct such investigation as is necessary to draft adequate legislation to put the rich and the poor on a parity with respect to subversive activities.

"Of course, such action would raise our standing and improve our relations with other peoples throughout the world."

Time To Begin

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Wall Street Journal of Wednesday, June 22, 1949, concerning the Hoover Commission's recommendations for the reorganization of the Federal Government, entitled "Time to Begin."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO BEGIN

The Hoover Commission suggested several different, and related, approaches to the problem of reorganizating the Federal Govern nment.

It recommended the consolidation of some agencies to eliminate expensive duplications and to strengthen the control of the President over the executive agencies.

It recommended a revamping of the budget and accounting procedures of the Government so that Congress could have a clearer idea of how much is being spent for what.

It recommended in some instances the abolition of useless offices, agencies which are vestigial appendages of earlier days.

It recommended in a few cases the creation of new offices of a supervisory nature. The Commission acknowledged that these in themselves would add something to administrative costs; but it was argued they might result in long range economies if their creation were accompanied by consolidations, eliminations, and the other recommended reforms.

President Truman has now sent to Congress the first of his reorganization plans growing out of the work of this Hoover Commission. It seems to us that he has selected for his first moves the recommendations least calculated to achieve any economies in Government.

Most of his recommendations involve merely the transfer of agencies from one department to another; that is, he would give the transferred agency a new boss to report to. These moves may have some merit, but not in the achievement of economy.

The most important move suggested by the President is to consolidate all of the Government's welfare agencies, now mainly under the Federal Security Agency, under a new Department of Welfare. This, however, is merely a gathering up of existing offices and dumping them in a new pot. It is not proposed to scale down any of them.

On the contrary, there would be created a new secretariat headed by a new Cabinet officer. There would be new clerks, new supervisors, new experts to oversee the work of the clerks, supervisors and experts of the already existing agencies.

Mr. Truman wisely promises no definite economies from any of these plans. Perhaps he remembers what happened when the Army and Navy were consolidated. The new Defense Department, in the end, enlarged both the size and cost of the Military Establishment.

Mr. Truman also showed that he is aware of the only road to economy. In his message to Congress he stated: "Only the curtailment or abolition of Government programs can be expected to result in substantial immediate savings."

This is a sound observation by a President who has expressed great concern over the dangers of a Government deficit. Well, when do we begin?

Communism and Religion

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting an editorial which appeared in the Times-Herald of June 29, 1949:

COMMUNISM AND RELIGION—I

(The Communists have started a new wave of religious persecution in Europe, with Archbishop Josef Beran of Czechoslovakia as their symbolic victim. To show the background of policy that lies behind these acts we reprint for the next few days excerpts from the recent report by the House Committee on Un-American Activities, entitled "100 Things You Should Know About Communism and Religion.")

If communism should come to the United States, could I belong to a church?

You would have to choose at once between church and communism. If you should choose church, then prepare for persecution.

What would the Communists do to churches and synagogues?

Take them over and put an end to the freedom now guaranteed by sentence 1, article 1 in the bill of rights of the Constitution: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

What does that mean, exactly?

Just study for a minute these figures on the present size and nature of religion and its works in the United States of America: 256 denominations; 253,000 churches and synagogues; 77,000,000 members; 162,000 Sunday schools; 13,000 parochial schools; 690 colleges and schools of higher learning; libraries, radio stations, publishing houses for books, magazines and newspapers; charities, orphanages, hospitals, missionary forces; ladies' aids and auxiliaries; men's societies, young people's organizations, children's groups.

These are what communism would like to take over and destroy.

Would the Communists destroy the Bible?

Every copy they could find. And they would jail anybody trying to print new copies.

Could I be married in the church?

Not legally.

Could my funeral be held in the church?

Not legally.

Could my child be baptized or christened in the church?

At the risk of prison for parent and pastor.

Would my child go to Sunday school?

Not only would Sunday school be illegal, but also your child would be taught to report you to the police for trying to send him.

How would my child learn his religion, then?

Only through what you might tell him at home, to offset the positive atheism he would learn all week at the government school.

You mean the government would teach atheism?

Yes. Here is the rule laid down by Nikolai Lenin, leader of the Communist revolution in Russia in 1917 and founder of the Red Government now headed by Joseph Stalin:

Down with religion! Long live atheism! The spread of atheist views is our chief task.

That rule has not changed.

Who would own the churches?

Under communism, churches, and synagogues could no longer own their own property, free, clear, and untouchable, as they do in the United States today. Church property would become government property. Congregations could only use such small rooms or buildings as the government might license to them on concession.

The fees and charges for this would be heavy and all use would be subject to strict Communist control, review, and supervision.

How about my own church-going?

You could try on your own time, if the government happened at the time to let you off work on a holy day. Otherwise, only at night, when and if you got a chance.

Could I help out with church charities and welfare work?

There wouldn't be any. All church schools, hospitals, orphanages, asylums, and such things would be seized by the government. Religion would be denied any say in their use or management.

What about missionary work?

Illegal. Forbidden.

What could my pastor do?

In the pulpit, he could lead the congregation in acts of faith and deliver sermons, with the Communists checking on every word.

Out of the pulpit, he would be an official target for abuse, ridicule, and scorn, under constant suspicion, and in danger of his life.

Why?

In him, the Communists would see a rival to their power over your mind, imagination, and will. The faith your pastor teaches is communism's deadliest enemy.

What do you mean by faith?

The sort of thing you find in the Ten Commandments and the Sermon on the Mount.

Immediate Consideration for Our Elderly People

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. WITHROW. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include two resolutions signed by citizens of my district urging the Ways and Means Committee to speed action on a comprehensive plan for helping our elderly citizens and in so doing help the country as well. The resolutions are self-explanatory.

We, the undersigned citizens of the Third Congressional District of the State of Wisconsin, respectfully request the passage of H. R. 2135 and H. R. 2136, known as the Townsend plan. Sincerely request your cooperation and help.

Mrs. Enos N. Poole, Mrs. Susan L. Bean, Mrs. Nellie Lampuran, Mrs. Wilson Woodruff, Aldwin Grimshaw, Mrs. Aldwin Grimshaw, Mrs. Linda Crockett, Mr. H. J. Crockett, Mrs. George Brown, Mrs. Alvira Nelson, Mrs. Merton Dodsworth, Ethel Dodsworth, Mrs. Mary Coughlin, John Riley, Mrs. Robert Schoonover, Mr. Fred Clausier, Mrs. Theresa Clausier, Geo. J. Staley,

Mrs. George J. Staley, Mrs. Fred Jensen, Mrs. Leo Dunn, Leo Dunn, James Dunn, Dan Murphy, Mrs. Dan Murphy, Herbert Lampman, Mrs. Earl Bailey, Ida Barkenhagen, C. A. Howell, Peter Nuibel, Mrs. Don O'Leary, Mrs. Andy Nelson, Mrs. Wm. Radl, Mrs. Crosby Dunlap, Mrs. Emery Shelby, Ferdinand Frank Huschka, Mrs. Fred Huschka, E. T. Moran, Mr. and Mrs. George Madden, B. L. Tripp, Mrs. Ted Board, Edmund R. Board, Albert J. Huschka, Mrs. Albert J. Huschka, Albert E. Puhl, Mr. John Huschka, Mrs. Christina Huschka, August Huschka, Mrs. Mary Grange, Mrs. Helen Creviston, Mr. and Mrs. Ernest Kinser, Mrs. Jas. Sorenson, Mr. and Mrs. Wilbert Thurston, Mrs. Anna Schorer, Mrs. Eliza Kelley, Mrs. Sophia Mohus, Mrs. Louise A. Volzka, Mrs. Minnie Adams, Mrs. Christina Olson, Fred Volzka, Nora Vincent, James M. Vincent, Bert Adams, all of Elroy, Wis.

SPARTA, WIS., *June 16, 1949*

We, the undersigned citizens of the Third Congressional District of the State of Wisconsin, respectfully request the passage of H. R. 2135 and H. R. 2136, known as the Townsend plan, and sincerely request your cooperation and help.

Mrs. Anna Slater, Mrs. Winnie Brown, F. W. Gilbert, C. H. Shattuck, Bert Brown, Grace Poss, George Anderson, Lewis B. McLain, Mrs. Mary L. Savall, Richard Savall, Tillie Edwards, Matilda Holberg, Viola Fanning, Anton Johnson, Mrs. C. R. Austin, Miss Ruth Austin, Miss Elsie Long, Mrs. Lucille Nichols, Henry Nichols, Mrs. Edna Sheffer, Mrs. Myrtle Davis, Mrs. Ben Edwards, H. A. Benzie, Augusta Longner, Wm. Eisland, Mrs. Anna Eisland, J. C. Arnold, Laura Arnold, H. Clay Hogue, Mrs. Maryann Hogue, Jacob L. Poss, Mrs. Blanche French, Harry C. Rhodes.

A Slogan Tells the Story

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tulsa Tribune of June 25, 1949:

A SLOGAN TELLS THE STORY

(By Richard Lloyd Jones)

Chester, Pa., has the best town slogan in the country: "What Chester makes, makes Chester." That is the whole story of America. What America makes, makes America. What Cincinnati makes, makes Cincinnati. So with St. Louis, Chicago, Atlanta, Beloit, Racine, Dayton, and every town in the land. That is the little slogan that tells the mighty story that the cynics and the critics of our capitalistic society do not know. Their novels and their essays, like their philosophies, are fabulously false until they can learn what made America.

I was one who used to have the notion that we would do a lot better if we would elect as our law-makers men who never made anything, but who professed to know all about those who did make things, i. e. professors.

Well, we tried it when Franklin Delano Roosevelt marshaled into our National Capital an ever increasing army of bureaucratic bunglers. He brought in the little teachers, the makers were going to meet their masters. The "economists" were going to give us a good jab in the arm of economy serum. And no political serum ever cost so much. Old joke, but we saw it in action: "If you can't do it, teach it."

Ever since the New Deal brought in the incompetent to govern the competent, business has been harassed, and capitalism has been assailed by novelists, lecturers, preachers, teachers, experts at knocking down but utterly unable to build anything up.

For 16 years we have played with "experts" who can't make anything nor help anyone else to.

Mr. Dewey didn't do very well in the last campaign. He was not going to attack anything, and he didn't. There never was so much to attack. And if he wouldn't attack the reckless record disgust took the place of support.

So Truman, who had nothing to attack, set out to "give 'em hell." Dewey's nonperformance was silly. The great prosecutor with everything to prosecute failed to prosecute. Truman aroused the unthinking.

Subconsciously, most of the people realized that there was something to prosecute. So they followed the only fellow who sounded like a prosecutor. By the default of the disappointed, Truman was elected.

He promised to give 'em hell and in the vernacular of Pendergast politics he was going to raise hell.

He was going to repeal the Taft-Hartley bill. All he now has a chance to do is to change the name. The Congressmen who represent the men who make things are not likely to let him do anything more than that.

He was going to reduce the public debt. He has increased it.

He was going to reduce taxes. He demanded more.

He was going to have socialized medicine, public housing, civil rights, a whole catalog of reformations and innovations. And he hasn't got a thing.

And while loose-minded fictionists, artists, commentators, and teachers, who themselves never made anything and can only criticize those who can, have enlisted their names in support of societies, countless in number, which have been sympathetic in part or in full with the Communists doctrine, the American people have begun to realize the social and economic truth of the Chester slogan.

Years ago New York City had annually, in September and October, an industrial exposition. So did Philadelphia, so St. Louis, Milwaukee, and Chicago.

Where the Chicago Art Institute now stands on the lake park there was for years the two-block long industrial exposition building. There, on exhibit, was everything that Chicago made. And they were the things that made Chicago.

The Philadelphia Industrial Exposition flowered in 1876 in the great centennial exposition in which the whole Nation took part. At that exposition America showed herself and the world the things free men could make. The products of free enterprise, initiative, and enterprise. The world was astonished. Triumphant stories were told in the marvelous gadgets that lightened labor and enlarged production.

The Chicago Industrial Exposition flowered in the great Columbian Exposition in 1893. Again we marveled at ourselves, and the whole world marveled at us. Paris, Berlin, and London all tried to imitate, but what was done at Chicago could be done nowhere else.

That Columbian Worlds Fair, aside from being an industrial show, was the greatest architectural panorama of beauty ever seen. Every visitor who was appalled at that majesty could with Shakespeare say, "And should I live a thousand years I never could forget it."

The triumphs of free men. How puny the sniping scribes. These are the triumphs that Albert Einstein calls "kindergarten-mindedness." These are the triumphs that fellows like Thomas Mann, Charley Chaplin, Paul Robeson, and the whole lot of scoffers cannot understand. They don't know the land that gives them security in their lives, their liberties, and their pursuit of happiness.

We are just getting onto the fact that the real critics of our country are the fellows who can't take anything. They are the masters of nothing. They are the intellectual duds. The real masters have been busy keeping America busy while these objectors to our triumphs, having nothing better to do, have become the agitators. It is time now for the defenders of our freedoms to loosen their persuasive powers. The country is quite fed up with all this so-called left-wingism. The fuzzy minds as Herbert Hoover properly calls them.

Out of the basket of a million American makers let's pick one. Take Cooper. Peter was born poor. He had little education. He had to go to work. Could he have done anything more unlovely? He made glue. But he made good glue. In seeking better forms for better glue, he hit upon a simple way to make wrought iron.

He built the first American locomotive. He was the genius who laid the Atlantic cable. As a legacy to his city he left the famous Cooper Institute of New York.

About 2 months ago Life magazine carried a 2-page display of 50 pictures of American citizens, none of whom ever made anything and all of whom are cynical of those who do. Not a Peter Cooper in the lot. Not one who could do a thousandth part of any of the worth-while things that Peter Cooper did. It was the Peter Coopers who made America.

We have gone the political cycle. We made the experiment. We pitched overboard the Constitution of the United States, and declared for a New Deal. The only thing that kept that abortive government alive was the diversion of an appalling World War. It was the makers who met the war needs. But with all that war stimulation the New Deal died with its author. The phrase was worn out. And all the tricks didn't turn a trick. So Truman comes in with his "raising hell" slogans to announce a Fair Deal. He had his own party in control. But he asked them to go so far out of line with the constitutional deal that made America they repudiated him. They voted down all his efforts at interference with the return of America to the freedoms of America's makers.

America is returning to the sound economics, the sure and sustaining philosophy and all the spiritual triumphs that are embraced in Chester's prophetic slogan. It is America's slogan. What America makes, makes America.

The Netherlands Education System

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Dutch Show the Way," written by E. F. Schroeder, and published in the April 23, 1949, issue of the magazine America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DUTCH SHOW THE WAY

(By E. F. Schroeder)

A long struggle for the rights of private education in Holland has led to very satisfactory conditions. In fact the results obtained in this country of a mixed population will probably seem almost incredible to Americans.

The school system in Holland differs somewhat from the familiar American picture. In the United States there are 8 years of compulsory elementary education. After the sixth grade, however, a child may enter one of many types of extension schools in order to get an education more adapted to his future occupation. At that time he may also apply for admission to a secondary school, but the majority succeed in passing the entrance requirements only after finishing the seventh grade.

In the Dutch system there are two basic types of secondary school: the high school, a 5-year course without Latin or Greek, and the so-called Gymnasium, a 6-year course offering the full curriculum in humanities, including poetry and rhetoric. A combination of both types, called the Lyceum, is gradually becoming more common.

A diploma from any of these secondary schools automatically opens the doors of the university. The high school or the Gymnasium diploma qualifies the student for the study of medicine, science, and economics; that of the Gymnasium also qualifies him for the study of law and languages.

An idea of the prominent part private education plays in the Dutch school system may be gleaned from the following tabulation. (Unless otherwise indicated, figures cover 1947 statistics.)

	Public	Catholic	Others
Elementary schools	[1] 2,414	[1] 2,579	[1] 2,049
Number of teachers	12,000	16,600	9,000
Number of students	[1] 328,000	[1] 525,000	[1] 349,000
Secondary schools	152	71	94
Number of teachers		1,434	
Number of students	40,000	22,000	24,000
Graduate schools	6	2	2
Number of students	[1] 22,605	[1] 1,482	2,100

[1] 1948 totals.

To get the full meaning of these figures one should bear in mind that the population of Holland amounts to about 9.5 million people, of whom 40 percent are Catholic and another 40 percent Protestant (three-fourths of them orthodox Calvinists).

THE ELEMENTARY SCHOOL

Every juridical person (association, foundation, ecclesiastical body, etc.) intending to establish a school is entitled to cooperation by town authorities. If certain conditions specified by law are fulfilled, the town must aid in the erection and maintenance of the school. These conditions are: (1) A written statement signed by a number of parents declaring that they will send their children to this school. The required number of signatures depends on the total number of residents of the town. (2) The association must file a declaration of its intention to deposit in the town treasury 15 percent of the estimated cost of founding and furnishing the school. (Both State and city contribute toward the rest of the cost.) A school board is then formed, which selects its own books and other teaching materials. It draws up a building plan, which must be submitted to the town officials. It scouts for a capable head and qualified teachers.

Once the building is completed, the State enters into the picture: it pays the salaries of as many teachers as are permitted by law for a school of that particular size. The town in turn is then asked to contribute towards the cost of maintenance and other operational costs; it must pay exactly the same amount per student to such a school as it pays to its own public schools.

The arrangement outlined above is an ideal one for the private schools, though the application of the principle at times leaves something to be desired. Most towns charge the administrative costs of public schools directly to the town treasury and not to the school. Hence the average cost of a public school student is in reality higher than the amount which appears on the school budget. The latter cost, however, is used for calculating the contribution to the private school.

There was a time, of course, when public-school advocates used to fight this legal "equalization." Against private schools they leveled such criticisms as duplication of buildings, teachers, teaching materials, and consequent waste of money. Objections were always founded basically on the religious nature of private schools. School education, according to these secularists, was a means to develop the intellect, not to form character. They overlooked the fact that a child will be a better citizen if he is educated to become more religious, and that he will be more tolerant towards his fellow citizens if better educated in his own religion than if he is indifferent towards religion.

The financial arguments of opponents of private schools are easily refuted. There is no real duplication of cost. If the children now attending private schools should be transferred to public schools, approximately the same number of buildings would have to be built, the same number of classrooms furnished, the same number of teachers appointed, the same amount of material bought as had been required to set up the private-school system. Further, there is abundant proof that the running expenses are lower in private than in public education.

The Catholic school system has no central board of directors. There is an advisory board to the bishops, and a Central Bureau of Education which supplies information and documentation, and which publishes a monthly review and an annual survey. It employs 33 persons, including 3 lawyers.

In Holland, teachers of the public schools are town officials; those of private schools are not. The latter are appointed by the school board; but, beyond that, they are in the same position as public-school teachers with regard to salaries, appointments and dismissals. A board of appeals exists to protect them against any arbitrary measures. As a rule, the teachers in Catholic schools must have graduated from Catholic teachers' colleges.

With regard to educational standards in both types of schools, although the Government is entitled to insure compliance with legal requirements, it does not interfere with instruction. There is an automatic method which compels the schools to keep their standards high. Since they must fit their pupils to pass the entrance examinations to the secondary school after the seventh grade, all schools must provide good teaching. Their existence depends on it.

THE SECONDARY SCHOOL

In the financing of private secondary schools there is no "equalization" as there is in the lower schools; there is, instead, a system of subsidies. The State contributes 90 percent toward the cost of erecting, furnishing, and enlarging the building—75 percent if it is rented—and 80 percent toward salaries of teachers and other costs of maintenance and administration. Tuition is paid according to the income of the parents. Any surplus will lower the subsidy to that extent.

There has recently been a notable increase in the number of students in this group of schools, most of them coming from families with moderate and small incomes. Accordingly, costs have increased enormously while the revenue from tuition has increased very little. Most of the private secondary schools are therefore in financial straits at the present time. To relieve their distress, a bill is expected to be introduced in Parliament to increase the 80-percent subsidy for salaries and other such expenses to 95 percent.

FINANCIAL PROBLEMS

Another factor that causes financial worries among our private secondary schools is the fact that the expenses have to be paid during the scholastic year, while the subsidy from the Government is not paid until the end of the year. The interest charge runs into thousands for a school of average size.

No private secondary school, under Dutch law, has a strict right to be subsidized. Once the department of education has granted the subsidy, however, it has always been continued during the following years. Parliament decides on this point when it approves the budget for the department. In 1924 a law was enacted which stopped the subsidies for new schools because of lack of funds—a measure which has prevented many private schools from being founded, Catholic as well as non-Catholic. However, a loophole was left, since the law made an exception for special cases. This exception has recently received a very broad interpretation, and many new schools have been founded and are being subsidized. It is a pleasure to report that in the exercise of these discretionary powers there is no sign whatever of discrimination for or against Catholics.

Of course, several conditions have to be fulfilled before an institution is considered a candidate for the subsidy. The school must be of such quality that it can be and is designated as one whose final diploma equals in rating the public-school diplomas. The requirements for the final examinations are specified by law, and the questions are drawn up by a central body. The subjects taught and approximately the number of hours to be devoted to each of them are prescribed. Little variation from this program is allowed. Religion, we must note, may be added to the curriculum. Even in public schools religious instruction is allowed, but only during free periods.

The school board governing these institutions is entirely independent of the teaching staff. Teachers must be qualified either by having taken a university degree (the minimum requirement is to have passed the comprehensive examinations for the doctorate; writing of a thesis is not required), or by passing a special examination before a Government-appointed board of examiners. At the moment, about half of the teachers have fulfilled the academic requirements; the rest have passed the special examination.

The school board also has a free hand in appointing the teachers. The Government can never force it to take or dismiss any qualified person. Likewise, the Government has no jurisdiction over the selections of textbooks. In these respects the pattern followed in secondary schools differs from that in primary schools.

CATHOLIC SCHOOLS

Since America readers will be especially interested in Catholic schools, I can report that there do not seem to be any real problems which would apply to Catholic schools as such. The law of 1924 has caused a shortage of Catholic schools, but this gap is now being filled. Catholic institutions enjoy great freedom, enough to make the public schools envy them. In case of any projected change in the laws, they are liberally consulted. Of the nine members of the official

advisory board to the department of education, three are Catholics, one of them now being the president of the board.

In general, we can say that there is great interest in the private schools and that they are drawing an ever-increasing number of students. The public school is necessary and stays in the lead, but it has lost much of the false glamour enjoyed in the past when it was portrayed as the only satisfactory type of school to meet our national educational needs.

With regard to the teaching of religion in public schools, it is never compulsory in Holland. The director may offer students an opportunity to study the religion of their preference in the public school, and as a rule he does. Ordinary classrooms are used for this purpose. Most of the directors realize the value of what they call a transcendental view of life. One sign of this favorable attitude toward religion, among others, is the fact that in many public schools religious and even Catholic plays are given on school days and around Christmas time.

Dutch law itself entirely ignores the teaching of religion. In cities where a Catholic school exists, the bishops do not permit priests to teach religion in the public schools lest they create the impression that they approve of Catholic children attending them. For those who must attend them (e. g., because of the lack of space in the Catholic school) a special place and hour is assigned for religious instruction. In both Catholic and Protestant schools, classes are opened each day with prayer and 1 or 2 hours of religious instruction are added to the curriculum each week.

HIGHER EDUCATION

Of the six universities in Holland, one is Catholic (at Nijmegen) and one Protestant. Each is supposed to have five departments: Theology, law, letters and philosophy, science, medicine. Of these, the Catholic university still lacks departments of science and medicine, but will get them in the near future. Four institutes for specialized studies complete the picture: The Institute of Technology and the Agricultural College are both public institutions; the Institute of Economics at Rotterdam is private, but nondenominational; the one at Tilburg is Catholic. Since 1948 the State subsidizes the private institutes of this type by paying 65 percent of the deficit if in any given year there should be a financial loss due to maintenance and operational costs. The degrees given by all of these institutions are of equal value. There is fine cooperation between them, so that students may transfer to a similar department at some other institute and have all their credits acknowledged.

As evidence of good feeling in the religious field, at each of the public institutions a chair has been granted to the Catholic hierarchy, and the bishops appoint a lecturer of their own free choice to teach Catholic philosophy and theology. The Catholic students also have their own groups, and a priest is assigned as their moderator in each of these places.

From this over-all sketch of Holland's educational system one can see immediately that our country has achieved a system of democratic religious liberty without creating the impediments to religious education which many groups in the United States today seem to think absolutely necessary to protect such liberty. From the vantage point of The Netherlands, where people naturally keep informed about developments in all the larger democracies with which we are allied, the American "fear" lest religious liberty be destroyed by State aid to religious schools seems entirely unfounded and is difficult to understand.

Sheriffs and Mobs

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, on June 6 of this year the Senate Judiciary Committee reported to the Senate and to the calendar Senate bill 91, the antilynching bill. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appears today in the Washington Post on that subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHERIFFS AND MOBS

The recent outburst of hooded gangster activity in Alabama has the single collateral benefit of refocusing attention upon Federal antilynching legislation. The House Judiciary Committee is currently holding hearings on several antilynching bills; the Senate Judiciary Committee has already given its approval to a measure sponsored by Senator FERGUSON, of Michigan, which seems to us to be the soundest and most invulnerable to constitutional objection of all the related proposals now under consideration. Democrats and Republicans alike are under compelling obligation to see that Congress acts in this area before adjournment.

Senator FERGUSON'S bill would not attempt to punish lynching as such. Odious as this crime is, it cannot be said to fall within the jurisdiction of the Federal Government; a mob murder in rural Georgia is as much a violation of local law and a problem for local law enforcement as a gang slaying in Chicago. The difference between the two stems from the fact that as a rule the Chicago police are not in cahoots with the gangsters, while in Georgia and other Southern States lynch mobs all too frequently do their ugly work with the connivance or through the negligence of local officials. A majority of the lynchings that have occurred during the past decade have involved victims who were taken from the custody of officers of the law.

The fourteenth amendment forbids any State to "deprive any person of life, liberty, or property, without due process of law." Thus, although the United States is not empowered by this amendment to proceed against individuals who violate its terms acting in their private capacity, it may punish violation by State laws or by any individuals cloaked with the authority of a State. Senator FERGUSON'S bill would make liable to criminal prosecution in Federal courts and to civil action for damages any law enforcement officer, Federal, State, or local, who should connive with a mob to permit a lynching or willfully fail to prevent it or to make reasonable efforts to protect a prisoner in his custody. It would also, quite properly we think, undertake to punish any members of a lynch mob who conspired with an officer of the law to perpetrate a lynching. If enacted into law, this measure would be effective in dealing with a major segment of the lynching problem and in prodding law-enforcement officers to carry out their sworn duty to protect prisoners.

It is significant, though scarcely surprising, that the National Sheriffs Association adopted a resolution last week opposing the Ferguson bill. They assert, and not without considerable justification, that the counties they serve frequently afford them inadequate jail facilities for the protection of prisoners. The defect should certainly be remedied. But sheriffs who do their duty have nothing to fear from Senator FERGUSON'S proposal. It is aimed only at those who willfully prostitute the authority conferred on them by a State with an intent to deprive arrested persons of their right to a fair trial in a court of law. The need to protect this right from violation by those acting under color of law is now far too apparent to admit of any further congressional delay.

Goethe Bicentennial Convocation and Music Festival, 1949

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a pamphlet entitled "Goethe Bicentennial Convocation and Music Festival, 1949," to be held at Aspen, Colo., June 27 to July 16, 1949. I will say that Herbert Hoover is the honorary chairman and Robert M. Hutchins is the chairman of the organization.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

GOETHE BICENTENNIAL CONVOCATION AND MUSIC FESTIVAL, 1949

The Goethe Bicentennial Foundation is a nonprofit, American corporation founded to commemorate the two-hundredth anniversary of the birth of Goethe. Its officers and directors comprise a representative grouping of the Nation's outstanding citizens from business, industry, education, the professions, government, music, and letters—men and women sympathetic to the intellectual and cultural requirements of the world community. They have volunteered their time, effort, and counsel to provide the leadership for an appropriate international observance of the Goethe bicentennial.

Goethe exerts a profound influence on our civilization, and it is this impress on modern thought that the Goethe Bicentennial Foundation plans to bring to bear on the most significant problems of the twentieth century. To achieve this, the foundation plans to re-examine and reinterpret Goethe's philosophy in terms of contemporary meaning by sponsoring an International Goethe Convocation and Music Festival in Aspen, Colo., June 27 through July 16, 1949.

The 1949 bicentennial of Johann Wolfgang von Goethe's birth this year is also being celebrated spontaneously in nations throughout the civilized world—a universal tribute to a poetic genius whose philosophic wisdom has striking pertinence today.

GOETHE, HIS LIFE AND TIMES

Goethe, one of the mightiest figures of the great literature of the world, has a deep-running, powerful influence on twentieth century life. In spite of his insight into the demonic forces in human history, Goethe had an indestructible faith in the ability of man to live a constructive personal and communal life. He was a universal man; his heart was mankind's. World literature

for Goethe meant a free exchange of ideas, values, experiences which could be put to the service of all men.

Reared in an environment of freedom, the free city of Frankfurt, his personality received its first mold from the strict educational demands of his father and the lively imagination and wit of his mother. At 23, after studies at the Universities of Leipzig and Strasbourg, Goethe was a lawyer with no taste for practice. At 24 his drama, Goetz von Berlichingen, sparked an incendiary convulsion that raced through Germany with its pioneering interpretation of the conflict between the abuse of power and the sense of justice in the free individual.

His first novel, the Sorrows of Young Werther, swept Europe and carried him to fame, while he was still a youth of 25. It had a revolutionary, emancipating effect on the world. It preceded by 2 years the American Revolution, and undoubtedly influenced the men who struck for freedom in the French Revolution 18 years later. Behind its frontal story of passion, written in the emotional style of the late eighteenth century, Werther laid bare the problem of the religious justification of human existence. Even Napoleon treasured the novel. He read it seven times and carried a French translation with him during his campaign in Egypt.

Faust, however, is the core of Goethe's lifework. Into this single monumental work, he poured all of his genius; in it he wrote for future generations. In this drama of human destiny, the hero Faust traverses the entire universe from heaven to hell and back to heaven again. The all-encompassing plot had been germinating in Goethe's mind for years during his youth at Frankfurt. He began work on it when he was 25 and published the first part at the age of 59. The second part was finished just 6 months before his death in 1832, at the age of 82. The aged Goethe sagely recognized the century-spanning significance of the Faust tragedy, and when his final manuscript was ended, he closed it with a seven-fold wax seal and instructed that it not be opened until after his death. His prophetic anticipation was borne out by history; the first truly penetrating interpretations of Faust were not produced until the third decade of the twentieth century.

The architecture of this drama has the same breadth and the depth of Shakespearean tragedy in that it pictures the world in its totality. Faust's character tends to understand the structure of the universe. It is in Faust that Goethe achieves a spiritual unity of the Hellenic, medieval, and modern elements of civilization. To him Greek antiquity was the epitome of human perfection.

Through the figure of Faust, Goethe presents the eternal striving, failure, and redemption of man. Developed from the Renaissance Faust legend popularly read in the sixteenth century, Faust represents a restless and tormented mind. In his unceasing search for the essence of existence, he seeks the help of the incarnation of evil—Mephistopheles. After despairing of knowledge, he concludes his pact with Satan and pursues his goal through passion and action. Faust, like Moses, finally ends up before the promised land, in which he hopes to live with free people on a free soil.

When Goethe was 26, he was invited to Weimar, the seat of government for that German state, by the 18-year-old Duke Karl August. Goethe's personality deeply impressed the young prince, and what began as a short visit grew into one of the classic friendships of history, and turned the poet into a statesman. For 44 years Goethe remained at Weimar, serving as spiritual nerve center of the court and as adviser to the duke. There he came to represent the highest cultural ideals of his age.

In 1786, Goethe withdrew from his public duties to live two highly productive years in Italy, wholly devoted to his poetry, art, and thought. Drawing fresh inspiration from the stimulating atmosphere of Grecian art forms, he designed over a thousand landscapes and architectural scenes and gathered abundant material for his later essays on the theory and history of art. He also finished the first collection of his works in six volumes before returning to Weimar.

This Italian journey confirmed his classical convictions of art and poetry. It was there that he brought to maturity his penetrating overview of life that permitted him to visualize the modern world while standing in an ancient one. In Italy he began the development of his amazing foresight by which he anticipated the problems of our time.

Goethe's versatility equals that of Leonardo da Vinci.

The poet who balanced the budget of the duchy of Weimar also worked out a scientific theory of colors and vision, discovered the intermaxillary bone in man, established an evolutionary outlook fully 70 years before Darwin, and was such a skilled geologist that he could describe in detail the topology of the sites of Philadelphia or Boston. Three-quarters of a century before the construction of the Panama Canal he suggested the economic and military advantages of connecting the Atlantic and Pacific Oceans.

This Goethe is the same man who wrote these lines in Wanderer's Night-Songs, translated by Henry Wadsworth Longfellow, considered among the most flawless in all of literature:

"O'er all the hill-tops
Is quiet now,
In all the tree-tops
Hearest thou
Hardly a breath;
The birds are asleep in the trees:
Wait; soon like these
Thou too shalt rest."

In his final years, Goethe was a stirring intellectual force commanding the attention of the entire western world. Ralph Waldo Emerson paid homage by writing an essay to Goethe. Humboldt was a devoted friend. Thomas Carlyle translated his Wilhelm Meister. Lord Byron corresponded extensively with the poet-philosopher.

Goethe's philosophy of life presents a synthesis of natural science and humanistic studies. Undogmatic, religious in essence, related to the great heritage of Greek, Christian, and Renaissance thought, his philosophy is a significant contribution to the world.

Believing deeply in the lasting regenerative power of the creative human spirit, Goethe endowed the world with the model of universal man upon which future generations could base their standards of human conduct:

"To self be true, and true to others,
Let thy search be in affection,
And thy living be thy deed."

Goethe's was a universal mind, belonging not to one nation, but dedicated to the community of Occidental thought.

THE 1949 BICENTENNIAL

Two hundred years after Goethe's birth his works have dramatic timeliness. That the major problems facing the nations of the world in 1949 are not only political and economic, but also intellectual, is one of the basic understandings of the men and women who compose the Goethe Bicentennial Foundation.

The Goethe who watched the industrial revolution reshape the face of the world, the swelling tide of opposition engulf the iron tyrant of his age, and witnessed two revolutions for freedom, is the Goethe who bears an important philosophic message for men of this century.

To interpret Goethe's wisdom in terms of the problems of ethics and morality confronting nations and their peoples in the fourth year following Hiroshima, the Goethe Bicentennial Foundation has invited the leaders of contemporary world thought to gather in the United States for participation in an International Goethe Convocation. At these symposia, lectures, and round table discussions, the most distinguished scholars, philosophers, and men of letters from the nations of the world will seek for a community of basic understanding structured on the foundation and framework of Goethe's thought.

GOETHE IN THE TWENTIETH CENTURY—THE INTERNATIONAL GOETHE CONVOCATION

To provide a central orientation to Goethe's place in the twentieth century, Dr. Albert Schweitzer, philosopher, doctor, musician, theologian—acknowledged throughout the civilized world as the foremost modern disciple of Goethe—has consented to journey to the United States for the first time in his life. He will present the main lecture at the International Goethe Convocation.

Dr. Schweitzer, one of the great men of our times, has expressed his philosophy in the first two volumes of his series, The Philosophy of Civilization. At present he is at work on the third and fourth volumes, The World-View of Reverence for Life and The Civilized State, whose theme is criticism of contemporary civilization and the problem of its restoration. He is also the author of The Quest of the Historical Jesus.

His life has followed outlines in general similar to Goethe's. Like Goethe, he became famous at an early age—30—for his books interpreting the Bible, for his genius as an organist which won him the accolade as the leading authority on the music of Bach, for his famed biography of Bach, and for his stature as a professor at the University of Strasbourg, where, over a century and a quarter before him, young Goethe studied law. Both men adhere to the same nature-philosophy. Both tower in their age. Both seek for ultimate truth in a complex, changing world.

Goethe and Schweitzer, in tender compassion for their fellow men, devoted huge segments of their life, their genius to the service of others. Goethe gave 44 years as a statesman at Weimar; Schweitzer has spent the last 36 years of his life at his jungle hospital at Lambarene on the west coast of French Equatorial Africa, devotedly ministering to the natives.

Albert Schweitzer is more like Goethe than is any other living man.

Spain's greatest living philosopher, José Ortega y Gasset, an eminent humanist, will join Dr. Schweitzer at the International Goethe Convocation.

Through his book, The Revolt of the Masses, Senor Ortega has made an essential contribution to our consciousness of our own time. Formerly professor of philosophy and literature at the University of Madrid, he is a scholar of international stature. His volume, The Mission of the University, is a valuable addition to modern thought on the function and purpose of academic education. In 1931, as a member of Spain's Constituent Cortes, he helped write the constitution of the Spanish Republic.

Chancelor of the University of Chicago, Robert M. Hutchins is a pioneering leader in American education and intellectual life. In his twentieth year as the chief administrative officer of one of the world's foremost universities, he is a strong proponent of liberal education. Through his advocacy of study of the great books he has given new impetus and direction to adult education.

A statesman-scholar, Charles J. Burckhardt is an eminent Swiss historian, formerly professor of modern history at the University of Zurich. Presently Switzerland's Minister to France, he is well known for his noted biography of Richelieu, and bears a warm understanding of belles-lettres through his close friendship with the late Austrian poet, Hugo von Hofmannsthal.

Thornton Wilder, the three-time Pulitzer prize-winning American novelist and playwright, occupies a prominent position in contemporary letters. Author of the philosophical novel, the Bridge of San Luis Rey, and the plays, Our Town, and the Skin of Our Teeth, Wilder in the early thirties was a member of the University of Chicago faculty lecturing on comparative literature. It was from Goethe's Faust that he derived the motto for his latest novel, the Ides of March.

Barker Fairley is head of the department of German at the University of Toronto. His profound understanding of Goethe is revealed in his books, a Study of Goethe, and Goethe as Revealed in His Poetry. His specialization is Goethe's biography.

Gerardus van der Leeuw is the author of Religion in Essence and Manifestation, a famous work in the field of comparative religion by which he made a decisive contribution to the analysis of civilization. Professor of theology at the University of Groningen, he was Minister of Education, Arts, and Science in the Netherlands in 1945 and 1946.

Ernst Robert Curtius is professor of romance languages at the University of Bonn in Germany. He began his career with interpretative treatments of Marcel Proust, André Gide, and modern French symbolism. He wrote an illuminating volume on Balzac and in 1932 published The German Mind in Danger.

Arnold Bergstraesser's field of specialization is Goethe's conception of culture and society. A University of Chicago faculty member, he is author of Goethe's Image of Man and Society.

Author of one of the best twentieth century interpretations of Faust, Giuseppe Antonio Borgese is a University of Chicago professor emeritus of Italian literature, and formerly professor of German literature at the University of Milan. A highly respected world scholar, he is also the author of Common Cause, a philosophic-political criticism of the contemporary world.

Halvdan Koht is the former Foreign Minister of Norway from 1935 to February 1941. His country's most eminent historian, he was professor of history at Oslo University for 25 years prior to his assuming the responsibility for Norway's foreign affairs. In 1937 he was the first Scandinavian diplomat of his rank to visit the United States, and conferred here with President Roosevelt and Secretary of State Cordell Hull. He is the author of The Life of Ibsen, The Old Norse Sagas, and Norway: Neutral and Invaded.

THE MUSIC FESTIVAL

The inherent musicality of Goethe's works has inspired more musical compositions than any poetry in the history of literature.

Goethe was a lyrical genius of the rarest quality. He gave the most delicate expression to his experiences of love and nature, the most succinct form and penetrating symbolism to his metaphysical poetry. He wrote ballads, lyrical epics, folk songs, poems in folk-song style, community songs, and sonnets.

Faust had a far-reaching impact on the world's most gifted composers. The Gretchen tragedy brought into being many immortal symphonies, operas, tone poems, and oratorios. Liszt wrote A Faust Symphony, Berlioz dedicated his Damnation of Faust to Goethe, Wagner created A Faust Overture, and the world of music was given Boito's Mefistofele.

Goethe's novel, The Sorrows of Young Werther, impelled Massenet to transform the story into an opera. Franz Schubert set more than 70 of Goethe's poems to music. Hugo Wolfe became famous through his compositions of Goethe's most popular lyrics. Beethoven's enthusiasm for the drama Egmont prompted him to write his Egmont Overture. Mozart wrote music for Goethe's poem The Violet, and Mendelssohn extracted a long section from part 1 of Faust and created Walpurgis Night, for chorus and orchestra.

A great admirer of Mozart, whom he first heard play as a 7-year-old child prodigy at a concert in Frankfurt, Goethe wrote a continuation of Mozart's opera, The Magic Flute. Although he maintained a cool distance from his contemporary, Goethe admired Beethoven's music, admitting, "His talent has utterly amazed me."

Albert Schweitzer points out that Goethe was enchanted with the music of Bach, because his own spirit reappeared in it.

Goethe loved music, and the elegance and metered magic of his works excited young Mendelssohn to state of his warm friend, "Goethe lays hold of music with his heart."

His exquisite rapport with music motivated him to work out a whole theory of music, published in his correspondence with his close friend, Carl Zelter, the Berlin composer and choral director. Here Goethe integrated his concept of music into the valid laws of the totality of his philosophy.

It is this oneness of the poet-philosopher's thought and his affection for music as a constructive element of the art of living that occasioned the Goethe Bicentennial Foundation to sponsor a music festival at Aspen, Colo., concurrent with the International Goethe Convocation.

Through the medium of the great music of the world, Goethe's universal dignity and his sweeping faith in a common humanity will be translated into sound and feeling. Music of three types will be presented at the festival: (1) Compositions based on Goethe's works; (2) monumental music of equal stature to Goethe; and (3) music contemporary to Goethe, or of a previous era and known to have been inspirational to him.

The Minneapolis Symphony Orchestra, conducted by Dimitri Mitropoulos, will present a series of sunset concerts offering such music of the world as Beethoven's Egmont Overture, Brahm's Symphony No. 1, and Mozart's "Jupiter" Symphony No. 41.

Distinguished instrumentalists who will join the Minneapolis Symphony in the Goethe Music Festival include pianist Artur Rubinstein, violinists Erica Morini and Nathan Milstein, and violoncellist Gregor Piatigorsky. Among the music they will play will be Mendelssohn's Symphony No. 3, Brahms and Haydn concerti, and Bach and Handel works.

Dorothy Maynor, the noted soprano; the Metropolitan Opera's contralto, Herta Glaz, and its tenor, John Garris; baritone Mack Harrell; and the piano team of Vronsky and Babin, also are participating in the concert series honoring Goethe.

Music such as Schumann's Overture to Hermann and Dorothea, Berlioz' The Damnation of Faust, Wagner's A Faust Overture, and Schubert's Overture to Rosamunde is to be included on the program.

Goethe lieder by Mendelssohn, Beethoven, Schubert, Hugo Wolfe, and other composers are to be sung in recitals as a part of the festival.

The festival will open with solo performances by the guest artists on June 27, 28, and 29. Solo recitals again will be presented on July 14, 15, and 16. The Minneapolis Symphony Orchestra and Dimitri Mitropoulos will offer 10 concerts from July 1 through July 12. The concerts are to be held in an open-air bandshell.

ASPEN, COLO., UNITED STATES OF AMERICA

Site for the International Goethe Bicentennial and Music Festival is Aspen, Colo., 180 miles southwest of Denver, cradled in a majestic valley 7,800 feet in elevation, and cut originally from the Rocky Mountains by Roaring Fork Creek.

In selecting a geographic location for the convocation and music festival, the directors of the Goethe Bicentennial Foundation sought to avoid the distractions of an urban metropolis. A site was desired away from each seaboard, yet accessible from either side of the world. For these reasons the present locale was chosen. Aspen Valley's physical environment forms a backdrop consonant with the scope and magnitude of the bicentennial program.

Accommodations are available both in the valley and in nearby communities.

The Aspen airfield is equipped to handle smaller private and chartered planes. Arrangements are also being made for commercial aircraft to use nearby larger airports. Special trains and private railroad cars will be available.

Subscription series tickets for the full Goethe Bicentennial program, both convocation and music festival, and reservations for accommodations, may be obtained directly from the Goethe Bicentennial Foundation, Aspen, Colo.

The Real Danger: Fear of Ideas

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the June 26, 1949, issue of the New York Times Magazine. This article, The Real Danger—Fear of Ideas, was written by Henry Steele Commager, professor of history at Columbia University, and author of "American in Perspective," and other works.

This is a timely article on a subject of vital importance to every American who cherishes freedom. It is a message for every individual who has been caught in the whirligig of emotional hysteria, and it is one that should serve as a warning to those who are endeavoring to use this hysteria as a weapon to confuse and mislead the Nation.

Professor Commager reminds us that "four times in our history we have given way to fear of ideas and indulged in measures of suppression and oppression," and each time we have emerged with a stricken conscience. We cannot afford to try that road again. Professor Commager clearly explains why in his article, The Real Danger—Fear and Ideas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE REAL DANGER—FEAR OF IDEAS

(By Henry Steele Commager)

Four times in our history we have given way to fear of ideas and indulged in measures of suppression and oppression.

The first example occurred in the 1790's and early 1800's, when "the wise, the rich, and the well-born"—that is, the Federalists—frightened out of their wits by the excesses of the French Revolution abroad and Thomas Jefferson at home, enacted the lamentable alien and sedition laws.

The second example came in the 1850's when the slave-owning South, convulsed by fear for the "peculiar institution," drove out those who criticized it, gagged the press, censored the mail, purged colleges, and, in the end, seceded from the Union.

In the third example, in the 1890's, respectable gentlemen, especially in the East, deluded themselves that the Populist Party was made up of anarchists, that all labor leaders carried sticks of dynamite in their pockets, that Peter Altgeld was a new Benedict Arnold, and William Jennings Bryan an anti-Christ.

The fourth instance of hysteria came after World War I when Americans whipped themselves into a frenzy over a bugaboo of bolshevism sweeping the United States, deported hundreds of harmless aliens, sent Eugene Debs to a Federal penitentiary, purged legislatures of Socialists, and spread syndicalist laws and teachers' oath laws on their statute books.

It is a sobering thought that none of these past hysterias was a reaction to anything that really threatened the American Republic, the Constitution, or our democracy and, moreover, that we have acknowledged and repented these mistakes of the past. The Alien and Sedition Acts were repealed and their victims compensated. Southerners are satisfied now that slavery was a great wrong. Practically every plank in the Populist platform of 1892 has since been enacted into law. We are not proud of our record of the twenties.

Yet we have not, it seems, learned anything from history. With all these precedents to give us pause, we are now embarked upon a campaign of suppression and oppression more violent, more reckless, more pervasive, and ultimately more dangerous than any in our history.

What is the explanation of the present hysteria? Are we, in fact, in danger? Are we disunited and torn by dissension? The contrary is true. Never before have the American people shown themselves to be as united as in this last decade.

It was not always thus. Jefferson in his First Inaugural Address said this was the only country "where every man, at the call of the law, would fly to the standard of the law and would meet invasions of the public order as his own personal concern." But that was not true during the Revolution, when about one-third of the American people were loyalist and another third neutral. It was not true during the War of 1812, when large numbers of the people bitterly opposed the war and effectively sabotaged it. It was not true during the Mexican War, when opposition to war was widespread and ardent in the North. It was not true during the Civil War, when both North and South were torn by internal dissension. Yet it is an interesting fact that we fought all these wars without sedition acts or loyalty oaths.

In the First World War there was considerable opposition from pro-German and pro-Irish segments and from unregenerate isolationists, but for the most part Americans were united. In the Second World War the American people were united as never before in their history. There was less opposition to war, less sabotage than in any previous war. Political parties sank their differences; racial and national groups, labor and capital united in the common cause.

We emerged from World War II incomparably the strongest, the richest, the best armed nation on the globe. We are almost tempted to say, with Horace Walpole back in 1763, "throw away your Greek and Latin books: Histories of little peoples." Nor is our strength purely material or military. We are the oldest republic, the oldest federal system, the oldest democracy in the world. Our Nation and our Constitution has withstood the vicissitudes of 160 years. Our people are intelligent and they are moral.

Nevertheless, we see evidences of anxiety and hysteria all around us—in the stir and bustle of Federal and State Un-American Activities Committees, in loyalty investigations, in the purging of schools and colleges, in witch-hunting and censorship, in our frenzy over such silly but innocuous things as the Cultural Conference at the Waldorf, in a hundred other manifestations, governmental and popular. This hysteria has certain marked characteristics.

First, this hysteria is concerned with rooting out subversives generally—a justifiable objective when revolutionary activity has gone underground or into labyrinthine ways. However, the hue and cry goes on without regard for the fact that the Department of Justice and the FBI, ceaselessly active in the enforcement of the forty-some laws against treason, espionage, and so on, have as yet adduced no evidence that traitors and spies and subversives have been able to work substantial harm to the Nation.

Second, the current program is directed, clearly, toward subversives of the left rather than of the right, toward Communists and fellow travelers or—as the House Committee on Un-American Activities once put it felicitiously—against the "New Deal in various shades of communism." Thus, it is relevant to note that several teachers lost their jobs because of activities in behalf of Henry Wallace's Progressives, but none because of activity for the Dixiecrat organization. Yet it was the States' Rights Party that was openly engaged in activities designated by the Attorney General as subversive in its denial of rights under the Constitution.

Third, the drive is proceeding without any clear-cut idea of what it is aimed at. Notwithstanding a decade of intensive concern with disloyalty, subversive conduct, and un-American activity, we do not yet have definitions of any of these terms. The House committee has not defined them, nor has Congress or the Attorney General. It is easy to sympathize with this situation, for definition of these terms is all but impossible. But the Constitution is clear enough on treason, and so, too, are existing laws on espionage. Who, then, is to determine and by what criteria just what is un-American or subversive?

Some efforts have been made, but they illustrate admirably, and alarmingly, the danger inherent in all such attempts. Thus J. Edgar Hoover listed among the easy tests to determine a Communist-front organization: Does the organization have a consistent record of support of the American viewpoint over the years? But he does not tell us what the American viewpoint is, or who is to determine the consistency of record. Another of his tests: Does the organization receive consistent favorable mention in Communist publications? Clearly, all that is needed here is for the Daily Worker to give consistently favorable mention to the Daughters of the American Revolution and the American Legion for these organizations to come under the ban.

Fourth, the campaign against subversives, like all campaigns of its kind, here and abroad, has an inherent and inevitable tendency to spread out, and, in the end, to proscribe any ideas which the dominant forces in the community may not like.

How else explain the attack on the loyalty of Senator GRAHAM, of North Carolina, in the Senate itself; the proposal of the Regents of the University of Nebraska to bar discussion that may plant the seeds of subversion; Louis Bromfield's argument that sale of colored oleomargarine will advance communism; Representative BROWN'S comment on the decision of the British court to free Gerhart Eisler:

"What gratitude. What a shining example of international cooperation. What a great demonstration of appreciation by the British Government of the sacrifices we have been making to aid the British people."

In this statement the basic assumption is that justice is for sale.

What are the fears behind the present hysteria and the dangers created by each of these fears?

First is the fear of Communist infiltration into the Government. This fear has led to a vast and expensive series of investigations into un-American activities, plus widely inclusive loyalty checks. The shabby antics practiced in the past by the House Committee on Un-American Activities are so familiar that they do not require rehearsal. President Truman attempted to provide the loyalty check with proper safeguards; what is most impressive about it is the paucity of returns so far. Out of 2,500,000 employees checked fewer than 10,000 required further investigation.

The precise number dismissed for alleged disloyalty or subversive activities, or merely because they were "poor security risks"—whatever that phrase may mean—is almost impossible to determine. It is, apparently, well under 500, though it should be added that an additional 3,000 or so have resigned under investigation. Even more impressive is the fact that, so far as the public has been informed, none of all those investigated or dismissed has been formally charged with any crime against the United States.

The danger created by this first fear is in the techniques evolved to prevent Communist infiltration. The safeguards which Mr. Truman hoped to establish have proved completely inadequate. It is probably improper to lay responsibility for this at the door of Mr. Truman or of Attorney General Tom Clark; it is rather that disregard of elementary principles of fair play is implicit in any such program. Though we do not, to be sure, know the whole story or even much of it, we do know that the Attorney General was authorized to draw up his own list of "subversive" organizations; that organizations thus branded had no opportunity to have a hearing; that the mere creation of such a list introduced to our law the odious principle of guilt by association.

We know something of the kind of questions asked of employees suspected of disloyalty. The first rule adopted by the Civil Service Commission, back in 1884, reads as follows: "No question in any form of application or in any examination shall be so framed as to elicit information concerning the political or religious opinions or affiliations of any applicant, nor shall any inquiry be made concerning such opinions or affiliations, and all disclosures thereof shall be discountenanced."

Yet here are some of the questions asked at loyalty examinations:

What do you think of the third party formed by Henry Wallace? Is your wife a churchgoer? Do you read a good many books? How do you explain the fact that you have an album of Paul Robeson records in your home? Do you believe that Negro blood should be segregated in the Red Cross blood bank? Which newspaper do you read?

Would you say that your wife has liberal political viewpoints?

J. Edgar Hoover advised the Chairman of the National Labor Relations Board that an employee of that office "is known to have radical tendencies leaning toward communism. It is further reported that X has studied anthropology and has been affiliated with the NLRB for 3 years. It was also reported that X visited Mexico City to observe the presidential election (of 1946) in that country."

A second fear—that communists or subversives will give away military or scientific secrets—has encouraged the dangerous notion that secrecy and security are synonymous, strengthened the demand for the return of control over atomic energy to the military, given impetus to the current attack on David Lilienthal, Chairman of the Atomic Energy Commission, and threatened the whole program of scientific research with confusion. That foreign spies are active may be taken for granted; it should be taken equally for granted that the FBI and our military counter-intelligence are on the job.

The danger created by this second fear concerns our national security. There can be no secret of atomic energy that foreign, let us say Russian, scientists will not discover. Our security lies not in secrecy but first in the preservation of peace, and second in the encouragement of the best scientific brains in the country to work on atomic energy and other scientific measures. They can work properly only in an atmosphere of freedom.

It is well to remember that the military did not develop the atomic bomb but civilians did; and that scientists, who are presumably as patriotic as Congressmen, are opposed to loyalty checks. Dr. W. A. Higginbotham has noted that 100 competent scientists have been barred from Government work without a hearing, and without reasons. If we discourage or fail to use our available scientific talent we may find ourselves dropping behind in the atomic race.

A third fear sweeping the country is that of subversive teachings in schools and colleges. Half a dozen States have already enacted teachers' oaths and similar legislation; others may confidently be expected to follow the examples of New York, Illinois, and Washington in proscribing not only Communists but "subversives.'"

In New York the board of regents is authorized to draw on any list prepared by any Federal agency for its own list of subversive organizations. When we recall that the Attorney General's and House committee's lists run to several hundred, and that among these are such harmless organizations as the Southern Conference for Human Welfare, we can realize the dangerous potentialities of such a program.

The real danger created by this third fear is that legislatures will produce an atmosphere of suspicion and timidity, that they will discourage independence of thought, original investigation, and association. Before we put a premium on conformity in our schools, we would do well to note the admonition of Dean Wilbur J. Bender of Harvard University:

"The world is full of dangerous ideas, and we are both naive and stupid if we believe that the way to prepare intelligent young men to face the world is to try to protect them from such ideas while they are in college. Four years in an insulated nursery will produce gullible innocents, not tough-minded realists who know what they believe because they have faced the enemies of their beliefs."

These are some major manifestations of the current hysteria; scores of others could be added, but they would merely elaborate the pattern rather than enlarge it. That there is a pattern is clear; it is a pattern of fear and suppression. The peril is perhaps more serious today than in the days of the Alien and Sedition Acts or the slavery controversy, for now the whole world is interested in our effort to maintain the traditional liberty with order.

The current program of suppression seriously endangers effective operation of our democracy. It lowers the morale of the civil service, puts a premium there on conformity, and discourages men of real ability from entering Government service. It endangers the morale of American science by putting a premium on mediocrity in a field requiring independence, originality, and full freedom of inquiry and of communication. It strengthens the hand of the military in areas traditionally and wisely entrusted to civilian control.

It imperils freedom of teaching in elementary, secondary, and higher schools by requiring conformity in standards, by introducing the grave peril of censorship of textbooks and ideas, and by driving away from the teaching profession men and women of independent minds. It creates an atmosphere in which teachers find safety not in orthodox ideas—for they will never know surely just which ideas are orthodox—but in no ideas. In the end we will get a generation of children taught by teachers who are afraid of ideas. Such children cannot grow up into wise and competent citizens.

The current program threatens the right and the necessity of criticism. No government can operate successfully without criticism, and no government that tries to distinguish between "safe" and "subversive" criticism will get the kind of criticism that it needs. The more we learn of the inner history of the Nazi and the Fascist regimes, the more we realize that perhaps the basic reason for their self-destructive policies was precisely this suppression of criticism.

Finally, the current program strikes at one of the most precious of all rights, one essential to the effective operation of democracy—the right of association. The practice of voluntary association is a peculiarly English and American practice. The Pilgrim Fathers associated themselves into a compact—incidentally it was a subversive one from the point of view of the English Government—and since that time Americans have customarily operated through thousands of voluntary associations: Political parties, parent-teachers, veterans, business, fraternal, philanthropic, recreational, learned, and others. It is in these associations that the average American has found more training for self-government and real democracy than the famed town meeting. A policy that discourages or crushes voluntary associations will dry up the very roots of American democracy.

The danger that confronts us, then, is graver by far than any danger that arises from the activities of Communists or subversives in America. The American system is strong enough to stand competition from communism or any other ism. The American people are intelligent enough to resist subversive doctrines. Only at our peril may we depart from those traditions of freedom of thought, speech, inquiry, and communication which have carried us triumphantly through the vicissitudes of the past and brought us to our present proud position.

Since the conquest of Greece by Rome, history has frequently recorded instances where the vanquished have imposed their ideas upon the victors. Will history record that the great American democracy, at the moment of its greatest triumph and its greatest strength, yielded to the thought-control technique of the Japanese, the intolerance of the Nazis, the police-state psychology of the Russians?

That Word "Injunction"

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Johnstown Tribune of June 13, 1949, entitled "That Word 'Injunction.'"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT WORD "INJUNCTION"

Probably the most controversial part of the Taft-Hartley Act is the section that allows the use of injunctions to stop strikes which imperil the national health or safety.

There is a general belief in Congress, and among the public, that such strikes should be prevented. The question before Congress is how it is to be done, while at the same time retaining the maximum freedom of collective-bargaining procedures.

This is how the Taft-Hartley Act operates:

When a strike threatens to imperil the national health or safety, the President may appoint a board of inquiry, with power to conduct hearings. Upon receiving a report from the board, the President may direct the Attorney General to ask an injunction, leaving it up to the court to determine whether such a strike affects an entire industry or substantial part of it, and would in fact imperil health or safety.

At the end of a 60-day period the board of inquiry must report to the President on the status of the dispute, if it remains unsettled. The National Labor Relations Board then has 15 days to take a secret ballot of employees on the last offer by the employer, and five more days in which to present the result of the balloting to the Attorney General.

That makes a total of 80 days, during which the strike has been prevented, and no matter what the outcome the injunction must be discharged. The President is then required to present a full report of the proceedings to Congress, together with recommendations for appropriate action.

Four alternative plans are before Congress to take the place of this somewhat cumbersome procedure.

Mr. Truman would ask for a 30-day cooling-off period and a fact-finding board, with no provision for enforcement of the no-strike provision during this period.

A bipartisan group of Senators offers a plan for Federal seizure and operation of the industry for a maximum of 90 days, with the company's profits during that time going into the Federal Treasury.

Senator ROBERT A. TAFT proposes either injunctions or plant seizure, or both, with the Government forbidden to negotiate a new contract with the employees during that period.

Senator IRVING M. IVES, of New York, would authorize seizure of the industry only, and not injunctions. He would allow Congress to veto governmental seizure within 10 days after it was proposed; otherwise the Government would take over the plant.

The point to be remembered, in all of these proposals, is that they all affirm a belief that a strike which imperils the national health or safety should not be permitted.

But seizure by the Government of a struck industry implies that, in one way or another, the employees of the industry must be required to keep on working. No purpose would be served if the Government took over the industry, and it shut down anyhow.

This is the question of implied powers which the President says he has, and Senator TAFT says he does not have. If those powers exist, the Government would either use them, or threaten to use them, to keep the industry running; and the chances are that this would involve an injunction.

The whole purpose of leaving this authority implied rather than expressed in the law is to get around the word injunction, while retaining the power which an injunction represents. For if the strike is to be stopped—and nearly everyone believes it should be stopped—something in the nature of an injunction must be used to stop it.

If the opponents of Federal injunctions—which are a far cry from the old, discarded, privately obtained injunctions—think that strikes which imperil the national health or safety should be stopped, let them explain clearly how, without injunctions, they propose to stop them.

If they believe such strikes should not be stopped, let them state that openly and frankly—and the public, whose health or safety is affected, will then know exactly where these legislators stand.

Nebraska's Gain in Factory Jobs

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 29 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Nebraska's Gain in Factory Jobs Leading Nation," published in the Omaha World-Herald of June 26, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEBRASKA'S GAIN IN FACTORY JOBS LEADING NATION—50,000 EMPLOYED IN MANUFACTURING AS COMPARED WITH 18,000 IN 1939; PLANT VALUE FIGURED NEAR BILLION

(By Emmett Curry)

Nebraska is one of the country's brightest spots in manufacturing jobs.

Nebraska and New Mexico lead the country in percentage gains in manufacturing employment. That is shown in the Census Bureau's preliminary report on a survey of the Nation's production.

There are about 50,000 Nebraskans working in 1,400 manufacturing concerns. There were 1,093 such concerns in 1939 when the last plant census was taken. Manufacturing jobs in Nebraska have jumped from 18,000 in 1939.

Nebraska manufacturing in 1939 increased the value of raw materials by $68,000,000. Last year the increase was $260,000,000.

No exact figure is available on the worth of the State's manufacturing for 1948. But it probably nears a billion dollars since Omaha's production alone last year was pegged at $706,500,000.

In nearly every town, the manufacturing plant is a local pride. Nickerson, near Fremont, has two factories. One makes grain elevators and the other rotary lawn mowers in that town of 183. Ralston, on the edge of Omaha, has several sizable industries.

Nebraska's advantages have become more apparent to industry: Centrally located, a north, south, east, and west transportation hub; power, comparatively little labor trouble, no burdensome State taxes, and the boost from the Missouri Basin development program.

The Nebraska Railway Commission's railroad tonnage figures show industrial growth.

Six railroads in 1940 handled 2,905,421 tons. Last year the tonnage total was 4,549,980.

Power production is another signpost of Nebraska's expansion.

Nebraska now can produce about 315,000 kilowatts.

The State now is well on its way in postwar power production.

Omaha public power district has added 20,000 kilowatts, will turn on another 35,000 in about a month, and another 44,000 in 1951.

Thirty thousand kilowatts will come from the new Bellevue steam electric plant in September, another 30,000 6 weeks later, and a third 30,000 in the latter part of 1951. The plant is being built by the Nebraska public power system, an operating combine of the Platte and Loup River public power districts.

The hydros are building another 15,000-kilowatt addition to the Lincoln plant.

That will make the total postwar power supply addition 204,000 kilowatts. Also, Nebraska can call on a 90,000-kilowatt expansion in Kansas by next January.

In the power picture, too, is the projected 230,000-kilowatt development from Fort Randall Dam at Pickstown, S. Dak. Plans call for developing the power in 80,000-kilowatt blocks, the first tentatively to be in operation in 1953. Omaha public power district has asked for 30,000 kilowatts of that power.

Nebraska also is on the threshold of a major natural-gas development.

The Federal Power Commission has approved a 711-mile line from Texas to Palmyra, Nebr. An out-State natural-gas company is expanding.

Railroads have been prime developers of industry.

The Union Pacific figures that 173 new industries have been established along its line in Nebraska since 1940. They include 49 feed companies, chiefly alfalfa dehydrating plants, and 29 grain elevators and storage concerns. Sixteen new propane gas plants have sprung up along with 14 potato processing concerns. That line also counts 12 new agricultural implement companies.

The Chicago, Burlington & Quincy Railroad Co. figures that there were 164 expansions or new industries along its line in the State last year. Expansions or additions in other postwar years were 89 in 1945, 165 in 1946, and 141 in 1947. Additions of 120 concerns are estimated by the Chicago & North Western and its Chicago, St. Paul, Minneapolis & Omaha Railway Co.

The Missouri Pacific estimates Nebraska postwar plant construction along its line at $12,955,000. That includes the Veterans' Administration hospital in Omaha.

There possibly is some minor duplication in the railroad figures since some cities are served by more than one line.

Nearly everybody in Nebraska sees a more tangible form of the State's industrial growth—the long strings of freight cars entering and leaving Cornhuskerland.

In 1940, the Union Pacific Railroad hauled out 900,806 tons of agricultural products and chugged in 626,002 tons. In 1948, the line hauled out of Nebraska 1,706,274 tons of farm products and brought in 855,905.

The North Western and Omaha lines in 1940 sent out 194,483 and brought in 253,293 tons of farm products. Last year outgoing farm stuffs amounted to a whopping 547,292 tons and incoming tonnage hit 431,756 for those lines.

The gain in animal and animal products tonnage has been steady but less sharp. The Union Pacific in 1940 hauled out 193,426 and brought in 149,743 tons. In 1948, the line hauled out 222,738 and brought in 142,626 tons.

Nebraska's building boom is shown in railroad tonnage of lumber and related products. On the UP tonnage hauled out jumped from 985 in 1940 to 4,129 in 1948 and what it brought in for the State to build with increased from 69,578 tons in 1940 to 123,136 in 1948.

Incoming building materials on the North Western and Omaha lines jumped from 76,809 tons in 1940 to 137,879 in 1948. Shipments from the State in that period rose from 818 tons in 1940 to 901 last year.

Shipments of coal, clay, sand and gravel, crude petroleum, salt and phosphate rock also rocketed. Another evidence of Nebraska's growth.

Trains hauled three times more manufactured products from Nebraska last year than they did in 1940. Nebraska's intake of manufactures doubled in that period.

While the influx of new concerns inflates State and local pride, the growth of home plants has passed almost unnoticed in many cases. Mostly, that growth has been the work of men who gambled and won.

They include the electrical, packing and processing companies in the west, the rapidly growing manufacturing centers of central Nebraska and the expanding concerns in the eastern third of the State.

Those concerns bring many millions of dollars into Nebraska.

Nebraska's effective buying income for 1949 is estimated at $1,739,413,000 by Sales Management magazine. That compares with $1,320,982,000 for 1945. Nebraska's gross cash farm income last year hit $1,069,000,000.

Per capita income in Nebraska has risen from $557 in 1929 to $1,148 in 1946 and an estimated $1,324 in 1949.

Douglas County, whose 290,000 population ranks it seventy-first in the country, is pegged as fifth in effective per-person buying income by Sales Management. That figure is $1,859 per person. Sales Management's estimated Douglas County family income of $6,133 ranks it tenth among counties in its group.

Omaha is given a ranking of twenty-second by the magazine for its estimated effective per-person buying income of $1,909 in cities over 100,000 population. Omaha ranks forty-first in population. Its estimated per-family buying income is put at $6,304 by the magazine.

Three Nebraska counties in 1945 and 1948 ranked among the richest 200 in the country in gross cash farm income.

Scotts Bluff led the Nebraska counties with $34,520,000 in 1948 for the rank of seventy-third richest county. Its $32,364,000 farm income ranked it thirty-fifth in 1945.

Sales Management ranked Dawson County one hundred and sixteenth in 1949 with gross cash farm income of $29,986,000, and sixty-ninth in 1945 with $24,442,000. Cuming County, ranking one hundred eighty-ninth in 1945 with $17,501,000, moved up to one hundred and thirty-eighth in 1948 with $29,007,000, according to Sales Management.

Pottawattamie County, Iowa, across the Missouri River from Omaha, ranked twenty-ninth in gross cash farm income in 1945 with $35,181,000 and thirtieth in 1948 with $52,108,000.

Nebraska has caught national attention in the decentralization of industry.

Watch and rubber plants moved into Lincoln. A surgical instrument concern shifted from the East to Columbus. A large packer and a chain-store organization's warehouse went to Fremont. A million-dollar eastern corporation put a manufacturing subsidiary in Omaha.

More corporations were formed in the 2-year period ended June 30, 1948, than ever

before in the State's history, said Harold E. Woten, corporation clerk in the Secretary of State's office.

There were 1,204 corporations formed in that period.

LINCOLN "DISCOVERS" GREAT NEW INDUSTRIAL PAY ROLL; ESTABLISHED FIRMS HAVE EXPANDED FACILITIES

Nebraska's capital city during the past 3 years has been doing a thorough job of digesting a rich new industrial pay-roll diet.

With the fighting war out of the way as 1946 opened, Lincoln people made the cheerful discovery that their city had acquired great new economic assets.

These included the Elgin Watch, Western Electric, and Goodyear factories and the expanded Cushman Motor Works. Other established firms were to remain much larger than before the war.

Industrial jobs had jumped from about 3,000 in 1940 to around 10,000 in 1946. This figure has since remained fairly constant.

BUSINESS FIGURES UP

Business figures went up consistently during 1946–48 and are holding up well in spite of the long-expected leveling off this year. Bank clearings were up 30 percent in 1948 over 1946. Bank loans nearly doubled in the same period, indicating capital going to work. Postoffice receipts, another good indicator, rose 20 percent. All utility figures reflect greater usage by more people than ever.

Developments during the last 3 years have been predominantly in the commercial field, generously supplemented by additions to the campuses of the University of Nebraska. Nebraska Wesleyan University and Union College. More additions are planned.

STORES EXPAND

Gold & Co., the city's largest retail firm, has a new five-story building. Other leading stores have expanded.

The Lincoln Journal, one of two newspapers in the city, is starting a $750,000 expansion and remodeling program. One large off-street parking area has been developed and another is about to start. Many smaller ones have been opened.

Two wholesalers, Archie Furr & Co., and O'Shea Rogers Tractor and Equipment Co., have fine new buildings. Watson Brothers Transfer Co. has opened a big truck terminal. Fred S. Sidles Motors, Inc., has an elaborate new establishment.

National names added

New national names, such as American Business, State Farm Mutual Insurance Cos., and Three Sisters, appear on the business roster.

Cushman and Goodyear Tire & Rubber Co. and other industries continue to progress.

A year ago new manufacturing space was dedicated which doubled the capacity of the Cushman factory, providing 250,000 feet of floor space.

Incorporated with this expansion program was the installation of new and additional equipment and a new foundry rated as one of the most modern and best equipped in the Middle West.

Motor works expands

From an auspicious beginning by Charles D. Ammon, when only 5 persons were employed not quite half a century ago, Cushman Motor Works has developed into a leading industry with a personnel in excess of 1,000. Products include a complete line of motor scooters, air-cooled gasoline engines, water-cooled engines, and small castings produced on order for industry.

Charles Ammon, who has controlling interest, started in business as a hardware merchant with his father at David City, Nebr.

Top achievement during the postwar period by the Lincoln Chamber of Commerce has been the retention of the Veterans' Administration offices with a bold stroke involving investment of $535,000 by a handful of leading business firms.

Office building acquired

Faced with the loss in 1947 of a 500-employee pay roll unless the VA was furnished more office space, chamber leaders spearheaded formation of the Veterans Building Corp.

This group purchased an 11-story office building and leased more than 50,000 square feet of office space to the VA.

In this way Lincoln was saved from the one major set-back which has threatened it since the war.

In 1948 the chamber again stepped into the picture to help bring in the Naval Air Reserve unit which now occupies one of the giant hangars on the war-built municipal airport. There is a permanent personnel of 225. The Navy says the personnel may ultimately exceed 700.

Growth continues

During the postwar period, the city's growth has continued steadily. Observers are certain the 1950 census will find 100,000 bona fide Lincoln residents, exclusive of some 12,000 college and university students.

To take care of the population surge, Lincoln's builders put up new homes and apartments at a furious pace during 1946, 1947, and 1948, and still are building. A minimum of 2,000 family dwelling units was created, in addition to several hundred units made available by conversion of facilities at the Lincoln air base.

While there is still a demand for low-priced rental housing, the edge has been taken off housing shortage, Lincoln leaders say. Buyers are becoming selective.

Recreation expands

Lincoln has seen notable additions to its recreational assets.

In 1947, Lincoln businessmen, a few ardent baseball fans and venerable Connie Mack's Philadelphia Athletics provided $60,000 to build a new Western League baseball park, named Sherman Field for C. S. (Cy) Sherman, retired Lincoln Star sports editor. This spring, the Philadelphia club spent $10,000 more enlarging and improving the park.

Two years ago, seats for 3,000 persons were installed in Pioneers Park Pinewood Bowl. Money was raised by subscription. A new park was purchased in University Place, again with money subscribed privately.

Frank H. Woods, pioneer civic leader and benefactor, paid $65,000 for the 50-acre Rogers tract at Thirty-third and O Streets and deeded it to the city. No definite plans for its use have been developed.

Midget games financed

When the women's division of the chamber needed money to create a "lilac lane" the money again came from private sources.

Lincolnites also dug into their pockets for more than $6,000 to finance midget baseball, sponsored by the junior chamber of commerce as part of its youth activities program.

With minor exceptions, Lincolnites have refused to tax themselves for civic necessities proposed at the polls.

A year ago, voters authorized a badly needed sanitary sewer, but turned down three other proposals. One of these was for a separate parks and recreation levy which would have relieved a strained situation in the city's general operating fund.

Auditorium funds voted

Recently the voters refused to amend the charter to relieve the city of restrictions on general fund income which are hampering its operation. But later they voted to provide $1,500,000 more for construction of a city auditorium, first authorized before the war when it was felt that about one million would do the job.

So it may not be long before a new auditorium costing $2,500,000 will be under construction.

On the other hand, the city council and department managers are scratching hard to find funds for street improvement and other vital projects. Many feel this condition has been due to lack of understanding by the voters.

Hope maintained

However, Lincoln civic leaders refuse to be discouraged.

Considerable hope is placed in the city planning commission created in May, 1948, by the city council.

Establishment of the commission had been urged by the Future Lincoln Council of the Chamber of Commerce as an official adjunct to the city government. The commission was set up after nearly a year of study by Mayor Clarence Miles and his co-workers.

The group, which has a part-time staff assistant in Kenneth B. Clark, architect, has 11 members. They are:

E. J. Faulkner, insurance executive, chairman; Mrs. Fred Putney, housewife; Wardner Scott, former State highway engineer; Kenneth Lewis, union labor official; Walter Wilson, architect; Cecil Donley, telephone company official; C. Petrus Peterson and Joe Ginsburg, attorneys; D. B. Marti, realtor, and Mayor Miles and D. L. Erickson, city director of public works, as ex-officio members.

More work planned

Much of what happens in Lincoln during the coming years may well result from the commission's work.

It is working on a long-term blueprint for community progress. These items include a combined city-county building, development of the Rogers Tract, beautification of the State capitol area, city auditorium, and many other projects.

Lack of Monetary Accord Blocks Trade Recovery

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial that appeared in the Detroit Free Press of June 27, 1949:

LACK OF MONETARY ACCORD BLOCKS TRADE RECOVERY

The longer we dole out Marshall plan (ECA) funds to Europe the less clear what we are driving at becomes.

Are we expected to derive direct benefits from this largesse or is it pure philanthropy?

When Congress was discussing the second year's authorization, an army of producers and exporters descended on Washington, all demanding consideration. They wanted some of the cream off ECA.

An angry southerner shouted: "When Congress first voted the Marshall plan it thought we were going to get something out of it."

At that time, though, the stress was upon Americans being content with the indirect benefits that would follow from Europe's getting back on its feet.

At a Pilgrim dinner in London last week, Thomas Finletter, chief of the ECA mission in Great Britain, said that if the Marshall

plan had been presented to the American people as a means of subsidizing exports, they would have rejected it.

Yet upon one occasion ECA Administrator Paul Hoffman pointed out that of the $17,000,000,000 expected to be disbursed by his organization, approximately $9,000,000,000 would be spent in this country.

And last week he presented the Senate with a long list of American exports that would suffer if the proposed cut of $1,000,000,000 from the ECA authorization deprived them of this subsidy.

Was that an appeal to altruism or to a natural desire on the part of Americans to receive some tangible reward for their well doing?

The dollars-and-cents consideration is beginning to loom larger, as the indirect benefits that were to accrue to us seem more and more remote.

The Marshall plan, we were assured, would contain communism and enable Europe to regain economic normality. Then we could sell it things instead of giving them to it.

We were also encouraged to believe that Europe would reduce trade and currency barriers, achieve a measure of economic and political unity and thus be able to get off our necks onto its own feet.

Yet no one now expects that to be done by 1952.

The condition of Europe when ECA ends will not be basically different from when ECA started.

At least three important factors operate to delay the establishment of a viable European economy.

The first is the iron curtain. Western Europe is only part of the European body economic. As long as eastern Europe is paralyzed by communism, western Europe is cut off from normal sources of raw materials and from normal markets for its industrial products. The deficit thus created has to be made good by the United States, Canada, and other Western Hemisphere countries.

The second factor is the loosening of colonial ties and the political turmoil in China and southeast Asia, which bear heavily on the paramount powers in Europe.

The third factor is currency chaos.

At the Pilgrims dinner already mentioned, Sir Stafford Cripps politely but very clearly warned against any attempt to use ECA to interfere with British "policies and plans." As Chancellor of the Exchequer, Sir Stafford is keeper of the pound sterling and he says he won't devalue it.

With equal directness Mr. Finletter said that the Western World would not get an economy that tended to reduce frictions among peoples "as long as the West is divided into two currency areas—between dollar and nondollar worlds." The United States regards it of the "utmost importance," he added, that the pulling down of barriers begin "at the earliest possible moment."

The British once were the world's greatest creditor nation. The pound sterling was international currency. The London bankers kept the world's book. All other nations balanced their accounts through them.

Two world wars destroyed that happy arrangement. The British are now a great debtor nation. Sterling no longer is freely convertible. American dollars have taken its place.

Yet the British persist in messing up international trade with a "sterling area."

An admitted factor in this British policy is stubborn pride.

As far back as 1867, a monetary commission met in Paris to fix a common unit of money for the civilized world. The United States, Great Britain, and France were among the 17 nations represented.

The commission proposed that the unit be the French 5-franc gold piece. This would require the value of the sovereign to be reduced 2 pence and the American dollar by something over 3 cents.

The French Government said, "Yes." The Senate Finance Committee in Washington reported favorably a bill to adjust the dollar to the proposed new unit. The British Government said, "No." That was the end of it.

The American delegate, Samuel B. Ruggles, wrote to Senator John Sherman that it had become "entirely evident that the great monetary struggle of the future must lie between the British pound and the American dollar." The British delegate, according to Ruggles, "virtually admitted" this.

That was 82 years ago. The British still cling to the idea that sterling is paramount and inviolable.

The dollar's claim to primacy rests upon the hard facts of economic history.

While it is impossible not to admire the tenacity with which our British friends stick to their glorious past, we can't afford to forget—as they never have—that business is business.

The use of ECA or similar means to force Sir Stafford to give the pound a more realistic relationship to the dollar ought not to be necessary.

The British Government might be expected to see in the devaluation of the pound an opportunity to make a contribution of their own to world recovery.

Derogatory Information?

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. HOLIFIELD. Mr. Speaker, I am inserting in the Appendix of the RECORD today a letter from former Col. H. Blankenhorn, of Alexandria, Va., which appeared in the Washington Post of June 27, 1949.

The letter criticizes the type of material contained in FBI reports as far back as 1918. It was during World War I that Colonel Blankenhorn was given FBI reports on two of his junior officers, which contained derogatory information, "A hash of published fact, scary gossip, and balderdash evaluation" on his two junior officers. These officers were the two now famous journalists, Walter Lippmann, columnist, and Charles Merz, editor of the New York Times.

Mr. Speaker, in my opinion, the type of FBI file material, a great deal of which is unsubstantiated, should be carefully screened by a competent board before it is placed in the permanent file. The argument that FBI does not evaluate this material is specious, in that the material once placed in an FBI file becomes a matter of evidence to untrained persons, in reaching conclusions regarding a person's integrity, honor, and loyalty.

The recent court decision which set the precedent of disclosing these confidential files makes it more imperative than ever before, that a reevaluation of FBI investigative procedures be immediately undertaken by a competent congressional committee.

EVALUATION OF FBI REPORTS

The current self-exposure of FBI "reports" is no surprise to Government officials, including military, who have long feared that "FBI procedures will come into the open some day and blow up." Excuses, such as have appeared in your columns, that the FBI reports "were unevaluated because expected to be kept confidential" do not impress experienced officials. "Evaluation" is the hoariest of the false whiskers on a situation they have long had to deal with.

The situation has not improved much in 30 years, in my casual observations of one phase—FBI reports on the qualifications of military personnel. Serving overseas in the recent war, I have seen colonels turn profane or speechless over a Pentagon memo transmitting an FBI adverse report, usually on the "previous civilian activity," of some subordinate officers whose worth they thought had been tried in 2 years of combat.

Those 1943-45 outbursts sounded familiar, as witness an instance which nearly embarrassed me in 1918, while commanding a small operational unit under G2 at Pershing's GHQ in France.

During the height of the Argonne battle the general's aide sent for me one night and threw over a paper "from Washington, adverse report on two of your officers."

The one page memo said that investigation of the two named officers' previous civilian occupation disclosed that they might engage in subversive activities. It warned against placing them in key posts affording access to classified documents.

Investigation disclosed both had been employed by a paper published in New York called the New Republic, which paper was exhibiting pronounced Bolshevik trends. Attachments were first the Department of Justice investigation report—a hash of published fact, scary gossip and balderdash evaluation—and, second, New Republic clippings of articles by William Hard criticizing certain War Department policies.

I had the two in key posts, one in Paris, one in London. At Chaumont I had no file of the New Republic to prove how fanatically it was supporting the war. Worst was the atmosphere of urgency, snap decisions being made hourly while GHQ labored to keep up with the battle raging not so far north.

Desperately I asked the aide to phone a corps headquarters up front: "You can talk to the man who founded the New Republic, Maj. Willard Straight. He is so much a Republican he opposed the reelection of the President. He is a member, on leave, of J. P. Morgan's."

The aide relaxed, thought I'd know the answers, scrawled "No action, ALJ" across the memo, and cussed Washington for trying to tell us how to fight the —— war.

So I saved my two subversives, Capt. Walter Lippmann, known since to Washington Post readers, and Lt. Charles Merz, for years now editor of the New York Times. The two of course were not shown the derogatory report.

Thar's gold in them thar mountainous FBI files, including fool's gold and gold brick.

H. BLANKENHORN,
Former Colonel.

ALEXANDRIA.

The Road to Economy and Efficiency in Federal Activities

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the way to economize is to vote

for it—not some time in the future but now. That I have always been, and I still am, willing to do.

Under the bold-faced caption "How do you feel about—" newspapers in the Fourth Congressional District and elsewhere are requesting their readers to advise their Congressmen whether they are for or against each of eight general propositions. Hundreds have complied with that request.

From a political standpoint, the wise thing might be to acknowledge receipt of the communication, reply that it was appreciated and would be given consideration when the proposal came up for a vote. However, I assume that those writing in want to know my position, the reasons which influence me. Hence, this statement. If I am wrong, set me right.

It is always difficult to make definite answer to broad, general questions without subsequently being accused of insincerity or inconsistency, for often, when a bill is finally voted upon, it does not raise the same issues that were in the minds of those who made inquiries or gave an opinion. The bill on which a constituent was expressing an opinion may not be the same as the bill upon which the legislator is later required to vote.

Because so many have written me and the questions asked are general and printed, to save time and expense my answer was mimeographed. The issues are these:

1. Question. "How do you feel about a straight 10-percent cut in all Federal expenditures that can be cut?"

Answer. Economy being imperative, there being no apparent reason why Federal expenditures cannot be cut 10 percent, I assume that everyone who does not believe in waste is in favor of a 10-percent cut. I am. I introduced bills to cut Congressmen's salaries and their clerk allowance.

2. Question. "How do you feel about the general recommendations of the Hoover Commission? (An estimated $5,000,000,000 can be saved by adopting these recommendations.)"

Answer. This question assumes the adoption of the recommendations of the Hoover Commission will give us a saving of somewhere from three to five billion dollars. Naturally, if a saving can be made without impairing service, we all are for it.

I was chairman of the committee which wrote the bill creating the Hoover Commission. I know there are duplications in Federal service, that we can have economy and increased efficiency if some of the Hoover recommendations are adopted. But here is the meat in the shell—we will get economy and efficiency if, but only if, the departments will administer the law in accordance with the recommendations.

Don't jump to the conclusion that the adoption of the Hoover Commission recommendations will automatically give either economy or efficiency. Many, many times Congress has passed a law designed to cut down expense, give greater efficiency. Result: Those in the departments by interpretation and administrative methods give the people just the opposite.

Unless Congress keeps a watchful eye on the executive departments, insists they follow the law, answer its inquiries, the adoption of the Hoover Commission recommendations will not give us efficiency and economy.

What our Government needs is a thorough housecleaning by the election of a President and a Congress which will practice, rather than talk about, economy.

Permit me to speak plainly. Assuming we adopt all the recommendations of the Hoover Commission, that the Congress attempts to force economy and efficiency upon the departments, the practice of operating in the red, eventually facing national bankruptcy and a depression, will not be avoided unless the people themselves quit pressurizing Congress into passing legislation giving additional services, ever-increasing appropriations through a larger number of Federal employees.

Congressmen are just like other folks—they will try to please the people who elect them and, if the people who elect them, in the future as in the past, insist upon an appropriation for first one project, then another, we will not get economy until we go broke and it is forced upon us.

The responsibility for the present ruinous waste, the inexcusable lack of efficiency in Government, does not rest wholly upon the Members of Congress. Primarily, at least in part, the responsibility for our present situation is upon those who elect Congressmen, who have been sold a bill of goods by reformers, do-gooders and, worse yet, agitators with an ax to grind who have been demanding new activities, each service calling for additional money.

3. Question. "How do you feel about the so-called national health plan? (Referred to as socialized medicine, the estimated annual cost is $10,000,000,000.)"

Answer. I shall vote against it because I believe the cost will be excessive. Its adoption will tend to destroy self-reliance, independent thinking and action and inevitably weaken individual, as well as national, morale.

4. Question. "How do you feel about the Federal housing program? (This bill, recently passed by the Senate, may total $20,000,000,000 over a 40-year period.)"

Answer. I do not intend to support it. It smacks of paternalism, of socialism. It is destructive of free enterprise. It is designed to take from those who have, give to those who lack, and, while we must take care of our unfortunate neighbors, there is no reason why the family which works and saves should be required to build or furnish a house for the family which works and spends.

Much as I would prefer spending our tax dollars or those we borrow here at home rather than abroad, in view of our present financial condition, I do not believe we can safely adopt this housing program.

We have a national debt of more than $250,000,000,000, with an annual interest charge of around $5,000,000,000. The contract authorizations passed by the Eighty-first and preceding Congresses will obligate us to spend an additional $8,000,000,000 and this year's national income is $3,000,000,000 less than it was last year, even though taxes are still high. It is apparent that by the beginning of the fiscal year, July 1951, our present deficit will be increased by at least $11,000,000,000.

The housing program, which, if adopted now, subsequent Congresses cannot repudiate, calls for additional contracted payments of between ten and sixteen billion dollars in the next 40 years. We have no moral right to throw such an additional tremendous back-breaking burden upon future generations.

5. Question. "How do you feel about Federal aid to education, costing $300,000,000 the first year? (The cost will probably never be this low again.)"

Answer. I do not intend to vote for it. Here, again, as in the two preceding issues, the cost will be excessive, but, far more important, bureaucrats and officeholders will have control of the educational program and with the national administration shot through and through with false theories, futile aims and, worse yet, socialism and communism, turning over the education of our youth to those who do not firmly believe in the principles of the Constitution, the practices of our forefathers, would be ruinous.

6. Question. "How do you feel about the ECA program costing $5,500,000,000 for the coming year? (This is chiefly aid to Europe under the so-called Marshall plan.)"

Answer. I shall vote against it. We gain nothing by handing out billions of dollars to other peoples in other lands. Our job here at home requires all of our energy, the full development of our resources. We have been the most charitable Nation in the history of the world and to that I have no objection. But I will not vote to impoverish our people to give aid to other nations which want none of our way of life.

After the war, through the adoption of the Morgenthau plan, we made it extremely difficult for the German people, who might have stopped communism at the frontier, to recover. We permitted France and England, as well as Russia, to strip Germany of its means of self-support. Our dollars today are being used to further the advancement of France and more especially England, which is trading with the Russians, to our detriment.

There is a limit to what we can do for other nations. ECA continued means we will be bled white, finally unable to help ourselves—which is Russia's objective—to say nothing of helping others.

7. Question. "How do you feel about arms for the North Atlantic Pact, to cost something over $1,000,000,000 in the coming year?"

Answer. The issue will not come before the House except by way of appropriation bills. I shall vote against those bills. I do not believe in becoming a partner in a group of impoverished nations (some quarrelsome), any one of which can, under the North Atlantic Pact, involve us in a war in which we have no real interest. Two wars have weakened our resources, given us obligations to care for our fighting men and women which will require the expenditure of every dollar we can find.

8. Question. "How do you feel about Secretary of Agriculture Brannan's farm plan? (Yearly cost estimates run up to $10,000,000,000.)"

Answer. I am not for it. It is contrary to our whole system of government—to our whole theory of individual independence. It will result in the production of surplus crops to be paid for out of the taxpayers' pocketbooks and, to give it even a semblance of workability, must carry strict controls under which individual producers will be told what, when and how much they can plant, harvest and market. That means opening wide the door for favoritism and corruption. It means the creation of additional Federal jobs; the appointment of thousands of additional Federal employees; the expenditure of additional billions of dollars. In short, the extension of bureaucracy and the futility of attempting to do anything worth while under question No. 1.

The proposal as outlined in question No. 1, to make a straight 10-percent cut in all Federal expenditures is meaningless if one is to vote for propositions Nos. 3, 4, 5, 6, and 7. No one can have his cake and eat it too.

I know we want economy in our Federal Government, but are we willing to forego our desire for an appropriation, additional Federal employees, to service our own pet project? That is the real test.

As a Nation, we are living beyond our income. We are borrowing money for running expenses. A business recession, unemployment, and a disastrous depression all threaten us. All of us concede we need economy and the only way to get it is to curtail appropriations for necessary services, deny them completely for services which, however desirable, are not at this time necessary. We must retrench and the time to do it is now.

Thanks for writing me. Your questionnaire has been answered. I have acted as well as talked for economy by introducing bills to cut my own salary—I voted against increasing my own clerk hire.

I wonder if we are willing to do with less until we again get on our feet, or if we will have to go "bust" before we are willing to economize?

If I am wrong, I hope my constituents will set me right.

Rural Telephone Situation in Missouri

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith a statement by F. V. Heinkel, president, Missouri Farmers Association, Inc., Columbia, Mo., before the Senate Committee on Agriculture and Forestry, Washington, D. C., June 11, 1949.

Mr. Heinkel brought to this Senate committee a true and forceful statement which clearly pictures the rural telephone situation in Missouri. Mr. Heinkel clearly states the situation regarding proposed legislation which will provide aid and encouragement for rural telephone service when he said:

This program is one of the most important that will come before this Congress, so far as rural America is concerned, and I can assure you that the farmers of our country will be forever grateful to Congress if you adopt it.

I will not be satisfied until every farm family who desires such service has an adequate supply of electric current at a reasonable rate and a telephone that will meet the family's needs. Our farm people—the backbone of our economic structure—need these services. Such services are long overdue. Why further delay?

Mr. Heinkel's statement follows:

Mr. Chairman and gentlemen of the committee, my name is F. V. Heinkel, and my address is Columbia, Mo. I am president of the Missouri Farmers Association, Inc., a State-wide farm organization having a membership of 126,000 farm families in Missouri, and also represent the National Council of Farmer Cooperatives, which represents some 2,600,000 farm families throughout the United States.

This opportunity to present the views of farmers relative to the rural telephone program which you are considering, is deeply appreciated. As a farmer, and living constantly in close touch with farmers, I feel competent to say that there is a dire need for more and better telephone service throughout rural America.

Only about 42 percent of the farms of the United States have telephones. But this figure does not convey the true picture. Service over existing lines ranges from good to bad and indifferent. Out in the Midwest, rural telephone service has a very bad reputation, and that is an understatement.

Missouri's telephone situation is comparable to that existing in most of the country, for Missouri is located in the very heart of America. Agriculture is its biggest industry, and the State ranks well up in point of wealth.

According to the 1945 census, only 45 percent of Missouri farms have telephones. In 26 counties, only 20 percent of the farms have telephones, and in 7 counties fewer than 1 farm in 20 has a telephone.

It seems incredible in these modern times that in 6 counties in Missouri, a wealthy State located in the center of the United States, there are fewer than 3 telephones per 100 farms.

I have prepared some colored maps for you which show clearly the situation in Missouri according to the 1945 census.

It is true that rural America has many shortcomings. We lack roads, and adequate electric services, and many other modern conveniences that are so commonplace to city dwellers. But one of the worst of our shortcomings is a lack of good telephone service.

Only a tolerant, patient class of people such as farmers would have put up for so long with the lack of such a modern convenience as the telephone. In fact, the younger generation of rural people are not putting up with it. They are leaving our farms in wholesale numbers. In Missouri, for instance, during the period 1920–45 the number of farmers 55 years and older increased 32 percent. In 1945, fewer than 1 out of every 50 farmers was under 25 years of age. The average age of farmers in our State is approximately 47 years.

What is happening is that farm children, who have been attending high schools and colleges, are simply unwilling to live under the primitive conditions of their forefathers in this atomic age. Of course I know that mechanization of agriculture and such influences as a disparity in prices have been at work in this connection, but, by and large, young farm people are simply refusing to stay on a farm where there are no all-weather roads, no electricity, no running water in the house, and no telephone service.

As the young people leave the farm for the bright lights and modern conveniences of the city, and their parents grow too old to operate their farms, the land is sold and merged into larger holdings. Thus, our farms grow larger and fewer in number. The family-sized farms disappear. Absentee ownership increases. Our population in the cities, where all too many of our citizens live in crowded apartments which they do not own, grows apace.

I submit to you that this is an unhealthy condition. It is not good for a Nation like ours—particularly during a period when democracy throughout the world is on trial—to have a large mass of people that own nothing but the clothing on their backs. When they have no actual, visible stake in America, they are a ready prey for those who peddle unsound panaceas.

Aside from this sociological aspect, a lack of telephones is holding back the progress and development of rural America. Farm families badly need good telephone service in order to carry on their business. They need to telephone for repairs to their complicated farm fachinery; to call the veterinarian; to call for help in case of fire and accident and sickness; to order supplies; and generally to communicate with their neighbors about their work, as well as to communicate with the outside world.

In Missouri, where the dairy industry has been developing as rapidly as roads and electric power will permit, we have several artificial breeding associations. One of them is affiliated with the Missouri Farmers Association. It has a stud of forty-odd dairy bulls, and competent authorities say this is the finest stud of bulls in the United States. Last year it was possible to breed only 30,000 cows. Twice that number of cows could have been bred with the same number of bulls if the telephone service had been adequate.

There's no telling how much Missouri farmers could multiply the State's wealth if they could breed all their dairy cows to fine bulls. For instance, by using good bulls it is possible to add 100 pounds of butterfat to the progeny of one of these animals in one generation. The average butterfat per cow for the Nation is only 186 pounds, so you see what such an improvement would mean.

I have with me a number of letters received recently from Missouri farmers complaining about the lack of good telephone service which I am leaving with the committee for perusal. You will note that a number of them came from inseminators whose business it is to breed cows artificially. Both they, and the farmers themselves, tell how they can't breed cows artificially because they haven't adequate telephone service. These letters say, as I have already mentioned, that even where there are telephones the service is abominable.

As previously stated, Missouri is no exception. In fact, the figures show that our telephone service is slightly better than the national average.

It is noted that the proposal under consideration by you does not provide for Government ownership of telephone service. It authorizes the Rural Electrification Administration to make loans for the expansion and improvement of rural telephone service under the same terms and conditions which the REA has employed for many years in making loans for rural electrification. It provides that funds shall be made available on identical terms to private corporations and other agencies now operating telephone facilities, and recognizes the authority of State regulatory bodies over rates, service, and service areas.

In my estimation this is a splendid provision. Farmers have been highly pleased with REA service. A common and popular question one hears voiced at meetings of farmers is, "Why can't we have REA telephone service just as we have REA electric service?" I'm sure they would be happy if the privately owned telephone companies would provide them with service.

The fact that it has been a very, very long time since Alexander Graham Bell invented the telephone and more than half the farmers of America are still without telephone service has not been lost upon farmers. One of the big mysteries to them is why the telephone companies that have served urban areas so well and so long have been unwilling or unable to extend the service to rural areas.

Thousands of farmers who have implored the telephone companies from time to time to give them service have just about given up hope. If the seeming lethargy of the telephone companies is due to their inability to finance the expansion into rural areas, then this measure under consideration by you will provide the solution to their problem.

If, on the other hand, they are simply unwilling to provide such service to rural areas, then it is necessary for Congress to help the rural people to help themselves by making it possible for REA-financed cooperatives to render the necessary service. Perhaps a combination of both would be best for the entire country.

Since telephone lines must connect up with the whole network of systems that serve the entire Nation, it is obvious that a few farmers in a neighborhood cannot provide such a service for themselves—at least in a satisfactory manner. That's why it is necessary, in my opinion, for Congress to help rural people to help themselves.

After having observed how well REA loans have been gradually amortized with interest, we have reason to believe Uncle Sam will lose none of the money that is invested in rural-telephone service. It will not be merely an expenditure of money, but an investment that will bring enormous returns in greatly increased wealth produced by agriculture, plus a better rural life that will build more solidly the foundation upon which our country rests and make it safe for a continuance of the free-enterprise system and a democratic form of government.

This program is one of the most important that will come before this Congress so far as rural America is concerned, and I can assure you that the farmers of our country will be forever grateful to Congress if you adopt it.

Letter From Dr. E. U. Condon to J. Edgar Hoover

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Dr. E. U. Condon, Director of the National Bureau of Standards, to the Director of the Federal Bureau of Investigation, J. Edgar Hoover. This news item and letter were published in the Washington Post of Friday, June 24, 1949.

In his letter Dr. Condon expresses his feelings as only a man who has been hurt and injured by the cumbersome and sometimes cruel juggernaut of government can express them.

For some time I have been concerned with the type of material which appears in the FBI files. Realizing the necessity for the operation of the FBI, and realizing its increasingly important role in our national life, I intend to explore the methods in which FBI files are compiled, the type of material which the files contain, and to point out what I believe to be certain defects that can be corrected in the interest of national security and in the interest of preservation of the rights of American citizens.

It is obvious that this is a task which should be done carefully, and I hope to be able to speak on this subject at some length in the near future.

For the present, Dr. Condon's letter contains some very thought-provoking material.

The matter follows:

LETTER TO HOOVER OUTLINES IN DETAIL SCIENTIST'S PROTEST OF FBI METHODS

(By Drew Pearson)

Dr. Edward Condon, Director of the National Bureau of Standards, who with his wife was smeared in FBI reports made public in the Judith Coplon trial, has written a letter to FBI Director J. Edward Hoover that may rank as one of the great human documents of 1949.

Dr. Condon, tortured by the rumors and innuendo spread first by the Un-American Activities Committee about his wife's alleged sympathies for Russia, twice asked Hoover for an apology. Then he sat down and wrote Hoover a personal letter in which he poured out some of his obviously deep convictions on FBI reports. However, the letter, so far unpublished, speaks for itself. Here it is:

TEXT OF CONDON LETTER

The text of Dr. Condon's letter follows:

"DEAR MR. HOOVER: On Saturday and Sunday, angered and hurt by the unjust and unfair allusions to my wife contained in an unevaluated FBI report which was made public in connection with a court trial last week, I issued statements to the press in which I demanded an apology from you.

"I would like to assure you that these statements grew solely out of the spontaneous anger natural to any man on seeing the name of his wife sullied in the press through official documents implying improper conduct through their distortion of an innocent and normal act, by cryptic and insidious phraseology and connotations, into something improper. I believe that you can appreciate and sympathize with my reactions.

"It is apparent, however, that you could not reply to my statements because the injury is irreparable by any apology, because it would be impossible to remedy the sufferings that many have undergone, including myself, as a result of similar operations, and because there is the possibility that any reply from you might be pertinent to a court matter. In the light of these, I regret any inconvenience that I may have caused you.

"The fact that the present unfortunate events did take place does emphasize, it seems to me, the need for care and caution in connection with investigatory procedures. I have repeatedly pointed out the importance of proper investigations and proper security measures and, for example, I have held again and again that the President's loyalty program is a splendid and excellent thing.

"But the care and caution which I mention are crucial if we are to attain the ends which we seek and, indeed, if we are not to jeopardize that very thing—our free and democratic country—which we value above all else.

"In this connection, I do not believe that the welfare of our Nation is served when slanderous material about decent Americans becomes a part of official documents. It does no good to say that these documents are unevaluated because they are, in fact, used as official reports, as they are in such matters as Federal employment and loyalty cases where they are used as though the contents were truly factual and evaluated. Nor does it remedy the dangers to our citizens to say that the FBI is merely a fact-finding agency and that the responsibility of interpretation rests on other units of the Government because the FBI knows how these are used in practice (as against any theories) and should therefore label the contents of these documents as gossip, slander, hearsay, one side only, etc., and should clearly differentiate between information that is relevant and irrelevant, true and false, etc.

"In the present instance, I have gathered the impression from the press reports that the Government seriously considered dropping the charges in court because the documents were too important for the national security to release. If that is the case, then one must inevitably conclude that their contents are really important. If they are important, why is it that the contents are unevaluated—in the case of the perverse allusions to my wife a period of some 19 months having elapsed? If this information was known to be biased, incomplete, and slanderous, why was it allowed the dignity of a formal place in an official document? And if it was felt that any information, irrespective of truth or falsity, constitutes a 'fact' in the 'fact finding' sense of the FBI, then why was it not clearly labeled as to what it was and evaluated in that period of 19 months as of no value. Moreover, if 'facts' are gathered in this puzzling and broad sense, why were not additional facts sought before my wife's good name was sullied by entering this material in official files? Why, for example, was she not questioned as to the material? Or, why was not a proper study made of the conference which led to her innocent meeting of one individual interested in purchasing printing-type materials and then indicating to an American businessman in the export business that here was a possible sales opportunity? Certainly, the full facts could have easily been obtained and entered into the document; and this would have presented the full facts in place of the few insidious-sounding ones which turned up."

PROCEDURES FAIL SERIOUSLY

"It appears to me that the fact-finding procedures fail seriously in ignoring the information that can be obtained from the person under investigation, even in those cases where (1) the situation is one in which the person involved is already aware of the fact that he is being investigated or (2) the standing and character of that person is such that it is abundantly clear that he will not run away but would be happy to have a chance to cooperate fully with the FBI.

"I will enlarge this point. Are you aware, with all the enormous amount of effort that has been spent on investigating Mrs. Condon and myself as a result of malicious and vindictively motivated false alarms, that not once has one of your agents come around to see either Mrs. Condon or myself, either to interrogate us or to get straightened out on some point or other? And this is so in spite of the fact that I have been absolutely straightforward in all my dealings and have repeatedly offered to cooperate fully with any fairly conducted investigation. I know, as a matter of fact, that your files on Mrs. Condon and myself are shot through with errors with regard to easily ascertainable facts. We would be glad to go over all of this material with your agents in order to get it straight, requiring only that a full transcript be made of the interview in which this is done for my files.

"Having never met you personally, I look forward to meeting you, if you wish, and to discussing these or other matters which may be of mutual or general interest."

WRITING IN FRIENDLY WAY

"I would like to assure you that I am writing you in a friendly and cooperative way, and I would like to confess that one of the reasons that I have addressed you so frankly and openly is the article entitled 'The Challenge,' which you wrote for the Sunday magazine section called This Week.

"When I read this fine piece, beginning with the quotation from the Prophet Micah—'What doth the Lord require of thee, but to do justly, and to love mercy and to walk humbly with thy God?'—and ending with your sentence 'These three simple phrases set up an indestructible guidepost for human conduct. In clear and simple words they establish the essentials of decency. All are of the spirit—justice, mercy, humility'—when I read these, moved by their profound truth and applicability in this troubled world, I felt that you would not mind a simple, frank, and friendly letter discussing matters that weigh heavily on my heart, not merely in personal terms, though I am vulnerable enough like all mankind to feel anger and sorrow over unjustified aspersions, but in terms of that freedom and democracy which we cherish.

"Sincerely yours,

"E. U. CONDON,
"*Director.*"

Franco Spain

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. CLEMENTE. Mr. Speaker, under leave to extend by remarks, I include in the RECORD an editorial entitled "Franco Spain" that appeared in the New York World-Telegram, May 9, 1949; an article entitled "These Days," by George E. Sokolsky, that appeared in the New York Sun, May 16, 1949; and an article entitled "An Interview With Franco," by James F. Murray, Jr.

The matter referred to follows:

[From the New York World-Telegram of May 9, 1949]

FRANCO SPAIN

The political committee of the United Nations General Assembly has voted, 25 to 16, in favor of lifting the 1946 ban on the appointment of ambassadors and ministers to the Franco government in Spain. The question now goes to the General Assembly for final action and the issue there is in doubt.

Representatives on the committee of the United States and 15 other nations did not vote either way. However, if we duck the issue again in the General Assembly, our refusal to vote will be counted against the proposal, which requires a two-thirds majority for approval.

Our Government initiated the original boycott resolution against Spain. That mistake should be acknowledged by joining in the movement for its repeal.

Franco's government isn't our kind of government, but that is not the test. If we exchanged diplomats only with those nations of which we approved in every particular, we would be doing business in a very restricted world.

Spain is under a dictatorship, yes. The Soviet Union, Poland, Yugoslavia, Bulgaria, and Czechoslovakia—with all of which we have full diplomatic relations—also are under dictatorships.

Franco attained power by revolution—by force and violence. So did the other dictatorships. So have several Latin-American governments to which we have extended full recognition.

Franco's particular crime is that he gained control of Spain with the assistance of Hitler and Mussolino. But that was a case of dog eat dog. Stalin's international brigades were fighting on the other side. If they had won, we probably would have a Communist Spain today. Would that be good?

We voted to boycott Spain in 1946 largely as a sop to the Soviet Union. In doing so, we ignored the fact that Spain had not been guilty of attacks on any other nation, which was more than could be said of Russia. After Hitler and Mussolina helped Franco, he did nothing to help them. But who is there today to find fault with him for that? Hitler and Mussolini aren't around any more.

Our Government has had friendly relations with Spain since the war of 1898.

Franco has shown every evidence that he desires to live at peace with the rest of the world. His country is one of the bastions against communism and occupies a strategic area vital to us and the other members of the North Atlantic group.

Our Government should vote to lift this foolish boycott.

[From the New York Sun of May 16, 1949]

THESE DAYS

(By George E. Sokolsky)

SPAIN

Dean Acheson, Secretary of State, in his discussion on Spain, falls back on the totally disproved argument that there are good and bad dictators. It used to be said, as war propaganda, that Hitler was a bad dictator and Stalin a good one. Nobody can say that any more—not even the State Department. So Dean Acheson paints an utterly distorted picture which requires analysis:

"The Franco government was one which was established with the active support, and only with the active support, of Hitler and Mussolini.

Even if wholly true, the point must be made that the current Polish, Hungarian, Yugoslavian, Czechoslovakian, Bulgarian and Rumanian Governments were established by Soviet Russia. We do not exclude them from the comity of nations for that reason.

He says further:

"The Republican government in Spain received the support of the Soviet Union. There were charges at the time that the Republican government was Communist. Those charges were denied. It is unimportant at this point to go into what if any substance they had."

BOASTED OF WORK

That is so childish that I never thought anyone would say anything like it. The Communists have for years boasted of their work in connection with Republican Spain. Did Mr. Acheson ever hear of La Pasionaria? Did he ever hear of the Abraham Lincoln Brigade? Did he ever read the Daily Worker, the New Masses, the Communist—all published in the United States? I can provide him with all the evidence on this subject he may need, all from Communist sources.

Then Mr. Acheson says that there is no writ of habeas corpus and no independent judiciary in Spain. Is there habeas corpus and an independent judiciary in Russia, Poland, Czechoslovakia, Hungary, Rumania, Turkey, Greece, China—all within the comity of nations? If Acheson's yardstick is habeas corpus and an independent judiciary—and a good yardstick it is—then we really ought only to speak to the British and the Scandinavians. Certainly we ought not to speak to the Russians who maintain the law by purges and murder. Did Mr. Acheson ever hear of what happened to the old Bolsheviks? Did he read the reports of the great purges—even the reports of the Russians on the subject?

Further our Secretary of State says:

"One of the things that all dictators do—from the time of the French Revolution and before the French Revolution down to the present time—is to take anyone that they do not like and throw him in the oubliette (dungeon) and there he stays until he dies or until they shoot him or until they take him out. The fundamental protection against that in free countries is the writ of habeas corpus."

Did Mr. Acheson ever hear of Siberia? Does he know about the Russian slave camps? Did he ever hear of what happened to the intellectuals of the various satellite countries, to the Social Democrats, to the leaders of Peasant Parties?

EQUALLY WRONG

I do not contend that Franco is right but I do say that Stalin and his agents in a dozen countries are equally wrong. If we make the oubliette the yardstick, let us make it that for everybody. Mr. Acheson refuses to send an Ambassador to Franco but he, himself, is going to Paris to talk to Vishinsky who was the prosecutor at the purges and sent his old colleagues to insanity and death. Acheson will probably shake hands with Vishinsky.

Oh! Now he comes up with this one:

"The second right is that in being convicted of a crime you are convicted not by employees of the state but by your fellow citizens."

Now where does he find that among most of his pals in the United Nations? In how many countries is there trial by jury, which is what he is talking about?

Finally, he says:

"Then there is the question of religious liberty, which is fundamental to a free exercise of the human personality. That right does not exist in Spain."

Does religious liberty exist in Hungary, Soviet Russia, or Poland? Did he ever hear of Cardinal Mindszenty, of the 15 Lutheran ministers in Bulgaria, of the closing of the Moscow synagogue?

It is a pity that our Secretary of State is so poorly briefed.

[From Thought, Fordham University quarterly, March 1949]

AN INTERVIEW WITH FRANCO

(By James F. Murray, Jr.)

Few strategic areas in the world are more vital to the United States policy of containing Soviet expansion than the Spanish peninsula. The shiploads of matériel which arrive daily in Italy, Greece, Turkey, and other pressure points, implementing the master design of the Truman doctrine and the Marshall plan, owe their safe arrival to the fact that no hostile power stands at the gateway to the Mediterranean.

Were Spain to pass under Soviet domination the structure of our diplomatic labors in Europe, Africa, and western Asia would be overturned. Our positions in Europe would be outflanked; the Balkans, Middle East, and North Africa would be sealed off and a new menace would hover over our relations with South and Central America.

Despite these possibilities the average American has for some time been uninformed not only as to the factors involved in the problem of our relations with Spain but as to the very existence of the problem itself.

Startling proof of this came to my attention during a series of forum appearances last year. Recorded samplings through audience reaction of the current knowledge of relatively well-informed metropolitan groups showed that less than 5 percent were aware that we had withdrawn our Ambassador from Madrid; 20 percent regarded the present Spanish regime as persecutors of the Catholic church; 50 percent were uncertain as to whether or not Spain had been admitted to the United Nations; less than 15 percent had any clear notions as to issues involved in the late civil war; and more than 60 percent were convinced of varied forms of Spanish hostility toward the United States.

When it became necessary for me to return to Europe after an absence of nearly 2 years the above considerations persuaded me to include Spain in my itinerary. My sole purpose was to conduct a personal fact-finding mission in order to evaluate at first hand such phases of the cultural, economic, and political life of Spain and her people as would have a bearing upon the fundamental interests of the United States. My status was purely a private one without benefit of the advanced contacts and avenues of easy entree traditionally at the disposal of journalists, diplomats, the military, or semi-governmental agents. I possessed but a single letter of introduction furnished by a distinguished American professor to two of his cultural colleagues in Madrid.

I engaged in a series of frank and informal discussions with cultural, religious, industrial, educational, and governmental leaders ranging as high as the cardinal primate and the minister of foreign affairs. Everywhere I made it abundantly clear that I had few if any preconceived notions on matters of current controversy and that my only desire was to make objective inquiry from the viewpoint of the average American into the present position of Spain and the Spanish people on the problems besetting United States-Spanish relations.

About midway through my visit it occurred to me that a very considerable contribution to better understanding might be achieved if Generalissimo Francisco Franco would be willing to consent to an interview and express his opinion on certain direct and specific questions touching upon the main points of interest and doubt in the average American's thinking on postwar Spain.

A few days later I was informed that General Franco had agreed to my suggestion and had further offered to return his answers in writing as well.

After my return to the United States when the Spanish question returned to the center of our diplomatic stage I sought and obtained authorization to release these questions and answers for publication. I present them without comment as to content pointing out only that no changes or limitations were at any time suggested in the formulation of these inquiries. I submit them in the hope that they will prove enlightening and provide prime source background material for all who seek to analyze the development of United States-Spanish relations through our period of intense diplomatic activity in 1948.

1. What in your opinion is the fundamental cause of the present strained relations between Spain and the United States?

No reason whatsoever exists, in my opinion, to justify the fact that relations between our two countries are not as cordial as our common interests and plain good sense require.

I feel that our peoples have very extensive grounds for mutual understanding. Over and above the historical ties which have long bound Spain to the entire American continent, we have at the present time a compelling basis for common cause in the mounting western resistance to Soviet communism—a menace which Spain recognized in 1936 and against which she has been battling ever since.

Taking advantage of the turbulent war years to employ tactics now being exposed by your congressional committees, Communist agents so infiltrated into positions of influence as effectively to confuse and misdirect American public opinion to ends diametrically opposed to simple justice and to your own national interests. Thank God that the people of the United States, with their traditional sense of fairness, are gradually becoming aware of this deception and in many instances are actually outstripping the more hesitant political leaders in demanding realistic action.

2. What basic measures do you consider most necessary in order to better these relations?

Influential citizens and public leaders in the United States should endeavor to acquaint themselves with the real position of Spain in exactly the same way that we are attempting to understand the American point of view. Despite an acute shortage of dollars, Spain is sending students and professional men to the great American centers of learning in order that the achievements of your country and your people may be better known to us. It is to be hoped that in the future the United States will find it possible to participate with equal enthusiasm in this exchange. Certainly we witnessed a gratifying step in the right direction this summer when a numerous group of American professors and students came to Spain for study and research.

An intensification of our commercial interchange should also be encouraged on a basis of equity and honest cooperation, taking into account the full requirements of our two nations. It should be remembered in this regard that very frequently problems which are of little or no consequence to a country like the United States are absolutely vital to the economy of other countries, such as ours.

3. Those in the United States who attack Spain lay great stress upon the irreconcilable ideologies of the two Governments. To what extent do you find this true?

It is true that Spain does not possess the same political structure as the United States, just as the American people find no reason to adopt the political and social forms prevalent in Great Britain, Switzerland, or France. Each nation should establish for itself that political framework most in keeping with its historical tradition and best calculated to serve the spiritual and material well-being of its people.

If normal relations between nations were to depend on an identity of ideology among those who form the various governments, then nearly every state on the globe, to the detriment of its own best interests, would be compelled to live in absolute and independent isolation.

The Spanish Government professes no other ideology than that which is traditional in a fundamentally Catholic, Christian community, an ideology which has always been at the service of western peace and civilization. What is most important for us all is to safeguard under a system of law and order those rights and civil liberties essential to the dignity of man and to preserve and support the lawful institutions of the state on a basis of mutual respect and recognition of duly established judiciary authority.

No one in all honesty can deny that these concepts prevail today in Spain, whereas in many other nations with which the United States maintains full diplomatic and political relations, flagrant disorder, tyrannical abuses, and deliberate defiance of these principles is the order of the day.

Nothing, for example, could be more hostile or irreconcilable to the political concepts of the American people than the doctrine and behavior of Soviet Russia. Yet in spite of this the United States has not only maintained diplomatic relations with Moscow but even embraced Stalin in a close military alliance for 5 years.

4. Many Americans, otherwise well inclined toward Spain, are confused as to your Government's exact position with respect to—

(a) Civil liberties, including the opportunity of free ballot.

(b) The religious rights of non-Catholic minorities. Would you care to clarify these points?

I would be glad to. But at the outset let us agree that nowhere in the world today can one find that Utopia of absolute liberty of which radical propagandists constantly claim themselves deprived.

There have been two common approaches to the problem of civil liberties. One is a purely formal recognition in principle of all imaginable liberties, undermined in practice, however, by governmental suspension of these guaranties upon the slightest pretext. The other and much more honest solution is an attempt to develop and effectively protect these rights with the idea of attaining a more perfect individual and collective life.

For more than a century in Spain, during the so-called constitutional regime and particularly during the period of the Republic, the first alternative was followed. Under the Republic a constitution was proclaimed which theoretically guaranteed every degree of liberty but which, in actual practice, was throttled by a unilateral governmental suspension of citizens' rights almost throughout its entire existence.

I can definitely assert that essential human liberties are not only recognized in Spain today but are protected by law and by independent courts of justice. I include among these liberties the right of suffrage and freedom of speech, which are permitted in all fields where they do not harm or endanger public peace or the principle of orderly good-fellowship which the Marxists and their accomplices struggle incessantly to subvert.

The Spanish bill of rights—the Fuero de los Espanoles—is a dogmatic and realistic enumeration of these liberties, and a series of progressive laws is gradually being enacted implementing and protecting that declaration.

Moreover, the institution of the referendum to inquire into the opinion of the people on matters of national importance together with the forthcoming communal elections show to what extent the state is subservient to the sound public opinion of the people of Spain.

With reference to religious minorities, any impartial observer can verify that although by far the greatest number of Spanish citizens are Roman Catholics, no one is in any way obliged to profess this religion, and religious tolerance is fully extended to all other sects as long as this does not imply a breach of the public peace or moral order.

5. What comment would you care to make concerning charges repeatedly made in the United States regarding the persecution and imprisonment of honest political opposition to your government?

With regard to the supposed persecution of the self-styled honest opposition on which our political adversaries abroad constantly play, the degree of honesty of those involved can be gaged by the intensity of the Moscow radio programs directed to these individuals for their guidance. The Soviet air waves are daily filled with instigations to armed rebellion, terrorism, sabotage, and other subversive acts. The United States has only too recently exposed the tactics of these professional spy terrorists who cross frontiers under any guise that may suit their criminal and treasonous designs.

6. If Communist aggression continues in Europe do you foresee the necessity of a military alliance of the Western Powers? Would Spain be willing to join such an alliance?

For 12 years our country has fought in the front ranks of the struggle to hurl back Communist aggression. Spain, which has never flinched from her duty in any of the great invasions which swept over Europe, will know how to honor this sacred tradition if called upon again.

But the danger of Communist aggression cannot be wholly countered by military alliances or force of arms alone. A sincere spiritual force must invigorate those who would throw off the monstrous tyranny of materialism which communism thrusts upon us. It is not enough simply to say that we do not want communism. Other and better ideals must inspire the people of the world; nobler aspirations, sentiments and patriotism must arouse the common man everywhere. Despite the tragic fate which has overtaken them, the indomitable people of Poland, Finland, Hungary, and Czechoslovakia give daily proof that the thirst for independence and the zeal for religious freedom can become insurmountable barriers in the path of Soviet brutality.

Although the necessity of preparing a defensive front is generally acknowledged, there is much to be done before what you suggest in your question can come about. The precise ends in view should be clearly and unequivocally defined and guaranties should be established that the intended social, political, and economic order will be

founded on a minimum common basis of civilized Christian values with universal respect for the liberty, personality, and individuality of each nation.

7. To what extent do you feel that the present United States policy in Spain is playing into the hands of the Communists?

Franklin D. Roosevelt, during the critical moments of the recent world war, made a solemn written pledge assuring Spain of the friendship of our two nations. It is indeed regrettable that the United States, so soon after his death, should fail to abide by this promise.

Everything which has worked against this promise has been due to Russian intrigue and influence, either issuing directly from the Kremlin or applied indirectly through Communist-inspired pressure on France and Great Britain.

The importance of Spain in the Soviet scheme for communizing the Continent of Europe is graphically illustrated by the attention which Russia and her unfortunate satellites pay to our country at every international meeting.

However, I am sincerely convinced that the sound judgment of an ever-increasing number of Americans who are motivated by a fervent desire to neutralize the Red terror as a prelude to stable peace and who are already contributing so generously to European reconstruction will be able to influence the public leaders of the United States in their own national interest, to rectify the fundamental errors which have been committed in regard to Spain.

8. Has Soviet Russia, directly or indirectly, indicated a desire to enter into diplomatic relations with Spain?

It should be obvious from the Hitler-Stalin Pact of 1939 that Soviet realism never allows conflicting national ideologies to stand in the way of the immediate objectives of their foreign policy.

However, Spain cannot even be suspected of being receptive to such a suggestion as embodied in your question. Regardless of the humiliations and injustices she has suffered our country will never abandon her struggle against atheistic materialism.

9. Can you reveal the extent and persistency with which Soviet Communists are attempting to penetrate Spain today?

Notwithstanding the overwhelming defeat inflicted by the Spanish armies on the Communist international brigades, communism has never given up its attempts to return to Spain by infiltration. During the last few years the Soviets have exploited to the full their own victorious position in Europe as well as the weakness and indecision of their ex-allies.

Russia does not actually require great numerical strength in order to seize control when the moment is ripe. In Spain, for example, the Communist Party was negligible and yet when the time came it imposed its will on all the other parties including those vastly more powerful socialist movements to which it had previously clung for support.

What is now taking place in many of the countries of Europe, Spain experienced 12 years ago. The whole world has since been able to verify that the leaders of the International Brigades which fought on our soil were mere tools in the hands of that same Communist International which today enslaves whole peoples of Europe.

10. What do you consider to be the greatest single problem facing Spain today?

The increase of the economic welfare of our people.

Fifty years of neglect and misgovernment combined with a rapid increase in population have worked to produce an unbalanced economy in the nation. This condition, of course, was still further aggravated by the repercussions of the last World War.

Our goal, therefore, must be to develop our national resources, intensify our commercial relations with other states, and at the same time gradually implement the forward-looking pattern of social justice which is drawing together all Spaniards in a sincere and fruitful brotherhood.

Our country, little by little, has been achieving these ends virtually alone, through its own efforts and tenacity and supported entirely by its own resources. But it is always ready to extend a hand of welcome to any help or collaboration which other nations might wish to afford us.

The Essence of Democracy

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. CROOK. Mr. Speaker, ever since the inception of our Government, education has been considered the essence of our democracy. It has been the vehicle instrumental in helping us build an enlightened commonwealth. It has fought ignorance and all the evils connected therewith.

It has reenforced the walls and strengthened the superstructure of the greatest democracy in the world today. It has enhanced our understanding, standards of living, health, happiness, inventive ingenuity, and American economy.

At present education is being grossly neglected and, unless we execute remedial action in the near future, we may subsequently be indelibly reminded of our costly neglect. The educational problem has grown to be a national one, and I am certain you will agree with me when I say our educational system of this land is no stronger than its weakest link. Every child is entitled to a reasonably good education.

To further impress you in regard to this grave situation, I include in the Appendix of the RECORD the following statement sent to the Committee on Education and Labor by Robert H. Wyatt, executive secretary, Indiana State Teachers Association, Indianapolis, Ind.:

The Indiana State Teachers Association, with a paid membership of 24,000 teachers, which, incidentally, is 100 percent of the profession, is desirous of calling to the attention of the members of this committee the grave needs existing in the schools of the Nation and would like to have these remarks recorded in the report of these hearings.

Our association has been on record for many years in favor of action by the Federal Government to insure a minimum education to all children of this Nation and on numerous occasions has presented facts to congressional committees on this important subject.

I should like to add at this time that the events of the past 2 years have greatly accentuated the needs as well as the wide discrepancies in educational opportunity. They have brought us as a Nation face to face with a crisis.

We have witnessed a mass exodus of our teachers from the schools to other vocations in order to maintain an acceptable standard of living. Some 350,000 of our 900,000 teachers in addition to normal turn-over have left the profession.

This exodus has been more striking among men than among women and has brought us a condition where 8 of our States have a total teaching force comprised of over 90 percent women and 11 of our States have elementary school teaching forces comprised of more than 97 percent women, as reported by the United States Office of Education. There were exactly the same number of men teachers in the United States in 1900 as there were in 1944, 126,000, while women teachers increased in number from 296,000 to 701,000 or 137 percent. These facts need little interpretation since it is recognized by educators and laymen alike that a much more equal balance between men and women in the profession is necessary for a well-balanced school environment.

In our own State of Indiana we have seen similar conditions prevail though not nearly as serious as those in numerous other States. In our own State, however, we have lost many of our teachers, and as a result have found it necessary to issue some 2,000 special-teaching permits to person not qualified under the law to teach, and have found it necessary to suspend our retirement laws to attract back into the schools some thousand or more persons beyond the retirement age.

At the same time, teaching as a profession has failed to attract the graduates of our high schools, and as a result our enrollments in teacher-training institutions have fallen to a very low point. A recent survey of our 32 teacher-training institutions in Indiana showed that we had available for graduation this year only 166 elementary teachers including some 13 men for a probable demand of at least 1,500 positions.

These facts and many others that have been presented to this committee indicate that substantial action must be taken.

The bill now under consideration by this committee offers a most just and equitable solution to the problem. It is particularly sound in its approach because of its three basic provisions, namely:

1. The automatic formula for distribution of funds to be administered solely by the State;

2. The basic distribution of $5 per child; and

3. The equalization factor which guarantees to every child within this Nation at least a fair education.

Whether one views this problem from humanitarian considerations or from the cold-blooded considerations of national self-preservation, there is no escape from the inexorable logic of a necessary solution. The opposition to this proposal is placed upon philosophical grounds and may be summed up as either:

1. Dangerous from the standpoint of what might develop from Federal control;

2. Not the responsibility of the Federal Government to consider education; or

3. Out of harmony with our beliefs in local self-government.

The first of these objections, that it will lead to Federal control, is disproved by the history of Federal aid to schools.

An impartial study of Federal grants to schools in the past indicates that with few exceptions they have not led to Federal control when provided by Congress on a uniform basis. The land laws of 1785 and 1787 and the Morill Acts during the Civil War granted money from the sale of land equal in area to 25 States the size of Connecticut. This money has been used and controlled entirely by the States. The Morill Acts and acts subsequent thereto have granted millions of dollars to land-grant colleges in the various States amounting at the present time to $233,000 a year of Federal money for each such land-grant college, including our own State University of Purdue. The various vocational education laws, including Smith-

Hughes, George-Deen, and others, have for many years provided Federal money to every high school in Indiana and throughout the country that sought it to the extent at present of $21,000,000 per year.

These laws have not led to Federal control, but on the contrary have proved a tremendous boon to education. They are responsible in a considerable measure for the ability of our schools in the recent emergency to provide the technicians to fight our war. To say that the present movement for Federal aid is the beginning of a movement for Federal control can evidence nothing less than an ignorance of history. The danger of Federal control, if such a danger exists, lies in the establishment of a Federal system of schools with a separate overhead, administration, and personnel. Such a development would be not the result of Federal assistance to public schools but rather the alternative if the individual States cannot find assistance for the existing public-school systems.

I might point to the development during the depression and during the war when our needs became very great and very critical, to the necessity for instant and immediate action in this very direction which caused considerable concern among educators.

It is time that the citizens of this Nation cut through the maze of propaganda in opposition to providing an enlightened citizenship. It is time that we outline clearly the impending doom that will overtake any democracy that will not provide for its own intellectual preservation.

The second objection that is held before the eyes of the general public is that it is not the responsibility of the Federal Government to consider education. This is an assumption that never had any validity, as indicated by the history of Federal grants to schools discussed before. A mere superficial examination of this principle indicates its fallacy. Here in America we have established a government that must depend upon the intelligence of citizens to make right decisions and thus preserve the form of government. How can such a government stand if it permits the boys and girls of the poor areas to grow up in ignorance and thus become the victims of demagogs and dictators?

Our democratic Government in America was founded on the principle that all men are created equal before the law. Education is a prerequisite to the development of human personality, and there can be no equality and no freedom unless a minimum education is offered by all.

The third objection to Federal aid to education, found in the emphasis upon local self-government and the alleged responsibility of each State to provide all of the education of its children, has been distorted to an extent that has obscured certain hard, cold, economic facts.

A striking example is the fact that in 1946 the State of Mississippi had income that produced a total of only twenty-three one-hundredths of 1 percent of Federal revenues, whereas it has eight times as high a percentage of the Nation's children to educate. At the same time, the income of New York State was sufficient to provide some 20 percent of Federal revenues, while only some 8 percent of the Nation's children have to be provided for by that State.

These shocking inequalities grow particularly out of the great variations in natural wealth and in the size of families. To say that the people of the poorer States are responsible for their condition simply ignores economic facts. Are the people of New York responsible for the location of the New York harbor and all of the tremendous wealth-giving power that goes along with it? Are the people of Chicago responsible for the presence of Lake Michigan plus this natural gateway to the West? Are the people of southern Indiana responsible for the barren conditions of their soil? Such a concept is indeed elementary.

These inequalities grow out of the two factors mentioned above and are being accentuated by two existing social conditions, namely, the rise of the corporation as an instrument for owning and managing wealth and in the educational poverty which binds down the people of the poorer areas with a yoke which in their poverty cannot be thrown off. There is no way to counteract the present economic trends toward still greater inequality other than to tax the wealth where it is and educate the children where they are. This practice is, of course, odious to some who now are escaping their social obligations to the children of the whole country, by advocating a doctrine of local self-government that would claim responsibility for the education of only those children who live within a stone's throw of the center of wealth. This ignores the fact that that wealth was created, and will be protected and increased by all the children of all the people.

My home State of Indiana is a proud State. She is not a rich State as compared to all the States of the Union, standing as she does almost at the median as far as income payments of her citizens are concerned. Some of our citizens have been taking the position that Indiana can and will support her own public schools, but a rapidly growing number of those citizens are gradually coming to understand the major developments referred to above, and as a result, are rapidly accepting the premise of Federal assistance to schools. They are coming to see that the tremendous concentration of wealth in fewer and fewer places within the Nation, the widening gap between the ratios of children to be educated in the various sections of the country, and the absolute necessity for a relatively high level of education if we are to preserve democratic government demand a reappraisal of previous conclusions on this subject.

Any American who takes the position that a child deserves only the kind of an education that his local community can afford is ignoring the basic principles of democracy and what is much worse is flirting with the death of free government. At the same time he demonstrates an ignorance of economic facts which have been so ably brought to light by the United States Chamber of Commerce showing the absolute parallel between educational attainment and the economic welfare of the community.

More than one-fourth of the people residing in Indiana have migrated there from other places. It is obvious, therefore, that the economic life of our State as well as other States is determined in considerable measure by the level of education of the citizens of the whole country.

In Indiana we have 2.6 percent of the population of the country while our people will pay some 2¼ percent of the Federal revenues. This means that we are a median State in the matter of ability to educate our own children. There are, however, within the State of Indiana enormous variations in wealth behind each child, ranging all the way from several hundred dollars per child to $15,000 per child, with expenditures for education ranging all the way from $100 per child to $353 per child.

The result of these discrepancies within our State makes it absolutely necessary for the State as a whole to bear the major portion of the cost of education. With the free flow of commerce throughout the Nation, which now prevails, there are many sources of taxation that are completely outside the grasp of State-taxing agencies, as for example, the New York stock transfer tax, some 90 percent of which is collected in New York State. It therefore becomes more and more imperative as our economic life becomes more complex, that a reasonable amount of equalization on a national basis should be practiced. The State as a unit of taxation is slowly but surely finding itself challenged in its race with scientific and industrial progress.

It is a source of great satisfaction to all of us in Indiana that H. R. 4643 incorporates the same two basic principles of distribution, namely, the $5-per-child minimum to all States, and secondly, the amount necessary when added to a given minimum effort on the part of the State to produce a $50 education for each child. H. R. 4643 is an excellent bill. It harmonizes completely with the principles underlying our whole philosophy of Government. It guarantees to each child in this Nation at least a $50-a-year education. When it is considered that the average expenditure for education in the whole country last year was more than three times that amount, it is obvious that anyone who would deprive children of such a pittance would indeed find difficulty in squaring his views with the basic tenets of our Federal Constitution. It matters not whether one bases his argument upon what the child deserves or upon what the Nation must have. There is no escape from the conclusion that somehow or other this Nation should and must provide its children with at least that modest beginning for life.

The future of the public schools in America rests with the citizens of America. We are 1 Nation, not 48. We will continue to live as one Nation or we shall fall into sectional or class groups and destroy ourselves by internal disunity. National unity can be achieved and maintained only if the wealth of the Nation and all its resources bear their fair share of the burden of defending, preserving, and building the future of the Nation. We have passed the day when a man, because of his residence, his wealth, his family, or his creed, shall be condemned to play an inferior part and to remain in a subservient class in this Nation. It cannot be that way in America.

Therefore, I should like to urge this committee to give consideration to this excellent proposal for legislation.

An Open Letter to Labor, National Weekly Newspaper of the Standard Railroad Unions

---

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I enclose herein an open letter to Labor, national weekly newspaper of the standard railroad unions:

YELLING "REDS" WON'T GET US 30-YEAR RETIREMENT—AND THAT'S WHAT WE'RE AFTER

(An open letter to Labor, national weekly newspaper of the standard railroad unions, issued by Chicago committee for progressive railroad labor legislation, Bulletin No. 3—Will Labor publish this letter?)

To the EDITOR OF LABOR:

In the interest of truth and decency and because we firmly believe that railroad workers are justly entitled to 30-year retirement at half pay and at no additional cost to them, the May 20 meeting of the Chicago committee unanimously condemned the smear article in

your issue of May 14 entitled "Fantastic Rail Pension Proposal by 'Reds' and Rail Lobby Look Like Apples Out of Same Barrel."

The meeting branded this so-called exposure for what it really is—an unscrupulous, dishonest, and deliberate attempt to block the efforts of railroad workers to obtain a more adequate pension plan, now long overdue. Your article was clearly an attempt to crucify railroad 30-year retirement at half pay, which has virtually the unanimous support of the 1,200,000 working railroad men all over America.

WOULD PROVIDE BETTER PENSIONS, BETTER JOB SECURITY

It is certainly a sad spectacle to see Labor, paid for out of the dues of the membership, stoop to attack proposed legislation that would provide a decent pension for the older employees in the industry, and at the same time help keep the younger workers on the job, with more prospect of steady employment. That is not the way to defend or advance the interests of the railroad workers.

Lay-offs on the railroads since January 1 exceed 200,000 workers. More lay-offs are coming. What are you doing to make our jobs on the railroads more secure? Why don't you attack the recent lay-offs with their resultant suffering, misery, and privation for the families of unemployed railroad workers, instead of attacking a bill that would help them? Where is a laid-off railroad man going to get a job these days?

Action must be taken to provide better railroad job security and one of the measures to alleviate railroad unemployment is the enactment of the Marcantonio bill, H. R. 2146, into law.

We question the motives of labor attacking this bill to improve the present inadequate Railroad Retirement Act, inasmuch as you don't have a program for better pensions or to meet the widespread lay-offs now taking place on the railroads and stabilize employment in the industry. We believe the Eighty-first Congress would be serving the best interests, not only of the railroad workers, but of the entire Nation, by enactment of H. R. 2146 into law.

WHAT'S FANTASTIC?

Railroad workers are paying their own way for retirement. In fact, they are paying themselves a pension: 50 percent of it out of their pay checks and the other 50 percent out of the profits of the railroad corporations—which the workers have also created.

Present annuities make it impossible for thousands of older employees to retire on the present pension. There are, in fact, ns of thousands of railroad workers 65 years of age and due for their pensions. But because of the totally inadequate annuities, there are less railroad workers retiring today than before the act was passed in 1937. Certainly no rosy prospect for retirement under the present pension set-up.

Here is what Mr. William J. Kennedy, Chairman of the Railroad Retirement Board, had to say when he testified before the subcommittee of the Senate Labor and Public Welfare Committee, in May 1948, in reference to inadequate pensions:

SOME STARTLING FACTS

"It is startling, but nevertheless a fact, that there are now more living persons over 65 who have credits under the Railroad Retirement Act, but who have not applied for annuities, than there were when the 1937 act was adopted. There are approximately 90,000 such persons, over 60,000 of whom are still working on the railroads. This is bound to create dissatisfaction. A retirement system normally is intended to enable the retirement of superannuated employees so as to provide opportunities for promotion of the younger men, otherwise the industry would be burdened with an unduly large number of men in the older years. I submit that the present situation offers very little incentive for older men to retire from service."

Voluntary retirement after 30 years of service, or 60 years of age, at half pay based on the five highest years of earnings, whether or not consecutive, as provided for in the Marcantonio bill, H. R. 2146, will make it possible for railroad workers to acquire pension rights at more adequate annuities and give them a pension they can live on in their old age.

What's fantastic about that? Would that discredit rail pensions, as you imply it would? Is that trying to stir up dissension among railroad workers?

Contrary to what you say, the Chicago committee does not promise better rail pensions at less cost. We don't propose to cut taxation. But to set the record straight: Railroad workers now are paying 6 percent a year, or six times as much as the 1-percent social-security tax paid by workers in other industries. There is strong feeling among railroad workers that in return for such a high tax we are entitled to much higher benefits.

WHERE THE MONEY WILL COME FROM

What we contend is that, if needed to pay these added benefits, the huge surplus of almost $2,000,000,000 in the railroad retirement reserve fund could be tapped for that purpose. This is where the money should come from—from the huge unused reserve built up out of railroaders' pay checks and company profits. If you say that can't be done, that the Railroad Retirement Act won't allow it, then a congressional investigation is certainly needed to inquire into the act's entire system of taxation and operation.

What is this money being used for? Is this vast sum, which is invested in United States Treasury notes, in effect, being used by the Government to finance the Marshall plan, prop up a Greek king, and other cold-war operations of the Wall Street bankers all over the world, instead of being used to pay decent pensions to railroad workers here at home?

HERE ARE THE FIGURES

During the fiscal year of June 30, 1948, the Railroad Retirement Board collected $557,062,782 in retirement taxes. But only $224,871,297, or less than half the tax collections, was paid out in benefits. This can be verified by consulting the Retirement Board's 1948 annual report, pages 97-98.

By the end of June 1948 the Board had accumulated a surplus in the United States Treasury, after all benefits were paid, of $1,382,746,000. More recent estimates are that the Board's surplus now totals close to $1,700,000,000. Figures don't lie. The railroad retirement fund is in the black, and Red-baiting 30-year retirement won't make the fund insolvent.

But if you contend that additional funds are needed, then these funds should be supplied by the railroads themselves out of the fabulous profits which, in 1948, reached close to $1,000,000,000, the highest in railroad history, and should not be taken out of the meager earnings of the railroad workers by adding another 3 percent to pay-check taxation, which you threaten will be needed to pay these increased benefits.

RAIL WORKERS ARE TIRED OF BEING SUCKERS

The facts about the huge surplus accumulated by the Railroad Retirement Board are becoming known to the membership. Because a railroad worker earning $300 a month and paying $216 a year into the Railroad Retirement Fund wants to obtain higher benefits in return for what he pays and favors the Marcantonio 30-year retirement bill in order to get it, that has a definite Communist flavor, and that makes him a sucker, does it?

We're paying for it, so why aren't we entitled to a better pension?

Behind your smoke screen of Red-baiting you hope to divide the railroad workers on the question of 30-year retirement at a time when we need the utmost unity of the members of all 21 organizations in this fight for improved pensions.

But this time it won't work. Railroad workers are tired of being suckers.

ORIGINAL PENSION PLAN WAS RED-BAITED, TOO

Railroad workers have had a lot of experience with your Red-baiting technique that is meant to mislead and confuse, and is aimed, in this instance, at defeating their efforts to gain 30-year retirement at half pay. We haven't forgotten that the same tactics were also used against the membership when it started the original pension movement back in the early 1930's. But the membership won out at that time by sticking together and obtained our present pension law over bitter opposition from the same sources, and the membership, if it sticks together, will win out again this time in its fight for 30-year retirement.

WHO IS SERVING THE RAILROAD LOBBY?

Labor takes the position of opposition to the railroad lobby. Yet, in this instance, in attacking the Marcantonio bill, H. R. 2146, you are in reality doing the job of the railroad lobby.

Your shameful article, which purports to be the result of a one man careful study of the 30-year retirement movement, resorts to one of the lowest tricks in the history of the railroad labor movement. It is the kind of trick that can be expected from the enemies of labor in the pay of the railroad corporations, but not from responsible leaders who profess to serve the interests of the working man.

WHERE IS THE CONNECTION WITH STACK?

Your attempt to lump the Chicago committee with Tom Stack's Railroad Pension Forum is the exact opposite of the truth. If your one man had really investigated, you would have found that the Chicago committee has no connection whatsoever with the Stack outfit. Your man would have ascertained that the Chicago committee is a strictly independent committee with no other connections, and that the strange assortment of men composing it are responsible local lodge officers, committeemen and members of the standard railroad unions who have the respect and confidence of the rank and file railroad workers in the Chicago area. But, obviously, truth and decency was not your intention in printing this article.

Because of the critical job situation in the industry and the need for better pensions, the movement for 30-year retirement at half pay deserves the full cooperation and support of every one—instead of being attacked and opposed. Then we could win this badly-needed improvement in our working conditions.

Labor has an opportunity to bring the true facts concerning the Chicago Committee for Progressive Railroad Labor Legislation and the Marcantonio 30-year retirement bill, to the attention of its readers and correct the misrepresentations made against this movement, by giving this open letter the same prominence in its columns as it did the article referred to above in its May 14 issue.

International Insanity

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. LEMKE. Mr. Speaker, our internationalists—one-worlders—for a profit are still bent upon depleting America of its natural resources. They insist that we commit national suicide, and they are still determined to have our Nation play Santa Claus to the rest of the world—still interested in having us establish and maintain an international WPA.

The Secretary of the Treasury, John W. Snyder, has just left for Great Britain. The British Embassy is no longer sufficient. Neither are special ambassadors necessary. All that Great Britain has to do is to press the button, and our Secretary of the Treasury hops on a plane, at the taxpayers' expense to sell this Nation and future generations further down the river.

In this way the internationalists can nip more dollars out of the taxpayers, as the products, bought with the taxpayers' money, leave our shores, and then nip some more when some of these same products come back to us via gray and black markets. In other words, some of these products later will be sold back to our people at black-market prices.

These internationalists are playing both ends against the middle, but the American people are beginning to wake up not only in the Middle West, but in the East as well as in the West. The one-worlders had better wake up before it is too late. When the public finally discovers what these internationalists have done to them and their Nation, there will be trouble.

Even Prof. Edwin Borchard, of Yale, has finally gotten his eyes open. I shall end my remarks by including an article from the Chicago Sun Tribune, May 29, 1949. This article speaks for itself. My international friends had better read it and take warning:

LEAVE TAKING TO INSANITY

Prof. Edwin Borchard, of Yale, whose distinction as an authority on international law is not challenged among scholars in that field, presents his valedictory editorial in the current issue of the American Journal of International Law. It is on the subject of United States foreign policy. On that subject Mr. Borchard is entirely candid.

"That I am not in sympathy with the aims and procedure adopted by this Government," he writes, "is apparent to all readers. It will be more novel to learn that John Bassett Moore in at least three places of his forthcoming memoirs characterizes the policy of this Government—if it can be called a policy—as 'insane.' That means more for the reader than an ordinary invective. The ordinary reader must know that John Bassett Moore was a man of great moderation who used strong words but rarely. His opinion on a question of international law or policy is rated among the highest in this country. No one was more familiar with our history than he was."

Dr. Borchard, because of his own great reputation, does not need to appeal to another authority in support of his judgment on the course of American foreign policy. He submits this additional testimony, knowing the respect which John Bassett Moore's opinion commanded among internationalists before his death in 1947. As Moore's judgment was until now unknown, it should command attention.

Dr. Borchard, referring to the proposed North Atlantic military pact, states, "The reversal of American policy from nonintervention to a commitment to intervention in foreign quarrels is so violent a departure from the past that it must justify itself by extraordinary benefit to the United States. Who can assert that the policy of intervention has produced laudatory results? The decision of the United States to remain out of the League of Nations has been traversed by Mr. Hull (former Secretary of State) and his successors. The flouting of the founders of this country has brought returns which will strike the average citizen as extraordinary. Even if the plan worked out successfully, a burden of proof rests upon its proponents which cannot be met in a practical world."

What are some of these returns? That the United States is regarded with dissatisfaction on all sides. That taxes occasioned by the last war and for present preparations for military adventure leave us with the uncomfortable consolation that no one knows when a government becomes bankrupt. That a likely prospect is war with Russia, which, even if won by the United States, would not convince the ordinary man that communism is a disappointment and a failure. Military victory might spoil the Russian experiment; it also likely would make the American experiment in free government unworkable.

"It seems unfortunate," says Dr. Borchard, "that the United States no longer has a free hand, which is all that isolationism has ever meant. The eight volumes of Moore's 'Digest of International Law' are a standing refutation that there ever existed isolationism in the Hull sense of that word. To follow up our intervention by a treaty of alliance with five countries or more is to place American intervention in the hands of other people—a policy that hardly can be regarded as useful to us. It must always be remembered by its proponents that the existence of the United States is at issue."

Dr. Borchard asserts that the exchange of epithets concerning "aggression" between the United States and its putative allies on the one hand and Russia on the other means that the status quo is under attack: "All those in favor of the status quo must stick together. All opponents of the status quo must stick together. The result is a world war, which, I have already suggested, this civilization cannot tolerate."

By this definition, the United States becomes, principally, the defender of western imperialism. Yet we already have the object lesson of China, where, in support of the status quo, we backed the wrong horse with three billion of the American taxpayer's dollars. Dr. Borchard feels that the experience should display the value of neutrality in foreign quarrels.

Dr. Borchard indicates that even if the North Atlantic Pact preserves, on paper, the constitutional right of Congress to declare war, the assurance is misleading. "The President," he observes, "has the capacity to write any notes he sees fit, and thus far he has been enabled to go to Congress and ask it to back him. Congress has never refused such a draft." Mr. Roosevelt and Pearl Harbor demonstrate the validity of this judgment.

It is gratifying that, before laying down his editorial pen, Dr. Borchard has registered the objections dictated by morality and good sense to the present course of American foreign policy. If the Atlantic Pact is approved, there will be little point in registering them later. The dictates of reason will then avail the country nothing. It will be subject to whatever storms of emotion and winds of influence that a usurper in the White House or crafty foreign combinations care to generate.

This Is No Time To Cut Air Force Appropriations—Too Much Is Being Spent To Learn How To Win the Next War While the People Want To Prevent It From Starting—Invulnerable Air Power Is Not Alone the Best But Also the Cheapest Way To Secure This Nation, And Insure World Peace

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. GRANT. Mr. Speaker, I have just come upon a front page Associated Press article carried by the Mobile Register, as well as a similar article carried in the New Orleans Times-Picayune.

These articles are based on a statement issued by one of the best known Members of this Congress—a hard-headed, factually sound, tax-conscious businessman—the Honorable FRANK W. BOYKIN of the First District of Alabama.

Nothing that Congressman BOYKIN ever says needs any elaboration. These articles—as can be expected—are taken from one of his down to earth factual statements with respect as to how this Congress can obtain the greatest measure of national security with the least expenditures of the taxpayers' dollars.

That every Member of this House may read these news articles, I am including them in my remarks and insert the same in the RECORD. The articles are as follows:

[From the Mobile (Ala.) Register of June 27, 1949]

BOYKIN IS OPPOSED TO AIR FORCE CUT—APPROPRIATIONS DECREASE SEEN AS FALSE ECONOMY

WASHINGTON—Representative BOYKIN, Democrat of Alabama, said Sunday he was opposed to cutting appropriations for the Air Force.

"I do not feel that now is the time to effect a false economy by cutting the appropriations for our Air Force," he said in a statement.

"More than ever, the American people have come to the realization that air power is really peace power * * * that to maintain strategic air power is not alone the best defense of our Nation, but that it is the most economical way by which to maintain the security of the country as well as the peace of the world."

BOYKIN said the country's air defense was dependent not alone upon "the 70-group air force that was recommended by the President's aviation policy board," but also upon "the maintenance of a stabilized aviation production industry capable of constantly turning out the latest and most effective types of aircraft."

The Alabamian said that Secretary Acheson's return from the Paris foreign ministers' conference "has heightened the feelings of many on Capitol Hill that not alone will the

cold war in Europe be intensified * * * but that we must be prepared for a surprise move of any kind * * * from Moscow."

[From the New Orleans Times-Picayune of June 27, 1949]

(By Edgar Poe)

AIR-POWER VITAL, ASSERTS BOYKIN—SOLON WARNS OF SURPRISE MOVE BY POLITBURO

WASHINGTON, June 26.—Representative FRANK BOYKIN, of Alabama, warned Sunday that the United States "must be prepared for a surprise move of any kind" from the 13 men in the Politburo at Moscow that control Russia.

At the same time he pointed out that Russia already has bombers powerful enough to take off with bomb loads from Russian soil and fly nonstop to any metropolitan area in the United States.

The Congressman from Mobile said that like other Members of Congress, he believed it would be false economy to cut appropriations for the United States Air Force. Asserting that air supremacy is vital, Representative BOYKIN maintained that more than ever, the American people have come to the realization that air power is really peace power.

MOST ECONOMICAL WAY

"To maintain strategic air power is not alone the best defense of our Nation," he said, "but it is the most economical way by which to maintain the security of the country as well as the peace of the world."

Congressman BOYKIN said the return of Dean Acheson, Secretary of State, "has heightened the feelings of many on Capitol Hill that not only will the cold war in Europe be intensified, but we must be prepared for a surprise move of any kind from Moscow." He said that during the Paris Conference each time Secretary Acheson or representatives of Britain and France advanced a proposal Foreign Minister Vishinsky of Russia rushed to the telephone.

"I sometimes feel," said Mr. BOYKIN, "that we are no nearer peace now than we were the day that ended the shooting war. * * * The American people today are not so much concerned with how to win another war, but they are vitally concerned with the means we in Congress are following to keep another war from starting."

DANGER OF BOMBERS

The Alabamian said the people of his district, like the people over the United States, are not apprehensive of any Russian navy landing troops on the shores of this country, but he said, they do recognize the potential power of Russian bombers to come across the Pole through Canada or across the ocean to raise havoc and bomb.

Mr. BOYKIN said the 70-group air force (there are 14 groups currently functioning) recommended by the President's aviation policy board, was based on the findings of the joint congressional aviation policy committee, as well as findings of the Joint Chiefs of Staff. He concluded his statement that there is no greater medium with which to implement our desire for peace in any future conferences than invincible power in the air.

Federal Aid-to-Education Bill

EXTENSION OF REMARKS

OF

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. BARDEN. Mr. Speaker, I am utterly astounded at the statements made by Congressman LESINSKI, of Michigan, present chairman of the House Committee on Labor and Education, especially so when I have been waiting since last Wednesday afternoon for him to designate the date for executive session hearing on the bill reported out by the Subcommittee on Education, of which I was appointed chairman by Mr. LESINSKI. Chairman LESINSKI, prior to the appointment of a subcommittee, discussed the matter with me, indicated his dislike for any Federal aid-to-education bill, and later, without consulting me at all, named the members on the subcommittee without my approval, placed my name as chairman, sent the bills to my office, and instructed me to conduct hearings. He also sent part of his Labor and Education Committee staff to assist in the hearings. I drew H. R. 4643 with the assistance of the House drafting attorneys after conferring with the various agencies and departments of the Government interested. The subcommittee conducted full hearings. We then went into executive sessions and held a number of executive sessions. The committee, which was appointed by Chairman LESINSKI, without any knowledge on my part who they were to be, reported the bill out by a vote of 10 to 3.

The quotation accredited to Mr. LESINSKI that "Representative GRAHAM A. BARDEN, Democrat, of North Carolina, purposely injected bigotry into the Federal aid-to-education bill because he wanted to kill the whole measure" is a false statement and if made by him was known to be such at the time he made it. Mr. LESINSKI well knows that the full committee, of which he is chairman, consisting of 25 members will have to pass on every part and parcel of this bill.

The United Press and Associated Press as well as possibly others carry the following quotations: "His bill is anti-Catholic and anti-Negro. It is my opinion that he drew it up that way purposely because he did not want any aid to education and wanted to kill it." He was "tired of keeping my mouth shut." That BARDEN's bill is so "antireligious that it does not have a chance." "I do not believe we should upset procedure which has been established for many years in many States." "It is unfair to count parochial-school children who will receive none of the benefits." "The Barden bill is most anti-Catholic, but it also discriminates against other groups that maintain parochial schools." That the "bill drips with bigotry as well as racial prejudices and was anti-Negro as well as anti-Catholic." He goes on with other statements of similar nature.

This is most regrettable, and especially so when I am concerned, because I have never been one to engage in reckless statements and name-calling concerning other Members of the House or anyone else. I do not know where Mr. LESINSKI got his inspiration for making such statements, unless it was because some similar statements have been accredited to some high officials of his church. The statement certainly could not have been inspired by or founded on either truth or facts.

The bill as reported out by the committee, which meets with my approval as well as 10 of the 13 members of the committee, briefly consists of the following: A specific appropriation for public schools in the United States, Puerto Rico, and the possessions of the United States. It consists of the same type formula and the formula arrives at approximately the same conclusions when applied as the formula contained in Senate bill 246, with one amendment which was added by the committee that prevents a State from "walking," so to speak, on the Federal Government; that is, any State that reduces its appropriation below the 1949 appropriation in future years will be penalized twice that amount in the Federal funds to be received by that State. The bill provides for payments to the States by the Secretary of the Treasury through the fiscal service of the Treasury Department, and further provides that—

Amounts so paid upon payment become funds of the State to which paid, except for the expressed conditions imposed by section 5. The expenditure of such funds thereafter shall be subject to the laws of such State rather than to the laws of the United States.

The conditions imposed in section 5 are (1) that it shall be used for public elementary and secondary schools within such State; (2) that the current expenditure from all sources for public elementary and secondary schools will average, in each local public-school jurisdiction, $60 or more for each pupil—the Senate bill fixes $55—in average daily attendance, and so forth—which means that the substandard schools in the outlying sections of the State and the Negro schools and other schools, many of which are not now receiving anything akin to this amount, must be brought up to the $60 per pupil standard before the money can be placed in the schools in the cities and towns now already spending that much or more. The bill provides for judicial review in the following language:

Whenever in the judgment of a taxpayer of such State any person has engaged or is about to engage in any acts * * * that will constitute a violation of the first two sentences of this section—

Referring to expenditure to public schools and to bringing up standard to $60 per pupil—

such taxpayer may make application to the appropriate United States district court, to the District Court for the Territory of Alaska * * * for an order enjoining such acts or practices or for an order enforcing compliance with the first two sentences of this section. Upon a showing—

And so forth, the judge may issue the appropriate order. This procedure is basically American and puts the policing of this act in the hands of the citizens of the various States, and if any money is misspent, Mr. LESINSKI or anyone else, could make application to a district judge to stop it. The bill then contains definitions which are to state current expenditures, and so forth. The provision which apparently worries Mr. LESINSKI and some of his folks is as follows:

The term "current expenditures" does not include expenditures for transportation or

for interest, debt service, bonded indebtedness, or capital outlay, and does not include expenditures for health services—

And so forth. This provision is identical with the Senate provision, except the term "bonded indebtedness" was added for clarification and transportation was excluded because upon investigation of the committee it was found that the 48 States had more than 48 different systems and types and methods of transportation, some by contract and otherwise, some with mileage limitations, some States have constitutional prohibitions against transporting any students other than public-school students. The committee, therefore, decided that that was a matter to be left to the States and that we would not enter into that hazy field, and that if the State so desired it could transfer such moneys from its present appropriation covering school teachers' salaries, books, and so forth, to the transfer such moneys from its present appropriation covering school teachers' salaries, books, and so forth, to the transportation fund and replace these funds with money from the Federal grant. It was regarded that that would be simpler than to proceed otherwise. As stated above, I am not very good at a name-calling contest, and do not propose to assume that role, and any person has the right to be either conscientiously opposed to this bill or conscientiously for the bill, but God forbid that it ever reaches the point in America when conscientious differences of opinion is the signal for name-calling, abusive language, questioning of character, and even questioning of one's patriotism. That sounds too much like Czechoslovakia to me and I want no part of it, but I challenge any man to find any evidence supporting those ugly names in the language of the bill. If he will quote the bill accurately and let his comment follow, I will take my chances with the good judgment of the American people.

In order that there might be no misunderstanding as to the terms of the bill as reported by the subcommittee, I am making same a part of this statement.

This is the bill as reported out by the subcommittee:

An act to provide for Federal financial assistance to the States and Territories in helping to establish and maintain an adequate minimum program of education and in attempting to more nearly equalize educational opportunities in public elementary and secondary schools.

Be it enacted, etc., That this act may be cited as the "Public School Assistance Act of 1949".

APPROPRIATIONS AUTHORIZED

SEC. 2. For payments to the States and to Alaska, Hawaii, Puerto Rico, and the Virgin Islands to assist them in making current expenditures for public elementary and secondary schools, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1950, and for each fiscal year thereafter—

(1) $300,000,000 for the States; and

(2) $50,000 for Alaska, $250,000 for Hawaii, $14,000,000 for Puerto Rico, and $200,000 for the Virgin Islands.

AMOUNTS PAYABLE

SEC. 3. (a) To ascertain the amount payable to any State from any appropriation made pursuant to the authorization contained in section 2 (1) of this act—

(1) multiply the number of children of school age in such State by $50;

(2) divide the average of the total annual income payments to individuals in such State by 100;

(3) ascertain the amount, if any, by which the amount ascertained under paragraph (1) exceeds the amount ascertained under paragraph (2);

(4) multiply the number of children of school age in such State by $5.

The preliminary allotment for such State shall be the amount arrived at under paragraph (3), or the amount arrived at under paragraph (4), whichever is larger. The amount payable to such State shall be the amount which bears the same ratio to the amount of such appropriation as the preliminary allotment for such State bears to the sum of the preliminary allotments for all the States: *Provided, however*, That after the fiscal year ending June 30, 1952, in the event that (A) current expenditures for public elementary and secondary schools in such State derived from State and local revenues for the third fiscal year next preceding the year for which the computation is made, are less than (B) such expenditures in such State for the fiscal year ending June 30, 1949, the amount payable to such State shall be reduced by twice the percentage by which the expenditure in (A) is less than the expenditure in (B).

(b) The amount payable to Alaska, Hawaii, Puerto Rico, or the Virgin Islands from any appropriation made pursuant to the authorization contained in section 2 (2) of this act shall be the amount specified therefor in the statute making the appropriation.

PAYMENTS TO STATES

SEC. 4. As soon as practicable after the enactment of any statute appropriating money for the purposes of this act, the Commissioner of Education shall, in the manner provided in section 3, ascertain the amount payable to each State from such appropriation and shall certify such amounts to the Secretary of the Treasury. The Secretary of the Treasury shall thereupon, through the Fiscal Service of the Treasury Department, pay to each State the amount so certified. Amounts so paid shall, upon payment, become funds of the State to which paid. Except for the express conditions imposed by section 5, the expenditure of such funds thereafter shall be subject to the laws of such State rather than to the laws of the United States.

JUDICIAL REVIEW

SEC. 5. Amounts paid to any State under this Act shall be expended only for current expenditures for public elementary and secondary schools within such State. After the fiscal year ending June 30, 1952, amounts paid to any State under this act shall be distributed among the local public-school jurisdictions in the State solely on the basis of the number of pupils in average daily attendance in each such jurisdiction; with the exception that in any fiscal year in which the current expenditures from all sources for public elementary and secondary schools will average, in each local public-school jurisdiction, $60 or more for each pupil in average daily attendance, so much of the amounts paid under this act for such year as are not needed to reach such minimum may be distributed among the local public-school jurisdictions in such proportions as the State may, in its discretion, determine. Whenever in the judgment of a taxpayer of such State any person has engaged, or is about to engage, in any acts or practices which constitute or will constitute a violation of the first two sentences of this section, such taxpayer may make application to the appropriate United States district court, to the District Court for the Territory of Alaska, or to the District Court of the Virgin Islands, as the case may be, for an order enjoining such acts or practices, or for an order enforcing compliance with the first two sentences of this section. Upon a showing that such person has engaged, or is about to engage, in any such acts or practices, a permanent or temporary injunction, restraining order, or other order may be granted.

ANNUAL REPORTS

SEC. 6. Each State shall submit to the Commissioner of Education, on or before the 1st day of November of each year, for transmission to the Congress, (1) a statement of the funds paid to such State under this act during the preceding fiscal year, and the funds paid to such State under this act in previous fiscal years and remaining unexpended at the beginning of such preceding fiscal year; and (2) a detailed statement of all expenditures from such funds during such preceding fiscal year, (3) after the fiscal year ending June 30, 1952, a statement of the distribution of the current expenditure during the next preceding fiscal year from all sources per pupil in average daily attendance in each local public-school jurisdiction in such State and a certification to the effect that such expenditure in each such jurisdiction is not less than $60. On the first day of each regular session of the Congress the Commissioner shall transmit such reports to the Congress, together with such recommendations and comments as in his judgment the Congress should consider.

DEFINITIONS

SEC. 7. For the purposes of this act—

(1) The term "State", except as used in sections 2 and 3, includes Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

(2) The term "current expenditures" does not include expenditures for transportation or for interest, debt service, bonded indebtedness, or capital outlay, and does not include expenditures for health services for the prevention, diagnosis, or treatment of physical or mental defects or conditions.

(3) The term "public elementary and secondary schools" means tax-supported grade schools, and high schools which are under public supervision and control.

(4) The term "number of children of school age in such State" means the number of children from six to seventeen years of age, inclusive, in such State, as determined by the Department of Commerce, for the third calendar year next preceding the year in which ends the fiscal year for which the computation is being made.

(5) The term "average of the total annual income payments to individuals in such State" means the average of the total income payments to individuals in such State, as determined by the Department of Commerce, for the third, fourth, fifth, sixth, and seventh calendar years next preceding the year in which ends the fiscal year for which the computation is made.

The following editorial appeared in the Durham Herald, of Durham, N. C., on June 28, 1949:

Two developments on Representative BARDEN'S bill prohibiting the use of Federal funds for any schools other than public are keeping it before the public.

The Congressman has announced that he will press for consideration of the bill by the full Education and Labor Committee of the House.

Archbishop McIntyre of Los Angeles has followed Cardinal Spellman in denouncing the bill.

Archbishop McIntyre calls it a flagrant example of Soviet influence—even in our Congress.

Was Roger Williams under Soviet influence when he secured for the colony of Rhode Island a charter which eliminated an established church and provided for freedom of conscience?

Was Lord Baltimore under Soviet influence when he granted to Christians in the colony of Maryland freedom of worship?

Was Thomas Jefferson under Soviet influence when he wrote the statute of religious freedom for Virginia which specifically frees the inhabitants of that State from compulsory—or tax support of any religious organization?

Were the Members of the First Congress and the legislatures of the 13 States under Soviet influence when they adopted the first amendment to the Constitution which guarantees freedom of religion?

Separation of church and state is an accepted principle of the American way of life. Practically every religious denomination has established schools both on the secondary and the collegiate level, but they have depended upon the sponsoring group and the friends of the school for voluntary support.

It is unfortunate that the leaders of one of the religious denominations have resorted to name calling in their opposition to this bill. Cardinal Spellman, as was pointed out in this page last Tuesday, distorted the facts by calling the bill un-American. The Barden bill cannot in any fairness be considered discriminatory. Rather, it seeks to prevent the public money from being spent to aid in the propagation of any religious doctrine or to subsidize any private school, whether owned by an individual, a public foundation, or a religious sect.

The private schools have no claim for support from the Public Treasury. Public schools are provided, and those who are not satisfied with them to the extent that they wish to set up another system, which may even be viewed as competitive, should be willing to foot the bill. Most of the supporters of private schools are willing to do so.

The Barden Bill Must Be Rejected

EXTENSION OF REMARKS
OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. BUCKLEY of New York. Mr. Speaker, a reading of the front pages of our daily newspapers reports that the Communist rulers of Czechoslovakia have silenced the Catholic clergy. In that country every effort has been made and is being made to destroy the Catholic church, its press, the taking over of church properties, the control and suppression of its schools and to deny to the individuals the right to exercise free religious freedom. In other words, we again have the familiar example of the Communists continuing their attacks on religion in conformity with their actions in other countries. They are trying to destroy men's souls and to violate the human conscience. This assault upon the Catholic church is an attack upon every church and the rights of every individual.

I have, at all times, spoken out against oppression, whether it was directed against the Jew, the Protestant, or the Catholic. I have fought bigotry, whether it was exercised against those who lived abroad or those at home. My record in that respect has been a consistent one. I have always maintained and still maintain that those who preach hatred against any particular denomination are preaching bigotry and hatred against all denominations.

We know that the teachings of God and religious freedom have no place in a communistic regime. Where religion is strong, communism is weak. Where communism is strong, religion is weak.

Extermination of religion is now a communistic goal in Czechoslovakia. This follows the pattern inaugurated in Russia and pursued in the satellite states. The persecution of Archbishop Stepinac in Yugoslavia and the similar conduct pursued by the communists in Hungary in the case of Cardinal Mindszenty is now being followed with respect to Archbishop Joseph Beran in Czechoslovakia.

Religion is for all purposes dead in Russia, Hungary, Czechoslovakia, Yugoslavia, Rumania, and the Baltic States. Priests have been arrested, executed, imprisoned, deported or disappeared. The religious rights of the individuals in these countries have been destroyed. Prayer books have been censored. Church buildings have been seized and every effort made to destroy the Catholic Church. Attacks have been made on the Protestant Church and these people have likewise been persecuted because they wished to follow the dictates of their conscience and their religious beliefs. If their persecution has not been so severe it is only because the Catholics outnumber the Protestants and Jews in these countries.

On May 11, 1949, there was introduced in the House of Representative by Representative BARDEN, bill No. H. R. 4643, the so-called Federal aid to education bill. Previously there had been introduced in the Senate, bill No. S. 246, which bill was introduced for the same purpose. The Senate bill passed the Senate and differs from the House bill in that Federal aid funds are not confined to public schools, but provide help for all needy children, including those who attend private and sectarian schools. I feel that the Senate bill is a fair one and cannot conceive why anyone can hold that nonpublic school pupils should not receive the health benefits, and transportation services provided for children attending our public schools.

The bill's purpose is to extend educational opportunity to the youth of the Nation. It is a known fact that a great number of our children do not have an opportunity to obtain a required minimum of education. America is a wealthy nation. We have extended help and aid to other nations besides our own. It disburses funds for many other uses and purposes and to help those States which are not financially able to spend sufficient moneys for their youth is a commendable one. For if a child does not receive effective schooling, he is handicapped in later life when seeking employment and other means of earning a livelihood. For that reason, this bill, if applied to all its youth, could not be criticized.

The Committee on Labor and Public Welfare of the Senate in its report on S. 246 on page 7 stated "The most precious asset of this Nation, or any nation, is its children. To conserve and develop this human resource is the best insurance we can have for the future greatness and security of our Nation. Not only is education essential to economic welfare, but it is the major defense of liberty against totalitarianism."

It will be noted that the committee felt that education was the major defense of liberty against totalitarianism. For this reason the committee felt that an appropriation of $300,000,000 per year for such a purpose was an excellent one.

The Barden bill counts in all children in a State in the fixing of the amount of moneys to be appropriated to it. However, it counts out all children attending parochial schools when it comes to apportioning the benefits thereof.

The courts have upheld the practices of the States in providing children in sectarian schools, through public taxation, certain services auxiliary to free education, such as free textbooks and transportation. To deny to children who attend private and sectarian schools medical or dental examinations, nursing supervision or transportation of youngsters to and from school or the providing of nonreligious text books is certainly discriminatory, oppressive, and not in accordance with our beliefs in democracy.

Several years ago when I was a member of the Committee on Education, I opposed a bill similar to the Barden bill, because it was discriminatory and I am proud of the fact that my vote was the decisive one in killing that bill in the committee.

On Sunday, June 19, 1949, His Eminence Francis Cardinal Spellman delivered a powerful address at Fordham University, in my congressional district, expressing his views in connection with the Barden bill. I believe that Cardinal Spellman, one of the leading American citizens of this country, very well set forth the reasons why the Barden bill should be defeated. The Cardinal has always fought bigotry wherever it existed and against whomsoever it has been directed. He is respected by millions of Americans of every race, creed, and denomination because he defends truth, justice, and religious liberty for all people.

Federal aid for needy States and needy children is necessary. Under our American form of government, this should apply for all needy children, whether they be Jewish, Catholic, or Protestant; whether they be Negro or white. Those of us who believe in sending our children to the public schools have that right and those of us who wish to send our children to the Catholic, Protestant, or Jewish parochial schools have an equal right to do so. That is what makes America great and as long as we believe and defend those rights, we will continue to be a great nation.

The Catholics who support their parochial schools save to the taxpayers millions of dollars. To deny their children the right to transportation, health services, and nonreligious textbooks because they attend a parochial school instead of a public school is indecent and un-American.

If the Barden bill should become law, it would autocratically disfranchise millions of American citizens of their constitutional rights. The issue is a very important one. Here in America we all live peacefully together and we have gone a great way to break down bigotry and discrimination and it is my hope that this will continue to the time when these words will not be part of our dictionary. If we permit the Barden bill to become law, then we will take a step backward and give hope and courage to those who wish to see strife and hatred prevail in our country.

True liberals are opposed to the Barden bill. When the Senate had the opportunity of voting on an amendment which confined the use of the funds to the public schools, I am happy to say that it was overwhelmingly rejected by a vote of 71 to 3.

I was shocked to receive a letter from the Liberal Party of the State of New York dated June 23, 1949, in which, amongst other things, it presented to me for my attention the viewpoint of the Liberal Party with regard to Senate bill 246. The letter was signed by the chairman of the national legislative committee and the executive director of the Liberal Party, and stated that they favored S. 246 but that it unfortunately failed to prohibit the allocation of Federal funds to private sectarian schools. It then went on to say that "the Liberal Party recommends that the House bring to conference a bill paralleling S. 246 with the added provision that Federal aid funds be confined to free nonsectarian schools."

What a dastardly thing. Here they call themselves the Liberal Party. That is strictly a misleading name. I am surprised that they do not aline themselves with the Communists and Fascists in this country. It is typical of the actions of the Ku Klux Klan and not that of a party which titles itself "Liberal."

I have, in the past, received the endorsement of this political party. However, I do not seek and will never take the endorsement of this political party again. It should be condemned by all righteous thinking people. Needless to say the viewpoint of the Liberal Party is shared by the American Labor Party. However, that is not so surprising.

This is a time when everyone should take a stand. When I stand in opposition to this bill, it is not because I am a Catholic. It is because I am an American who believes that America still stands as a beacon light to the rest of the world, that liberty is still our most priceless possession.

I shall fight the Barden bill and I will use every means to defeat it. I am confident that it shall not see the light of day.

Text of Archbishop Beran's Pastoral Letter

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of Archbishop Beran's pastoral letter read in Czech churches, as carried in the Washington Post of June 27, 1949:

DEAR FAITHFUL: In these overwhelmingly serious times of our religious and national life we turn to you with this letter of the right-teaching church.

Love for nation and for the people of Czechoslovakia leads us to speak in these decisive days, in which we have become witnesses to attacks on the unity and leadership of the Catholic Church here. To know where the truth and right and your place in the church and nation lie, hear the voice of your pastors who, being conscious of responsibility before God and the conscience of the whole world, after deliberate consideration cannot remain quiet.

We have all been witnesses lately to a widely based action the aim of which is to force Czechoslovak bishops to come to an agreement with the state. As in our public, we also are of the opinion that relations between church and state are discordant and painful. This situation is surely unnatural, for both societies should complement each other and the present situation does not contribute to general public peace nor the internal peace of the faithful.

The worst of it is that many faithful Catholics suffer spiritually, as they sincerely love both their church and their state and are filled with fears for their future.

This causes us bishops, who are ordained by God as the guardians of the commandments of Christ and are responsible before Him for the saving of our souls, no little pain.

It pains us all the more that all responsibility for the failure in negotiations is put by people, who are not sufficiently informed, upon us to whom your eternal and temporal welfare is the greatest treasure for which we are ready to sacrifice everything.

We understand your natural right—that you wished to be informed truthfully, also from our side. Having no other possibility of presenting our case, we are endeavoring to do so, as our conscience bids us, by this pastoral letter, imploring God that the voice of the pastors reaches your hearing and that it be heard with credence and is rightly comprehended.

We also, the guardians of the truths and of the Lord, consider a sincere and just agreement with the state to be of no small importance. We cannot be indifferent as to whether our circumstances be favorable to the development of the Christian life or not. For, after all, the hindrances which today stand in the way of Christian thought in civilization and in everyday practical life are known.

We know well how many rights you have been deprived of, just as you are acquainted with the adversities which the church has had to go through lately.

We have always been aware of the burden of responsibility for the saving of your souls before God. We have always endeavored, and we still endeavor today, even if only with small hopes of success, to defend and insure the sacred rights of you Christians as free citizens of the state, as is naturally demanded by God's order.

To these humanitarian and commonly recognized rights of man belong not only the freedom of privately held religious convictions and the freedom to execute religious rites, but also the free realization of the principles of this faith as the norm of life of individuals and society—and this without fear of losing personal freedom, civic equality, and the endangering of the rights of existence.

For the realization and insuring of this religious freedom for Catholics it is the church's conception, by the ordinance of God, that these further conditions are necessary prerequisites: The recognition of the authority of the Holy Father as the highest visible head of the church and recognition and respect for the authority of his bishops.

The nonrecognition of this fundamental principle means that the Catholic Church as Christ wanted it is not recognized and that every action taken apart and against the will of the bishops, connected with the Roman Pope, disturbs the church's basic structure, disrupts its unity, and necessarily leads to its destruction.

Further basic conditions for the recognition of the rights and freedom of the church stemming from natural law are:

1. Respect for the sovereign right of parents over the education of their children. That means education in school and also outside school.

2. Recognition of the family as a sacred tie and the rights and duties stemming from this.

3. The right of the faithful to assembly in free congregations and organizations.

To these belong also the conditions of free religious life, which otherwise would be unattainable for the Communist or the individual. These conditions include the necessary number of church schools, educational and social and charitable institutions, cultural and philanthropic institutions, sufficient facilities for printing periodicals and books and free and unlimited access to all possibilities of social and cultural life.

Finally, financial means and material security for these institutions and establishments is also necessary, as without them it would not be possible for the church successfully to develop this activity for the welfare of our people and to save church buildings from deterioration and destruction.

All this we once had to the necessary extent and all this we have been deprived of lately.

In difficult circumstances, with many hardships, the church had built—with extreme sacrifices from your will and your means, for you and your children—social and educational institutions, schools, seminars, its presses, and an organization of societies. All these formed conditions for the spiritual life.

And what has become of all this in this short time? We need not put before you, dear Catholics, special proofs of this. Look around you. Follow what is happening and you will easily come to the conclusion that the Catholic Church in Czechoslovakia has received a very bitter reward for its hundreds of years of service to the nation, for its cultural and charitable activities, for its loyalty to the people, for its fearlessness and suffering during the (German) occupation.

It stands here today—robbed, deprived of the majority of its freedoms and rights, dishonored, soiled, persecuted secretly and openly.

Only observe how the church is faring in Czechoslovakia at the present time. A concerted campaign is waged against it on the radio and in public proclamations, especially against the Holy Father and the bishops, who are its God-ordained heads. The sacred character of the family and the sovereign

rights of parents to the education of their children are willfully undermined.

All the ecclesiastical press, with a few completely insignificant exceptions, has been stopped. Even the official gazettes of the bishops, which informed priests also of important state directives, have been stopped. Instead, the Ministry of Education, Science and Art has published the so-called Gazette of the Catholic Clergy, which is not church endorsed and is edited against the will of the hierarchy. Although this so-called gazette is intended for Catholic priests, it is directed by non-Catholics in an antichurch spirit and attempts to govern directly by state organs affairs which are wholly ecclesiastical and thereby attempts to exclude the bishops from practicing their rights.

Every Catholic book which is to be published—even prayer books—is subjected to preliminary state censorship.

State plenipotentiaries are planted in Catholic publishing houses. An interdiction of assembly and schooling of Catholics outside churches was edited under the threat of prosecution.

Even the fate of church buildings, as was demonstrated by the forced inventory of ritual objects and sacred vessels, is, it seems, insecure.

The church is deprived of the last remnants of its property. Not even the minimum laid down by the law is respected.

In many cases the paying of the state stipend of priests was stopped.

Church schools practically no longer exist and the fate of the few remaining is painfully insecure, which causes suffering to pupils and parents. Pressure was even brought to bear upon the parents to take their children out of church schools, and this under a direct threat of consequences.

Teachers of religion are tested ideologically and are given directions on how to teach religion in the materialistic spirit.

All religious education of youth in societies, eucharistic circles, et cetera, was in many places forbidden under punitive threats and is consistently made impossible by the fact that the state has taken a monopoly on materialist school and extracurricular education, so that education in the Christian spirit is made impossible and considered as practically illegal.

In this respect, we have come so far that even in theological schools lectures of so-called social science were instituted whose aim it is to bring about that even theological students should be educated in the materialistic ideology.

An inventory of all church property, even church collections, was ordered, quite illegally. With direct inspection, such inventories were carried out in many cases; they were anticonstitutional searches.

Consistent attempts are made to deprive church buildings of their religious missions, especially by the taking over of monasteries and institutions for the education of clerical and monastic youth.

Especially in Slovakia some monastic houses were forcibly cleared out and the priests taken away in trucks.

The Ministry of Interior gave instructions to the regional command of the state security (police) how to deal with the church and its members.

In some places even the practicing of religious rites has already been forbidden. In many places religious processions were made impossible or were misused for irreligious purposes.

The conference of bishops in Dolni Smokovec, which was to have taken a stand on the demands of the Government, was broken up when listening devices were discovered in the conference room. The Ministry of Interior was asked to make an inquiry but up to now no satisfactory answer has been forthcoming.

The latest conference of bishops in Prague was disturbed by security organs.

At the same time the Prague consistory was occupied by state officers and the archbishop's residence put under secret police surveillance, so that the freedom of the chairman of the bishops' conference was totally restricted. These restrictions represent extreme breaches of constitutional freedoms and many of the still existent laws. On the whole it can be said that outside the church any religious activity is impossible and many fear to visit churches lest they be accused of reaction and fear the loss of their means of existence.

It is a certainty that by these measures conditions are created which are not only in defiance of the rights of God but are also opposed to the natural and commonly recognized rights of man.

Judge for yourselves, dear Catholics, after ascertaining these facts whether the State was in any way harmed by the church or whether just the opposite is true.

After all, the whole affair of an agreement between church and state would actually have been a rather simple matter if it had not been for the fact that the state first harmed the church and deprives it of the majority of its rights.

All this organized calling for an agreement would have been quite superfluous if Government personages, on their own initiative, had not interfered before the start of negotiations in church freedoms and rights and formed, by this one-sided action, a painful situation in which the church was deprived beforehand of that which was supposed to have been the subject of the agreement.

So in reality the church was deprived of all possibilities of successful negotiations and given this choice: Submission to dictatorship or persecution.

In spite of all these painful realities the Czechoslovak episcopate was always willing to negotiate and really did negotiate through its delegated representatives. It made extreme sacrifices to attain, at last, in the most basic things, some regulation of affairs and to ensure its faithful at last the most conditions of religious life.

It (the episcopate) always found out, to its great pain, that in spite of all its good will this could not be done, except for the price of fundamental concessions and the price of misusing the church against its Godly mission.

At the same time, during the negotiations, the church was frequently treated in a hostile way which consistently undermined the confidence of the bishops in the success of the negotiations.

Ask yourselves this question, dear Catholics:

Could we bishops be satisfied with all this and accept every demand which is in defiance of the laws of God and humanity?

Could we approve, before our faithful people and before the whole world, every development, even if it was not in accordance with the spirit of the teachings of Jesus Christ?

Indeed, with gladness, we shall render under Caesar the things which are Caesar's but would not be possible to sacrifice to him that which is God's because it behooves us better to obey God than man.

This negative attitude of the state toward the church cannot even be justified by the allegation that the bishops refused a clear statement of loyalty to the republic, because such statements are not in accordance with the truth.

We declare that we were always loyal to the republic. We have stressed this many times and it can be deduced from the oath we undertook when we assumed office. A loyal attitude toward the republic is, therefore, a matter of course for us and we are sure to remain faithful to our oath. Therefore we have always demanded from our clergy that they refrain from any political activity, especially from any illegal and antistate activity.

But we cannot remain quiet when the rights of the holy church are violated and when political power is being misused against it.

If, therefore, we defend, as is our duty, the rights of the holy church we in no way want to harm the interest of the state.

On the contrary we do it in the interest of the state itself and for the welfare of our dear Nation.

Most painful is the fact that we have no way of defending ourselves against these gross and untrue attacks. All manner of attempts are being made to force us out of our pastoral offices and the conduct of the church is being taken over by unbelieving people, people who have broken away from the church and those who have no right, no competence, and no church missions.

Nothing else remains for us but to waste our energy and time with unceasing protests and efforts against the confiscation of church institutions, schools, and monasteries, against trampling of all church rights and religious freedoms—protests which nobody answers, which nobody takes any notice of, and which have no practical results.

In the present affair it is, therefore, not a matter, as we have stated before, of a lack of positive attitude of the church toward the state. It is not a matter of reaction, because the form of government and regulation of social life is not the main subject of our interest.

We must, however, be interested whether this form is favorable to the development of the religious life and whether it is possible to bring such a social reconstruction into harmony with the teachings of Jesus Christ.

It is not even a matter of inclination toward capitalism, for we know that not even a liberal-capitalistic society corresponds with all the ideals of Christianity, and capitalism has several times been condemned by the church.

You, yourselves, know best that your present bishops are not capitalists. They certainly would be better off today if they were willing to choose the path of Judas.

We wish our working people all the improvements in social standards.

We only wish that their standard of life improve and that, together with the growth of their material welfare, favorable conditions be created for the perfecting of moral and religious life.

The seriousness of the times makes us act in absolute loyalty to principles and consistency in negotiating. Indeed, this is a matter of a consistent, well-planned, and steadily applied persecution of the Catholic Church in Czechoslovakia.

Not a whit of this can be changed by the resolution passed, on a plan prepared beforehand, at the meeting of the so-called (government-sponsored) Catholic Action in the Municipal Palace in Prague on June 10, 1949, even if it promised loyalty to the holy church, recognition of the Holy Father as its visible head, and submission to him in matters of faith, morals, and church discipline, and recognition of the authority of the bishops in matters of faith and morals.

This meeting, secretly prepared, was convened without the knowledge of and against the will of the bishops. Its aim was clear: To hinder still further the authority and influence of the bishops.

After all, the majority of delegates at this conference were paid delegates—appointed by action committees. They were delegates who often did not know what it was all about and who did not suspect that their signatures on the list of those present would be misused for the so-called Catholic Action.

Because of this, the bench of bishops at its conference of June 15, 1949, was forced to declare that the so-called Catholic Action

is not Catholic but a separatist movement and that participation and cooperation with it must be prosecuted with ecclesiastical punishment. The inspirators have, ipso facto, been excommunicated. That is, they were expelled from the church according to canon 2334, paragraph two, and canon 2231, paragraph two, according to the Ecclesiastical Juridical Code.

For the whole action is aimed against the unity of the church and church discipline.

By methods similar to that demonstrated above, many clergymen were misrepresented as voicing assent with the so-called Catholic Action. They knew nothing about its mission and their signatures were enticed under quite disguised slogans. They were asked if they favored a just agreement, if they were for the maintenance of church rights, for the teaching of religion in schools, the recognition of the holy father as visible head of the church. These priests did not want to undertake anything against the will of the church dignitaries. On the contrary, they wanted to support their efforts for the realization of such an agreement which would be in accord with the interests of the church, in the sense of church directives.

These priests consequently gave their signatures under conditions of deceit and pressure. They did not act either consciously or of their own free will and therefore maintained, of course, their loyalty to the holy church and faithfulness to the bishops, as many of them have already privately and publicly stated.

The names of many priests were published without their knowledge, even against their will and protests.

The Catholic bishops therefore call to everyone's attention that every attempt at the founding of diocese, regional, district, or so-called action committees is forbidden by the church and that clergymen and laymen who personally participate in the founding of such actions or enter their committees or accept functions in them will thereby be excommunicated from the Catholic Church.

Also, the so-called Catholic newspaper, published by the Committee of Catholic Action, of course lacks the indorsement of the bishops and cannot be considered as Catholic. Therefore, the reading and keeping and distribution of this newspaper is forbidden by the church.

The clergy also must be aware that directives published by consistories under government control are not only ecclesiastically not binding but that also the clergy is bound by its conscience to observe only those directives and repeals which they are safely convinced were published by their respective dignitaries.

As the responsible representatives of the Catholic Church of the Czechoslovak Republic we, of course, feel heavy responsibility for the development of church affairs in our country and we are not deluding ourselves of the fact that the decisive moment of great tests has come for our dear faithful and for our loyal clergy.

If it were true, as has been claimed, that the main aim of all this which has now been organized against the Czechoslovak Catholic Church were to make the bishops come to a just agreement between church and state, then we declare that this whole campaign is superfluous.

Czechoslovak Catholic dignitaries had, and have, the greatest interest in reaching a sincere and just agreement between church and state and will not cease to pray for this end.

But they desire that a real agreement be reached on the basis of which the church could develop all its rich activity and put to use all its moral influence in favor of the state and its people. They want Catholics to be able to use their philosophy and to be able to direct their lives according to it, for religion should govern all acts of men.

But they do not want the church to become a mere servant of the state—in other words, the bearer of a different philosophy under a cloak of Christian religion.

They wish for an agreement, not a dictate.

In this spirit the Czechoslovak dignitaries at the bishops' conference of June 7, 1949, in Olomouc, laid down the basic conditions on which agreement would be possible and which should be accepted and guaranteed by the government beforehand. These conditions are:

1. The Christian world viewpoint (philosophy) will be recognized and respected in public life and education, in word and deed.

2. The government recognizes the spiritual authority of the Roman Pope as the supreme head of the church in matters religious and ecclesiastical, who according to valid authority does not touch the sovereignty of the state but is a natural consequence of recognized basic human rights, and especially the freedom of religion.

3. Before the beginning of negotiations, all measures restricting and threatening religious freedom of Catholics in the Czechoslovak Republic, especially the religious freedom and education of youth, be repealed.

In addition to this:

(a) The Gazette of Catholic Clergy, published by the Ministry of Education, Arts and Sciences, will be abolished immediately, and that the publishing of all official dignitaries gazettes will be permitted.

(b) The decree of the Ministry of Education, Arts, and Sciences of May 23, 1949, about vacant church offices and accompanying stipends, as well as the decree of the Ministry of Interior of May 5, 1949, restricting the freedom of assembly and congregation, and also the decree for regional and district command of the state security police on the procedure against the Catholic Church, must be revoked.

(c) All restrictions involving the religious rights must be canceled.

To these conditions a further demand is added—that the government will not support the newly formed Catholic Action and will not grant it state sponsorship. To demand the fulfillment of these conditions we feel commanded by our arch-pastoral responsibility before God and before you and before the conscience of the nation, because without their fulfillment the church would no more be the church of Christ and would not be able to fulfill its spiritual mission; that is, to teach, to sanctify, and to direct.

We are certain, dear brothers and sisters in Christ, that you approve of this, our standpoint and watchfulness. We would have had to feel ashamed before you had we acted otherwise, had we not acted like pastors who are willing in the interest of your Saviour to give even their lives for their sheep, but as hired pastors who forsake their flock treacherously in time of danger.

Help us and strengthen us with prayers, your truly Christian life, and your unconditional loyalty to the good Mother Church so that with the help of the Holy Spirit, a negotiable path will be found for the regulation of church-state relations.

But if such an agreement could not be attained because it was decided to begin a struggle of extermination by all means against the church of Christ and misuse it in a cloaked way for ungodly purposes, then the hour of trial has come for the Catholics in Czechoslovakia.

The moment has come in which it is necessary to realize the words of the Apostle Peter: "Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you.

"But rejoice, inasmuch as we are partakers of Christ's sufferings, that, when His glory shall be revealed, ye may be glad also with exceding joy."

Every test is of God's making and will surely contribute to the salvation of our souls. It is an opportunity to prove our faithfulness to Christ, to make amends for our trespasses, and to learn to be true and consistent Catholics.

The nation looks upon you, how you will fare in this historic moment of trial. The Catholics of the whole world are linked with you.

Remain loyal to your bishops who suffer with you and do not waiver even if their voice does not reach you.

The church is indestructible and to suffer for Christ is the greatest glory.

Do not let yourself be misled by false prophets. Beware of wild wolves in sheep's clothing. Don't let yourselves be provoked to immediate actions. Be on your guard and pray.

All ye saints of God who were imprisoned and tortured for Christ, plead for us the Sacred Heart, pierced for our sins on the grounds of a false sentence, be merciful to us.

We bless you all, especially those who suffer or will suffer adversities for the sake of justice. In the name of the Father, the Son, and the Holy Spirit. Amen.

Josef (Beran), Archbishop of Prague; Josef Charles, Archbishop of Olomouc; Jan, Bishop of Spisska Nova Ves; Josef, Titular Bishop of Thagora, Apostolic Administrator in Kosice; Paul, Bishop of Presov; Maurice, Bishop of Hradec Kralove; Andrew, Bishop of Banska Bystrica; Charles, Bishop of Brno; Josef, Bishop of Ceske Bludejovice; Stefen, Bishop of Litomerice; Edvard, Titular Bishop of Velicia, Apostolic Administrator of Nitra; Frantisek Onderek, Apostolic Administrator of the Czech portion of Wroclaw Archdiocese; Ambrosius Lazik, Apostolic Administrator of Trnava; Robert Pobozny, Capitular Vicar of Roznava.

PRAGUE, *June 15, 1949.*

This pastoral letter is to be read in all parish churches and chapels at public services on Sunday, June 26, 1949. Let the reverend priests not be intimidated from reading this letter by any threats in these so difficult and decisive times. They are bound by their consciences to inform their faithful of the real state of affairs. Willful and intentional neglect of this duty will be prosecuted with ecclesiastical punishment.

Congress Should Pass the Keefe Resolution

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. PHILLIPS of California. Mr. Speaker, during the argument over butter and oleomargarine, several Members of this House tried to point out that there was a great deal more to the discussion than the matter of color, or the price the housewife paid for a spread.

In particular, the gentleman from Wisconsin [Mr. KEEFE] has been trying to tell us for a long time that the increasing use of chemical substitutes, in place of the natural oils, and in place of dairy products, is producing a situation to which the attention of this Congress should very well be given. He has introduced a resolution, calling for the appointment of a special committee to investigate the problem, and I, for one, am

very much in favor of the passage of that resolution and of the appointment of the committee, so that the investigation may begin. There is actually no time to lose.

If we needed any evidence of the seriousness of the situation, we could find it in a letter, addressed to the Fresno Bee, and printed in that paper on Sunday, June 12, 1949.

Under permission to extend my remarks in the Appendix of the RECORD, I include this letter, Mr. Speaker, so that every Member of the House may have the opportunity to read it:

PHYSICIAN'S VIEWPOINT

EDITOR OF THE BEE:

SIR: Margarine is white. Butter is yellow. Some butter is yellower than other butter. White always is white—there are no shades of white.

Yellow margarine is a wolf in sheep's clothing, imitating butter. Beware of a product which thrives on false pretenses. Keep margarine white and butter yellow, and no signs need to be put up. Teach people the truth. Tell them there is no substitute for butter.

When this Nation or any other nation ceases to use butter and adopts a substitute, then will polio strike in all of its many and varied forms and the warped bodies and shriveled legs of bed-ridden children will be the answer to several letters recently printed in the Bee.

I have no ax to grind.

A. F. ST. SURE, M. D.

TULARE.

Address of Paul E. Fitzpatrick

EXTENSION OF REMARKS

OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Paul E. Fitzpatrick, chairman of the Democratic State committee, at the annual dinner of the Women's Democratic Club of Jefferson County, at Pine Lodge, Watertown, N. Y., Tuesday evening, June 21, 1949:

It is a pleasure to be here with you today in the heart of this great dairyland of our Nation.

I am always happy to visit your north country with its magnificent farmlands. It recalls to my mind the mighty job done by the farmers of America to feed our people during the war years and in the eventful years that have followed. The dairy farmers were in the front ranks of the food producers in the crisis years of war, and I am certain the American people will never forget the everlasting debt of gratitude owed them.

My visit today is somewhat saddened, however, by the knowledge that you have recently suffered a great and tragic loss in the death of that fine and able newspaper editor, Harold B. Johnson. His loss will be felt in every section of this State. His unbiased reporting of the news and his clear-cut, discerning editorials were always a beacon in the north country for us in the remainder of the State.

While it is always a grand experience to journey into Jefferson County and renew old acquaintanceships and visit old friends, my visit here today is primarily for the purpose of publicly expressing to you women of Jefferson County my thanks and that of the Democratic State committee for a job well done.

Ever since I took over the State chairmanship in 1944, I have maintained that the women of the State are the backbone of the Democratic Party in the State. We have sought to bring more and more women into the top councils of the party. We have sought to bring more and more women into leadership in our national administration. We have sought to give women a stronger voice in the destiny of our party.

The enthusiasm with which you have responded, from Montauk to the north country and from Champlain to Niagara has proven overwhelmingly to me the rightness of our course.

I must confess that even I was astounded by the response of the Democratic women to the conference held at Rochester last month. I am astonished again by the turnout here.

I know that all of you have worked day in and day out to advance the cause of our Party—the cause of the people of our State I might add—here in Jefferson County. I am deeply grateful to all of you.

I am particularly pleased and happy to see here today many fellow warriors of past battles. Warriers, whom, I am sure, will be comrades—in arms in struggles to come.

I want to doff my hat to your splendid president, Miss Lucille Grant.

My thanks for the untiring and unselfish way she has worked for our cause to your county vice chairman, Mrs. Emma Lansing.

My appreciation, too, for her vigorous efforts of the past and her cheerful confidence in the future to your State committeewoman, Miss Gertrude Helmer.

I cannot, of course, let this become a woman's affair entirely and so I want here and now to say that I am everlastingly grateful to a man who has fought the good fight day in and day out, your county chairman, Jim Butler.

As a citizen of the State and as leader of the Democratic Party in the State I have become increasingly concerned with the trend of government in Albany after 6 years of Republican misrule. As I travel about the State I find that I am not alone in these fears. More and more of our fellow citizens are awakening to the soaring cost of State government at a time when the State's services to its people are deteriorating at a rapid pace.

Because I believe that our children are the finest asset the State possesses, I am particularly worried about the growing educational problem in the State.

At your Rochester meeting I pointed out that in many sections of this great State children are attending classes in school-bus garages, lodge halls, private homes, basements, attics, and hallways. The situation will grow increasingly worse in the immediate years ahead as the school population grows.

I pointed out at Rochester, and I want to reiterate it now because I have a very special point that I want to make here today, that back in 1942, the last year of Democratic Governor Lehman's administration, 28½ percent of the State's revenues went back to the communities as aid for education. This past year, the fiscal year 1949, the percentage dropped to 19.12.

Now education is, and it is so stated in our State constitution, a responsibility of the State. Yet, under this Republican administration the burden is being placed more and more and more upon the communities.

There are few communities in the State not spirited enough to want to provide the finest education for our children even when the State shirks its responsibility. The tragedy is, however, that many communities are unable to shoulder the complete burden. There is a limit placed by the State upon the taxes that may be raised from real estate, our principal source of taxation.

It is a fact, too, that only so much blood can be wrung from a stone.

This is the reason that so many of our communities are forced to impose special nuisance taxes—Republican nuisance taxes, I call them—and it is also the reason that so many of our communities have had to go hat in hand to the legislature and ask permission to bond themselves beyond the limitations placed upon them by law.

Now if the State itself were upon the verge of bankruptcy, some of this cold-blooded attitude toward our communities might be excusable. But what are the facts—the State budget under this Republican administration has almost trebled in 6 years. Our people have been taxed and overtaxed.

During the war years our people were overtaxed to the sum of nearly $700,000,000. This, we were told, was a surplus. This, we were told, was being put aside to meet the postwar needs of our State.

It is a fact that every single dollar of this huge so-called surplus, with the exception of approximately two millions, has been spent, contracted for, or appropriated. And here is my point: Not one single penny of that tremendous sum went to build one new schoolhouse in the State of New York.

You may well ask, "Where did it go?" We are patiently and persistently cutting our way through the maze of smokescreens and statements made about that $700,000,000 and we hope, in time, to have a complete and final break-down for the people of this State.

I propose to give you here and now a report on where a huge part of this fund was supposed to have gone. I also propose to show you why it is so extremely difficult to believe the press statements, the hoopla, and the fanfare that comes out of the Dewey publicity mill at Albany.

Let us turn the clock back to July 11, 1946, and set the stage at Liverpool outside of Syracuse. You will recall we were about to launch a State campaign.

The occasion was the dedication of New York State's much publicized Thruway.

There were several thousands of spectators at Liverpool that day. Governor Dewey and his entourage were present for the big event. There was a major State-wide radio hook-up. Red, white, and blue shovels were passed around and a few spades full of dirt were turned over.

The Thruway was to cover 486 miles. It was to cost $200,000,000. It was to be completed in 5 years.

The Thruway, Governor Dewey told us on that day, would compare with the construction of the Erie Canal, creating a link between the immeasurable wealth of the Great Lakes system bordering the western part of our State and the great seaport of New York City.

It was the outcome of long studies, he continued, that "pointed to but one solution, an entirely new highway, modern in every respect—the Thruway!" (The exclamation point, I might add, is the Governor's.)

Then the Republican governor struck this keynote—a note which has been sounded constantly throughout his administration.

"We have made financial plans, too, and now New York State is in a sound fiscal position, able to advance the highway construction program it has under way without having to resort to bond issues or any new taxes to pay the bills. Surplus State revenues were set aside during the war into a postwar reconstruction fund which totaled more than $500,000,000. That is the money which makes possible this present program. We will pay as we go without plunging the State into a debt to be paid by our grandchildren."

I know that the people of the north country are vitally interested in the Dewey Thruway because of the propaganda barrage out of Albany to the effect that this region would be tied into the superhighway through special arterial highways.

Because I believe the Thruway to be one of the most ambitious projects ever contemplated for the people of the State to undertake we have made a special study at State headquarters of what happened since that day 3 years ago at Liverpool.

Today I can reveal to you for the first time that only 33 miles of pavement consisting of four strips in widely separated areas of the State has been constructed or are under construction. One strip is located in Greene and Ulster Counties, another lies north of Syracuse, another runs through portions of Monroe and Ontario Counties, and the fourth is in Erie County.

Nowhere in the reconstruction fund is there any appropriation of $195,000,000 for completion of the Thruway. I base this statement on the official report of the postwar reconstruction fund submitted to the legislature in 194[illegible] by the division of the budget.

I therefore challenge the Republican State administration today to give to the people of the State a complete and full explanation of what happened to the $200,0000,000 Governor Dewey claimed was earmarked for the Thruway. Until such an explanation is given the Dewey administration will stand indicted for hoodwinking and fooling the people for campaign purposes at Liverpool on July 11, 1946.

I want once more to return to that statement of Mr. Dewey's at Liverpool. He told us then it would not be necessary to resort to bond issues or any new taxes to pay the bill.

In this past session of the legislature, the same Governor placed his stamp of approval on $48,000,000 in bond issues.

In the past session of the legislature, this same Governor proposed the highest income taxes in our State's history. He was beaten down, you will recall, by a revolt within the legislature.

So you see what we are confronted with constantly: The words and the claims on one hand and the hard rock facts on the other.

We are digging and digging and the more we dig the more we mine. It takes a lot of spadework. But we are getting down to pay dirt.

I gave you these facts today because I expect the women of this State to play a decisive role in the campaign of 1949 and 1950. I know that upon you will fall a large part of the task of ringing doorbells and carrying the story to your neighbors of what has happened to our State government after 6 years of Dewey administration.

I urged you at Rochester to organize educational crisis committees in your communities. I recommended that action so that the full story of the plight of education in our State would be brought home to our people. Tonight I go a step further: I recommend that the Democratic women of the State organize public information committees whose responsibility it will be to fully expose to the public the deception and sham practiced on the people of this State by the Dewey propaganda machine at Albany.

Thank you.

Government Reorganization

EXTENSION OF REMARKS
OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. MOULDER. Mr. Speaker, congressional history reveals that an overwhelming majority of individual Members of Congress have always wanted economy in the operation of the affairs of our Government; however, the records show that acts of Congress have created many additional and necessary governmental functions, which established numerous bureaus, departments, and agencies, employing personnel whose duties and work overlap and duplicate that of other departments and agencies already established and in existence.

Our Government is a combination of political, business, and social science, and in order to succeed in our endeavor to render governmental services for the general welfare of the people, we must, insofar as expenditures and finances are concerned, conduct and administer governmental affairs and services on sound business methods.

It has been said that "the nearest approach to self-esteemed immortality on earth is a Government bureau," and surely Congress is cognizant of its gargantuan creations, and I believe that Members of the Eighty-first Congress are fully aware of and sensitive to the fact that various bosses, heads, or department executives of Government bureaus and agencies, as well as many of their assistants and other employees, are inclined to be contemptuous of the duly elected representatives of the people in Congress, and frequently thumb their noses with derision at Congress. The execution of the functions, business affairs, and policies of our Government are controlled and administered by executive managers of Government bureaus who are not elected by a popular vote of the people and who are not subject to discharge by the electorate. On the contrary, they are independent of such electorate and are securely protected by a bureaucratic Civil Service Commission and its rules and regulations regardless of incompetence and uselessness of their jobs. Such executive managers of Federal bureaus and agencies seek to control and actually do wield a powerful influence over Congress, by the use of patronage, and the control of Federal projects and expenditures of the moneys appropriated by Congress. For example, a friend and fellow Member of Congress recently advised me that it might be unwise to vote for the approval of a reorganization of a certain Government department because that department might be offended and oppose expenditures of money on projects in my district. Such a situation, if it exists, amounts to disgraceful bureaucratic blackmail and must be corrected. Federal bureaus and agencies must not be permitted, directly or indirectly, to control the powers vested in Congress by the Constitution of the United States. They must not be permitted to influence Congress by such unfair use of the taxpayers' money appropriated by Congress, nor should they be allowed to exercise such dictatorial power over Congress in any manner whatsoever which would be prejudicial to the rights of the American people in any congressional district. Such a system in our Government is undemocratic, wasteful, and inefficient.

We must not jokingly say or believe that a bureaucrat is a Democrat holding a Government job which a Republican wants. In fact thousands are Republicans, but in my opinion the majority of such Government job holders are neither Democrats nor Republicans; they are Government bureau politicians and specialists in obtaining and keeping influential positions in our Government.

Waste and red tape are twin brothers. They go hand in hand. Our present civil-service system permits, encourages and results in bureau expansion by ambitious bureaucrats. This is what one Government official said:

> I have seen guys take a job that used to be done by two girls and build it into a special section employing more than a dozen people. That way they could point to the number of employees under their supervision and get themselves a higher civil-service rating and a boost in pay. I once watched a man who took a simple job, subdivided it into eight functions, wrote lots of memoranda, hired more people, called staff conferences, had the minutes of the conference recorded, mimeographed and distributed, and so forth, and so on. He became a big shot.

Another department supervisor has told the following story:

> One of the most disheartening things I've ever run into was the case of an office worker in my own department. He had come into the Government during the war, and he was so incompetent that each department kept palming him off on another unsuspecting office. But his seniority rating was high, and involved civil-service rules made it almost impossible to get rid of him. He finally landed with me. In a moment of idealistic enthusiasm I tried to fire the man. Well, before you could say gobbledegook, investigators from the Civil Service Commission came around and a big fuss with the labor-management committee started, and I would have had to fight my way up through three appeal boards. But I did dump this lame duck in the lap of another unsuspecting section chief.

The great depression of the 1930's, the demands made by the war, the increased emphasis on national defense, and the assumption of world leadership in foreign affairs have all been factors contributing to the necessary expansion of the Federal Government and its agencies. But long before the depression, the problem of the proper organization and direction of the Government was causing severe headaches to those charged with supervising its activities.

Public Law 162 declares the policy of Congress to be "to promote economy, efficiency, and improved service in the transaction of the public business in the executive branch of the Government."

This is to be done by limiting expenditures to the lowest amount consistent with efficient performance of essential duties, by eliminating duplication and overlapping of service, by consolidating service, by abolishing unnecessary functions, service, and activities.

The Commission appointed by President Truman, known and referred to as the Hoover Commission, has performed commendable and constructive work and the Commission's report and recommendations clearly reveal our antiquated Federal machinery of government and the need for overhauling and reorganization. The report is loaded with facts about duplication, overlapping, waste,

and inefficiency in the massive Government bureaus, departments, and agencies.

The members of the bipartisan Commission of 12 members established by Public Law 162 chose as their chairman, Herbert Hoover, the only living former President of the United States. We may be proud of the caliber of the members of the Commission, all of whom are extremely able men, sincerely devoted to the cause of providing a better government for the American people. The same statement is applicable to the members of the 24 task forces which did the spadework for the Commission in the various subject-matter fields. President Truman should be heartily commended for his consistent and wholehearted cooperation and support of the undertaking. It is now imperative that action be taken on the recommendations which have resulted from the labors of all these people. We must find in the near future workable solutions to the problems posed by the tremendous growth in size and complexity of the Federal Government—problems which have been recognized for half a century. We can do no better than to take the findings and recommendations of the Hoover Commission as a starting point.

The Commission on Reorganization of the Executive Branch of the Government, appointed by President Truman, and generally referred to as the Hoover Commission, has published 18 reports to the Congress as well as 18 task-force reports, a total of 3,400 pages of material. There are also some 8,000 pages of unpublished data which were collected during the investigations. Specific examples of ways in which the efficiency and economy of the Government may be promoted are found in every report. The reports reveal shocking duplications and waste in Federal bureaus and agencies. I cite a few examples, as follows:

As of June 20, 1948, the Veterans' Administration was handling nearly $40,000,000,000 worth of life insurance in nearly 7,000,000 policies. More than 15,000 employees were engaged in insurance activities, with an average work load of 450 policies per employee. A comparable private company has a work load of 1,762 policies per employee. The record of death claims is equally bad.

The Veterans' Administration requires an average of 80 days to process death claims with some claims unpaid after more than a year. Private companies pay about 80 percent of their death claims within 15 days. The Hoover Commission has recommended that the insurance operations of the Veterans' Administration be organized as a separate Government corporation, with emphasis on business-type budgeting, accounting, auditing, and methods of operation.

Two Federal agencies planned in 1948 to build the same dam on nearly the same site, at Hell's Canyon in Idaho, at a cost approaching half a billion dollars. One dam was to be 710 feet high, the other 740 feet. One was estimated at $258,000,000, the other at $433,000,000. Confused by the two costly and conflicting surveys—one submitted by the Army Corps of Engineers, the other by the United States Reclamation Bureau—Congress has authorized neither project.

The multi-million-dollar Pine Flat project in California is another specimen of Army engineers-Reclamation duplication at the taxpayers' expense. The two agencies conducted separate field investigations, drew up separate reports, and after a 5-year fight before Congress each was authorized to construct the same project. But the engineers are now at work, having corralled the first money.

Two large and expensive agencies are in continual conflict over the management of national forest and grazing lands. They are the Forest Service and the Bureau of Land Management. They comprised one of their clashes by dividing large acreages of public land in western Oregon into checkerboard sections. One agency now manages the even-numbered sections, the other the odd-numbered sections. They maintain separate forestry organizations and their rangers crisscross each other's lands in performing their duties. Loggers must negotiate contracts with both agencies to remove timber.

This tax-devouring rivalry still goes on. Within the past year, the Land Management Bureau established six regional offices, each in an area in which the Forest Service already has a regional office.

Often from 5 to 10 separate organizations of the Department of Agriculture operate at the same time in rural counties—not counting nomadic services which include specialists on Japanese-beetle control and golden-nematode extermination. Recently a Missouri farmer received from 5 different department agencies varying advice on how to apply fertilizer. The Commission report states that farmers are confused and irritated by such conflicting agencies.

Four separate Federal agencies make short-term loans to farmers. Each maintains its own organization. They represent a Government investment in excess of half a billion dollars. Some of them receive and invest in Government bonds. Thus the Treasury ends up by paying interest on its own money.

In New Orleans there are five Federal hospitals, all within 6 miles of the center of the city, operated separately by the Veterans' Administration, the Army, the Navy, Navy Air, and United States Public Health Service. Their joint capacity is 1,620 beds. When surveyed, they had 913 patients. Unified planning could close three of these hospitals at a large saving.

In New York City there are 11 major Federal hospitals in the metropolitan area, with a total capacity of 8,257 beds. When surveyed, they held 5,330 patients. To care for them, 7,000 persons were employed, including 630 full-time physicians. Four of these hospitals could be closed at a considerable saving, and better medical care would result. Nevertheless, three Federal agencies are now building or planning for New York five additional hospitals at a cost of $105,000,000.

Although the Government is spending over $40,000,000,000 a year, it cannot tell from its books what is accomplished with the money. Its cumbersome accounting system does not show it. One reason is this:

Instead of asking Congress for a flat sum to run a specific project, many agencies split their budgets into fragmented appropriations under headings which frequently disguise the real use to be made of them. Thus, the $43,000,000 required to run the Forest Service this year will come from 16 separate appropriations. In addition, funds will come to it from the Secretary of Agriculture. A reading of the budget would indicate that only $26,000,000 was needed.

No one can possibly tell from the budget what it is costing to operate the skyscraper National Medical Center of the Navy, at Bethesda, Md. It received funds from 12 different Navy appropriations, many appearing under such indistinguishable headings as: "Secretary's office, miscellaneous expenses"; "Bureau of Ships, maintenance"; "Bureau of Supplies and Accounts, transportation of things."

Overlapping, conflicts of authority, and other inefficiencies build to $43,000,000 a year the cost of handling Federal statistics. Some 50 different agencies engage in this work. The Commission reports "many defects," including contrary figures and gaps in the statistics assembled by a diversity of agencies at great public expense.

When Federal agencies have money left over at the end of a year, they are prone, instead of returning it to the Treasury, to stock up on supplies. Some have enough supplies on hand to last them for 50 years.

The foregoing examples are only a small fractional part of the many revealed and set forth in the Commission's report.

The Hoover Commission report recommends an increase of salaries for the administrators of executive positions in our Government bureaus and departments, in order to obtain the services of men with business experience and executive ability to correct the inefficiencies and waste hereinbefore mentioned.

As a Member of the Eighty-first Congress, I am proud of my support and vote for H. R. 2361, a bill providing for the reorganization of Government agencies and for other purposes, which was approved and passed by the House of Representatives on the 20th day of June 1949. This bill, H. R. 2361, was passed by the Senate, signed and approved by the President and is now Public Law 109, Eighty-first Congress.

Under the provisions of the bill, now Public Law 109, Eighty-first Congress, the President is authorized to examine and from time to time reexamine the organization of all agencies of the Government and determine what changes therein are necessary to accomplish the following purposes:

1. To promote the better execution of the laws, the more effective management of the executive branch of the Government and of its agencies and functions, and the expeditious administration of the public business;

2. To reduce expenditures and promote economy, to the fullest extent consistent with the efficient operation of the Government;

3. To increase the efficiency of the operations of the Government to the fullest extent practicable;

4. To group, coordinate, and consolidate agencies and functions of the Government, as nearly as may be, according to major purposes;

5. To reduce the number of agencies by consolidating those having similar functions under a single head, and to abolish such agencies or functions thereof as may not be necessary for the efficient conduct of the Government; and

6. To eliminate overlapping and duplication of effort.

Public Law 109, Eighty-first Congress, declares that the public interest demands the carrying out of the purposes specified in the above-numbered subsections 1 to 6, inclusive, and that such purposes may be accomplished in great measure by proceeding under the provisions of this act, and can be accomplished more speedily thereby than by the enactment of specific legislation.

The above-mentioned Public Law 109, Eighty-first Congress, further provides that the reorganization plans submitted to Congress by the President shall take effect upon the expiration of the first period of 60 calendar days of continuous session of the Congress, following the date on which such plans are transmitted to Congress by the President, unless between the date of transmittal and the expiration of such 60-day period, there has not been passed by either of the two Houses of Congress, by the affirmative vote of a majority of the authorized Membership of that House, a resolution stating in substance that that House does not favor the reorganization plan or plans so submitted.

President Truman has submitted several reorganization plans during the past week, in accordance with Public Law 109, and it is the duty of Congress to cooperate with the President by staying in continuous session 60 calendar days as provided by said public law, or for such time as may be necessary to permit the President's Government reorganization proposals submitted at this session to become law and go into effect.

Additional reorganization proposals will be submitted by the President at the next session of Congress, beginning January 3 of next year. It is reasonably estimated that Government reorganization plans if approved by Congress will result in an annual saving of $2,709,792,000 a year, and additional millions of dollars would also be saved by Government business efficiency resulting from the adoption of reorganization plans.

We are employed by the people as their Representatives in Congress to provide the proper legislation for the efficient execution of their Government business. We will be violating the terms of our employment by the people if we do not approve the President's Government reorganization plans. Such sensible and favorable action by Congress would be a historical achievement, for which the people of our great Nation would be grateful and proud.

Housing Needs of Allegheny County and the City of Pittsburgh

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

UNITED TENANTS' ASSOCIATION
OF WESTERN PENNSYLVANIA,
Pittsburgh, Pa., April 6, 1949.

JAMES G. FULTON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: The enclosed is a condensation of the high lights of the Nurnberg Report. The report is the result of a 2-year survey by Dr. Max Nurnberg, economist and housing consultant, and was made to the Allegheny Conference on Community Development.

I hope the information will enable you to enter the housing picture of Pittsburgh and Allegheny County as submitted by the Tenants' Association into the CONGRESSIONAL RECORD.

Thanking you for your consideration, I am,

Sincerely yours,

TED J. LIEBERMANN, Jr.

ALLEGHENY COUNTY AND CITY OF PITTSBURGH HOUSING NEEDS—SUBMITTED BY THE UNITED TENANTS' ASSOCIATION OF WESTERN PENNSYLVANIA

1. Allegheny County needs 51,000 more dwelling units; 33,000 county, 18,000 city.

2. Allegheny County needs 21,000 more rental units; 12,000 county, 9,000 city.

3. Allegheny County needs 30,000 more owner-occupied units; 21,000 county, 9,000 city.

4. Allegheny County demand (ability to pay the price) for buying and renting for 1949 is 14,000 units; 5,000 county, 9,000 city.

5. Allegheny County rental demand for homes $60–$80 is 8,400 units; 3,400 county, 5,000 city.

When prices are above $60–$80 the demand shrinks to about 1 percent.

6. Only 17 percent of the families can buy a $13,000 home. Less than 30 percent can afford to pay $10,000. Only 8 percent of the middle income ($3,000–$7,500) are able to buy any house today.

7. Since 1940 the number of county families increased 4 percent to 397,000; 206,000 County, 191,000 city.

8. An estimated 18,600 had to double up involuntarily; 6,600 county, 12,000 city.

9. Population is expected to reach 456,000 families by 1960; 249,000 county, 209,000 city.

With potential housing needed for 164,026 families (60,950 in city).

10. At the present building rate (5,000 a year) the county and city combined would be short 109,000 dwellings by 1960 (on estimated population).

11. With 52,500 marriage applications in the last 3 years, the entire new construction would only take care of a little more than one-fourth of the newlyweds. At least 22 percent doubled up.

12. Repairs are needed on 82,000 dwelling units; 37,000 county, 45,000 city.

In a press conference in Pittsburgh on March 10, 1949, John J. Pendergast, regional housing expediter for Pennsylvania, New Jersey, New York, Maryland, and Delaware, stated that the housing picture in Pittsburgh is no better and that 1948 saw no material change in the over-all demand.

"The demand is just the same as ever—rental units for $40, $50, and $60 and homes for $10,000 and less."

Tribute to Senator Wagner

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. CELLER. Mr. Speaker, it is unfortunate that Senator Wagner resigns his stewardship as United States Senator of the State of New York because of illness. He has indeed been an effective and loyal public servant. Jurist, legislator, humanitarian, he has always struggled for the rights of the underprivileged. We all remember his solid work with the late lamented Alfred E. Smith in the New York State Legislature, where both pioneered for workmen's compensation, factory safety, and other kindred welfare legislation. The people of the State of New York rewarded his efforts by electing him to the United States Senate, where he has served with distinction.

In Washington he exemplified his rare talents for humanitarian efforts by his preeminence in the field of Federal social laws. He was the author of the first public-works program, the United States Employment Service, the Wagner Labor Relations Act, and our social security laws, including workmen's compensation, old-age pensions, and the like. He blazed new trails and we bestow upon him the accolade of merit for services well performed.

We fervently hope that his health will improve and that he will regain vigor and strength. He has our best wishes for happiness.

Harold Christoffel Decision

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of joint statement of SAMUEL MCCONNELL, Republican from Pennsylvania, ranking member of the party on the Committee on Education and Labor and Congressman JOHN F. KENNEDY, Democrat, of Massachusetts, a member of Subcommittee on Education and Labor which investigated Christoffel's Communist background:

We think it most regrettable that by a 5–4 decision the Supreme Court should have reversed the decision of the Court of Appeals, which found Harold Christoffel guilty of

committing perjury before the Committee on Education and Labor of the House of Representatives.

Not only does the decision give a witness an opportunity to go free after falsely denying he was a Communist, but also the decision will have far-reaching effect on the operations of congressional committees and the many subcommittees, and will retard the working of the committees, which in turn will affect the legislative processes.

Justice Jackson, in his dissenting opinion, said, "All the parliamentary authorities, including those cited by the court, agree that a quorum is required for action, other than adjournment, by any parliamentary body; and they agree that the customary law of such bodies is that, the presence of a quorum having been ascertained and recorded at the beginning of a session, that record stands unless and until the point of no quorum is raised. This is the universal practice."

A quorum was present at the beginning of the afternoon's hearings of the Education and Labor Committee, and no member of the Committee, and Mr. Christoffel himself did not raise any point of order that a quorum was not present at the particular time of his testimony.

What a travesty on justice, that a Communist witness testifies untruthfully before a recognized committee of the House and then escapes the consequences of perjury by a technical claim that a specified number of Congressmen were not present at a particular moment.

Harold Christoffel was the president of local 248, United Automobile Workers, CIO, of local No. 248. In war and in peace, he used his power, not for the benefit of members of his union, but in the interests of the Communist Party.

We believe the Education and Labor Committee should carefully review this entire matter.

Address of Hon. Harold D. Cooley

EXTENSION OF REMARKS

OF

HON WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. ABBITT. Mr. Speaker, I have requested permission to extend my remarks in the RECORD and include the address of the Honorable HAROLD D. COOLEY, chairman of the House Committee on Agriculture, delivered at the State conference of PMA committeemen, Richmond, Va., on April 22, 1949. HAROLD COOLEY is one of the outstanding and beloved Members of the Congress. He is respected and admired by all of his colleagues. His advice and guidance is often sought by his associates. He has taken an active part in all major legislation coming before the House of Representatives for consideration.

As a member of, and now chairman, of the House Committee on Agriculture, Congressman COOLEY has made an outstanding record in solving the problems of the farmers of America. He has fought for wise and beneficial legislation. He has the respect and admiration of all the members of his committee.

It is a real pleasure for me to serve as a member of that committee and to realize and know we have a chairman who is courteous, energetic, and considerate of the other members of his committee at all times. I am glad of this opportunity, Mr. Speaker, on leave to extend my remarks in the RECORD, to include the address of the Honorable HAROLD D. COOLEY:

I am very grateful to my kind friend, WATT ABBITT, for the splendid manner in which he has presented me, and I am likewise grateful to you for the warmth and cordiality of your response. Frankly, I wish that my friend could go down into my district and make that speech in my behalf.

I am happy to be here today for many reasons; not the least of which is that I am here on this platform with my colleague, WATT ABBITT, whom I have known for only a short while. I am very fond of him, and I am very proud of the record he is making in Congress. He is a faithful servant of the people. He is a loyal man; a hard worker. I have been in Congress for many years, and I have seen men come and go by the dozens, and I think I am safe in saying that I don't know of a single one who has made more friends in Congress in the short while he has been there than has WATT ABBITT. He has applied himself diligently, and he possesses all of the fine qualifications to make a good representative of the people.

I am happy to be here today because I am in the city of Richmond. It is true that this is my mother's home, and in this city both my mother and my father died, and my one little girl was born here, so I feel very much at home. I come not as an alien to a foreign land, but rather as one who returns to the home of his ancestors and to the household from which he sprang.

I am happy to be in Richmond, and I am glad of the fact that Richmond is at least "where the South begins." I love the South, and I like to be in the South. I love the traditions of the South, and I love southern people. I am happy for another reason, and that is that I am able to get away from Washington, the town of circles and great confusion. That is now a metropolitan, cosmopolitan city. People are there from everywhere, and they are asking for everything.

I feel, as I say, very much at home here with you ladies and gentlemen, and I want to talk with you seriously about some of our common problems. You heard a man make a remarkable statement a moment ago. The very distinguished and beloved Under Secretary made reference to my being chairman of the House Committee on Agriculture, told you that he loved to visit that committee room and that he always enjoyed the questions that were propounded to him. I just want to tell you, ladies and gentlemen, that we are going to have a good time in that committee room Monday morning because there are going to be some questions propounded. You know, we have a very distinguished and beloved Secretary coming before the committee Monday morning and I want to extend to all of you a cordial invitation to attend the session. He has brought before us the program which we are now considering. I shall not undertake to discuss the program he has submitted. I am sure that he has worked on it faithfully and that he is bringing it in all sincerity in the honest belief that it is in the interest of the farmers of the Nation.

I was glad to hear Mr. Loveland say a moment ago that he was proud of the farm program that we now have, and I want to say to you that I take great pride in the very minor part that I have played in the preparation and passage of the program which is now in existence. I think it is a well-rounded program. I think it is a permanent program. It is a program that has served well the needs of this Nation, both in times of peace and in times of war.

When war came upon this earth American agriculture was better prepared for the impact of war than any other segment of our economy. Why, the warehouses were filled to overflowing and our fields were flourishing, and even with less land and production, with less labor and with less machinery and with less fertilizer, we have produced in a magnificent fashion. American agriculture geared itself to the wheels of war, and we not only fed our own civilian population, but we fed our military population and we made a great contribution to the support of our allies. Yes, American agriculture made America the bread basket of democracy. Surely, farmers were offered some inducement, but after all it was a true patriotic zeal that spurred the farmers of this Nation on.

Now that the war is over we have come into the postwar period. We must make major adjustments. Just as the Under Secretary said a moment ago, we must be willing to accept the situation in which we find ourselves. We were prepared for the shock of peace. Now we must meet the problems of the peace we now enjoy. We must make some terrific adjustments, some drastic adjustments. I have been told that if we are to reduce production to the point of reasonable demands, if we are to cope with the level of supplies and demands, that it will probably be necessary for us to retire from 28 to 30 million acres of land from wheat, from cotton, from peanuts, from tobacco, and the other basic crops. That is a drastic change in American agriculture, but I believe that the farmers of this Nation are intelligent enough to appreciate the importance of making the adjustments which I indicated necessary in the situation in which we find ourselves. I believe that the farmers of Virginia and North Carolina are more willing and ready to make the drastic adjustments which will be required than perhaps any other farmers in America. We have enjoyed the blessings and the benefits of this Federal farm program, and we must be willing to accept some of its burdens. We must be willing to cooperate with our fellow farmers in keeping production in line with consumer demands.

I want to leave this thought with you, that we farmers have done a pretty poor job of educating the public with regard to our farm program. You hear a lot of talk about the farm bloc. We are referred to as selfish and greedy, trying to get more than our fair share of the national income and of the consumer dollar. The truth is that the farm program and every part and parcel of it is a program enacted in behalf of the general welfare of the people of America. No city Congressman need apologize to his constituents because he has voted for farm legislation.

Yes, I even say that with regard to the support program. To be sure, the support program was inaugurated for the purpose of giving the farmer some inducement to increase his effort to put a floor under prices so as to accord him security. By and likewise it was a part of that program for the farmer to produce an abundance of all of the essential foods and fibers so that the consumers of this Nation could have something to eat and something to wear. But for those programs—yes, but for the support program, we might have had a scarcity of essential foods and fibers, resulting in unreasonably high prices. So I say that the farm program is just as much in the interest of the consumer as it is in the interest of the farmer. As proof of it, during the last 2 years, though the control of the legislative branch of our Congress was in the hands of another great political party, during that 2 years there wasn't a single part or parcel of our farm program repealed or junked. It is still intact, and we are still operating under it, in both Houses of Congress appointed special committees during the last 2 years. My committee traveled in all of the major agricultural areas of America. The Senate committee visited all parts of the country, and both committees held hearings, and farmers were given a free opportunity to speak. Both committees found on those surveys that the farmers of this Nation

were proud of the program which has been built in the last 16 years.

Now we are coming into a new situation. We have suspended upon the heads of Congress a law which was enacted in the dying hours of the last session of the Eightieth Congress, at 5:30 o'clock Sunday morning—rammed through the House, and I dare say there were not six men on the floor of the House who knew or understood it. So anxious were they to secure its passage that they were willing to suspend its operations until January 1950. Now we have that law suspended over our heads.

We have heard a lot of talk about flexible parities and flexible supports. I don't know how you feel about it, but if parity is fair, certainly 90 percent of parity is as unfair. We have had a lot of experience in recent years, and the tobacco farmers know something about the necessity of making adjustments in production. Our tobacco program has operated more successfully and cheaply than any other program yet suggested or inaugurated. We have had more experience than any other group of farmers in America. We know what happened to us in 1930 when the collar started to gall our necks a little bit. We threw it off, and down and down and down went the prices, and when next year came around we had learned our lesson. We know that when we cooperate and produce a reasonable-size crop that it can be sold more profitably than when we produce a surplus of that commodity.

I think farmers are entitled to adequate support when they are willing to make reasonable adjustments. I am definitely and unalterably opposed to giving high support on commodities that are produced without limitation. On every single, solitary occasion when we have undertaken to support commodity prices with unlimited production we have come to great grief. Look at the potato program, costing us now a million dollars a day. That one commodity has done more to bring the farm program into disrepute than all the rest of them put together. I don't believe that we can support part of a crop or a part of production because, whenever we do, that part which is supported finds its way into the storage warehouses. The man who has cooperated with no program, who has made no adjustments or reductions, sells in a market that has been relieved of the surpluses which have been siphoned off and stored in storage warehouses. I don't believe that the farmer who is willing to cooperate with his fellow-farmers should hold an umbrella over the head of the man who is not willing to cooperate.

We are looking into a future that is draped with uncertainty. Yes, all of us must realize that we are living in a sick and a sad and a sorry world; a world that has been literally destroyed by the cruel arts of war—one nation after the other devastated. Here in this part of the world we know what world trade means to us as individuals. We have traditionally grown crops for export, cotton, tobacco, and peanuts, and next year we are faced with the almost certain necessity of placing marketing quotas on those three major farm commodities—on my farm and your farm. We will have marketing quotas on our tobacco, on our cotton, and on our peanuts and that will be the first time that we have had control on three major commodities at the same time. That is going to bring about some great changes on your farm and mine. We know that we are dependent upon export trade. In 1939 when it became necessary for Great Britain to marshal all her dollar resources and withdraw the British buyers from our tobacco markets, all of us remember that prices just didn't decline—we locked up the warehouse doors and closed the market, and we did that because of our great dependency on foreign markets. We did that in the spring of 1947 following the issuance of a white paper that was placed before the British Parliament in the middle of April. When they curtailed their purchases and surrounded our markets with great uncertainty because of our dependency upon the British markets, we closed our markets in North Carolina. And they remained closed until we worked out the financial arrangements which enabled the British buyer to return to the market. I mention this only to emphasize the point that we are dependent upon world commerce and world trade and to bring home the fact that the channels of world commerce have been choked, and only by the revival of the world market will we be able to expand production profitably in this country.

Your Nation and mine has embarked upon the most magnanimous program ever inaugurated by any nation in all history—a program of great magnitude. We started out to rebuild the world, to aid in the rehabilitation of the devasted areas, and I say it is magnanimous and most charitable because we are actually making great grants to our former enemies. No one ever thought there was any question about our winning the war. No true American ever doubted for one moment that the members of our armed forces would win many great victories on the battlefronts and would ultimately win the war. The brave men of this State and this country went out and died on the ramparts of freedom and on the seven seas throughout the universe. They died that the institutions of freedom might survive and continue to live here in this great land of liberty, and they fought for the authors of freedom. They fought for the world. And now in this hour all of us sit here today and wonder whether or not we will be able to win the peace. Yes, we are wondering if we are going to lose victory, the fruits of the victories, the hard-won victories of the last World War; and we are wondering this, notwithstanding the fact that VE-day has come and gone and VJ-day is now written in history.

The fact is, that the documents of peace haven't even yet been written or signed—we are living in a world of uncertainty. By extending a hand of charity and help to the broken and bleeding economies of this world, the Marshall plan has perhaps surprised even its most ardent enemies. We are told that more has been accomplished in 1 year than we had hoped might be accomplished in 2 or 3. I have had an unusual opportunity, I suppose, as a Member of Congress to travel in the different parts of the world and see some of the destruction that has been wrought. It is difficult for anyone to appreciate the magnitude of the destruction and certainly difficult for anyone to describe it. It is a splendid thing to see the flag of your country flying in the ancient capitals of the world. I have seen it in Vienna, in Rome, in Berlin, and in Tokyo and on the islands of the Pacific. And as I saw the Stars and Stripes in those distant places, I couldn't help but think of the blood that had been shed by American men who placed our flag on the lofty peaks of the ancient world.

I would like to leave with you these questions: Are we going to abandon the fight? Are we going to turn our backs upon the sufferings of humanity across the sea? Or are we going to remember the sad lesson that we learned after the First World War? We thought then we were great and rich in power; that we could draw the curtain of complacency about us and live alone in luxury here in this great country. So we pulled our ships of commerce from the seas; we lifted trade barriers around about our Republic and high-tariff walls and we sought to live, but not for long. Economic isolation will mean economic suicide for America. We can no longer attempt to isolate ourselves from the rest of the world. Ancient empires have fallen apart into pieces. America has been given the role of leadership and to us has been handed the torch of freedom. Liberty-loving men and women throughout the world are looking to us to return this world to the high land of peace and prosperity. Oh, yes, we can turn our backs upon the sufferings of humanity, but remember, whenever we do, we are turning our backs upon the little white crosses that mark the last resting places of American boys who died that you and I might remain in the land of freedom. We have no alternative.

There are two great ideologies clashing in this world. We either believe in these institutions of freedom or we don't believe in them. We are either willing to live for them or we are not willing to live for them. If they were worth fighting for, if they were worth dying for, then certainly the people who are left here should be willing to live for the institutions of freedom, which have come down to us through the long corridors of the past. We must be willing to adjust ourselves.

We are looking today at agriculture in a changing world. Changing first from peace to war and then from war to peace. We cannot afford ever again to embark upon a program which contemplates scarcity. We must always be willing to produce an abundance and that is a program that we are trying to keep in existence, a program which provides for the production of an abundance of all of the necessary foods and fibers. I think that we should show our appreciation for the degree of prosperity which we have been permitted to enjoy since this Nation became so farm conscious and so soil conscious. True, as Mr. Loveland has said, the fertile topsoils of American farms and ranches are the greatest resources of this Republic. We must be willing to understand the propositions which look us straight in the face. I have a feeling that the farmers of this Nation appreciate this program, that they want it perfected, that they want it strengthened, and that they are willing to embrace it and to live with it. I don't know what we can put our retired agricultural land to. I don't know whether we can grow other crops without producing surpluses, but even if the fertility of the soil must be sealed up in the soil, far better it will be to seal it up in the soil than to mine it away by producing such surpluses that the people don't want and will not buy. I don't want to see this program wrecked. I don't want to embark upon any new experiments and run the risk of wrecking the program unless I am sure that the new idea is going to work in the interest of the farmers and in the interest of the people of my country.

I know that I have already trespassed too long upon your patience, but I want to say that I have seen this distinguished city's Congressman, my beloved friend and next-door neighbor, VAUGHAN GARY, come into the room, and I would not be true to the inmost feeling of my heart if I did not tell you that I have enjoyed his friendship immensely. He, too, is a very faithful servant of the people, a brilliant lawyer, a man of great ability, and I look forward to continuing my services with him. I want to say in behalf of all of you ladies and gentlemen that you have one of the best delegations in the House of Representatives that you will find in any other section. I don't know of a finer delegation in Congress than the Virginia delegation. All of them are friends of mine, and I have enjoyed knowing them. Now in closing these remarks, I want to say again that I have enjoyed very much being here with you today and I want to assure you of my constant and great interest in perfecting a farm program which will mean prosperity to the farmers and which will contribute to a peaceful world.

Even though VAUGHAN is what you might call a city man, he is just as interested in farm legislation as he is in any other type

of legislation that is proposed. He is always interested in knowing about new proposals and suggested amendments, and he has always been most helpful in drafting, in presenting, and in passing farm legislation.

I have enjoyed very much being here and I hope that I may have the pleasure of seeing all of you again sometime in the not too distant future.

The Housing Bill

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JUNE 22, 1949.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN McCORMACK: Representatives of national organizations signing this communication to you in support of immediate passage of H. R. 4009, the Housing Act of 1949, have a twofold purpose in writing.

1. We wish you to know of our deep appreciation of your constructive leadership toward achieving favorable action on this measure. We applaud the fact that Speaker RAYBURN and you called for a caucus of Democratic Members in order that they may be thoroughly versed in the facts concerning the housing program which is so vital to our Nation's future welfare.

2. It is our expressed purpose to give you this evidence of the tremendous public support for a national policy on slum clearance, public low-rent housing and farm housing. The organizations we represent have through public education been supporting the objectives of H. R. 4009 for many years. On no controversial measure before the Congress is there greater public support than exists for the housing bill. We shall continue our efforts in behalf of this legislation until it is enacted, and will then accept our public responsibility to help achieve the objectives of slum clearance and public low-rent housing in communities throughout the Nation.

We recognize the power of the opposition to H. R. 4009 and we know that every vote is important if the measure is to pass. For your leadership we are grateful, and in turn we wish you to know that you have our continuing and wholehearted support. It is our earnest hope that the measure will pass. With expressions of our esteem, believe us, we are,

Respectfully yours,

Rev. Thomas Keehn, Council for Social Action of the Congregational Christian Churches of the U. S. A.; Rev. Beverley M. Boyd, Federal Council of the Churches of Christ in America; Fern M. Colborn, Assistant Secretary, Division of Social Education and Action, Presbyterian Church, U. S. A.; Rt. Rev. Msgr. John O'Grady, Secretary, National Conference of Catholic Charities; Rev. Robert Van Deusen, Washington, Secretary, National Lutheran Council; Richard J. Gray, President, Building and Construction Trades Department, A. F. of L., and for the Housing Committee, American Federation of Labor; Harvey Brown, President, International Association of Machinists; Anna Lord Strauss, President, League of Women Voters of the United States; Ruth Craven, Executive Secretary, National Council of Catholic Women; Mrs. Irving Engel, National Vice President, National Council of Jewish Women; Mrs. Mary McLeod Bethune, President, National Council of Negro Women; Elisabeth Christman, Secretary-Treasurer, National Women's Trade Union League; Mrs. Theodore O. Wedel, Chairman, Department of Christian Social Relations, United Council of Church Women; Norma Sims, American Association of Group Workers; Philip Schiff, American Association of Social Workers; Elmer Henderson, American Council on Human Rights; Joseph Chlorety, American Veterans Committee; Bernard M. Weitzer, Jewish War Veterans of the United States; Simon Slavin, National Association of Jewish Center Workers; George Hamilton, National Association of Rural Housing; Lawrence M. Cox, President, National Association of Housing Officials; James Mitchell, National Council of Catholic Men; James Patton, President, National Farmers Union; Edward Weinfeld, President, National Housing Conference.

Retirement of Maj. Gen. Wilton B. Persons

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, June 30 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me in tribute to Maj. Gen. Wilton B. Persons on his retirement today from the Regular Army.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today marks the retirement from the Regular Army of Maj. Gen. Wilton B. Persons. I count it a privilege to pay tribute to General Persons on this occasion.

In my opinion, Mr. President, it adds to the high praise heaped upon the top civilian and military leaders of our armed services during and since World War II to say that General Persons ranks second to none in the depth of respect with which he is rightly regarded by the Congress of the United States. During my service in the United States Senate it has been my pleasure to meet many men of competence in government who have served their country with completely unselfish devotion. I have no hesitancy at all in saying that General Persons' devotion to duty and country is an inspiring example of the ability, forthrightness, and courage we would have considered typical of those who serve in all positions of public trust.

Others have reviewed in some detail for the Senate the progress of General Persons in the United States Army. Credit has been directed to him in recent days for his part in the enactment of many of those measures which helped pace the victory of America and her Allies in World War II. That credit has been properly placed, although the general would be the last to make claim to laurels for himself.

It would take much time to recount the many occasions when the knowledge and patience of General Persons has spelled the difference between defeat and victory for legislative proposals of vital importance to the armed services, the welfare and security of our country. On the other hand, he has been quick to recognize on other occasions the pitfalls of proposals pending before us. We have found his mind to be penetrating and his conclusions sincere. Our finding has been shared by his superiors and associates in the armed services. It is a significant tribute to General Persons that throughout the changes which have occurred in armed services organization and personnel those with top authority have continued to lean upon his experience and the wisdom that springs from it.

But, Mr. President, there is another phase of General Persons' service to which I refer today with the deepest of pleasure. It is his warm, human understanding of the problems of the men and women in the Army's ranks, and their families at home. I have never found him unwilling to direct sympathetic attention to the personal situations of those who have served their country in the lowest to the highest grade.

There are many families in New Hampshire, Mr. President, who owe a debt of gratitude to General Persons. There are many veterans of World War II the country over whose lives are happier today because this top-ranking officer of the United States Army was never too busy to give personal thought to the difficulties which arose in the wartime living of these men and women in places far away from home. Many are the stories told of the human kindness displayed by leaders in America's wars but I dare say that none of them would outshine the story which could be written of the human understanding of General Persons who lays his Army duties aside today. I think no higher tribute could be paid a military leader than to say that he is the friend of those who serve in the ranks and enjoys their full respect.

This man who for so many years has been a welcome visitor to Capitol Hill almost daily, who has been on the job many times when men of less devotion would have taken rest leaves the United States Army to assume the position of superintendent of the Staunton Military Academy. I can think of no finer choice that distinguished school could make. General Persons understands young men. He has the character, the courage, and the vision to teach them how to measure their responsibilities of citizenship in the days ahead. He knows what their responsibilities are likely to be because he is aware of the duty of his country in this time of world confusion. The young men who come under General Persons' influence will respect him, Mr. President, as we respect him. That is why we can praise him warmly for work well done and extend our friendliest wishes to him as he goes to his new position.

The Longshoremen's Strike in Hawaii

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, June 30 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials dealing with the strike in Hawaii, one entitled "American Call to Arms," published in the Honolulu Advertiser of June 25, 1949, and the other entitled "Hawaii Blockaded," published in the Long Beach (Calif.) Independent of June 27, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Honolulu Advertiser of June 25, 1949]

AMERICAN CALL TO ARMS

Repeated blockades of Hawaii by ILWU's dictators are pegged definitely into the Communist plot to overthrow the Government of the United States and to surrender this country to Moscow in Senator HUGH BUTLER's documented report to Congress. His call to the American people to rise and defend their land against invasion is as clear as that which was sounded on December 7, 1941, when Pearl Harbor was attacked by an alien enemy. It proves beyond argument that Hawaii's plight today is not a local incident to be settled at home; that it is a major move in an organized assault upon the life of the Nation, and must be recognized as such at Washington.

This is the view also of influential newspapers on the mainland. The New York Daily News, most widely circulated newspaper in the United States, asks, "Wouldn't it be the height of folly to ignore the possibility that Stalin * * * has been rigging up some sort of Pearl Harboresque surprise for us in the Pacific? * * * Wouldn't Congress be wise to take the Hawaiian appeal for help against Bridges with extreme seriousness, and do it now?"

Most of the material in Senator BUTLER's report is not new to the people of Hawaii, although some of them profess to disbelieve it. However, it will have the effect of bringing the considered attention of many Americans, particularly those in Congress, to this Territory as meaning more to them than a provincial colony far out in the Pacific Ocean. It links Hawaii so closely to the rest of the country and so intimately to the lives of the American people that they cannot wholly ignore the present distress of 540,000 of their fellow countrymen here.

Coming at a time when the people of Hawaii are extending their utmost efforts to obtain congressional action that will end the current longshore blockade and prevent future assaults on the Territory's economic life by that means, the Butler report can be of tremendous value. It demands in no uncertain terms that Congress shall enact remedial legislation forthwith, and demolishes the foundation upon which President Truman based his declaration that he had no authority to rescue the people of Hawaii from the net in which they have been enmeshed by ILWU's blockaders. For Senator BUTLER shows conclusively that the situation here today is both national and international in its scope and in its effect, and a proper concern for the President of the United States, his Cabinet aides, and the country's legislators.

[From the Long Beach (Calif.) Independent of June 27, 1949]

HAWAII BLOCKADED

The Hawaiian Islands are blockaded more effectively than Berlin was by the Russians. For 2 months all ocean transportation of civilian goods has been stopped by the CIO Longshoremen and Warehousemen Union. These unions are dominated by Harry Bridges who is now on trial charged by the Federal Government with being a Communist.

If Long Beach and its immediate trading area were blockaded by a railroad or truck strike, the President would move in with an injunction. That area has about 540,000 people. Hawaii has just that number of persons who are made to suffer by the shipping strike. But the people of Hawaii have no votes in the presidential elections so nothing is done.

It is appalling how few people seem to understand or care what is happening. The Army and Navy ships are unloaded and allowed to sail. But the rights of 540,000 civilians are ignored. The radical leaders of the CIO union are using the misery of the people to gain control of the shipping of the islands.

The argument is over demands for pay increases for the longshoremen and warehousemen. The direction of the strike is by Harry Bridges in San Francisco. The Federal Government is attempting to ignore the issue because longshoremen have votes while the people of Hawaii do not. There is no other explanation apparent.

The pineapple crop is ready for harvest. It will probably be lost because of the shortage of tin cans. The trucking and warehousemen will not handle the crops as harvested. The loss to the Nation and the islands will be tremendous. But the misery of the blockaded people is the unreasonable result allowed.

If ever there was an example of the need for control of unions, this blockade is one. The Nation supported the airlift for the feeding of Berlin when blockaded by the Communists. It would seem reasonable that the Army and Navy should unload and load ships for the protection of the people of Hawaii.

It is time that unions, under such leaders as Harry Bridges, be disciplined. If they are not Communist-dominated, they are certainly very close to it. The Bridges control over Hawaii makes him a virtual dictator of the economic life of the islands. It is time that dictatorship is broken. The 540,000 people of Hawaii deserve to be protected just as were the people of Berlin. In either case, a ruthless dictatorship is responsible for the suffering of the people.—L. A. C.

The Labor Bill

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, June 30 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram sent to me on June 20, 1949, by James C. Petrillo, president, American Federation of Musicians, dealing with the labor bill which we have had under consideration in the Senate.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *June 20, 1949.*

Hon. PAUL H. DOUGLAS,
Washington, D. C.:

I read by the Sunday morning press that John L. Lewis commends Senators PEPPER, NEELY, and MURRAY for standing by the entire repeal of the Taft-Hartley Act. To this there can be no complaint. These three Senators are highly respected by the entire labor movement of America. The press further states that Lewis indirectly lit into those Democratic Senators who are backing amendments to the administration measure. However, it will not be long before Mr. Lewis will lambast these same three Senators that he is now bragging about. That is his reputation. He does not stay on the best possible terms with anyone for long. I say that 98 percent of labor in this country while favoring the entire repeal of the Taft-Hartley bill, including myself, are for any measure that you and the rest of the liberal Senators on the Democratic side and the Republican side, as opposed to the reactionary Republicans and Dixiecrats, can give labor. We feel that the only reason you are making amendments to the administration bill instead of entire repeal of the act is because there is very little possibility in this session of Congress to repeal the entire Taft-Hartley Act. We are satisfied that labor will back you 100 percent in anything you do. Mr. Lewis says that he wants all or nothing. Well that is the rule or ruin policy that he has always followed and will continue to follow. We in the American Federation of Musicians, numbering 237,000 have lost hundreds of thousands of dollars in wages since the Taft-Hartley bill has been put on the statute books of our country. We are willing to follow the leadership of men like you. What we cannot get today we may be able to get at some time in the future, but certainly we must start some place to tear down this vicious slave-labor bill. We also know that if it were not for men like you and the Democratic liberals including the Dixiecrats and some of the liberal Republicans that the reactionary Republicans in the Congress would take away what little freedom labor has left. Mr. Lewis and his organization were all but busted up when the late great leader, President Roosevelt, came into office and gave him a chance to rebuild it and you know how he repaid him by coming out for Willkie in 1940 and Dewey in 1944; but the coal miners voted for the late President Roosevelt and the record shows that in 1948 when President Truman came out for repeal of the Taft-Hartley Act that Mr. Lewis lined up with TAFT and company, but the coal miners again differed with Mr. Lewis and voted for Mr. Truman, while Mr. Lewis voted for TAFT and company. We are just wondering how sincere that man is when he puts a club in TAFT's hands to destroy all liberals and liberalism by first calling a strike in March of this year when the House of Representatives had the bill before the Congress and now that it is up before the Senate he again calls a strike, much to the delight of Mr. TAFT and his reactionary cohorts. In conclusion let me say that the labor movement is satisfied that the administration Democrats, like yourself and the liberal Republicans, are giving labor the best kind of a bill possible to get and we appreciate it, and that the betrayal of labor is not by the administration's amendments but by John L. Lewis.

JAMES C. PETRILLO,
President, American Federation of Musicians.

Railway Labor Executives' Association Speaking for Thousands of Railway Employees Opposes the Merging of the Railroad Retirement Board With the Social Security Administration

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. VAN ZANDT. Mr. Speaker, from several sources comes the suggestion that the Railroad Retirement Board should be merged with the Social Security Administration.

If such a merger occurs the Railroad Retirement Board would lose its identity as a separate and distinct agency of the Government, administering a retirement program the entire cost of which is borne

by railway management and railway employees.

The Railroad Retirement Board is one of the most unique agencies of the Federal Government and has been doing a good job since its creation in 1937.

Speaking for many of the employees of the railway industry Mr. A. E. Lyon, executive secretary of the Railway Labor Executives' Association, takes a very positive position against the proposed merger.

Having many railroaders in my congressional district, together with many retired railway employees, in my opinion Mr. Lyon speaks their sentiments.

For that reason I am calling your attention to Mr. Lyon's statement which is as follows:

MEMORANDUM ON PROPOSAL TO RECOMMEND EXTENSION OF THE GENERAL OLD-AGE AND SURVIVORS INSURANCE SYSTEM TO INCLUDE RAILROAD EMPLOYMENT

The subject of this memorandum cannot be intelligently considered without having clearly in mind the respective origins and histories of the railroad retirement system and the general social insurance system, although, significantly, proponents of covering railroad employment into the general system invariably avoid historical discussion. Divergent origins and histories may not in themselves constitute adequate grounds for continued differentiation, but the light they shed on the purposes served and functions performed by the respective systems cannot be ignored in informed and objective consideration.

Industrial pension systems in this country began on the railroads. During the 50 years preceding 1930, pension plans became practically a universal feature of railroad employment. Despite the universality and formality of pension arrangements on the railroads, the plans were, practically without exception, operated without substantial reserves; current pension payments were simply charged as current operating expenses. By 1930, when the railroads were hard-hit financially, the costs were still mounting annually and revenues were inadequate to meet these mounting costs. The insecurity thus engendered brought demands for congressional attention as early as 1930. In 1931 and 1932 several bills were introduced to deal with the problem. The problem was accentuated by the fact that in a period of several years in the early thirties practically all railroads reduced the pensions then in effect—the reductions ranging from 10 to 40 percent—in order to curtail expenses.

The impact of this condition in the industry was felt in several respects. Retirements virtually ceased. Railroad personnel became loaded with an undue proportion of superannuated employees. The cessation of retirements combined with almost universal and highly developed seniority rules operated severely to accentuate the unemployment among younger men, which due to the depression itself would have reached alarming proportions. At the same time the railroads, notwithstanding pension reductions, were faced with continuously mounting drains on diminishing revenues, while the retired employees and those facing retirement were robbed of that security that they had legitimately expected as part of the return for their services during their active careers.

The problem became one of major concern to the Federal Coordinator of Transportation who had been appointed under the Emergency Transportation Act of 1933 to assist in finding remedies for the most critical conditions afflicting the railroad industry. He, like the employees through their organizations, recommended the establishment of a railroad retirement system by Federal law. In 1934 he explained the seriousness of the conditions to Congress. (See especially Senate hearings on S. 3231, April 26, 1934, p. 154.) It was in response to the serious pension problem in the railroad industry, and not as part of any concern with social insurance, that Congress enacted the first Railroad Retirement Act in June 1934.

One may inquire at this point, Why did Congress concern itself with these problems in the railroad industry alone? Were there not pension plans in other industries that were experiencing similar difficulties? The answers to these questions again have several aspects. In the first place Congress has recognized ever since the development of a national railroad network that the national railroad transportation system must be an object of special congressional concern because it is the system of transportation arteries through which the commercial lifeblood of the Nation flows and upon which the defense of the Nation depends. That concern had been manifested innumerable times in the enactment of special legislation governing railroad rates and fares, relations with shippers, labor relations, safety practices, liability for employee injuries, Government operation in time of war, Government intervention in time of economic emergency, etc. In the second place, the railroad pension systems were longer established, more universal, and more uniformly facing collapse; in no other instance was an entire industry characterized by having throughout the entire industry long established pension systems which faced apparently certain collapse unless Congress intervened. Thirdly, the seniority system in the railroad industry was far more highly developed and of more universal application than in any other industry; that condition, when combined with the instability of the pension plans had the dual effect of loading railroads with superannuated employees and concentrating unemployment among the younger men—normal retirements were not being made and hence were not absorbing the expectable proportion of depressional unemployment.

The sporadic occurrence at numbers of points in other industries of conditions more or less similar to those running uniformly through the railroad industry served to give emphasis to the general problem of supporting the aged in an industrial economy, but they did not present a specific industrial problem. The general problem of social responsibility for the support of the aged in an industrial economy was brought to the fore by such factors as the widespread emergencies of destitution and the economic effect of lost purchasing power; hence the general social-security system was framed with those considerations in mind rather than the specific requirements of a solution to the railroad-pension problem.

The solution which Congress found for the railroad pension problem in 1934 was short-lived. The act was declared unconstitutional in 1935. The problem, however, was so pressing that Congress promptly enacted a new Railroad Retirement Act based on the taxing and spending power rather than the commerce power. The fact that the Social Security Act had been enacted in the interval between the declaration of unconstitutionality of the 1934 act and the enactment of the 1935 act was not regarded by anyone as having provided any solution to the railroad pension problems. Hence by the 1935 act railroad employees were deliberately removed from social security coverage and covered by a separate system directed to meeting the specific problems of the railroad industry. When new constitutional litigation was frustrating the efficacy of that act, the President was sufficiently concerned to make a personal appeal to railroad management and railroad labor to get together and work out a solution. The 1937 act, presented to Congress by labor-management agreement, was the result.

Two pertinent observations may be made regarding the circumstances of the enactment of the 1937 act: If the President had regarded the enactment of the Social Security Act, of which he was the political father and foremost exponent, as having solved the problems of the railroad industry, he would not have concerned himself with the railroad problems in 1936, for unconstitutionality of the 1935 act would automatically have resulted in coverage of railroad employment by social security. If railroad managements had felt that the problems of their industry were solved by the Social Security Act they would not have agreed to the setting up of a separate system that subjected them to substantially higher pay roll taxes than employers in other industry were required to pay.

From this background emerge the reasons why the general system of old-age and survivors insurance is not suitable to the railroad industry. First and most obvious is the fact that benefit levels of the general system, both when enacted in 1935 and as amended in 1939, are too low to be an adequate replacement of the railroad pension plans, whose instability was the root of the critical situation in that industry. This inadequacy is so generally recognized now that even the proponents of covering railroad employment in the general system tacitly concede it to be so. What they propose is universal coverage by the general system with a supplemental system for railroad employment to meet the special needs of that industry.

It should be carefully noted at this point, that once the need of a special railroad system, whether self-contained or supplemental to the general system, is admitted, the most appealing argument for a universal system, namely, equality of treatment for all, goes out the window. From that point on advocacy of extending the general system to cover railroad employment is dealing exclusively with the form and not with the content of the railroad retirement system. There can be little but a passion for symmetry or a bureaucratic concern with unified control that can impel advocacy of revision in the form of the railroad system.

But substantively a supplemental railroad retirement plan cannot do the job. That would have been the most obviously available scheme for the labor-management conferees to adopt in 1937, and had it appeared to those who know the industry to be a feasible device they would no doubt have adopted it.

There are too many reasons why a supplemental system won't do the job for a full presentation of them to be made here, but a few can be indicated. Any railroad retirement plan that adequately replaces the railroad pension plans must recognize prior service. One of the most important factors requiring Government intervention in the railroad pension problem was the necessity of salvaging the credit toward retirement benefits which those then in the industry had built up through their prior employment. Although this is a consideration that will gradually diminish over the years, there are now and will be for some years hundreds of thousands of railroad employees who have very valuable rights at stake in the recognition of prior service credits. The general system of old-age insurance does not recognize prior service. More than that, the formulas for calculating benefits are so constructed in lieu of recognizing prior service as to be defensible only in a system that does not recognize prior service. And it seems extremely unlikely at this date that there will be any revision in this basic approach. It is therefore impossible to engraft upon it any supplemental system that would accord the necessary recognition to prior service in the railroad industry, at least in any terms that would be comprehensible to others than the most abstract theorists.

A second essential of a railroad retirement system is the nonforfeiture of service credits earned. The fear of such forfeitures was a major factor in the insecurity of railroad employees that constituted part of the railroad pension problem of the thirties. Introduction into the railroad retirement system of any element of forfeiture of service credits would revive that insecurity. The general system of old-age insurance, at least as now established, depends on the forfeiture of credits by some in order to support the benefits available to others. To engraft onto this sort of general system a system of supplemental benefits that would eliminate forfeitures on the part of railroad employees would be too complex to be feasible and too costly to be conceived as practicable at least in the present climate of political and economic thought.

One of the elements that is greatly to be desired in any system of insurance is understanding of their rights by the beneficiaries. That is a goal that is extremely difficult to attain when benefit formulas have to be constructed to do even approximate justice among the variables that millions of individual cases present. The railroad retirement system, while far from ideal in this respect, is the fruit of the best efforts that leaders of railroad management and of labor, who know the beneficiaries best, could put forth. It may be said with assurance that railroad employees in general have a much better comprehension of their old-age insurance rights than do the beneficiaries of the general system. A scrapping of the present railroad retirement system in favor of inclusion of railroad employment in the general system, with a supplemental system engrafted upon it, would be a needless and foolish jettison of more than 10 years' produce in beneficiary education. Railroad employees would be given, in lieu of the relatively simple system they now have and generally understand pretty well, not only the more complex general system which few of its present beneficiaries entertain any hope of understanding, but that system encumbered with a railroad supplemental system that would add immeasurably to the complexity of determining ultimate benefit rights.

The sole reason advanced for covering railroad employment by the general system plus a supplement is that under such an arrangement there will be better coordination between benefits resulting from railroad employment and those resulting from other employment. As of the present time at least, this is a matter of only theoretical importance. It can be built up to fearsome potentialities by statistics of shifts in employment between the two systems. But in terms of concrete cases the proponents of extending the general system to include railroad employment would be hard put to find a significant number of cases, if indeed they can find any, in which split employment has resulted in patent injustice, through the individual getting either too little or too much in old-age benefits. For every such case that is produced we would gladly undertake to produce 10 cases of manifest injustice resulting from the social-security formula where there was no split employment. If the problem of coordinating benefit credits should ever be one of practical dimensions, as it may someday come to be, that will be the time to consider the kind of proposal now made; but it will have to be considered as one of innumerable conceivable means of coordinating benefit credits. And the relative efficacy of the available means will have to be considered in light of the specific problems of coordination that experience brings to light.

It is sheer effrontery to assert now on purely theoretical bases that inclusion of railroad employment in the general system is the only satisfactory means of coordination.

Those who assert that inclusion of railroad employment in the general system, together with a supplemental railroad system, is a satisfactory means (let alone the only satisfactory means) of coordinating credits from railroad employment with those earned in other employment should bear the burden of producing and submitting to critical examination a specific and concrete formula embodying the precise terms of the general system they have in mind and the precise terms of the railroad supplement they would propose. Such a concrete proposal could be subjected to valuation in terms of whether the general system predicated is the one that is now in existence or one that may be expected soon to be established; whether, if it is the one that is now in existence, it has shown itself to be a satisfactory base on which to build, or, if it is a proposed revision of the present general system, its prospects of coming into existence warrant planning a railroad supplement on that hypotheses; and, in either case, whether the specific railroad supplement proposed is a feasible one that would meet the needs of the railroad industry. The avoidance of these specific and concrete issues by sketching general and abstract goals is too glib to qualify as statesmanship.

Normally when an extension of a social-insurance plan is proposed, the proposal is based on a desire to benefit those to whom it is to be extended. What should be more remarkable than anything else about the proposal to extend social security to railroad employees is the complete absence of even a claim that such an extension would be to the advantage of railroad employees. It is clear that such a proposal, with or without a railroad supplement, would be to the disadvantage of the great bulk of railroad employees. The most that can be said for it is that, at the expense of the great bulk of railroad employees, it might theoretically benefit some individuals whose employment is split between railroads and other industry—with corresponding detriment to others whose employment is so split. The railroad employees have no intention of standing that expense. There can be no doubt that they will exercise their democratic right to resist such a proposal with every resource at their command. And such practical considerations, certainly no less than social blueprints, must commend themselves to the minds of those who would give the Congress helpful advice. For in a democratic society, unlike totalitarian regimes, the voices of those affected are entitled to respect in the formulation of policy and not merely to be regarded as resistance to be overcome in its execution.

Waltham Watch Co. Reorganization

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a timely editorial, which appeared in the June 21, 1949, issue of the Waltham (Mass.) News-Tribune.

The editorial follows:

HE'S EARNING IT

No difficulty is found in establishing justification for the heated repudiation directed by John J. Hagerty to those who linked his appointment as head of the Waltham Watch Co. to the RFC's approval of a $6,000,000 loan for the financially stricken firm.

The allegation first appeared in Drew Pearson's column and later was repeated. In view of Mr. Pearson's reputation as a smear artist and his penchant for distortion, the matter scarcely seemed worth dignifying. Waltham had good reason to know that Mr. Hagerty was not even under consideration as prospective top executive at the time the loan was formally approved.

As the community well knows, the approval was announced by Hagerty himself at the United Waltham Committee public rally in Hovey Memorial on January 25. Not until April 7 was he appointed trustees' agent. Two weeks before the latter date he told the News-Tribune he had no knowledge such an appointment was in the making.

Considerable fuss appears to be stirred by the fact that Mr. Hagerty left a $10,300 post with the RFC to take over one paying $30,000.

Since when, might we ask, is it wrong for an individual to better himself if he has the talents to sell? Government frequently takes competent men from business and they offer their services at a sacrifice in salary. The situation can work with reverse English, and in this case it appears that the very action is assurance the Government stake in the reorganized firm will be protected.

The question of salary is not a fair issue. Predecessors of Mr. Hagerty were paid higher amounts. If he can make good in his acceptance of a challenge of great magnitude, he will by every measure be worth every cent paid him. The start he has made has been remarkably successful, fully justifying the confidence placed in him by the trustees.

Senator FULBRIGHT's questions at a Washington subcommittee hearing brought the matter out into the fresh air where it belonged. We hope Mr. FULBRIGHT is convinced that it is good business for Government to provide capable career men for industry, particularly where Uncle Sam has a stake in the operation.

Unemployment and Rise in Cost of Living Resulting From Strike of Longshoremen Shown in Report of Department of Labor and Industrial Relations of the Territory of Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a report of the Department of Labor and Industrial Relations of the Territory of Hawaii showing unemployment and increase in the cost of living resulting from the strike of longshoremen now in progress in the Territory of Hawaii.

The report follows:

TERRITORY OF HAWAII,
DEPARTMENT OF LABOR
AND INDUSTRIAL RELATIONS,
Honolulu, June 24, 1949.

Hon. JOSEPH R. FARRINGTON,
Delegate from Hawaii,
House of Representatives,
Washington, D. C.

DEAR MR. FARRINGTON: The following is a summary of the effects of the longshore strike on the department of labor and industrial relations:

UNEMPLOYMENT

The strike has aggravated the unemployment situation which at the present time is a matter of grave concern. Unemployment increased from May 1, 1949, to June 23, 1949,

by 5,050 persons, with the total number of unemployed amounting to 21,050. The number of unemployed is 11.2 percent of the total labor force of the Territory compared to a 3.5-percent national average.

Wholesale and retail firms laid off 1,192 persons since May 1, 1949, hotels and places of amusement 700, construction companies 810, transportation companies 488, and manufacturing companies 800. Nine months ago the total number of unemployed persons was 11,000. The comparatively large increase in unemployment in the 9 months prior to the beginning of the strike was in itself a serious matter as there were no employment opportunities available or in prospect for the majority of the unemployed.

UNEMPLOYMENT COMPENSATION AND SERVICEMEN'S READJUSTMENT ALLOWANCE

The direct impact of the water-front strike on the bureau of unemployment compensation is daily becoming more severe. Unemployment compensation claims had increased to an all-time high during May 1949, and it is estimated that the volume for June will be 40 percent greater. Unemployment compensation claims and servicemen's readjustment allowance claims will total over $500,000 for June compared to a total of less than $3,000,000 for the entire year of 1948.

Unemployment compensation claims

	New	Additional	Continued	Total
April	1,401	540	15,582	17,523
May	1,259	669	16,734	18,663
June (estimated)	1,650	901	23,783	26,334

Readjustment allowance claims

	New	Additional	Continued	Total
April	442	478	10,447	11,367
May	431	567	11,287	12,285
June (estimated)	589	1,261	15,946	18,096

COST OF LIVING

Retail food prices in Honolulu took an upward jump of 2.6 percent since the beginning of the strike which was in marked contrast to the steady decline of food prices in the previous 6 months' period.

On June 17 several basic items of food had practically vanished from the shelves and bins of retail stores contacted. Rice and evaporated milk were found in only one store, with sales limited or rationed to each customer, and this supply was exhausted within a day or two. Onions and potatoes were completely sold out and a limited supply of butter was on hand at greatly increased prices due to air-freight importation. Island eggs increased from an average of 99.6 cents per dozen in May to $1.115 in June or a rise of 17 percent within 30 days.

Since June 17 a few shipments of onions, rice, and potatoes have arrived on relief ships. However, current prices per pound for these items are: onions 25 cents, rice 28 and 29 cents, potatoes 25 cents. Canned milk is now on limited sale at a few stores, upon presentation of a doctor's certificate, to families with children.

It is probable that thousands of persons in the Territory are unable to pay the above prices for adequate amounts of staple items of food, or are unable to secure them if they do have sufficient funds.

MISCELLANEOUS

The number of miners who have found employment in industry has declined about 65 percent compared with the same period last year. This drying up of job opportunities is undoubtedly due to the general unemployment situation which has been aggravated by the strike.

Wage claims filed since the strike do not show an appreciable increase over the preceding months but we find that as the length of the strike is protracted a steadily rising curve of those claims filed is directly attributable to the inability of the employer to pay because he has been unable to secure replenishment of stocks.

The wage-hour inspectors of the department have observed in general a widespread cut-back in hours of work offered and in many cases a reduction of rate of pay.

Very sincerely yours,

E. B. PETERSON,
Director of Labor and Industrial Relations.

Basing-Point Proponents Use Terms "Absorb Freight" and "Delivered Price" as Sales Talks—These Terms Should Not Be Written Into Substantive Law—Dangers to Our Antitrust Laws Obvious as New Terms Are Added—Long Court Action While Antitrust Laws Are Sabotaged—Evils of Basing-Point System Defined—Congress Must Be Cautious When Monopoly Cheers Its Action

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. PATMAN. Mr. Speaker, it is regrettable that the billions paid into the coffers of monopolies through the use of artificial price controls and systems cannot be dramatized. These huge sums of money which have been extracted from the pockets of our people have been so screened from public view by devious and secretive methods that they are brought to light only when perpetrators are brought into court. The Staley case, the Cement case, and the Rigid Steel Conduit case are examples of cases that have supplied evidence of these facts.

It is difficult to arouse interest in an acute problem which by its very nature cannot be dramatized. Those of us who try to point out the dangers to our system of government and to our people on the subject of monopoly are somewhat handicapped in the presentation. We can all easily visualize a $5,000,000,000 appropriation for ECA or a $5,000,000,000 increase or decrease in taxes. We have some conception of the problem when we say that it requires a certain number of billion dollars to run the Government for a particular fiscal year. We can arouse interest when we contemplate the expenditure of $15,000,000,000 for national defense. There are many problems which come before the Congress which immediately catch the imagination of the Members, of the press and radio, and of the people. But, somehow, the terrific and incalculatable costs of monopoly to the Government and to the citizens of the United States and its devious and secretive methods cannot accurately be portrayed.

The building of highways or reclaiming wasteland immediately arouses our interest. The development of our great river basins and the protection of our farm land from erosion receives first consideration. We immediately go into action when disaster of any nature overtakes or threatens any portion of our country. It is to our credit and to the credit of a progressive people to be interested and concerned about these matters. Congress has shown its interest, and the people have supported that interest, in the passage of antitrust laws. But, the danger now is that we are asked to weaken our antitrust and fair-trade practice laws by permissive legislation instead of prohibitive legislation.

Several months ago the Federal Trade Commission completed its evidence in Docket No. 5508, known as the Steel case. Up to this time, although Federal Trade Commission completed its case last September, the defendants have consumed the intervening time with delaying tactics and actions. Why have these defendants delayed? Is it the hope that Congress will pass legislation which will nullify all of the work of the Federal Trade Commission in its efforts to eliminate monopoly in the steel industry? Is it because of the powerful steel lobby, which is in operation and which has paid the greatest known sums of money for lobbying purposes, has assured its members that Congress will bail them out?

Without impugning the motives of any Member of Congress, and that I shall never do, I assure you if the S. 1008, as amended, passes you may as well abolish the Federal Trade Commission. If we do not abolish it, at least we can change its name to a more fitting one. Perhaps, the Commission for the Administration of Repealed Antitrust Laws would be appropriate.

Seriously, insofar as the administration of the laws entrusted to the Federal Trade Commission during the past 35 years, it would mean beginning all over again. What the devoted employee of the Commission would face is hardly enviable. A decade or a lifetime of work destroyed. The laws meaningless until tested again in the courts. Then after 35 more years work—another moratorium or another amendment which would again destroy years of effort.

Not only will S. 1008, as amended, open wide the gates for the destruction of small business, but I am equally sure the effectiveness of the Federal Trade Commission to stop evil trade practices in their incipiency will shrink to the vanishing point.

"ABSORB FREIGHT" DOES NOT MEAN WHAT THE TERM IMPLIES IN BASING-POINT PRACTICE

The phrases "absorb freight" and "delivered price" are dangerous ones to include in substantive law. These are "sales talks" used as an inducement to purchasers to make them believe they

are getting something for nothing. If these terms are written into law as contemplated by S. 1008, which passed the Senate on June 1, 1949, it will mean the return of the basing-point system of pricing which the Supreme Court outlawed more than a year ago in the Cement case. The phrase "absorb freight" has the connotation of something which the seller graciously bestows upon the buyer in return for his business. The term "absorb freight" will be used in such a way that it will mean "phantom freight." Where you have phantom freight the basing-point system of pricing is in full operation.

If the term "absorb freight," as used in the basing-point system of pricing, was really intended to benefit the purchaser by equalizing freight charges with the purchaser's nearest source of supply, it might mean competition. But, this equalization never happened under the basing-point system of pricing either in steel or cement. The use of arbitrary basing points in these industries were not for the purpose of benefiting the buyer but were for the purpose of controlling markets, creating a monopoly, and eliminating competition.

If the term "absorb freight" meant that freight charges were equalized by a seller whose plant was more distant from a shipping point closer to the buyer, the term might have substance. But, under the basing-point system of pricing, it has no such meaning. The location of a source of supply close to the buyer, under the basing-point system, made little difference because his closer source of supply might be a nonbasing point or if it were a basing point the buyer might not be in that particular basing-point's territory.

DIVISION OF TERRITORY WITHOUT REGARD TO FREIGHT ADVANTAGE

It was the division of territory without reference to the location of sources of supply and the arbitrary charge of freight from the basing point regardless of where the buyer purchased his material which enabled the Steel and Cement Trusts to extract unearned dollars in the form of phantom freight. Freight equalization in which the freight charge is equalized with the nearest competitive point is one thing; but freight absorption as practiced under the basing-point system does not produce freight equalization. It is the basing-point system with all of its monopolistic price and distribution controls which Congress must guard against.

WALL STREET JOURNAL DESCRIBES O'MAHONEY AMENDMENT AS ALLOWING USE OF BASING-POINT SYSTEM

The Wall Street Journal for Tuesday, June 7, 1949, continually speaks in a leading article of "freight absorption," as the term is now used by industry, in describing the basing-point system. It also speaks of delivered price in this connection. The Wall Street Journal says, with respect to the O'Mahoney substitute:

> The bill would amend the Federal Trade Commission Act and the Clayton Antitrust Act to permit freight-rate absorption (or use of the basing-point system) as long as there is no evidence of collusive price fixing. It would be permanent in effect.

I have pointed out time and time again how difficult it would be under permissive legislation to secure evidence of price fixing once such legislation is in effect. It took the Federal Trade Commission 25 years or more to finally bring the Cement Trust into the highest Court in the land and have the multiple basing-point system outlawed. It took many years of diligent effort to have the Pittsburgh-plus system outlawed, the system which forced everybody in the country to pay for steel on the basis of an f. o. b. Pittsburgh price, regardless of where the steel was purchased. I have told above of the delay incident to the new steel case and the procrastinating tactics which have been used. I believe that if we now pass a permissive act which, regardless of the language, may again permit the use of the basing-point system, none of us here present will be here when cases brought under this bill will finally have been decided—if they are ever decided.

BIG BUSINESS SPOKESMEN NOT AS FRANK AS BIG BUSINESS PRESS—SING SLIGHTLY DIFFERENT TUNE

The basing-point and monopoly boys are, however, becoming a little more cagey in their statements. With the defeat of the moratorium and the substitution of the language which the Senate adopted, as introduced by the distinguished United States Senator from Wyoming [Mr. O'MAHONEY], they are presenting a slightly different face. In the Wall Street Journal for Saturday, May 7, 1949, spokesmen were quoted as saying, "Only the word 'go' from Congress is awaited," to return to the basing-point system of pricing. Elsewhere in the article an undisclosed proponent talked of a green light from Congress and predicted, "All steel industry will pay freight bills if Congress approved." This, of course, was an erroneous statement intended to mislead, because it has never been a practice of steel producers to prepay freight shipments of steel to their customers.

In the June 7, 1949, article of the Wall Street Journal, it quotes unidentified cement industry executives as saying:

> The bill which has cleared the Senate goes a long way toward answering our major problem of pricing our product in competitive markets. The bill in no way approves or disapproves the basing-point system. It gives us the privilege of meeting competition.

Mark well the language as interpreted by one of the biggest cement companies in the country:

> The bill in no way approves or disapproves the basing-point system.

That statement, I believe, is sufficient for any fair-minded person to know that it is the intent and purpose of the steel and cement industries to again use the basing-point system once any bill permitting "freight absorption" and "delivered prices" becomes law.

CEMENT EXECUTIVE ADMITS INADVERTENTLY INDUSTRY IS A LOCAL ONE

Despite what the Supreme Court said about the matter, Mr. B. M. Roadstrum, president of Penn-Dixie Cement Corp., is quoted as saying:

> There had never been any setting of arbitrary basing points in the cement industry and no collusion between companies in setting prices.

Listen to what this unnamed representative of a cement firm had to say:

> We don't care much whether the bill becomes law or not. We are getting all the business we need in the low freight area we are now operating in. When business gets more competitive, however, we may have to quote delivered prices.

That is one of the great difficulties under the basing-point system, namely, customers situated close to the cement plants do not get the benefit of their freight advantage. This would not happen if the normal development of the cement industry had taken place during the past 50 years. But, through the use of the basing-point system and its monopoly controls, the Cement Trust did not allow plants to be built where they would best serve local markets.

SHOULD WE VOTE AGAINST OUR DISTRICTS TO SUBSIDIZE DISTANT AND UNECONOMIC CONCENTRATIONS?

I do not believe any Member of Congress would, knowingly, vote against the development of industry in his district, or in his State, or his region. I insist that the basing-point system of pricing, as practiced by the cement, steel, and other industries, has restricted regional development, and it is my firm conviction that if we now pass any permissive laws in the antitrust field, regional development in these industries will continue to be retarded.

So long as the cement and steel industry can control the markets, the building of plants will also be controlled. It is a brave man indeed who would risk his capital under the threat of the punitive action which could be taken under the basing-point system. No plant and no amount of capital can long survive cutthroat competition. It has happened before under the basing-point system and it can happen again.

PRICES WENT UP ARBITRARILY AFTER CEMENT DECISION TO ALARM CONSUMERS AND THROW OUT SMOKE SCREEN

The Wall Street Journal of the above date quotes an official of another company as saying:

> The change has shown the consumer how much more it cost him under f. o. b. pricing than under the old system.

That statement is as artificial as the basing-point system. It must be remembered (1) that the cement decision was handed down by the Supreme Court on April 26, 1948, a time of inflated prices, and (2) the sudden increase of many f. o. b. mill prices in steel and cement is suspect because at that time such prices could be easily secured and the drive of the cement and steel lobbies was getting

under way. Furthermore, the cement and steel industries were not sentenced to f. o. b. mill pricing but only pretended that such was the case. Undoubtedly, in order to further the drive on Congress to secure legislation, the sudden increases in the price of cement and steel were intended to cause unhappiness among consumers and in some cases to promote the belief that the f. o. b. system of pricing was more expensive.

However, once the forces of competition are restored, pricing which works to the benefit of the consumer on thousands and thousands of items will be found also to accrue to the benefit of regional development in steel and cement and many other industries.

VARIATIONS OF PHANTOM FREIGHT WILL BE RESULTED, STEEL EXECUTIVE PREDICTS

The Wall Street Journal further quotes the major prophets—or profiteers—of the steel industry as being somewhat undecided, but one steel maker is quoted as saying, "There would probably be some variations from the former system on some products and phantom freight charges, which existed before at some plants probably would be resumed."

A careful reading of numerous such articles makes it very clear to me that the cement and steel industries will return to one of the many forms of the basing-point system of pricing the minute any bill passed by Congress becomes law. Some may even have anticipated its passage and signing, so sure are these defilers of competition that the Congress will hand them a club with which to throttle small business to its knees.

USES OF STEEL AND CEMENT

The fact that steel and cement are necessary to practically every activity in our day makes it all the more important that we have free markets and free prices for these products. Cement has become the accepted material for practically every form of construction, and finished steel products enter into every human activity.

In fighting the basing-point system, I am fighting neither steel nor cement, nor any other commodity sold under such systems. Nor am I interested in the use to which these materials are put so long as it is a proper use. To the contrary, my aim and purpose is to afford free markets in which to purchase all commodities at competitive prices. We have not had in the past true competition in either steel or cement. I want to see these monopolies struck down and I want to see regional development in these industries. The real purpose of the basing-point system is to create monopolies, restrain trade, and stifle competition. It is not the duty of Congress to aid these monopolies, it is the duty of Congress to prevent them from getting out of hand. For the information of the Members I include a table on steel and cement distribution by commodities with appended explanations of the various products and the percentage of the total distribution of finished steel products and of cement. The table and explanations follow:

USES OF STEEL AND CEMENT

STEEL

The Iron and Steel Institute estimates that the distribution of finished steel amounted to over 66,000,000 net tons in 1948. It was distributed as follows:

Market classification	Net tons	Percent of total
Jobbers, dealers, distributors	11,299,936	17
Automotive	10,090,645	15
Construction (including maintenance)	7,275,573	11
Containers	5,312,953	8
Rail transportation	5,227,047	8
Unclassified	3,905,417	6
Converters and processors	3,436,238	5
Export	3,307,142	5
Machinery, industrial equipment and tools	3,019,925	5
Contractors' products	2,451,624	4
Appliances, utensils, and cutlery	2,041,918	3
Domestic and commercial equipment other than appliances, utensils and cutlery	1,724,727	3
Electrical machinery and equipment	1,899,172	2
Agricultural	1,447,185	2
Bolts, nuts, rivets, screws	1,321,630	2
Forgings (other than automotive)	895,068	1
Oil and gas drilling	720,288	1
Shipbuilding, marine equipment	574,909	.1
Mining, quarrying, lumbering	335,709	1
Ordnance, other military	102,663	------
Aircraft	33,041	------
Total	66,081,500	100

The Nation's largest producer of steel, the United States Steel Co., lists in its 1947 annual report a partial list of manufactured steel products which are as follows:

Building and construction: Structural shapes, plates, and steel-bearing piles for bridges, buildings, and similar structures; steel sheet piling for retaining walls and cofferdams; concrete reinforcing bars; bridge flooring and cables; culverts and sectional plates and corrugated or smooth sheets for culverts; formed steel roofing and siding sheets for buildings; hot- and cold-rolled strip and sheets for air-conditioning ducts, furnaces, and other heating equipment; enameling sheets for porcelain enamel finish and trim; stainless steel for architectural trim and related uses; nails, spikes, staples, and tacks; conduit, electrical wires, and cables; elevator, crane and shovel rope; wire fabric for concrete and stucco reinforcement; telephone and telegraph wire; wire screen and hardware cloth; chain link property protection fence; aerial tramways; seamless pipe piles for foundation and construction work; pipe for plumbing and heating; fabricated structural steel buildings, bridges, stadiums, tanks, towers, and other structures; manufactured homes.

Transportation: Rails, switches, crossings, and track accessories for railroad track construction; locomotive side frames; stainless and high-strength steels and wheels and axles for railroad and street-railway cars; structural shapes, plates, sheets, and strip for freight- and passenger-car construction; electrical wires for control signals and lights; spring wire, rail bonds, and other wires and cables for railroad use; seamless pipe for locomotive and train lines; air brake and signal pipe; cold-rolled strip and sheets for automobile bodies and parts; carbon and alloy steel bars and special sections for automobile engines, transmissions, chassis, and other parts; stainless steel for decorative trim; springs and spring wire for automobile seats and mechanical uses; axles, axle housings, and torque tubes; tubes for steering columns; alloy steel bars and seamless alloy steel tubing for aircraft frames, engines, and landing gear; aircraft control cables and stitching wire; plates, shapes, and bars for all types of marine construction; tubular masts, poles, and booms; railing and deck piping; power piping, fuel lines, bilge and ballast lines; naval vessels, cargo and passenger ships, tankers, lighters and barges, floating dry docks and dredges.

Petroleum: Oil-country goods in the form of drill pipe, casing, and tubing; line pipe and gathering lines for long distance transportation of petroleum products; structural shapes for oil-field derricks; plates for oil and gas storage tanks; stainless steel for refinery vessels and equipment; alloy steels for drilling tools; wire rope for drilling and other oil-field operations; oil-well cement; drilling engines and machinery, feed controls, hoists, traveling and crown blocks, sucker and pull rods, sluah, oil, and subsurface pumps, central pumping units for operating a number of wells from a single power source, portable pumps, swivels, packers, bits, slips, elevators, hoses, valves, and other specially designed equipment used in oil and gas fields.

Mining and quarrying: Plates, shapes, bars, and sheets for mine tipples, hoists and fan houses. Steel timbers and jacks for mine-roof supports. Light rails, steel ties, and track accessories for mines and quarries. Mine cars. Plate lining and grinding balls for ball and tube mills. Wire rope and cable for hoisting and other mine and quarry uses. Heavy duty electrical wires, and cables for trolley wires. Pipe for pump and drain lines, processing and water supply.

Agriculture: Carbon and alloy bars, shapes, plates, sheets, and strip, pipe and tubing for agricultural machinery, such as harvesters, combines, plows, and other farm equipment. Water-supply lines and well casing. Formed roofing and siding sheets for farm buildings. Galvanized sheets and strip for silos, grain bins, brooder houses, and other farm structures. Wire bale and cotton ties. Woven wire fencing, netting, barbed wire, steel fence posts, and gates. Welded fabric for pens. Diesel engines for farm use.

Machinery and industrial uses: Bars, shapes, plates, sheets, and strip for electrical and other machinery. Plates for boilers and pressure vessels. Special alloy steels for machine tools and related industrial equipment. Stainless steel for food processing, chemical, paper and textile equipment, and machinery. Electrical wires and cables for motors and turbines. Wire rope for cranes and hoists. Welded mesh for machine guards. Welding and strapping wire. Chain link conveyor belting. Book binding and stitching wire. Mechanical tubing for machinery, tool parts and equipment. Superheater tubes, boiler tubes, condenser, and heat-exchanger tubes. Still tubes and high-pressure piping. Commercial forgings. Electric furnaces.

Appliances and household equipment: Enameling, stainless, and other steel sheets for refrigerators, stoves, kitchen cabinets, washing machines, ironers, kitchenware, bathroom equipment, household and office furniture and fixtures. Galvanized and black sheets for garbage cans, trash cans, washtubs, pails, and other household ware. Spring wire for bedsprings, mattresses, and upholstered furniture. Pipe for awning frames and yard equipment. Seamless tubing for refrigerators and appliances. Bedstead tubing.

Containers: Tin, terne and black plate for cans, caps, and closures. Sheets for shipping pails, steel barrels and drums. Slack and tight barrel hoops. Steel drums, containers, cylinders, and shipping containers.

CEMENT

Standard and Poor's Industry Surveys show that nearly 100 percent of total output in the cement industry is consumed by the

construction trades. It is used in dams, concrete roads, and many other public-works projects, and it is used in virtually all other building to some extent. The distribution of uses of cement is estimated as follows: building construction, 33 percent; paving (highways, streets, runways, etc), 25 percent; conservation (flood control, drainage, power projects, etc.), 15 percent; rural, 9 percent; sewers and water supply, 7 percent; bridges, 5 percent; railroads, 2 percent; miscellaneous, 4 percent.

REGIONAL CEMENT PLANTS NEEDED—14 STATES HAVE NO PLANTS

At various times I have discussed the necessity for cement plants located closer to the points of consumption. The need is great in many sections, of which New England is an example. If cement plants were properly distributed throughout the country and the basing-point system was not in existence, the cost of cement would be materially less to public and private consumers. There are a great many deficient areas in the United States, and one outstanding surplus area, namely, Pennsylvania. Pennsylvania is also a heavy surplus area in steel production. Fourteen States do not have cement plants within their borders.

I recently outlined the phantom-freight situation in New England, under the basing-point system, by illustrations of typical destination points and the amounts of phantom freight on a barrel of cement to such points. During the last 10 years shipments of cement to destinations in New England have amounted to 59,145,162 barrels. The consumers of this great quantity of cement have paid large sums of money in phantom freight. I have pointed out that the basing-point system is predicated on the higher all-rail freight rates thereby denying, as in the case of New England, the advantage of its lower water rates which must be taken into account in the greater portion of New England. A table of New England shipments of cement for the years 1939 through 1948, inclusive, follows:

Shipments of cement to destinations in New England States for years 1939 to 1948, inclusive

Year	Connecticut	Maine	Massachusetts	New Hampshire	Rhode Island	Vermont
	Barrels	*Barrels*	*Barrels*	*Barrels*	*Barrels*	*Barrels*
1939	1,787,229	416,027	2,606,866	374,609	567,057	263,515
1940	1,893,733	331,685	2,707,242	428,752	649,373	246,820
1941	2,379,471	623,245	3,029,370	518,691	834,261	238,436
1942	1,996,198	559,791	2,715,651	456,845	963,073	126,412
1943	1,094,609	439,647	1,467,558	268,157	535,352	117,981
1944	863,538	248,306	1,084,005	212,212	304,685	116,590

MANY LARGE AREAS IN UNITED STATES SHOW A DEFICIENCY IN CEMENT CAPACITY AND PRODUCTION

Going back to the deficiency in the local supply of cement in the United States, it must be kept in mind that many States do not have cement mills at all. This condition has obtained despite the fact that the records show available cement-making materials in practically every State in the Union. As stated above, the cement trust has concentrated production in some particular areas for its own reasons. These reasons, however, should not be sufficient to impose the multiple-basing-point system upon the entire United States, or any part of it for that matter. Concentration of production in any industry, including steel and cement, should not be an excuse to invoke artificial pricing systems to the detriment of the rest of the country. Because of arbitrary territorial divisions which existed in the cement industry, under the basing-point system, many States did not receive the benefits to be derived from local production. Many States which have cement plants do not have sufficient production to take care of local consumption. If the basing-point system is reinaugurated it is doubtful when, if ever, such States will have a sufficient available supply on the lowest freight cost basis. It must also be kept in mind that cement is needed in greater quantities all the time. Our public and private projects, our farms, our cities and towns, all demand an ever-increasing supply but at a reasonable price on a competitive basis.

BASIC HEAVY INDUSTRY VERSUS LIGHT INDUSTRY—EACH OF OUR STATES DEPENDENT UPON THE OTHER FOR MANY PRODUCTS

It is not my intention to advance the argument that every State should be self-sufficient in every product. To the contrary, certain regions of our country have raw materials and other advantages which make the manufacture and distribution of a variety of products an economical one. For example, there are very good reasons for a number of finished products to have a wide distribution and that statement might include, for example, shoes, tobacco products, cutlery, clothing, and many others. I am concerned here principally with our basic commodities which are heavy and which in proportion to their unit cost carry high rates of transportation. But, regardless of the industry, I am concerned, greatly so, when any pricing device is used as a handy instrument to eliminate competition and create a monopoly.

At this point I desire to include two tables showing the estimated surplus or deficiency in cement-producing States for the years 1939–40 and for the years 1945 and 1946. Source, Bureau of Mines, Department of the Interior, Minerals Year Book.

HOUSE JUDICIARY COMMITTEE OF EIGHTIETH CONGRESS—HISTORY "CRIES OUT" FOR LEGISLATION TO PREVENT MONOPOLY

The report of the Federal Trade Commission on the merger movement, published in the fall of 1948, quotes the House Judiciary Committee of the Eightieth Congress as saying:

> The history of legislation previously adopted to prevent monopolies, the great increase in recent years of competition—destroying mergers, the damage to small business, the blighting of opportunity for our young people—all cry out for the enactment of legislation to stop the rising tide of monopoly.

I subscribe to this statement 100 percent and that is what motivates me when I cry out against the enactment of legislation which may weaken and subvert our antitrust laws. My record is consistent in this respect and I am not going to succumb now to the blandishments of any piece of legislation which may have the effects I have described.

I respectfully ask my colleagues of the House Judiciary Committee of the Eighty-first Congress if perchance they too, subscribe, at least in part, to the words above. Are our children and our children's children to live in an economy controlled by monopoly, and are we to incline our heads respectfully toward the citadels of the Steel and Cement Trusts before we start the day, and again at eventide?

STEEL TRUST CONTROLS BOTH STEEL AND CEMENT

The United States Steel Corp. through its subsidiary, Universal-Atlas Cement Co., in 1945, controlled 14.9 percent of the cement capacity in the United States, an increase of seven-tenths percent over 1937. The second largest member of the Cement Trust, the Lehigh Portland Cement Co., controlled 12 percent of productive capacity in 1945, an increase of 3.4 percent over 1937. These with the other three of the big five, namely, Lone Star Cement Corp., Alpha Portland Cement Co., and the Penn-Dixie Cement Corp., accounted for 44 percent of the productive capacity in 1945 as against 39 percent in 1937. The 10 largest producers in 1945 accounted for over 60 percent of the cement capacity.

It is interesting to note in the report of the FTC that the process of merger and acquisition in the cement industry continues. In 1945 Universal-Atlas acquired Wabash Portland Cement Co., Osborne, Ohio. The Marquette Cement Co. in recent years has acquired the Hawkeye Cement Co., of DeMoines, Iowa; the Hermitage Portland Cement Co., of Nashville, Tenn., and the Cumberland Portland Cement Co., of Cowan, Tenn. Incidentally, the report points out that by these acquisitions Marquette has secured over 21 percent of Iowa's capacity and 23 percent of Tennessee's capacity.

Other mergers in the cement industry in recent years were the Pacific Portland Cement Co., Headwood Harbor, Calif., and the Beaver Hill Portland Cement Co., Gold Mill, Oregon. Another acquisition was the Gulf Portland Cement Co. of Houston, Tex., by the Ideal Cement Co. of Denver, Colo.

MERGERS PLUS BASING-POINT SYSTEM MECCA FOR STEEL AND CEMENT

These acquisitions and mergers in the cement industry can, standing alone, produce controlled markets and controlled prices, in other words, monopoly. When this growing tendency is augmented by the now outlawed basing-point system, there is no hope either for the enforcement of our antitrust laws or free competition in the cement and steel industries. Under the basing-point system in 1942 Universal-Atlas Cement Co., the United States Steel's subsidiary, owned basing-point plants at Hudson, N. Y.; Universal, Pa.; Buffington, Ind.; Leeds, Ala.; Hannibal, Mo.; Duluth, Minn.; Independence, Kans.; Waco, Tex.; and Northampton, Pa. The only non-basing-point plant listed for this company was Osborne, Ohio.

The Lehigh Portland Cement Co., the second largest in the business, owned basing-point plants at Birmingham, Ala.; Oglesby, Ill.; Mitchell, Ind.; Mason City, Iowa; Iola, Kans.; Union Bridge, Md.; Alsen, N. Y. (near Hudson); Buffalo, N. Y.; Fordwick, Va., and at Metaline Falls, Wash. The Lone Star Cement Corp., the third largest in the business, owned basing-point plants at Birmingham and Spocari, Ala.; Limedale, Ind.; Bonner Springs, Kans.; New Orleans, La.; Greensport, N. Y. (in the Alsen-Hudson district); Nazareth, Pa. (in Northampton district); Cement City and Manchester, Tex.; and at Norfolk, Va. The Alpha Portland Cement Co., the fourth largest in the business, in 1942 owned basing-point plants at Birmingham, Ala. (Phoenixville); LaSalle, Ill. (adjacent to Oglesby); Alpha, Mo.; Cementon, N. Y. (in Hudson-Alsen Greensport district); and at Ironton, Ohio. The Penn-Dixie Cement Corp., the fifth largest in the business, owned basing-point plants at Clinchfield, Ga.; Nazareth, Pa.; and at Kingsport and Richland City, Tenn.

NON-BASING-POINT PLANTS STRATEGICALLY LOCATED BY BIG FIVE OF CEMENT TRUST

Each of these companies had in 1942 one or more non-basing-point mills in the several States strategically located to reap the benefits of the basing-point system. It can be easily seen how these five companies, which with their strategically located mills and more than 44 percent of the production, can control the sale and distribution of cement in the United States. Particularly is this true when the next five largest are added, accounting for 60 percent of the capacity. The little fellow just has to behave, or else. There are approximately a total of 71 companies manufacturing cement in the United States and its island possessions. The source of the information on basing-point and non-basing-point plants recounted above is a map prepared by the Board of Investigation and Research, under the Transportation Act of 1940, which sets out portland cement plants and cement-producing districts in relation to sources of limestone and bituminous coal.

CALIFORNIA SENATE INVESTIGATION OF CEMENT TRUST

In this connection California some years ago had a thorough investigation of the cement industry in California by a special committee appointed to investigate concerning the existence of a reputed Cement Trust. The supplemental report of the committee on May 15, 1929, by the Honorable Herbert C. Jones found conditions in California at that time to be exactly the same as found later by the Federal Trade Commission, which

led to the Supreme Court decision in the Cement case. In the summarization of his report Senator Jones stated:

The realization that we have entered on a new economic era cannot but be viewed with serious thought. We have to recognize that with the passing of free competition the American people have lost the fight which they have been conducting for at least two generations. We have to recognize that a system, a culture, almost a civilization—that which has brought America to its present pinnacle of achievement and which has been based upon individual initiative—is being swept into the discard.

Please remember that Senator Jones' statement was made on May 15, 1929, and not yesterday. It was made more than 20 years ago, and frankly, as we look the facts in the face today, we are still going backward instead of forward in controlling our ever-increasing monopolies. What will the end be? Are the corporations to become more powerful than the people, or shall we make a stand now and make the antitrust laws effective?

For the information of the Members I include a directory of the cement plants in the United States. The directory follows:

[Mineral Industry Surveys, United States Department of the Interior, Bureau of Mines, J. A. Krug, Secretary; James Boyd, Director]

DIRECTORY OF CEMENT PLANTS

In response to requests for general information on the location of the plants manufacturing hydraulic cement, the following list arranged alphabetically by States and location of plants has been prepared by the Bureau of Mines:

PORTLAND CEMENT

Alabama

Birmingham: Lehigh Portland Cement Co., Allentown, Pa.; Lone Star Cement Corp., Birmingham.

Leeds: Universal Atlas Cement Co., New York, N. Y.

Phoenixville: Alpha Portland Cement Co., Easton, Pa.

Ragland: National Cement Co., Birmingham.

Spocari: Lone Star Cement Corp., Birmingham.

Mobile: Ideal Cement Co., Denver, Colo.

Arkansas

Okay—Arkansas Portland Cement Division, Ideal Cement Co., Denver, Colo.

California

Colton: California Portland Cement Co., Los Angeles.

Crestmore: Riverside Cement Co., Los Angeles.

Davenport: Santa Cruz Portland Cement Co., San Francisco.

Los Angeles: Blue Diamond Corp., Los Angeles.

Monolith: Monolith Portland Cement Co., Los Angeles.

Oro Grande: Riverside Cement Co., Los Angeles.

Redwood City: Pacific Portland Cement Co., San Francisco.

San Andreas: Calaveras Cement Co., San Francisco.

Permanente: Permanente Cement Co., Permanente.

San Juan Bautista: Pacific Portland Cement Co., San Francisco.

Victorville: Southwestern Portland Cement Co., Los Angeles.

Colorado

Boettcher: Colorado Portland Cement Division, Ideal Cement Co., Denver.

Portland (2 plants): Colorado Portland Cement Division, Ideal Cement Co., Denver.

Florida

Tampa: Florida Portland Cement Division., General Portland Cement Co., Tampa.

Georgia

Clinchfield: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Rockmart: Southern States Portland Cement Co., Rockmart.

Idaho

Inkom: Idaho Portland Cement Co., Inkom.

Illinois

Dixon: Medusa Portland Cement Co., Cleveland, Ohio.

La Salle: Alpha Portland Cement Co., Easton, Pa.

Oglesby: Marquette Cement Manufacturing Co., Chicago; Lehigh Portland Cement Co., Allentown, Pa.

Indiana

Buffington: Universal Atlas Cement Co., New York, N. Y.

Limedale: Lone Star Cement Corp., Indianapolis,

Mitchell: Lehigh Portland Cement Co., Allentown, Pa.

Speed: Louisville Cement Co., Inc., Louisville, Ky. (also natural and masonry-natural cements).

Iowa

Davenport: Dewey Portland Cement Co., Kansas City, Mo.

Des Moines: Hawkeye Portland Cement Co. of Iowa (Marquette Cement Manufacturing Co.), Chicago, Ill.

Mason City: Lehigh Portland Cement Co., Allentown, Pa. Northwestern States Portland Cement Co., Mason City.

West Des Moines: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Kansas

Bonner Springs: Lone Star Cement Corp., Kansas City, Mo.

Chanute: Ash Grove Lime and Portland Cement Co., Kansas City, Mo.

Fredonia: Consolidated Cement Corp., Fredonia.

Humboldt: The Monarch Cement Co., Humboldt.

Independence: Universal Atlas Cement Co., New York, N. Y.

Iola: Lehigh Portland Cement Co., Allentown, Pa.

Kentucky

Kosmosdale: Kosmos Portland Cement Co., Inc., Louisville.

Louisiana

New Orleans: Lone Star Cement Corp., New Orleans.

Maine

Thomaston: Lawrence Portland Cement Co., New York, N. Y.

Maryland

Security: North American Cement Corp., New York, N. Y.

Union Bridge: Lehigh Portland Cement Co., Allentown, Pa.

Michigan

Alpena: Huron Portland Cement Co., Detroit.

Bay City: Aetna Portland Cement Co., Bay City.

Cement City: Consolidated Cement Corp., Jackson.

Detroit: Peerless Cement Corp., Detroit.

Petoskey: Petoskey Portland Cement Co., Petoskey.

Port Huron: Peerless Cement Corp., Detroit.

Wyandotte: Huron Portland Cement Co., (Wyandotte Chemicals Corp.), Detroit.

Minnesota

Duluth: Universal Atlas Cement Co., New York, N. Y.

Missouri

Alpha: Alpha Portland Cement Co., Easton, Pa.

Cape Girardeau: Marquette Cement Mfg. Co., Chicago, Ill.

Hannibal: Universal Atlas Cement Co., New York, N. Y.

Prospect Hill: Missouri Portland Cement Co., St. Louis.

Sugar Creek: Missouri Portland Cement Co., St. Louis.

Montana

Trident: Three Forks Portland Cement Div., Ideal Cement Co., Denver, Colo.

Nebraska

Louisville: Ash Grove Lime & Portland Cement Co., Kansas City, Mo.

Superior: Nebraska Cement Div., Ideal Cement Co., Denver, Colo.

New York

Catskill: North American Cement Corp., New York.

Alsen: Lehigh Portland Cement Co., Allentown, Pa.

Hamburg: The Federal Portland Cement Co., Inc., Buffalo.

Buffalo: Lehigh Portland Cement Co., Allentown, Pa.

Cementon: Alpha Portland Cement Co., Easton, Pa.

Glens Falls: Glens Falls Portland Cement Co., Glens Falls.

Greenport: Lone Star Cement Corp., Albany.

Howes Cave: North American Cement Corp., New York.

Hudson: Universal Atlas Cement Co., New York.

Jamesville: Alpha Portland Cement Co., Easton, Pa.

Portland Point: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Ohio

Bay Bridge: Medusa Portland Sement Co., Cleveland.

East Fultonham: Pittsburgh Plate Glass Co., Zanesville.

Ironton: Alpha Portland Cement Co., Easton, Pa.

Middle Branch: The Diamond Portland Cement Co., Middle Branch.

Osborn: Southwestern Portland Cement Co., Osborn.

Universal Atlas Cement Co., New York, N. Y.

Painesville Township: Diamond Alkali Co., Standard Portland Cement Div., Painesville.

Silica (Toledo): Medusa Portland Cement Co., Cleveland.

Superior: Superior Cement Div., New York Coal Sales Co., Portsmouth.

Oklahoma

Ada: Oklahoma Portland Cement Division, Ideal Cement Co., Denver, Colo.

Dewey: Dewey Portland Cement Co., Kansas City, Mo.

Oregon

Gold Hill: Pacific Portland Cement Co., San Francisco, Calif.

Lime: Oregon Portland Cement Co., Portland.

Oswego: Oregon Portland Cement Co., Portland.

Pennsylvania

Bath: Keystone Portland Cement Co., Philadelphia; Pennsylvania-Dixie Cement Corp., Nazareth.

Bessemer: The Bessemer Limestone & Cement Co., Youngstown, Ohio.

Brodhead: National Portland Cement Co., Philadelphia.

Cementon: The Whitehall Cement Manufacturing Co., Philadelphia.

Coplay: Coplay Cement Manufacturing Co., Coplay.

Egypt: Giant Portland Cement Co., Philadelphia.

Evansville: Allentown Portland Cement Co., Catasauqua.

Fogelsville: Lehigh Portland Cement Co., Allentown.

Martins Creek: Alpha Portland Cement Co., Easton.

Nazareth: Lone Star Cement Corp., Nazareth; Nazareth Cement Co., Nazareth; Pennsylvania-Dixie Cement Corp., Nazareth.

Neville Island: Green Bag Cement Co. of Pennsylvania (Pittsburgh Coke & Chemical Co.), Pittsburgh.

Northampton: Lawrence Portland Cement Co., New York, N. Y. (also natural and masonry-natural cements); Universal Atlas Cement Co., New York, N. Y.

Ormond: Lehigh Portland Cement Co., Allentown.

Sandts Eddy: Lehigh Portland Cement Co., Allentown.

Stockertown: Hercules Cement Corp., Philadelphia.

Universal: Universal Atlas Cement Co., New York, N. Y.

Wampum: Medusa Portland Cement Co., Cleveland, Ohio.

West Conshohocken: Valley Forge Cement Co., Catasauqua.

West Winfield: Pennsylvania-Dixie Cement Corp. (plant No. 9), Nazareth.

York: Medusa Portland Cement Co., Cleveland, Ohio.

Puerto Rico

Guaynabo: Puerto Rico Cement Corp. (Puerto Rico Development Co.), San Juan.

Ponce: Ponce Cement Corp., Ponce.

South Carolina

Harleyville: Carolina Giant Cement Co., Philadelphia, Pa.

South Dakota

Rapid City: The South Dakota Cement Plant (State of South Dakota), Rapid City.

Tennessee

North Chattanooga: Signal Mountain Portland Cement Division, General Portland Cement Co., Chattanooga.

Cowan: Cumberland Portland Cement Co. (Marquette Cement Manufacturing Co.), Chicago, Ill.

Kingsport: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Near Knoxville: Volunteer Portland Cement Co., Knoxville.

Nashville: Hermitage Portland Cement Co. (Marquette, Cement Manufacturing Co.) Chicago, Ill.

Richard City: Pennsylvania-Dixie Cement Corp., Nazareth, Pa.

Texas

Cement City: Lone Star Cement Corp., Dallas.

Cementville: San Antonio Portland Cement Co., San Antonio.

Eagle Ford: Trinity Portland Cement Division, General Portland Cement Co., Dallas.

El Paso: Southwestern Portland Cement Co., El Paso.

Fort Worth: Trinity Portland Cement Division, General Portland Cement Co., Dallas.

Houston: Gulf Portland Cement Division, Ideal Cement Co., Houston. Trinity Portland Cement Division, General Portland Cement Co., Dallas.

Longhorn: Longhorn Portland Cement Co., San Antonio.

Manchester: Lone Star Cement Corp., Dallas.

Waco: Universal Atlas Cement Co., New York, N. Y.

Utah

Devils Slide (2 plants): Union Portland Cement Division, Ideal Cement Co., Denver, Colo.

Salt Lake City: Portland Cement Co. of Utah, Salt Lake City.

Virginia

Fordwick: Lehigh Portland Cement Co., Allentown, Pa.

South Norfolk: Lone Star Cement Corp., Norfolk.

Washington

Bellingham: The Olympic Portland Cement Co., Ltd., Seattle.

Concrete: Superior Portland Cement, Inc., Seattle.

Grotto: Northwestern Portland Cement Co., Seattle.

Irvin: Spokane Portland Cement Co., Spokane.

Metaline Falls: Lehigh Portland Cement Co., Allentown, Pa.

Seattle: Permanente Cement Co., Seattle.

West Virginia

Kenova: Green Bag Cement Co. of West Virginia, Kenova (also pozzolan (slag-lime) cement).

Manheim: Alpha Portland Cement Co., Easton, Pa.

Martinsburg: The Standard Lime & Stone Co., Baltimore, Md.

Wisconsin

Manitowoc: Manitowoc Portland Cement Co., Cleveland, Ohio.

Wyoming

Laramie: Monolith Portland Midwest Co., Los Angeles, Calif.

NATURAL CEMENTS AND MASONRY CEMENTS OF THE NATURAL-CEMENT CLASS

Indiana

Speed: Louisville Cement Co., Inc., Louisville, Ky. (also portland cement).

Kansas

Fort Scott: Fort Scott Hydraulic Cement Co,, Fort Scott

Minnesota

Mankato: The Carney Co., Mankato.

New York

Akron: Louisville Cement Co. of New York, Louisville, Ky.

Rosendale: Century Cement Manufacturing Co., Inc., Rosendale.

POZZOLAN (SLAG-LIME) CEMENT

Alabama

Birmingham: Southern Cement Co., Birmingham.

Graystone: Cheney Lime & Cement Co., Birmingham.

West Virginia

Kenova: Green Bag Cement Co. of West Virginia, Kenova (also portland cement).

ALUMINA CEMENT

Indiana

Buffington: Universal Atlas Cement Co., Lumnite Division (United States Steel Corp.), New York, N. Y.

HYDRAULIC LIME

Virginia

Riverton: Riverton Lime & Stone Co., Inc, Riverton.

Wisconsin

High Cliff: The Western Lime & Cement Co., Milwaukee.

STEEL MONOPOLY UNDER PITTSBURGH-PLUS AND ITS MULTIPLE-BASING-POINT SYSTEM ROSE TO CONTROL MANY INDUSTRIES

In 1947 the steel industry produced 84,894,000 tons of steel; and in 1948, 88,534,,000 tons. The three largest steel companies in the United States accounted for 58.2 percent of the total production in 1947, and 57.6 percent of the total production in 1948, as follows:

	1947	1948
United States Steel Corp:		
Tons	28,000,000	29,300,000
Percent	33.7	33.1
Bethlehem Steel Co.:		
Tons	12,806,940	13,411,492
Percent	15.1	15.1
Republic Steel Corp.:		
Tons	7,947,170	8,324,172
Percent	9.4	9.4
Total:		
Tons	49,394,110	51,035,664
Percent	58.2	57.6

For all practical purposes the production of the three largest companies amounts to nearly 60 percent, which is more than enough in production to control the sale and distribution of steel within the United States. Is it any wonder that these three larger corporations and their satellites per force, clamor for the return of the basing-point system? These corporations know from past experience the wonderful results dollarwise they have experienced both under the old Pittsburgh-plus system, and the multiple basing-point system in effect prior to the Supreme Court decision in the Cement case. I think it well that the members see the artificial set-up of the basing points in steel; I therefore include a table as published in the Iron Age of January 1, 1948, showing the basing points then in existence. In order to properly evaluate this basing-point table, one must remember that a great many semifinished steel products were manufactured and produced at points not shown, and many products were produced at the points shown on the table which were based on some other point. It is interesting to note that Pittsburgh is a basing point for nearly every item listed. It simply does not make sense to conclude that the basing-point system of pricing is intended to benefit the consumer. It never has and it never will, except perhaps in some isolated instance.

In connection with the basing-point table I wish to point out that on the Pacific coast there were 14 secondary basing points in the prewar days. These secondary basing points computed their prices on the nearest freightwise eastern basing point plus rail and water freight to the Pacific coast. If the shipment were all rail the basing-point price, of course, was computed on the basis of all-rail freight. After World War II, at which time a steel plant had been established in Utah, certain material received from that point took the Utah base price plus the freight to the coast.

Under the basing-point system, as practiced by the steel industry, there have been no primary basing points west of the Mississippi. The points west of the Mississippi, which you will note in the chart, are all secondary basing points. For illustration, the small plant at Houston based its prices on the all-rail freight from Birmingham and Chicago. Kansas City is not listed on the chart, although it has been used as a secondary basing point from time to time based on Granite City

and Chicago, Ill. Pueblo, Colo., the scene of the operations of the Colorado Fuel & Iron Co., is not listed as a basing point and it is my understanding that prices at this plant were quoted, under the basing-point system, on the basis of eastern basing points, first Pittsburgh and then Chicago. If the basing-point system is not revised the steel plants located in Colorado, Utah, and the new plant in California, will afford steel buyers in the West competition which they have never had previously. No doubt these plants will have an opportunity to enlarge their operations and other plants may be built which will bring to the West steel at fair market prices and without the addition of large sums of phantom freight tacked on to the price. The basing-point table follows:

Basing points of major steel products

[The basing points listed below apply only to the sizes, grades, finishes, and specifications of products produced at the points named]

	Ashland, Ky.	Baltimore	Bethlehem	Birmingham	Brackenridge, Pa.	Brooklyn	Buffalo	Canton, Ohio	Chicago	Claymont, Del.	Cleveland	Coatesville, Pa.	Detroit	Duluth	Dunkirk, N. Y.	Fort Wayne, Ind. [1] Additional Pacific coast basing points: San Diego, San Pedro, Wilmington, Long Beach, Oakland, Alameda, Berkeley, Richmond, Stockton, and Sacramento; all in California.

This chart by no means includes all steel products. On the contrary, many specialized products and those sold to a very few customers have not been included. Additional space is provided for new points and other products.

STEEL COMPANIES DO NOT NEED LAW TO ABSORB FREIGHT, I. E., CUT PRICES

Under date of April 11, 1949, the Wall Street Journal in a leading article stated:

Freight absorption is returning to the steel business. The reason: pressure from consumers for lower prices.

And again the article said—

The increased eagerness of steel producers to get away from the f. o. b. mill-pricing system reflects their almost general acknowledgement that normal market conditions in steel are close at hand.

The article, however, continues to confuse by talking of freight absorption when it should say basing-point system. There is no steel mill which has any valid intention of absorbing freight. Their intention is to ride high with the basing-point system if they can get it back into operation. The fact is, of course, that if a consumer or dealer wants competition under the basing-point system, it is impossible to find it. The only freight absorption in the steel industry, if you want to call it freight absorption, is dumping surplus production in the other fellow's natural market and by so doing setting up the uneconomic cross-hauling inherent in the basing-point system of pricing.

THE BASING-POINT SYSTEM AND WATER TRANSPORTATION

At great cost we have developed and extended harbor facilities on our Atlantic and Pacific coasts. This is also true of our Great Lakes and Gulf ports.

We have spent many millions canalizing our rivers. We have built intercoastal waterways at great expense.

Why have various Congresses authorized such expenditures? Was it in the public interest, or was all of this work accomplished for the purpose of subsidizing a few powerful private interests? Every Member of Congress knows why these great works were undertaken. Every Member knows these facilities were projected on the sound proposition that all citizens of our country could have the advantage of our waterways and the benefits of low-cost transportation.

But, please remember that all basing-point systems of pricing calculate prices on the higher all-rail freight rates. True, the users of the basing-point system utilize water transportation and water-rail transportation for the savings involved, but such savings are pocketed by the exponents of the system—none, absolutely none, of such savings in transportation costs are salvaged by the consumer—public or private.

THE BASING-POINT SYSTEM AND HIGHWAY TRANSPORTATION

The billions of dollars expended by the Federal, State, county, and municipal governments for good roads are worthless to the taxpayer in the purchase of cement and other basing-point commodities.

The Cement Trust has decreed a purchaser—public or private—cannot drive up to a cement mill and haul cement by truck. If a highway project runs right past a cement mill, the builder must go to the trouble and expense of unloading railroad cars and paying freight to some destination, near or far. This is the law of the land as handed down by the cement trust sitting as judge and jury in the case of basing point against public interest. This is a "decree in absence,"

a default judgment in a case in which the public was never advised that such proceedings were under way, a proceeding in which the taxpayer did not have a chance to be represented, so secret and so furtive are these defilers of the American system of free enterprise.

No, if the basing-point system returns, as contemplated by the power-hungry cement monopoly, the savings in truck transportation will never materialize.

The savings in the transportation of our heavy, basic commodities are of the utmost importance and must be included in our consideration of the basing-point problem. We must think of all the angles—as the expression goes—we must think not only of monopoly, of artificial prices, of the restraint of trade, of the elimination of competition, but we must count the cost lest it become greater than we can bear. We must decide whether the Congress is in charge of the passage of trade-practice and antitrust laws, or whether we are abdicating that constitutional power to a small group of powerful monopolies.

THE BASING-POINT SYSTEM AND REGIONAL DEVELOPMENT

One need go no further than the facts presented in the Cement case, docket 3167 of the Federal Trade Commission, to learn that under the basing-point system regional development is restricted and retarded.

Under the basing-point system, several facts stand out clearly against a backdrop of secrecy and a devious maze of shifting scenery and camouflaged movements. The basing-point system of pricing may be viewed in its true light, and the evils emphasized by these facts brought out in the Cement case:

1. It is, as the Supreme Court said in the Cement case, "a handy instrument to bring about elimination of any kind of price competition."

2. It is a pricing device which permits a few powerful members of an industry to create a monopoly.

3. It retards natural development of basic industries in many sections of our country.

4. It permits concentration of manufacturing facilities for the convenience of management.

5. It requires heavy basic commodities to be transported far beyond an economical range of distribution.

6. It restricts plant capacity at points which would be of the greatest benefit to public and private consumers.

7. It allows expansion of plant capacity at points where increased facilities are not needed.

8. It facilitates "dumping" for punitive and strategic purposes—cutthroat competition, if you will.

9. It promotes a crisscross, back and forth, up and down, hodgepodge of distribution which, if brought into perspective, would look like an anthill on a busy day. Cross hauling it is characterized: "The public-be-damned method of distribution" would be a more accurate and descriptive definition.

10. It favors the few large members in industry and subjects the smaller members to rigid controls which jeopardize their growth and often threaten their very existence.

11. It forces public and private consumers to pay freight charges never incurred. Excess freight, which has come to be known as phantom freight. Phantom freight, that unearned increment of the Steel and Cement Trusts. That illusory method of collecting millions upon millions of dollars from the public in a manner which screens the real from the unreal in freight charges. This was particularly so in the cement industry and was true of any basing-point industry using water transportation or a combination of water and other forms of transportation. On steel shipped by rail, you could see the phantom freight, but perhaps that was more trying on the nerves than when you could not see it.

12. It discourages local venture capital from investing in projects which would aid in building up the community, section, or region.

13. It encourages dishonesty and sharp practices by requiring employees to operate the system in an unhealthy business atmosphere. The destruction of records and files which might be incriminating was forcibly brought out in the Cement case.

14. It divides territories on a geographical basis. Ofttimes the basing-point mill is so distant from the territory it controls that the freight factor is a large part of the destination price. The North Carolina, Virginia, and the New York-New England areas are good examples. These situations I have previously described and by permission inserted in the Appendix of the CONGRESSIONAL RECORD.

15. It precludes a purchaser from purchasing from a near-at-hand non-basing-point or basing-point mill on the basis of such mill's cost of production and freight advantage.

16. It takes no account of cost of production as between individual mills and plants.

17. It thwarts an individual member of an industry from stressing quality of product. The cement industry pretended all portland cement was alike and its product was standardized. Raw materials for the manufacture of cement are so varied it is doubtful if the degree of sameness is as great as pretended. Using all types of limestone, marl, slag from blast furnaces, clay, and so on, in the process, it is rather hard to believe that the quality factor, as between mills, is a real rather than a fancied one.

18. It is used to control wholesale and retail distribution as in the case of the rigid-steel-conduit industry. Wholesalers and retailers of rigid-steel conduit were often whipped into line by blackjack methods. Cement dealers were never permitted to make a living wage in handling the commodity. Steel margins for the wholesaler or independent warehouse, according to my best information, were always very low.

All of these things, and more, the basing-point system does to our country and its normal business structure. Small business cannot compete, and never will be able to compete, in the basing-point industries if the system is returned to the business scene with congressional blessing.

This is the system which for nearly 50 years defied our antitrust laws and our enforcement agencies. This is the system which has cost our people billions of dollars and, if legalized, will soon cost more than our entire national debt.

DELIVERED PRICE IS NOT WHAT BUYER GETS

Now, just a word about this mythical delivered price we hear so much about.

It is well known that, prior to the institution of the Cement Institute case by the Federal Trade Commission, the cement industry quoted only prices "f. o. b. shipping point with freight allowed to destination." Shortly after the Cement Trust was brought before FTC examiners, its members began to use the term "delivered price."

The courts have defined "price," but up to the present moment "delivered price" has not been defined. If this phrase meant the guaranty of safe delivery from mill, plant, or warehouse to the purchaser's place of business or job location, it would be correctly defined, in part. But in order to complete a delivered-price transaction, one must include (1) the cost of the product in the market, that is, f. o. b. plant, mill, or warehouse; (2) transportation charges, which, of course, should be by the lowest-cost method of transportation, that is, water or combination means of transportation accruing to the benefit of the purchaser; (3) handling charges at destination to business premises or job site. Then, and ony then, you would have a "delivered price" as a term which meant what it said in the purchase of cement, steel, and other commodities.

The ordinary business institution—whether mill, factory, plant, or wholesale establishment—does not make a practice of prepaying public-carrier transportation charges. Unless it happens to be a prepay station, dock or wharf where no agent of the carrier is in charge, the consignee—in other words, the purchaser—pays the freight charges. If the average concern adopted a prepay policy, the amount tied up in nonprofit transportation items would be so great that its working capital would be severely taxed. This sort of business practice is not sound or practicable for the average small business, nor for the average big business, for that matter.

STEEL AND CEMENT TRUSTS DO NOT MAKE DELIVERED PRICES OR PAY FREIGHT

The only use the Steel and Cement Trusts have for "delivered prices" and "freight absorption," as the terms recently are used, is to (1) monopolize and control markets and (2) thereby charge higher prices by way of phantom freight and restrictive supply controls.

One of the dangers of writing these terms—freight absorption and delivered price—into substantive law lies in the obvious fact that the terms may, and will, be used as the fait accompli for the reincarnation of the now outlawed basing-point system.

All the books and techniques are ready and waiting. All the propaganda has been spread. The Cement and Steel Trusts are ready and waiting for the green light; for

the word "go" from Congress. They don't have to get together. They have been together for years and years.

AID TO MONOPOLY AND CONCENTRATION OF POWER ARE WHAT BIG BUSINESS WANTS FROM CONGRESS

"Somewhere a voice is calling." A voice full of emotion and supplication. A voice which pleads in cadence low and sweet. 'Tis the voice of monopoly, willing to take any little crumb from the table of Congress.

Once the crumb is tossed, like the Genii of old, monopoly of today will magically transform that crumb into a whole loaf of unfair-trade practices; into baskets full of phanton freight and houses breaking apart with controlled and rigged markets.

Yes, sales talks are what freight absorption and delivered prices are, in fact. Nothing more and nothing less. If we write these terms into law, it will be an action of never-ending regret by Congress and, more important, of never-ending regret to our constituents—the folks back home.

YEARS OF LITIGATION AHEAD WALL STREET JOURNAL PREDICTS

The Wall Street Journal of June 14, 1949, in an article under the byline of Alan Otten states:

Antitrust laws are couched in fairly general terms, and have become specific only as applied to individual cases by the courts and by administrative agencies. The same will be true of any new freight absorption law. Its exact meaning probably will unfold over years of litigation.

And again years of litigation are referred to in the following words:

No matter which bill is passed, industry can be sure of one thing—years of litigation on the issue are still ahead. Questions such as when does a seller act independently and interpretations of price and freight absorption will provide many a legal field day.

Thus, the big business press bears out the predictions which I have made heretofore that if one period or one comma of a permissive character is injected into the antitrust statutes it provides corporation lawyers grounds for defense against unfair and vicious trade practices. There is no doubt about this. The press admits it and I know big business attorneys will subscribe to it wholeheartedly.

CONGRESS MUST BE CAUTIOUS WHEN MONOPOLY CHEERS ITS ACTION

Should S. 1008 be allowed to pass, and I pray not, and should the courts not define freight absorption and delivered price in accordance with the desires of the basing-point and monopoly boys, we shall hear from them again. Yes, they will be right back again, shouting for clarification and moratorium. They have done it before, and we have compromised to our sorrow. They will do it again as long as one decision of the courts or one line of the antitrust laws is left intact.

This whole matter of legislation stems from the Supreme Court decision. Had the Court not found the basing-point system collusive and outlawed the system, no legislation would have been urged by big business.

Let us not be stampeded by hasty action. Let us not be misled with fancy phrases. Let us be doubly cautious when monopolies cheer an action of Congress—lest we regret, lest we regret.

Illegal Sales of Alcoholic Beverages Laid to Army Posts

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. KLEIN. Mr. Speaker, the Washington Retail Liquor Dealers Association disclosed today that information has been placed before the Committee on Armed Services showing that there have been widespread violations of the law in the retail sale of alcoholic beverages in officers' clubs and post exchanges of the armed services. Doubtless, like me, many Members have received complaints from constituents about unfair competition from post exchanges and ships' stores in the sale of various commodities.

The association made public a 1,200-word statement which has been filed with the committee, which has been looking into complaints of unfair competition by post exchanges and ship stores in the sale of civilian goods.

A source close to the committee has informed officers of the association that the committee will take full cognizance of the abuses pointed out in the statement and has indicated that the abuses will be eliminated promptly.

The association has charged that the armed services are flagrantly violating an act of Congress by the sale of alcoholic beverages at retail, and has furnished information to the committee that the practice is prevalent not only in Washington and vicinity but in military installations throughout the country.

In addition, the charge has also been made to the Secretary of Defense in a telegram dated June 12.

The text of the statement filed with the committee follows:

MEMORANDUM OF HILLIARD SCHULBERG, EXECUTIVE DIRECTOR, WASHINGTON, D. C., RETAIL LIQUOR DEALERS' ASSOCIATION, INC., AS FILED WITH PHILBIN SUBCOMMITTEE OF THE COMMITTEE ON ARMED SERVICES, JUNE 28, 1949

My name is Hilliard Schulberg and I am a member of the bars of the State of New York and of the District of Columbia. I am the executive director of the Washington, D. C., Retail Liquor Dealers' Association, Inc. I am presenting information of great interest to the association I represent in the hope that your committee will lend a sympathetic ear to the matter I now set forth.

Under the Constitution of the United States, and specifically, under article 1, section 8, clause 17 thereof, Congress is given the power to "exercise exclusive legislation in all cases whatsoever over * * * all places purchased by the consent of the legislature of the State in which the same shall be for the erection of forts, magazines arsenals, and other needful buildings." Such power extends to land purchased by the United States, by consent of the legislature of the State and used for governmental purposes.

In accordance with the authority to acquire military establishments as provided for by the Constitution of the United States, and as a result of the circumstances that arose in the years leading up to the year 1899, Congress under the provisions of the act of March 2, 1899 (c. 352, sec. 17, 30 Stat. 981), in effect prohibited the sale of intoxicating beverages in any premises used for military purposes by the United States. This act was construed by the Attorney General of the United States (1899, Opinions Attorney General 426) to mean that no officer or private soldier could be detailed in the canteen section of post exchanges to sell intoxicating drinks either directly or indirectly, nor could a license or permission be given by the commanding officer to a private person to sell liquors in any encampment, fort, or premises used for military purposes by the United States. This act did not prevent the continuance of the sale of intoxicating drinks through the canteen branch of the post exchanges as heretofore organized by civilians employed for that purpose.

SALE PROHIBITED

Subsequently, under date of February 2, 1901, Congress deemed it advisable to enact legislation, providing as follows: "The sale of or dealing in beer, wine, or any intoxicating liquors by any person in any post exchange or canteen or Army transport, or upon any premises used for military purposes by the United States, is hereby prohibited. The Secretary of War is hereby directed to carry the provisions of this section into full force and effect." This later act prohibited both military as well as civilian personnel from dealing in the sale of intoxicating beverages. Congress thus evidenced its intent, without equivocation or qualification, that the sale of intoxicating beverages on military establishments in all instances should be prohibited.

In defining what intoxicating beverages were in relation to the two aforementioned acts, Congress enacted the act of March 22, 1933 (48 Stat. 16), which provided that beer, ale, porter, wine, or other similar fermented malt or vinous liquor, containing not more than 3.2 percent alcohol by weight, are not intoxicating. Beer and wine of an alcoholic content not in excess of 3.2 percent by weight may be sold or dealt in by Army exchanges, clubs, canteens, aboard Army transports, upon other premises used for military purposes by the United States.

The sale of or dealing in intoxicating liquors (including beer, wine, or other malt or vinous beverages containing an alcoholic content in excess of 3.2 percent by weight), regardless of what the transaction is called or how it is effectuated, is prohibited, if title to such intoxicating beverages passes or changes upon any premises used for military purposes by the United States.

BEVERAGES SOLD ON POSTS

Purchase of the intoxicating liquors upon behalf of any person, including a member, by a club or mess or by any official or employees thereof, or the transportation of such liquors to military reservations by a club or mess or its official or employees as agent of the person and on his behalf, and regardless of whether any benefits accrue to the club or mess from the transaction, either directly or indirectly, is definitely prohibited.

I have presented in great detail the history of the afore-mentioned acts for the reason that the texts are reflective of the determination of Congress that the sale of intoxicating beverages on military reservations should be prohibited in all instances.

As an authorized representative of the Washington, D. C., Retail Liquor Dealers' Association, Inc., comprising over several hundred retail liquor dealers doing business here in the District of Columbia, I have been told by many of these businessmen that notwithstanding the provisions set forth above, intoxicating beverages are being sold in officers' clubs, PX's, and in noncommissioned clubs on military reservations—in direct

contravention of the laws of the United States. I have been further advised that officers' clubs and other clubs comprising military personnel are purchasing from distilleries and breweries liquor and beer invested with an alcoholic content of in excess of 3.2 alcoholic content, and that such liquor and beer is being sold at prices equal to and lower than those prevailing in the retail stores. This is easily done for the simple reason that these military clubs do not pay local taxes, license fees, rent, or electricity, and, as a matter of fact, these clubs have little or no cost for the upkeep of being in business. Of course, as stated above, this practice is in direct contravention of the laws of the United States. Not only is it violative of the law, but it also penalizes the small retail liquor dealer who, in the course of conducting his business, is required to pay local taxes, license fees, and all other costs incident to the conduct of a retail business establishment.

The Secretary of Defense has been advised by telegram of these unlawful practices and request has been made of him that corrective steps be taken to prevent the abuse of the existing laws as set forth above. The Secretary of Defense under the provision of the National Security Act of 1947 is head of the National Military Establishment, and as such is charged with carrying out the provision of these acts. Since the Secretary of Defense has not as yet notified me as to whether any corrective steps have been taken, and in view of the continuance of these violations at the present time, I feel it is encumbent that this matter be brought to the attention of this committee of Congress with the prayer that corrective measures be taken as quickly as possible.

Communism and Religion

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. REED of New York. Mr. Speaker, it has been said "That planners may think that men and things will choose to run freely in the channels prescribed at their desks. Before they know it, freedom must be replaced by command, command must become universal, unbridled nature must be coerced, and as between incoercible nature and the tragic insufficiency of the best planners' brains, hecatombs of victims will be ground to death."

Is not this the history of the planned economy of Russia?

What becomes of our great heritage of liberty under law which gives 140,000,000 citizens under our flag their intellectual freedom and their privilege to speak and write their thoughts? The Communists are shrewd manipulators of public thought. The time has come to face reality and with clear sightedness and courage return to the fundamental principles set forth in the Declaration of Independence, the Federal Constitution and its Bill of Rights. Take a look, my colleagues, at the sacred documents and compare them with the manifesto of Karl Marx.

Under leave to extend, I am inserting as a part of my remarks an editorial which appeared in the Times-Herald of June 30, 1949:

COMMUNISM AND RELIGION

(Following is the second of a series of excerpts from the recent report by the House Committee on Un-American Activities entitled "One Hundred Things You Should Know About Communism and Religion.")

What is the Communist faith?

"Marxism-Leninism," as operated by Joseph Stalin.

What's all that?

A plan and method to rule the world.

The man who drew up the plan was Karl Marx, who lived from 1818 to 1883.

The man who put the plan into action in real life was Vladimir I. Ulyanov, alias Nikolai Lenin, who lived from 1870 to 1924 and led the world Communists to capture Russia in 1917–18.

The man who made the plan a world force was Josef Vissarionovich Djugushvili, alias Josef Stalin, now living and 67 years old, who followed Lenin in command of the world Communist conspiracy.

What was Marx's idea of a Communist world?

That the world as we know it must be destroyed—religion, family, laws, rights, everything. Everybody opposing was to be destroyed, too.

Marx wanted a world in which people owned no property, took orders from the government without question, and let their family life—husbands, wives, parents, and children—be without religion, morals, or ideals as we know them.

What was his idea of morality and family?

That anything is moral—even lying, stealing, and murder—if it brings on communism.

That women should have children for the Communist state to educate, train, and use, but parents should not have any say in training according to their own ideas.

That there is no need to fear God because He does not exist.

Marx had the idea that people could never be happy, have enough to eat, make enough money, or have success in the kind of world we know.

The United States of America is living proof that he was as wrong as a man can be.

Was Marx crazy?

Perhaps. But Marx was not the first evil and crazy man to start a terrible world upheaval, nor was he the last. Hitler was like that, too, but look at what he did.

How did anybody fall for Marx?

Some overlooked his craziness because he was one of the most effective propagandists who ever lived.

His preaching of destruction appealed especially to people who wanted to rule others and didn't know how. It still does.

Was Lenin one of those power seekers?

Yes, Lenin was the son of a minor government clerk. He had a terrible thirst for power.

Early in his life he read Marx, caught the idea of forming Communist cells of revolution as Marx planned them, and built a conspiracy to capture his country.

When Russia's czarist government crashed in the war of 1914–18, it was followed by a republic organized along the lines of our own. But before the republic could really take hold, Lenin's Communists came out from under cover, confused the public mind by propaganda, stirred a military revolt, slaughtered all opposition and set up by force of arms a Communist dictatorship. They still have it today.

Did all the Russians turn Communist?

Neither then nor now. Only a few trained and disciplined favorites were or are allowed to be Communists.

For a general picture of what kind of people turn Communists and what they do, see the first of this series, entitled "100 Things You Should Know About Communism in the U. S. A."

Why do any people fall for their line?

They promise all the things that people have always sought, an easier life, an end to trouble.

Do they deliver?

Of course not.

Once they get in control, they reduce a nation to horror and slavery. Look at the record, not only in Russia but in all other countries captured by communism.

How do they keep going?

The secret of communism's drive and the real key to the Communist faith is the dream of total power for Communists, loss of power for all others. That's the story in a nutshell.

Where is the headquarters of the Communist faith?

The Kremlin, Moscow, Russia.

Who is the head of that faith?

Joseph Stalin, because he is the head of the Government of Russia and chief of the Communist Party of Russia. To a Communist in the United States or any other country, Stalin's word is final.

For a Communist to defy Stalin is as scandalous to other Communists as for a religious-minded person to blaspheme God.

Is there any proof of this?

Examine the record in Russia, Latvia, Lithuania, Estonia, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Yugoslavia, Austria, Germany, and in all other countries where communism takes any hold.

Add to it the thousands of volumes of Communist official literature collected in the Library of Congress here in Washington.

Measure against your common sense and decide for yourself.

A Kindly Man

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial which appeared in the Daily Times of Mamaroneck, N. Y., on April 12, 1949, eulogizing the late James M. Fitzpatrick who represented a part of Westchester County, N. Y., in the Congress for 18 years.

The editorial is entitled "A Kindly Man."

A KINDLY MAN

Upon occasion back before 1926 the old Twenty-fourth New York Congressional District would go Republican. But as the vote in the Bronx portion of the district with Democrtaic preponderance grew, the normal Republican majority in the Westchester portion of the district—Eastchester, Pelham, Mount Vernon, and Yonkers—was insufficient to offset the Bronx.

Thus it was that for eighteen successive years a Bronx Democrat, James M. Fitzpatrick, represented the district. Not until redistricting before the 1944 election did Mr. Fitzpatrick retire from Congress. The two new Westchester districts, eliminating any part of the Bronx, with one including Putnam, became safe for the GOP.

But during these 18 years, when Mr. Fitzpatrick represented the southern part of Westchester, this man who had worked his way up to Congress through night school and who had started life as a boy in a Massachusetts iron mine did thousands of favors for his Westchester constituents, regardless of their political affiliations.

He died last Sunday morning but he will be remembered by many in this county for his kindliness, his unfailing courtesy and his personal interest in the problems which so many brought to him.

Expenditures in Government

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am advised that the House joint resolution introduced by the gentleman from Massachusetts [Mr. MARTIN] is now numbered 286 and it has been referred to the Committee on Expenditures in the Executive Departments.

For the convenience of the Members, I am quoting the text of this brief resolution:

Joint resolution to reduce expenditures in government for the fiscal year 1950 consistent with the public interest

Resolved, etc., That (a) with a view to bringing the estimated Federal expenditures within estimated Federal receipts for the fiscal year ending June 30, 1950, the President is authorized and directed to make such reductions in the amounts to be expended by all agencies from any and all appropriations and funds made available prior to the expiration of the first regular session of the Eighty-first Congress for expenditure in such fiscal year, as will in the aggregate equal not less than 5 percent nor more than 10 percent of the total amounts estimated for expenditure in the budget for the fiscal year 1950 by all agencies, as adjusted to conform with the total amounts estimated for expenditure under appropriations and funds actually made available prior to the expiration of such session.

(b) As used in this joint resolution—

(1) the term "appropriations and funds made available" shall include the amount of any borrowing authority estimated for in the budget for the fiscal year 1950; and

(2) the term "agency" means any executive department, independent establishment, or corporation which is an instrumentality of the United States.

SEC. 2. In order to accomplish the reductions in expenditures required by section 1, the President is authorized to direct any officer in the executive branch of the Government to refrain from creating, notwithstanding any other provision of law, any obligation or commitment which would require an expenditure during the fiscal year 1950, under any appropriation, fund, contract authorization, or borrowing authority over which such officer exercises administrative control, in such amounts as he may deem necessary. No such officer shall create any obligation or commitment under any borrowing authority which would require an expenditure during the fiscal year 1950 in excess of any estimate included in the budget (or in excess of any estimate under any authority included in any act of Congress enacted after submission of the budget for the fiscal year 1950) with respect to such obligation or commitment for such fiscal year or in excess of any amount established by direction of the President under the authority contained in this section; except that the President is authorized to waive the prohibition contained in this sentence in individual cases upon the happening of some extraordinary emergency or unusual circumstance.

SEC. 3. Such reductions shall be made in a manner calculated to bring about the greatest economy in expenditure consistent with the efficient operation of the Government.

SEC. 4. No reduction of expenditures required herein shall have the effect of reducing by more than 20 percent the estimated expenditures by any agency from appropriations and funds made available prior to the expiration of the first regular session of the Eighty-first Congress.

SEC. 5. The President shall cause (a) the total amounts estimated for expenditure in the fiscal year 1950 (adjusted as provided in sec. 1), (b) the amount of the reduction directed by him in obligations or commitments (as provided in section 2), and (c) the amount of the reduction in each appropriation or fund account, to be certified to the Secretary of the Treasury, and shall make a detailed quarterly report thereon to the Congress within 15 days after the expiration of each calendar quarter during such fiscal year. The amounts so certified shall not be expended, or, in the case of contract authorizations and borrowing authority, the authority shall not be exercised to the extent of the reduction. The President shall also include in the quarterly report to Congress the actual figures showing the number of Federal employees at the beginning of the quarter and the estimated number of Federal employees at the close of the quarter.

I am confident that everyone understands that this is a determined and most serious effort to solve the critical situation with which this Government is confronted. Yesterday an eminent Member of the other body, an able Democrat, stated, "We are facing a real financial crisis."

We know that by midnight, at the end of fiscal 1949, the Federal Government will have spent approximately $1,500,000,000 more than it has received in revenues. We know that estimates have been made that the deficit for the next fiscal year may be between $3,000,000,000 and $4,000,000,000 and can be considerably more.

The objective is a realistic one. The minimum is a reduction of at least $2,100,000,000 and a maximum of possibly $4,200,000,000 to prevent the inevitable alternatives of deficit financing or increased taxes which could result in serious economic consequences.

As the gentleman from Massachusetts [Mr. MARTIN] so well said, there is now "no alternative but to direct the man who sponsored the huge budget—the President—to trim expenditures."

The gentleman from Ohio [Mr. MCGREGOR] and I have been attempting to make it possible for Republican Members of the House to indicate their support of this resolution. For the further convenience of Members, I am including a list of those who have joined in supporting the resolution:

GERALD R. FORD, JR., Michigan; CLARENCE J. BROWN, Ohio; CLIFFORD R. HOPE, Kansas; FRANCES P. BOLTON, Ohio; CARL T. CURTIS, Nebraska; JOHN SANBORN, Idaho; HUGH D. SCOTT, JR., Pennsylvania; LESLIE C. ARENDS, Illinois; RICHARD B. WIGGLESWORTH, Massachusetts; CHARLES A. WOLVERTON, New Jersey; CARL HINSHAW, California; LEONARD W. HALL, New York; LOUIS E. GRAHAM, Pennsylvania; RALPH W. GWINN, New York; CHRISTIAN HERTER, Massachusetts; JAMES W. WADSWORTH, New York; J. CALEB BOGGS, Delaware; JOHN JENNINGS, JR., Tennessee; HARRIS ELLSWORTH, Oregon; JAMES S. GOLDEN, Kentucky; FRANK A. BARRETT, Wyoming; NORRIS POULSON, California; JOHN W. HESELTON, Massachusetts; REID MURRAY, Wisconsin; A. L. MILLER, Nebraska; R. WALTER RIEHLMAN, New York; JAMES I. DOLLIVER, Iowa; CHARLES H. ELSTON, Ohio; CHARLES W. VURSELL, Illinois; ALVIN F. WEICHEL, Ohio; BERNARD W. KEARNEY, New York; ROBERT HALE, Maine; ANGIER L. GOODWIN, Massachusetts; J. HARRY MCGREGOR, Ohio; JAMES C. AUCHINCLOSS, New Jersey; GEORGE J. BATES, Massachusetts; JOHN C. KUNKEL, Pennsylvania; KENNETH B. KEATING, New York; RICHARD M. NIXON, California; HARRY L. TOWE, New Jersey; PAUL B. DAGUE, Pennsylvania; HARDIE SCOTT, Pennsylvania; WILSON D. GILLETTE, Pennsylvania; CLARENCE KILBURN, New York; CHESTER E. MERROW, New Hampshire; ROBERT B. CHIPERFIELD, Illinois; JAY LEFEVRE, New York; HENRY J. LATHAM, New York; WALTER NORBLAD, Oregon; JAMES E. VAN ZANDT, Pennsylvania; EDWARD T. MILLER, Maryland; THRUSTON B. MORTON, Kentucky; RICHARD M. SIMPSON, Pennsylvania; RUSSELL V. MACK, Washington; THOMAS E. MARTIN, Iowa; JOHN W. BYRNES, Wisconsin; LEO F. ALLEN, Illinois; AUGUST H. ANDRESEN, Minnesota; EARL WILSON, Indiana; JOSEPH W. MARTIN, JR., Massachusetts; CHARLES A. HALLECK, Indiana; JOHN DAVIS LODGE, Connecticut; CLIFFORD P. CASE, New Jersey; CHARLES A. EATON, New Jersey; WILLIAM L. PFEIFFER, New York; NORRIS COTTON, New Hampshire; JAMES G. FULTON, Pennsylvania; DANIEL A. REED, New York; DONALD L. JACKSON, California; J. GLENN BEALL, Maryland; FREDERIC R. COUDERT, JR., New York; ROBERT F. RICH, Pennsylvania; FRANK FELLOWS, Maine; WESLEY A. D'EWART, Montana; GEORGE A. DONDERO, Michigan; WALTER E. BREHM, Ohio; WILLIAM M. MCCULLOCH, Ohio; HUBERT B. SCUDDER, California; WILLIAM W. BLACKNEY, Michigan; RALPH HARVEY, Indiana; PAUL W. SHAFER, Michigan; CECIL M. HARDEN, Indiana; DAYTON E. PHILLIPS, Tennessee; JOHN M. VORYS, Ohio; ANTONI SADLAK, Connecticut; DONALD W. NICHOLSON, Massachusetts; EDITH NOURSE ROGERS, Massachusetts; T. MILLET HAND, New Jersey; GORDON CANFIELD, New Jersey; JAMES T. PATTERSON, Connecticut; RALPH A. GAMBLE, New York; W. STERLING COLE, New York; GORDON L. MCDONOUGH, California; ROBERT W. KEAN, New Jersey; IVOR D. FENTON, Pennsylvania; BENJAMIN F. JAMES, Pennsylvania; LEON H. GAVIN, Pennsylvania; ROBERT J. CORBETT, Pennsylvania; FRANKLIN H. LICHTENWALTER, Pennsylvania; THOR C. TOLLEFSON, Washington; SAMUEL K. MCCONNELL, Pennsylvania; DEAN P. TAYLOR, New York; EDWIN ARTHUR HALL, New York; W. KINGSLAND MACY, New York; JOHN J. ALLEN, California; JACK Z. ANDERSON, California; THOMAS H. WERDEL, California.

May I add that either of us will be glad to receive any other names of those who wish to join in this effort. In that connection I want to call attention to the further statement by the gentleman from Massachusetts [Mr. MARTIN] when he said:

I invite Democrats, as well as my Republican colleagues, to join with us in this vital effort.

It is significant to note that an identical proposal, Senate Joint Resolution

108, was reported favorably on June 13. The Committee Report No. 498 constitutes a careful analysis of the background and of the terms of the resolution. It is also significant that 61 Members of the other body, 37 Republicans and 24 Democrats, have indicated their support of this proposal. They represent 40 of the 48 States and these States include approximately 94 percent of the population of the Nation. An interesting discussion of the proposal may be found in the RECORD of June 28 at page 8518.

The importance of this legislation is high lighted by the fact that these 61 Members of the other body have joined in an additional resolution requesting the majority and minority leaders to so arrange the schedule of business that Senate Joint Resolution 108 might be brought up at the earliest practicable date "so that said resolution may receive full consideration of the Senate and be brought to a vote on final passage." Any unbiased examination and consideration of the names of those who have so expressed themselves formally can lead but to one conclusion, that they believe it to be of the utmost importance to obtain immediate and favorable action. To complete the record I am including the names of the 61 Members of the other body who are supporting prompt action on this proposal: Senators JOHN J. SPARKMAN, Alabama; JOHN L. MCCLELLAN and J. WILLIAM FULBRIGHT, Arkansas; WILLIAM F. KNOWLAND and SHERIDAN DOWNEY, California; EUGENE D. MILLIKIN and EDWIN C. JOHNSON, Colorado; RAYMOND E. BALDWIN, Connecticut; JOHN J. WILLIAMS and J. ALLEN FREAR, JR., Delaware; SPESSARD L. HOLLAND, Florida; WALTER F. GEORGE, Georgia; PAUL H. DOUGLAS, Illinois; HOMER E. CAPEHART and WILLIAM E. JENNER, Indiana; BOURKE B. HICKENLOOPER and GUY M. GILLETTE, Iowa; CLYDE M. REED and ANDREW F. SCHOEPPEL, Kansas; VIRGIL CHAPMAN and GARRETT L. WITHERS, Kentucky; OWEN BREWSTER and Mrs. MARGARET CHASE SMITH, Maine; MILLARD E. TYDINGS, Maryland; LEVERETT SALTONSTALL and HENRY CABOT LODGE, JR., Massachusetts; HOMER FERGUSON, Michigan; EDWARD J. THYE, Minnesota; JAMES O. EASTLAND and JOHN C. STENNIS, Mississippi; FORREST C. DONNELL and JAMES P. KEM, Missouri; ZALES N. ECTON, Montana; HUGH BUTLER and KENNETH S. WHERRY, Nebraska; GEORGE W. MALONE and PAT MCCARRAN, Nevada; STYLES BRIDGES and CHARLES W. TOBEY, New Hampshire; H. ALEXANDER SMITH and ROBERT C. HENDRICKSON, New Jersey; IRVING M. IVES, New York; CLYDE R. HOEY, North Carolina; MILTON R. YOUNG, North Dakota; ROBERT A. TAFT and JOHN W. BRICKER, Ohio; ELMER THOMAS, Oklahoma; EDWIN MARTIN, Pennsylvania; BURNET R. MAYBANK and OLIN D. JOHNSTON, South Carolina; CHAN GURNEY and KARL E. MUNDT, South Dakota; KENNETH MCKELLAR, Tennessee; TOM CONNALLY, Texas; ARTHUR V. WATKINS, Utah; RALPH E. FLANDERS, Vermont; HARRY FLOOD BYRD and A. WILLIS ROBERTSON, Virginia; HARRY P. CAIN, Washington; ALEXANDER WILEY and JOSEPH R. MCCARTHY, Wisconsin.

Getting Down to Basic Issues

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. KLEIN. Mr. Speaker, under consent I am inserting in the RECORD, and I commend to your attention and to the consideration of the House, a lucid editorial from the Washington Post of Thursday, June 23, which goes down to the basic issues in the current controversy over help and future disposition of the thousands of Arab refugees left homeless and helpless by the hostilities in the Holy Land.

Surely this editorial will help clear the air and dispel some of the misapprehensions that have taken root in the public mind.

ARAB REFUGEES

The Arab-Israeli Conference at Lausanne is so deadlocked that there has been a suspension of talks till the delegates get fresh instructions. The air is full of recriminations. The Arabs insist that the Israelis are ducking the United Nations resolution of last December 11 which said that the Arab refugees should be permitted to return to their homes and that this should be facilitated by the Conciliation Commission. The Israelis retort that the December 11 resolution is not so restrictive. They say—and they are right in so saying—that the refugee problem was made all of a piece with a peace settlement, but that the Arabs will talk about refugees but not about a peace settlement. The effort to promote a meeting of minds seems to have put the Conciliation Commission in a state of exhaustion and exasperation.

In the meantime the condition of the refugees seems to be worsening, and this is of concern to civilized society. There have been few tragedies in history comparable to the enforced deprivation of domestic ties of millions of people by the war and by the subsequent transfer of populations. This applies to Arabs no less than to Jews and to the Volksdeutsch. Contrary to what some Israeli spokesmen say, many of the Arabs in Palestine were attached to their homes in Palestine, and they want to go back there. It doesn't matter to most of them, contrary to what used to be said during the hostilities over Palestine, whether sovereignty is Israeli or Arab. Indeed, they may have a preference for the new sovereignty of a people who have made Palestine thrive and prosper. Some of them used to work in the orange groves, and, with Israel short of such workers, would be helpful to reconstruction in the new state. However, the Israelis cannot be sure of the allegiance of all the refugees. Obviously there is a security or a fifth-column problem involved so long as a technical state of war continues to exist. And it is by no means alleviated by the second-round talk of the Arab press or by the Bevin decision to resume arms shipments to Arab countries.

The prospect of a general settlement will recede if the present recrimination is maintained. The key to Arab willingness to talk peace is said to be some serious move by the Israelis to repatriate the refugees. But they have made not one move but several. What are they? On the record, there are two—first, an offer to reunite broken families, and, second, an offer to take responsibility for the 250,000 refugees cooped up in the Gaza strip, about 20 miles of coastline 4 miles deep, in return for that strip. In addition, in principle, they have agreed to validate the property rights of the refugees and to unfreeze their bank accounts. Are these not serious offers while the war is still in a state of suspense? This is certainly the appearance they give, though they were tardy in coming forth, and the acknowledgment of property rights applies neither to urban homes nor to uncultivated land.

It would seem to us that since multilateral negotiations seem to have had no promising results, bilateral negotiations should be encouraged, and might begin with the issue with Egypt over the Gaza strip. Here is the locus of the greatest concentration of the refugees. Since Egypt and Israel came to an armistice when their representatives were brought together at Rhodes, why not let them try to come to a peace agreement between themselves. There is no subject except that of the refugees which justifies any comprehensive negotiations. Pressure in this direction, however, presupposes a united Anglo-American policy in the Middle East based upon live-and-let-live and forward-looking development that, unfortunately, still seems to escape the diplomacy of both countries.

Chinese Resistance Center?

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting and constructive letter from Dr. K. C. Wu to the Christian Science Monitor. In the light of the great concern widely shared in this country as to what policy may be adopted by our Government as to China, Dr. Wu's recommendation is worthy of the serious and immediate consideration of the officials in our Government charged with the responsibility as to the development of any such policy. Dr. Wu is one of the best examples of a man who has a balanced understanding of both China and America. Educated at Princeton University, he is widely known as a friend of this country and a man who has demonstrated beyond any doubt his great abilities. His letter is as follows:

To the CHRISTIAN SCIENCE MONITOR:

I recall Mr. Canham's visit to Shanghai and later on reading his columns about the world trip. Owing to long illness, I relinquished my post as mayor of Shanghai at the end of March this year. Since then, I have been recuperating in this beautiful island, Taiwan. My health has improved a great deal, but my mind is constantly harassed by developments in China. I have been thinking of you often these days. The leadership of the whole democratic world rests on the shoulders of America; and Mr. Canham as editor of one of the most influential American dailies may be rightly said to be a custodian of human destiny. Last night through his broadcast, "The Voice of America," I heard a summary of your editorial in relation to General Chennault's appeal. Hence, my letter to you.

How right your editorial is in its analysis of the situation here. Of course, we are to blame ourselves for the sad plight which we are in. We are reaping the consequences of years of misrule. The underpayment of public functionaries has undermined the integrity and efficiency of our administration. The depreciation of currency has lowered the morale of our people and their confidence in the government. Favoritism and factionism ran rampant, and in no place did such malpractice find more evidence than in the army. Everything was heading for a sudden collapse.

Yet, though far be it from me to whitewash ourselves, you, esteemed always for your acumen and impartiality, cannot but know that there are other equally important factors which contribute to the deterioration and which are extenuating circumstances for us. The long war with Japan and the continuous strife with the Communists have forced the hand of the government in doing many things which they would not have done under normal conditions and in failing to undertake reforms which they would have undertaken, had they only had peace and time.

It is of no use to harp on the past. Nor it is necessary for me to impress upon you the importance to the United States of maintaining China as an independent democratic nation. You know them as well as I do. Not to speak of the enormous manpower which will be placed at the absolute disposal of the totalitarian Soviet, the loss of China will open Communist inroads into southeast Asia, the soft economic underbelly of America, with its vast rich resources of rubber, oil, zinc, tin and quinine.

To send American troops to China to fight our civil war is, of course, impossible. To ask for a huge grant of, say, billions of dollars at present may appear to many of you as throwing money into water. Yet nobody can deny that the interests at stake are exceedingly high. It may be unwise to gamble. But it is certainly not injudicious to do some hedging to cover your position. Indeed, it would be injudicious not to do so.

My conjecture is that the Communists may be able to conquer and dominate the whole of China within 6 months to a year's time. But after that, when they begin to enforce the Soviet type of rule, as I am sure they will, the entire country will become a mass of seething discontent. The thing for us to do is (1) to retain as many as possible centers of resistance in the Communist-controlled area such as the Communist border regions when we were in the upper hand, and (2) to secure a strong foothold where we can really build up a good popularly supported government to form a contrast to the tyrannical Communists so that it may become the rallying point of all the enlightened forces of China. The first, however, we have to leave more or less to the shaping of circumstances in the future. But it is most imperative to plan and achieve the second objective right now.

Where can we secure that much needed foothold? In my opinion, Taiwan is exactly the place we want.

It is needless to enlarge on the strategic value of Taiwan to Japan and the Philippines. Nor need we dwell at length on the richness of the resources of this island. What I want to stress is that, separated from the mainland, it is comparatively secure for the time being. And that is a basic condition for the introduction of necessary reforms. Before the war, the Japanese did a good job here. It will not be very difficult to restore Taiwan to its former prosperity. With the supply of 300,000 tons of fertilizer, the agricultural produce can be doubled. With $10,000,000 (the ECA has a plan now), electric power can be so much increased that new factories can be set up to multiply exports and cater to the needs of the people.

Of course, the transportation system has to be renovated, and many other things, too. But I figure the total expenditure will not come to much more than $50,000,000. And if ways and means can be devised to facilitate exchange of products between Taiwan and Japan and the Philippines, this island can be easily made self-sufficient without any regard to the continent.

There exists in some quarters a belief that the Taiwan people are against the Chinese. But I find this utterly untrue.

I am very glad that the present Governor of Taiwan is Gen. Chen Cheng, who was appointed only a few months ago. He is one of the very few Chinese military leaders whose integrity is above dispute. Fortified by bitter experiences of the past, his mind is turned toward the future and bent on thorough reformation. He lends a willing ear to all sound advices and his heart is for the welfare of the people. If the United States decides to give aid to this island, I am sure that your people will find him honest, efficient, and most cooperative.

Moreover, you can deliver your aid to Taiwan through the existing channels of ECA. As a matter of fact, you need not even ask for action by Congress at present. What you need to do now is only to get the cooperation of the State Department and ECA to divert to Taiwan, for a start, as much as possible of the funds which have already been allocated to the mainland and found impractical to use and then wait for fresh opportunities to render us further assistance.

I make these suggestions entirely unknown to my own government and independent of any political connection. The cost is only some $50,000,000, which your Congress has already appropriated. The advantages are stupendous. If the plan works well and comes up to my expectations, this may become the turning point for the recovery of entire China, now seemingly lost to the Communists. If it meets only with moderate success, Taiwan may serve the purpose of strengthening the defense of the democratic world in the Pacific. There is not much of a gamble in this proposal. It is only a minor hedging which any cautious man would take in such a big game.

But time is short and the situation brooks no delay. It is lamentably true that leadership is wanting in China. But it would be all the more regrettable should you, the custodians of human destiny, fail to take the initiative at this critical hour and neglect to salvage China, or parts of it, out of this present avalanche which in the end may even smother you with all your noble ideals of liberty and equality.

K. C. WU.

TAIPEH, TAIWAN.

The Brannan Plan

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. LECOMPTE. Mr. Speaker, the editorial staff and the research department of the Des Moines (Iowa) Register, one of the great newspapers of the United States, and the largest and most influential newspaper in Iowa, has made a very careful study of the proposed Brannan plan and has printed a series of four articles or editorials on the subject. I believe that these very carefully prepared articles analyzing the Brannan plan and offering suggestions, and representing a vast amount of research, are worth reading by all the Members of the House. Under leave to extend my remarks, I include this material in the Appendix of the RECORD:

[From the Des Moines Register of June 7, 8, 9, and 10, 1949]

WE NEED A NEW FARM POLICY—I

When Secretary of Agriculture Brannan tossed his recent proposals for farm-price support in the congressional hopper, the reaction was immediate and loud. His plan was either praised or damned as something entirely new in agricultural policy. But is it new?

There is, to be sure, a new formula for supporting prices.

There is a new base period. There is the proposed use of direct payments to farmers, on a broader scale.

Yet the basic aim is the same as it has been ever since farm-relief agitation began after World War I: Support agriculture by keeping farm prices up.

Because his proposed levels of price support are so high, Secretary Brannan has provided the opportunity for a complete reappraisal of our agricultural policies.

If this is where they lead, do we want to continue on the road? Is the price-support route the way to real stability for agriculture?

Does the Brannan program hinder or help agriculture's long-run adjustments to an expanding industrial economy?

Our present agricultural policy—including the Brannan plan, which is its legitimate offspring—stems actually from the cry for farm relief in the early twenties. At that time agriculture was afflicted with low-price difficulties—or high-cost and debt difficulties—depending upon the way you look at the problem.

Farm leaders chose to see it as a low-price problem, for perfectly understandable reasons. So they put on pressure for raising prices.

There were many other issues involved in the demand for higher prices—the growing tendency toward administratively fixed prices in industry, the growth of labor unions and rigid wages, the high cost of rail transportation, high real-estate taxes, and so on.

The failure of these costs to drop as farm prices did, after World War I, plus the swollen mortgage debt inherited from the land boom, suggested the price-raising remedy: Lift prices of farm products, and agriculture's problems would be solved!

As the dreary process of mortgage foreclosures and farm bankruptcy dragged on during the twenties, while the rest of the country was prosperous, it was natural for farm leaders to seek a solution "within agriculture." This was strictly a "farm depression."

Methods proposed included export dumping, and restriction of production to the size of the domestic market. Farmers were conscious of the sharp loss in foreign trade, and tended to place the blame on that alone. McNary-Haugenism and the "export debenture plan" stemmed from this belief.

This agitation during the twenties never got very far. President Coolidge vetoed the McNary-Haugen bill. An attempt by farmers to cure their own ills through marketing cooperatives fizzled.

But when the Great Depression of the Thirties hit, farm relief got high priority. Although the basic cause of the trouble had changed—it was now world-wide industrial paralysis, instead of domestic economic imbalance—the methods of the twenties were dusted off and put to use.

The objective remained the same—higher prices. "Parity for agriculture" was the rallying cry. It has been ever since.

The New Deal programs achieved some success. The benefit payments under AAA provided much-needed cash. Commodity loans effectively raised prices of basic crops above the free-market level.

But the total effect of all the programs on national farm income was small indeed. Farm income during the thirties was but little higher than its average relationship to national income during the twenties.

Farmers did not really begin to prosper until the whole economy began to revive, under the stimulus of wartime production programs financed by Government spending in the forties. Even as late as 1940, farmers were hard up.

But the experience with farm programs during the thirties was exceedingly valuable. It showed, by large-scale national try-out that production control did not work very well.

Especially in the feed-livestock sector of agriculture, acreage restrictions simply didn't do the job. Farmers substituted other feeds for corn, for example. They grew more corn on fewer acres by using more fertilizer and better seed. They demonstrated an unexpected degree of individual flexibility and adaptability in production.

Controlling corn acreage did some good because it stimulated better farm practices and encouraged use of soil-conserving grasses, but it certainly did little to hold down production of livestock and livestock products—and these are the products which must be controlled if Corn Belt farmers are to get higher prices and incomes by "monopoly methods."

Other valuable lessons were learned. Crop loans above market value piled up huge carry-over stocks of corn, wheat, and cotton. The war absorbed these providential (but accidental) stock piles. Yet the lesson cannot be missed: If war had not come along, the storage stocks would have had to be destroyed, exported under subsidy, or else allowed to break down the price-support system.

The price-support activities of the thirties, mild as they were in comparison to the Brannan plan—supports never being higher than 75 percent of parity before the war—proved to be a great handicap to our foreign-trade policy.

In 1934 we had begun the reciprocal trade-agreements program to encourage a world-wide reduction in tariffs, import quotas, and other trade restrictions. But our artificially high prices of export products like cotton, wheat, and tobacco tended to restrict trade. In the case of cotton, they encouraged the development of competitive exports from other countries. They even made necessary domestic import quotas—because we could not have farm products from other countries flowing in to ruin our own price supports.

During the war that began for us in 1941, the price-support technique was used for a different purpose and in a different economic climate. We will talk about that in a later editorial.

WE NEED A NEW FARM POLICY—II

In a previous editorial we reviewed the history of farm price-support legislation between Wars I and II. We showed how the philosophy of raising agricultural prices as a means of attaining farm relief and stability emerged into Federal policy.

When World War II came along, we began to use the earlier depression-born price-support techniques for a different purpose, and in a different economic climate, of course.

The Government first guaranteed farmers 85 percent of parity in order to encourage output of needed products. This was shortly raised to 90 percent (92½ for cotton).

These supports caused no trouble, however. Demand was increasing so fast that it kept ahead of the supports, except for short-period surpluses, as of hogs in 1944 and of eggs at various times. After the war even the 90-percent supports were so low in relation to the free market that few surpluses occurred—only in potatoes and eggs and a few other exceptional cases.

In the last year, however, as foreign demand has begun easing off and with bumper crops of grain, both wheat and corn have moved into the "surplus" category. They are surplus in the sense that the entire production cannot move into consumption at the price-support level.

Eggs are in the same class. Some dairy products also.

Potatoes are in surplus again, even though the price-support level has been lowered from 90 percent of parity to 60.

Other products are not far away. Hogs, for example, are almost certain to drop to price-support levels (90 percent of parity) before the end of this year.

Under the price-support law passed by the Eightieth Congress, most of the commodities given price protection during the war are guaranteed 90 percent of parity until the end of this year. After that supports become "flexible."

With the exceptions of tobacco and wool, which remain at the 90-percent level, supports will go down the parity scale. For the grains and cotton, supports must be no lower than 60 percent. For others, the Secretary of Agriculture is given discretionary power—within the limits of funds granted by Congress. Under this power, he has announced that hogs will be supported at 90 percent until March 31, 1950.

Now Secretary Brannan has interjected his proposal into the political limelight. He calls for a much higher level of price support than ever before proposed—despite all the window dressing of direct payments, a new base period, and the use of the words "minimum income standard."

If this proposal were to become law, it certainly would compound the difficulties which were experienced under the earlier programs in the thirties. It would make the crop restrictions and marketing controls of that period look mild, indeed.

Even at fairly high levels of general business activity, the Brannan proposal would require a great deal of Government price-support activity. For most of the important farm products, the mandatory level of support would be higher than 90 percent of parity. There is little provision for any adjustment to weaker demand or greater supply provisions.

In view of our experience with more moderate price supports, the Brannan support proposals would seem to be the height of economic insanity. Direct payments do not remove all the sting. Although consumers would benefit from allowing market prices to seek their own level, Government outlays would have to be very large to make good on the supports. To avoid excessive Government spending, the program almost certainly would lead to acreage restrictions and marketing controls.

Even assuming our past experience had been favorable, however, a new and higher support program should be judged in relation to the changed economic position of agriculture.

Early agriculture policy makers thought in terms of farming as a rather homogeneous industry. The debt load of the twenties, the rigidity of farm costs, the loss of foreign markets—all seemed to be universal in their impact on agriculture.

Besides, all the statistics were for agriculture as a whole. Actually, market prices for farm products are of great concern to only about half the farmers of this country. The other half of our 5,500,000 so-called farmers are so unproductive that they produce little for market.

This lower half raises only about 10 percent of the total agricultural output. Much of what they produce goes for home consumption, and does not reach the market.

This group includes not only the South's poor farmers and the inefficient farmers of all regions; it includes a growing number of people who live on farms and are classified as farmers in the census statistics, but who really earn most of their living off the farm. They are part-time farmers, not dependent upon their farm production for a living, except in time of depression, when they cannot get nonfarm work.

It is easily demonstrable that nearly half the farmers in this country have little to gain from a price-support program.

And a sizable proportion of this half actually have something to lose, since they are bigger purchasers of farm products than they are producers.

The other half of the farmers are a different sort, entirely. The most efficient farmers of the corn belt, the wheat belt, the fruit regions, the dairy regions and even of the South, are completely commercial. They sell everything they produce and buy everything they use. Obviously, they have a great deal to gain from a high price support program providing they can continue to produce as much as before. And in the case of the livestock producers, there is little doubt that they could, unless production and marketing quotas were applied to livestock and livestock products themselves.

Mr. Brannan has asked Congress for such controls, but it is doubtful that either farmers or consumers would long tolerate such restrictions.

In the case of tobacco and cotton, restrictions on acreage can be effective. But the more production is cut down to support prices, the less income advantage producers will get from the higher prices. And in both crops, such restrictions encourage competition from other countries and from substitute crops. Cotton already has lost ground it can never take back from rayon producers and cotton growers of other lands.

But more about that another time.

WE NEED A NEW FARM POLICY—III

In two previous editorials, we have related how over the last 30 years we came to arrive at the point where the Brannan price support program for agriculture was even proposable. We discussed reasons why very rigid restrictions and controls would be necessary to make it feasible. And we pointed out that any price support program fails to benefit the noncommercial portion of our farm population which most needs help.

The high-price-support philosophy needs also to be reexamined in relation to the changed economic position of our top commercial farmers, who primarily gain from it.

These commercial farmers are not overwhelmed with debt as they were in the twenties and early thirties. They learned their lesson from World War I, and refused to be stampeded into a runaway land boom during World War II. Land prices are still low in relation to net farm income.

The smaller debt load now carried by farmers is also much more flexible. Loans on land generally are amortized over a long period of years, with provision for skipping principal payments in hard times. Interest rates are low. There are no more 8 percent, 5-year loans as in 1920.

Farmers also have made great technological advances in the last 15 years. They have been able to reduce labor costs phenomenally, by the use of new machines and more gas and electric power.

They have joined the machine age, while the lower fringe of agriculture is still back in the nineteenth century.

While this technological revolution has increased the proportion of cash costs sharply, thus making it harder to lower total cash outlays in time of reduced income, it has made the farming operation more flexible. Corn Belt farmers today, for example, can easily shift out of grain to more grass, cutting costs sharply for gasoline, machinery, and fertilizer. A quarter century ago, most of the costs of corn production went right on, whether you reduced output or not—since the horses had to be fed anyway and one or two hired men probably had to be kept on the farm.

Of course severe industrial depression would work great hardship on farmers—just as it would on everyone else.

But the changed financial position of the top farmers raises the question whether these businessmen are entitled to as much special Government protection as before.

Would it not be wiser to spend less time and money on protecting commercial farmers against price declines, and more time on preventing depressions themselves?

As long as general business is good, as long as unemployment doesn't rise above 5,000,000, these commercial farmers will take care of themselves as well as most other businessmen will.

Giving the upper-income farmers a disproportionately high guaranteed income through price supports does little to prevent a depression. It may, indeed, aggravate a depression by clogging trade channels, distorting the natural production and marketing adjustments, and pushing people back onto farms.

But suppose our efforts through monetary, fiscal, and public works programs fail to achieve reasonable stability in the total economy, and a depression comes? Suppose unemployment grew to 10,000,000 or more, and the country's industrial economy was stagnant?

Then farmers would have a just claim on society for some kind of subsidy, some kind of benefit payment, in return for maintaining full production. (The same sort of guaranty might well be made, in all logic, to any industry that maintained its output.)

The fact is that in our modern society we recognize plainly the responsibility of government to provide assistance to all disadvantaged groups, in a depression. Our social-security laws give a measure of such aid to industrial workers. Certainly farmers are entitled to the same sort of protection in a depression.

If this is sound public policy, then the question becomes one of method. How would you make the payments?

Most of the suggestions made by agricultural economists and farm leaders are for some kind of price support. They cannot get out of the old groove. They see the fallacies in the programs of the thirties, and most of them see that these fallacies are merely compounded in the Brannan plan. But they still see no alternative.

Direct payments on a price-support base, without market manipulation through loans or buying activities, would be an improvement. But the payments would still be tied to the prices of market commodities. The urge to expand output of these products would still be there—and despite the wisest price-setting formulas, farm production would be directed into arbitrary channels.

Instead of allowing free choice of consumers to determine our output, we would be substituting the decision of government officials or the rigid bounds of an arbitrary price formula.

No acceptable substitute has yet been discovered in England, in Russia, or anywhere else for the free pricing system as a means of transmitting consumer preferences to producers of farm products.

Perhaps the Government can help slightly by "forward price" guaranties in times of great movements of demand—such as in wartime But for the most part, the less Government interference the better, so far as this function of adjusting output to demand is concerned.

Why not, then, make "depression payments" to farmers on some other base entirely?

Why not make soil-conservation payments, adjustable to changes in general economic conditions?

Large-scale conservation payments to farmers in a depression would be just as helpful to farmers in protecting their incomes as price-support loans or payments.

Moreover, conservation payments would have many advantages, both political and economic, over price supports as a means of providing this protection. First of all, they would be politically acceptable to farmers and their organizations.

Let us consider this topic of conservation payments further in another editorial.

WE NEED A NEW FARM POLICY—IV

In the preceding editorial of this series, we pointed out that rigid economic controls of agricultural production had never been and never could be a satisfactory substitute for consumer choice in a free market.

We suggested the wisdom, therefore, of shifting away in our thinking from the guaranteed price technique of safeguarding farmers against depression, which would not work anyway, and of shifting toward the conservation payment technique.

The Farm Bureau and the Grange have always opposed direct payments to farmers—as a technique of price support—because such payments look too much like handouts. They prefer a disguised subsidy of fair prices in the marketplace. They believe such guaranties of prices would be easier to maintain in Congress than outright payments.

But conservation payments are well established, after 15 years of AAA. Farmers see nothing immoral about taking money from the Government for the purpose of improving their land resources.

Consumers generally feel the same way about it. Conservation of our food-producing resources has received general public approval. Consumers would raise little objection even to payments totalling two or three billion dollars a year to farmers, in a depression, for building up the national food-production capacity. But they probably would howl loudly about the same payments as a means of giving farmers predepression prices in hard times.

Secretary Brannan proposed that his price-support payments be made contingent upon performance of certain soil conservation practices. This is certainly sound public policy. But why not, then, make the payments directly for that purpose?

Making conservation payments variable according to changes in general economic conditions is sound public policy—not merely because it would help stabilize farmers' incomes, but also because it would induce a proper use of soil resources. It makes sense to draw heavily on our bank of soil fertility when prices are high, and to put fertility back into the land when prices are low.

Soil conservation payments should be made for a carefully prescribed set of practices, laid down and checked for compliance by local farmers. They should be made on a scale which would vary with some over-all measure of demand for farm products, such as the estimate of income payments to non-farm people made by the Department of Commerce.

Variable conservation payments would have the advantage over price-support payments, also, in that they would help noncommercial farmers to a much greater degree. They would tend to encourage an improvement in farming methods by the people that need such encouragement most.

Dr. John D. Black of Harvard University suggests that payments be made in kind—that is, in fertilizer, materials, seeds, and farm equipment which would help raise farm productivity. Such an adaptation would provide more positive assurance to the general public that it was getting its money's worth in payments to farmers.

But any conceivable conservation program, backed up by large-scale payments in time of depression, would still fall short of dealing adequately with the problems of low-income farmers.

These people need two principal public aids: (1) adequate help and guidance to become efficient farm producers, so that they can join the commercial segment of agriculture, or (2) adequate training and financial help to get out of farming into other occupations, where they can earn a better living.

The Farmers Home Administration (formerly Farm Security Administration) has developing methods of providing the first of these forms of public aid. It has a notable record of rehabilitating farmers by providing them with credit and supervising their farm operations. This program might well be expanded. In spite of the fact that we have too many farmers in this country, there are many thousands of families in the lower half who are capable of becoming efficient producers, given the chance.

Moving people out of farming is a harder job. Our social values call for a maximum of freedom of choice for the individual. It would not be possible politically—even if it were desirable for other reasons—to move people off farms by force. The only acceptable technique is to provide the opportunity for farm families to move to other occupations if they want to.

Experience during the war shows that the principal factor which causes this movement is a high level of industrial prosperity. So the main contribution public policy can make to this desirable adjustment is to prevent a depression.

A better national distribution of educational advantages would also help. Many people living on farms in the South, for example, are incapable of moving to other jobs because they lack the rudiments of education to work in urban occupations. This can be over-emphasized: the wartime drift of people from farm to city showed that the knowledge and skills necessary for factory work are very quickly acquired. Nevertheless, adult as well as child education in backward rural areas undoubtedly would be a stimulation to further movement off farms.

This program of greater conservation payments to farmers, plus expanded public assistance to underprivileged farm people, would incorporate nothing particularly new in our scheme of farm programs. But it would make these real adjustment programs, rather than artificial price supports, the heart of farm policy. It would be an attack on farm problems which recognizes that no blanket program can correct the maladjustments of such an exceedingly diverse and complicated industry.

It would allow the country's highly developed and sensitive price and market machinery to operate freely, without excessive government interference.

The voice of the consumer again would be sovereign in deciding what kinds of farm products we should produce.

Our foreign economic programs no longer would be handicapped by restrictions, required by our price support policy. We would be able to go to the world with our programs for greater trade, and for a more rational international distribution of labor, without having to apologize for our own sins.

Best of all, this program would fit in with an expanding industrial economy. It would not "freeze" agriculture into any kind of a predetermined pattern. And it would put a high premium on farm production efficiency.

Nonreciprocating Reciprocity British Style

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. DAGUE. Mr. Speaker, if there are any of us who need further justification for our vote in opposition to an extension of this Nation's unrealistic reciprocal trade program surely we can find it in the Associated Press article which appeared in Tuesday's Washington Star.

Far from finding fault with Britain's apparent determination to do business with Argentina without regard to this country's juvenile conception of what constitutes world trade, we are rather inclined to applaud this latest demonstration of the utter impracticability of our present tariff and trade program. In the face of ever-increasing barriers to the products of this country we have continued to let down the bars to a swelling influx of foreign goods which can only spell disaster for American labor and industry. And admitting that the day of the high protective tariff is gone forever let us hope that we have at least reached the end of our present naive policy which has neither raised us in the regard of our neighbors or kept us out of war.

The time seems to have arrived when the President must rely on the expert advice of the Tariff Commission and turn from the impractical, visionary, un-American, and wholly unrealistic planning of the State Department. It would seem, too, that Mr. Paul Hoffman, Administrator of the Marshall plan, must revise his estimates as to the effectiveness of that give-away program as he contemplates these British restrictions on trade at a time when the United States is scattering broadside its dollars in an effort to bring about freer interchange of goods in the world market.

The Associated Press item which prompted these reflections follows:

BRITISH-ARGENTINE PACT HITS RECIPROCAL TRADE POLICY, SENATORS SAY

Senators today described the British-Argentine trade pact signed yesterday as a heavy blow to this country's reciprocal trade policy.

Publicly and privately, they accused Britain of following a policy which tends to choke off the free world trade sought by the United States.

The pact, binding Britain and Argentina to do most of their trading with each other over the next 5 years, was signed in Buenos Aires.

"SERIOUS SITUATION" SEEN

The State Department, which had vigorously objected to such a deal, made the best of it yesterday and issued a toned-down statement expressing gratification that "substantially more flexibility" had been written into the agreement.

But Senator GEORGE, Democrat, of Georgia, said the treaty has created a "serious situation." He said it will complicate his job of getting the Senate to approve an extension of the reciprocal trade-agreements program asked by President Truman.

As chairman of the Senate Finance Committee, Senator GEORGE will lead the fight to extend the President's powers to negotiate trade agreements which lower tariff barriers.

Senator MILLIKIN, of Colorado, ranking Republican member of the Finance Committee, said the pact "will have a tremendous impact on our reciprocal trade system."

UNITED STATES SEEN FROZEN OUT

Under the agreement, Britain will furnish Argentina most of her imports in return for meat and cereals. American critics say the pact will virtually freeze the United States out of the Argentine market.

But even more serious, some Senators say, is the fact that the treaty sets a pattern which may wreck American efforts to break down trade barriers.

"The pact tends to restrict rather than expand freer world trade," Senator MILLIKIN said, "and it indicates we are working at cross purposes with the second greatest trade country in the world—Britain."

Tokyo—MacArthur on the Job

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address made by Henry J. Taylor from Tokyo, Japan, on June 27, 1949. In this radio address, Mr. Taylor points out some of the difficulties facing General MacArthur.

Many of us have known for some time that not only the State Department, but sympathizers with the Kremlin have been trying to discredit and subordinate General MacArthur's activities in Japan. I shall urge, with all the force at my command, that the Congress back General MacArthur to the limit because he has done and is doing a remarkable job in Japan. It would be most unfortunate if those who are jealous of this great commander would be successful in subordinating and undermining the work he has been doing.

I recommend the reading of Henry J. Taylor's radio script to my colleagues:

Come with me, 6,000 miles across the Pacific. Stand here beside me in Tokyo tonight and you will be very proud of the United States.

Pull up your chair and talk with Gen. Douglas MacArthur. Go through these Tokyo streets. Go into the Japanese homes and shops. Go, as I did, to the Japanese police headquarters—into their banks and schools and movie houses. See our American troops in barracks, and quietly on duty at key places, where needed. You will be very proud of the United States.

MAKING FRIENDS OF ENEMIES

These people were enemies of our country. There are 81,000,000 of them on these rocky, rainswept islands. They caused us, in our American homes, great suffering, death and loss and pain. They were our bitter and horrible enemy.

You find it strange to move among these people who faced us in their foxholes and their Kamikaze planes—to have them serve you breakfast, light your cigarette, open the door as you pass through, bow and rush forward with your hat or coat, stand at attention while you ask a simple direction on a street corner, or in a shop.

A GREAT ACHIEVEMENT

Yet not a single case of violence, by any of these 81,000,000 Japanese, has occurred against a single one of our troops since the day General MacArthur first set foot on this enemy soil. It's doubtful if any achievement like this by an occupation leader has ever been recorded in the history of the world.

Speaking of America and of this occupation, one of Stalin's former commanders here said privately, "Your country's performance here is a miracle." Moreover, that's what the Japanese think about us tonight.

Was it done by brute force? No. What has happened in Japan has been achieved by victorious General MacArthur's intelligence, his imagination, his remarkable understanding of the oriental mind, his long and successful experience with oriental methods in the Philippines, his ability to transmit, even to orientals, the moral and spiritual values of the true America at its very best. Can you imagine a harder job any place in the world?

GENERAL MAC ARTHUR SHOULD REMAIN

But now is the time to sound an alarm. For General MacArthur may be undermined. Listen, if you will, for much that affects us at home is at stake, and at this very moment.

We're laboring under a great delusion at home, I'm afraid. Even many of the strongest well-wishers of General MacArthur are mistaken, I am convinced, in their conception of the fundamental American position out here.

I've traveled a long way, across 6,000 miles of ocean, to see this picture at first hand. So, with your permission, let me deal only with this fundamental—for it is the crux of the situation in Japan, as it affects us at home, in your land and mine.

Further, it is the true answer to the question, Why doesn't General MacArthur come home?

I've spent hours and hours with General MacArthur here. I've been alone with him in his office, and with him alone in his home—by daytime, at meals, at night.

In exactly the same manner, I was with General Clay in Berlin when General Clay was in command in Germany. So this is the story from each man, first hand.

JAPANESE AND GERMAN PROBLEMS DIFFERENT

Based on each man's own description of his problem in each country, it would be hard to imagine two problems more different than the problems we face in Germany and here in Japan. That's the first thing we need to understand, unless we want to wreck everything General MacArthur has built up in Japan, and are willing to carry these 81,000,000 Oriental people on our backs for generations to come.

There was no government in Germany, when Germany fell—not even a government that could effectively surrender, as you recall. Here, on the other hand, General MacArthur obtained a surrender from the Emperor of Japan.

General MacArthur has never instituted military government, as it was needed or practiced in Germany. In the German sense, there is no military government here today. In fact, among the civil authorities in Japan, of which there are only 2,700, over 88 percent are American civilians—not in the United States Army at all.

IGNORANCE OF THE ORIENT A FACTOR

Here life already proceeds under the Japanese Government, the Japanese courts, the Japanese police—modified to conform to democratic principles.

Yet, through a fundamental lack of knowledge of the Far East, many planners in Washington are expounding the idea that something strange and new should be added now in Japan—that there should be what is

called a transition period here. The same ignorance of the Orient, and of oriental minds, that has made our policy in China so utterly disastrous, is apparent in the policies being cooked up in Washington to be applied here in Japan.

The idea is to bring General MacArthur home, or else to leave him in Japan, merely in command of the troops, and send out as top man a civilian—as Mr. John McCloy has already been sent to Germany to take over from General Clay.

JAPANESE LOVE A VICTOR

But this is not European Germany. This is oriental Japan. Applying the German idea here is like saying, "Remove the only really great American asset we have in the Far East, and let the Japanese think General MacArthur did not conquer them after all."

The Japanese love only a victor. General MacArthur is the only thing to them around here. If General MacArthur left here—or if his authority were changed, and any civilian, no matter how competent, were sent over as a top figure—it would be beyond understanding to the oriental mind.

To the average Japanese, and to the entire Orient, any switch involving General MacArthur could only mean that America was pulling out of Japan and Asia—and that they'd better line up as closely as they could to the Soviet Union, and to the Reds, before it is too late.

COMMUNIST PROBLEM TOUGH

The great Red conquest of nearby China already makes the difficult problem of keeping Japan on America's side tough enough for General MacArthur, without any Washington talk of tampering with him here. General MacArthur must stay here, and in full authority, until the peace treaty he has been urging for 2 years is made with Japan. He must stay here, and without a civilian in higher authority, or no peace treaty will ever be made in Japan worth the powder to blow it across the street.

I can tell you that General MacArthur himself does not see the slightest necessity for a so-called intermediary stage between this present set-up and the period of a peace treaty. Such a change would be regarded by the Orientals as a sign of American weakness, and would at once be pounced on by Russian propagandists saying, "You see, the Americans are weakening. You'd better get cozy with us."

I've been over every feature of this present situation with General MacArthur personally, and at great length. So let me give you tonight a little picture of what it means to come here and discuss these questions with our American leader.

A PICTURE OF GENERAL MACARTHUR

I've never met a more forthright man. Like most men who really know their business, when General MacArthur speaks, he makes himself clear. He uses easy-going language, gets down to brass tasks and does not deal in generalities.

His mind roams the whole world. He asks questions about anything he thinks you might know. He simply sits there and talks things out, and he has an inborn courtesy and sense of fitness which give him a great deal more human appeal, at close range, than might be evident in his photographs, or at a distance.

Every thought that runs through his mind, about Japan or any place else, is tied in with its effect on the United States. In short, his mind goes from America outward and so does his heart.

THE GENERAL IS "AMERICA IN JAPAN"

When you are talking with General MacArthur you are at home in our country—at home in America, at its very best. As a matter of fact, to the Japanese, General MacArthur is "America in Japan."

Nothing would please the Kremlin Communists more than to have Washington appear to by-pass or subordinate General MacArthur under a civilian. There is evidence here—abounding evidence—that the Soviet propaganda aims to destroy General MacArthur and the prestige of our occupation forces. This is the same propaganda being promoted from Moscow by the Communist Party inside the United States.

Now the economic questions are large and complicated. It's impossible to do them justice in a broadcast like this. Many important economic difficulties remain. I know that as well as the next man.

But the big planning brains at home had better leave General MacArthur alone. My friend, Noel Busch, described the results here best, I think, when he said, "Scandal and failure make news. Success only makes history."

Believe me, General MacArthur is making history here.

HE MADE THE JAPS WORK

Remember that Japan was overcrowded and distressed before she went into war. Then you will realize that, had there been no war, Japan still would be very bad off indeed.

Yet, in helping Japan, we've not been an easy mark, as we have been in so many countries in the world that I have visited. The orientals detest an easy mark. But under General MacArthur, we have made the Japs work, and work hard, for anything they got from America.

We at home have actually been called on to spend less American money for recovery in Japan, under General MacArthur, than we have poured into little Greece. An amazing fact—but true.

NO TRANSITION PERIOD NEEDED

Yet I am sure that there are newspaper publishers and editors, in our own country, who do not know tonight that forces are at work to pull the rug out from under General MacArthur. Many of his best well-wishers simply believe that the so-called transition period to a so-called civilian authority is a natural and desirable next step, as in Germany.

So at home, in our congressional committees and in our press, we had better take a good hard second look at any proposals which tamper with the authority of General MacArthur in Japan.

No matter how well-meaning, even the appearance of weakening General MacArthur's prestige here would undermine the last single hope we have for a democratic peace and for any kind of American security in this vast area, that now lies under the shadow of the Russian paw, so close to the Red claws sharpened and poised to rip at the peace of the world.

Here in Tokyo, on my trip around the world, I've been granted an audience with the Emperor of Japan. I'm going now to the Imperial Palace. Let me tell you about this meeting with the Emperor next week, and about the biggest naval base in Japan, that looks out across the sea to Russia. My next broadcast is from Tokyo, and then I go into China.

So good night to all at home. Good night—and God bless our country.

The Public Pay Roll

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following editorial which appeared in the New York Times, Thursday, June 23, 1949, entitled "The Public Pay Roll":

THE PUBLIC PAY ROLL

The steady rise in governmental employment on all levels and the attendant effect on taxes drawn from the public's pocketbook can only be viewed with concern. Senator BYRD, of Virginia, who keeps the Nation informed on the Federal figures, has just reported that the number of civilian employees of the United States Government rose again in April, reaching a total of 2,122,710 in the executive branch. This was an increase of 11,453 in 1 month. In November 1947, we had managed to get this number down to 1,999,853, the first time it had been under 2,000,000 since 1941. In 1939 only 920,000 civilians were on the Federal pay roll.

The Census Bureau reports that Federal, State and local governments employed 6,083,000 persons as of January 1949. This means that about one person in ten of the working force was on a governmental pay roll, and that $1,340,400,000 in taxes was required to meet their pay checks for 1 month. A year earlier the number had been 5,842,000, while in January 1942, there were only 4,947,000.

In New York State alone the Federal Government has enough employees to populate a good-sized city. There are 181,000. As of October 1948, the New York State government alone had 79,102 employees, and New York City's government employed 207,289. Up-State cities employed about 70,000. So, working within New York State and not including members of the armed forces, were more than a half million public employees. When we add to this figure the number of persons who are living at least temporarily on public assistance (more than 300,000 in New York City alone at the moment) and the privately employed workers who are engaged on contract jobs let by various levels of government, the result is staggering.

Our rise in population accounts for some of the increase in governmental employ. The international tension keeps certain classes of Federal expenditure high. We cannot decently expect our Federal, State and city governments to return to normal while the effects of war still lie all about us, in continuing international obligations and in war-deferred domestic problems. But the public employee is on notice that Government budgets are under examination as never before by the citizen-taxpayer, who still likes to feel that what goes up must, eventually, come down.

Catholic View Outlined

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, by request of one of my constituents, I wish to insert the following letter in today's CONGRESSIONAL RECORD:

OUR LADY OF THE OAKS,
Pewaukee, Wis., June 22, 1949.

Representative GLENN R. DAVIS,
House Office Building,
Washington, D. C.

DEAR SIR: As a citizen and voter, I am writing this letter to you to solicit your aid in opposing the pernicious Barden bill.

I am a Catholic. Nearly seven hundred members belong to our religious community. All are Catholics. About one-third of the

total population of the United States belongs to the Catholic faith. The war called all able-bodied men to service, Catholic and Protestant alike. No objection was made to Catholic soldiers and Catholic sailors. Approximately one-third of our navy and one-fourth of our army were Catholic. No one, not even the most fanatical opponents of the Catholic Church, protested or objected though this number was much above the normal quota of the Catholic population. Many of our Catholic boys made the supreme sacrifice. Scores of others came home crippled or disabled for the rest of their lives. Not one complained. Neither was there a single protest recorded against this Catholic generosity.

Catholic people give their best to justice and to democracy. They pay their taxes faithfully. Why, just why, are they cut off from any benefit of their tax money? Taxation without a just return is a thing of ancient tyranny. Our forefathers fought a bloody war to destroy that system. Why revive it now? Catholic people want peace. They pray daily for a just peace for all.

America has so much to offer to its peace-loving people. Why stir up strife among our people now by unjust discrimination? We want no charity. We want no privileges. But we do want justice, the staunch justice of American democracy to which we belong.

Please read this request to your fellow legislators, and have it printed in the CONGRESSIONAL RECORD. All citizens of our own United States should know of our urgent plea for justice.

Respectfully yours,

MARY ROMANA, O. P.,
Mother Superior, Our Lady of the Oaks.

Central Valley Project

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. WHITE of California. Mr. Speaker, because certain leaders of the California Farm Bureau appeared before a Senate committee protesting the development of electric power features of the Central Valley project a number of rank-and-file members of the California Farm Bureau have written to me expressing the thought that these leaders did not represent the thinking of the membership of that organization. Typical of the comments I have received is the following letter from Mr. E. M. Sheridan, Farm Bureau member, from Orange Cove, Calif.:

SHERIDAN LAND OFFICE,
Orange Cove, Calif., June 21, 1949.
Hon. CECIL F. WHITE,
Washington, D. C.

DEAR MR. WHITE: I saw in the Fresno Bee last evening that the question had been raised as to whether the leaders of the farm bureau really represented the views of the members in connection with their lobbying before the Senate Appropriations Committee against the Central Valleys project.

I never have heard that question raised as all of the membership of the farm bureau I have talked to in this vicinity have expressed themselves as feeling the attitude of any one lobbying before the Senate or Congress against the project is an outrage against the best interests of this entire east side of the San Joaquin Valley.

It is silly to say they are for the project if the power features are taken away from them.

It is said that one or more of the so-called leaders have urged the project be taken away from the Reclamation Bureau and turned over to the State, and I have even heard the so-called manager of the State chamber of commerce urge just that most vehemently and in his peroration cried "Do it now." He did not say what the State would use for money which might be in order.

The trouble with so many of our people is the fact that they are inarticulate, or you would be smothered with letters expressing our indignation that anyone would pretend to represent the members of the farm bureau and advocate any features that would tend to destroy the benefits of the Central Valley project. It is just unthinkable.

Anyone dry behind the ears knows that would not only take away part of the project but would kill the whole project dead in its tracks.

It is inconceivable that anyone would think the Senate committee would be so dumb as to give any credence to anything so palpable. All of my neighbor farm bureau members tell me they are through with the farm bureau.

As to myself, I renewed my support for one more time hoping for a new leadership, the one reason was I have cattle and the marketing division of the bureau operates a very successful marketing agency at Visalia, which benefits all of us.

Yours truly,

E. M. SHERIDAN.

Uncle Sam Should Recognize Spain

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. SHAFER. Mr. Speaker, my personal nomination for the American official who has made the most stupid statement of 1949 goes to Secretary of State Acheson, who, on May 11, 1949, at a press conference called in Washington, attempted to clarify American policy toward Spain. If Mr. Acheson made anything clear in his statement at that time, it is that he is more muddled and inept than even his immediate predecessors in our foreign policy dealings.

At the very time he was planning to go to the Big Four conference in Europe, when he wanted, or should have wanted, to show Soviet Russia that America no longer was under any illusions about Russia's leaders, Mr. Acheson chose to alienate again a potentially strong friend in the Western Hemisphere. Spain, the nation that has fought Communism the longest and with the most consistent zeal, was made to appear to be an incipient threat to the freedom of all other nations in the Western Hemisphere. This was misplacing the emphasis with a vengeance, and Mr. Acheson, longtime friend of the left-wingers although always working to increase his personal family fortune, knew it was misplacing the emphasis.

The truth is, in his action of refusing again to recognize Spain, Mr. Acheson does not represent the majority of the American people. I will say it in any American town and I will say it in any Spanish town: If the American people had a chance to vote on Spanish recognition, two out of every three of them would vote to do business with Spain, make Spain a member of the United Nations, and, in fact, help Spain to move faster on its halting course toward representative government.

I believe that 100,000,000 Americans cannot be wrong, and I deeply believe that 100,000,000 Americans believe Dean Acheson is wrong—dead wrong.

In his press conference, obviously called to head off rising demands in the United States Senate and the United States House of Representatives for resumption of diplomatic relations with Spain, Mr. Acheson said that Spain has a dictatorship, that it has no writ of habeas corpus, that it lacks an independent judiciary, and that it has no trial by jury. He further charged that Spain does not have freedom of religion and that there is no right of freedom for groups to meet in public sessions for any of numerous reasons.

I could deny Mr. Acheson's statements, but I will not. It is not necessary. All that I, or any other sensible American, has to do is to point out that if anything the Secretary of State says about Spain is true, the same statements could be made with triple emphasis against Soviet Russia, and the United States has carried on uninterrupted diplomatic relations with Russia for almost 16 straight years.

The jumbled state of world affairs, due in no small part to the stupidity and ineptness and lack of foresight of Secretary of State Acheson and his predecessors, makes it more essential than ever that the United States cultivate its friends and discourage its enemies in every way possible.

Dale Carnegie, a famous American author, made a million dollars off a book, How To Win Friends and Influence People. It was a best seller all over America a few years ago. I submit that Secretary of State Acheson should read it. For by continuing to refuse to recognize Spain, he is proving that he needs more lessons both in diplomacy and in selling our American way of life.

We Americans have much closer ties or potential ties with Spain—religious ties, cultural ties, hemispheric ties, potential military and trade ties—then with almost any nation possible to name, outside of Great Britain and France. The Spanish helped to explore North America. Our closest neighbor in the south is Mexico, which was virtually colonized and made civilized by Spain. Spain is closer to the United States in point of miles than France or England. And if there is a single military authority in the United States who will not admit that America's most powerful line of defense, in case of war with communism, would be at the Pyrenees, I have not yet made his acquaintance, although I have served on the House Committee on the Armed Services for many years.

Many of our citizens rail against Spain's Government. The same citizens say that we could not officially do business with

Spain without tainting ourselves in some mysterious way with fascism. This is utterly ridiculous, and easily proven to be ridiculous. Yet these same citizens urge more trade with Russia, overlooking that the Soviet Government represents a tyranny infinitely more pernicious and more dangerous to the freedoms of the United States than Spain ever could in the conceivable future of the world as we know it.

Actually, by recognizing Spain, by helping the Spanish people through loans, by making Spain a full-fledged member of the United Nations, by having our soldiers and sailors and citizens mix and mingle with the Spanish people, we probably could help the poor people of Spain to learn more and better ways of helping themselves, both spiritually and materially.

Only a person with a thwarted mind or viewpoint possibly could believe that Spain ever could physically constitute a threat to the freedom of the Western Hemisphere. Any 10-day tourist can see for himself that Spain's millions of citizens desperately need our Amerian aid. They are crying for help, but our Department of State, in all its majesty, turns cold shoulder to the cries of the children of Spain.

Our policy of not doing business with Spain not only is cruel, from the standpoint of Spain's people in want, it is tragically short-sighted. Spain is going to do business with somebody, and, in fact, she already is doing business with a great number of somebodies—France, England, et al. We, of all the Western Hemisphere nations, seem to be the only Nation that takes a holier-than-thou attitude. And it costs us millions in loss of trade.

The Spaniards have proved in a thousand ways that they are closer to the concept of free government as we know it in America than Soviet Russia ever will be. The Spaniards retain their love for and support of the church. They believe in God and in charity and in kindness. I do not claim that the Spanish Government is a representative, republican government such as we have in the United States. But I hope that it someday will be, with our help and succor and encouragement.

The sanctimonious Mr. Acheson, who was one of the first Americans to shake the hands of Maxim Litvinov when that gentleman, then Russian Foreign Minister, came to the United States in 1933 to resume diplomatic relations between the United States Government and the Soviet Government, recognizes many governments and does business with many diplomats who could not meet the qualifications he lays down for Spain. It is obvious that he is playing domestic politics to please a few left-wingers and Communists in New York and Chicago while the long-time foreign interests of the United States goes a-begging.

If I could write a personal message to the people of Spain and to the millions of Americans who want to see the United States recognize Spain and do business with Spain and to help Spaniards to achieve their destiny as a free people, I would say this to every one of them: "Be of good cheer. Such bungling diplomatic leadership as America has had for so many years under the New Deal will not last forever. One of these days, the American people are going to replace their present inept leaders with men who can think clearly, talk straight, and act logically. When that time comes—and it will come in relatively few years at most—Spain will be a partner once more with the United States and with all other Western Hemisphere nations in the protection of religious peoples against the atheists and terrorists of the east."

Postal Salaries

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a statement in support of H. R. 4395, by Gurden M. Higley, legislative representative of the Central Pennsylvania Postal Employees Council in Harrisburg, Pa.

Mr. Higley has been a careful student of postal legislation for years and active in all matters pertaining to fair and equitable adjustments for the postal employees. His statement sets forth some of the salient facts and arguments connected wtih H. R. 4395 with force and clarity.

I recommend the reading of this statement by all the Members. It follows:

It is an established fact that postal salaries have lagged far behind those in private industry for many years and consequently the employees of the postal service have not been able to build up a reserve to cope with the present high prices. Regardless of the many statements made recently, the cost of living has dropped very little from the all-time high of last August. Based on the 1939 index, a $650 increase is necessary to bring postal employees current with existing prices. H. R. 2112, 2496, 2492, and 2579 will provide such an increase.

As legislative representative of the Central Pennsylvania Postal Employees Council, and secretary of the Harrisburg local of the National Federation of Post Office Clerks, I heartily endorse, H. R. 4395 (the Lyle bill) with $650 substituted for the salary section instead of the $150, presently contained in the bill.

The enactment of this bill will correct some of the inequities under Public Law 134 which are necessary for the economic welfare of all postal employees.

Suppose we take the longevity provisions of the existing law. Well, gentlemen as you know the older employees (those with more than 11 years in 1945 when public law was enacted) did not receive credit for all their service toward their salary grades. This was manifestly unfair since many of these men will have from 35–45 years of service but will never reach the top or so-called longevity grade. This is a poor reward for a whole life of faithful service.

This bill will provide the same leave privileges to postal workers as presently enjoyed by the rest of the Government departments. Certainly this is only fair, and should have been corrected long ago.

Under the provisions of H. R. 4395 the first four or lowest grades will be eliminated which will give the veterans in our service a much needed break. These employees certainly cannot support their families, adequately, on salaries of from $2,500 to $2,850. Most of these junior clerks, carriers, and railway mail clerks are veterans who have come back from the wars and are anxious to provide for their families in the traditional American way.

Postal employees are proud of their service which antedates the American Constitution. The United States Post Office was founded for service and has the reputation of being the most efficient business, public or private, anywhere in the world. We employees are anxious to maintain, and if possible, surpass this fine record maintained over the years. We feel it will be easier to do this if we receive adequate salaries that will eliminate the worry of trying to provide a reasonable standard of living for our families with an insufficient income.

Before finishing this statement I should like to call attention to a fact that is mentioned very little these days. Postal receipts have increased much faster than the manpower which shows that the efficiency and unit output for each employee has increased. On this basis in addition to the others we are entitled to reasonable consideration of our pending objectives.

I appreciate the courtesy of being allowed the privilege of filing this statement with the distinguished members of this committee and I ask a prompt, favorable report of H. R. 4395 with the suggested amendment. Thank you.

Respectfully submitted.

GURDEN M. HIGLEY,
Legislative Representative, Central Pennsylvania Postal Employees Council, Harrisburg, Pa.

JUNE 10, 1949.

The Menace Is Great

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Frank Malone, from the Miami Legionnaire of June 21, 1949:

THE MENACE IS GREAT
(By Frank Malone)

These are the rambling thoughts of an editor, to a great extent inspired by Commander Kelly's blast at communism last Friday night. He blamed, and rightly, the growth of communism in our own Nation, and throughout the world, on the apathy of our people.

If you will forgive me for the use of the perpendicular pronoun—"I"—I want to talk to you as a man who has spent 35 of his 52 years of life in the newspaper business.

I want to tell you what great danger apathy toward community affairs, national affairs means.

Let's forget—and we have no right to forget—the appalling conditions that exist in our own community. But let's remember this, that the preamble to the constitution of the American Legion says "for God and

country • • • for law and order • • • we associate ourselves."

We have established in our counties, municipalities, in our States, certain processes which call for the enforcement of laws which are written on our statute books. We say in effect that "we are against sin." We say you shall not gamble, steal, kill, commit perjury—we say by statute almost what the Ten Commandments forbid.

But nowhere in our statutes do we say that you shall not be guilty of selling out your country.

It is true that we have provisions in the Constitution of the United States punishing treason. But the hardest of all crimes to prove under our own statutes is the crime of treason.

As I understand the law of treason it almost demands that the person charged with the crime must confess to it.

That is the danger of communism to the United States of America, and the entire world.

The Red danger, it seems to me, is a danger we face in this country made greater by our own stupidity. We always say it can't happen to us.

Let's look at the record.

Today, Alger Hiss, trusted State Department official, is on trial in New York. Whittaker Chambers, senior editor of one of the Nation's great magazines (and I wouldn't and don't believe him under oath), says that Hiss, while Chambers was on his own admission a spy for Moscow, gave him confidential papers of our State Department.

On trial in Washington today is one Judith Coplon, trusted employee of our Department of Justice. The Government says she took from the Justice Department files highly confidential documents of the Government and turned them over on a street corner in New York to a man the Department of Justice says was an agent of the Russian Government.

From Elizabeth Bentley, confessed spy, but still an American citizen, have come amazing stories of how she sold out our Government. Lack of space prevents our printing the names of others who have confessed the sale of their Nation.

With the exception of the accused Hiss and Coplon, all the others have admitted their treason—and to me it is treason.

There are in our own community men and women who are as guilty as the Chambers and the Bentleys—the male and female rats, who for self-glorification, or for hope of high places in the Red government when these United States—they hope—will be destroyed by their machinations, join the enemies of our form of life.

I believe they should be hunted down and prosecuted as we prosecute all who violate our laws.

Perhaps it's too much to ask for—to much to hope for—but we have the right to direct the Attorney General of the United States the resolution we sent to him last Friday.

The resolution asks that the Department of Justice, of which Attorney General Tom Clark is the head, move to enact laws which will outlaw the Communist Party in the United States; that laws be enacted which will properly prosecute those who join in attempting to overthrow our Government, no matter what their later repentance may be.

Let's find some nation—if any nation will have them—to which they can be deported. Dry their lousy, maudlin tears. Rid us of them whether they were born in Brooklyn, Boston, Miami, or Michigan.

They love Russia. Let's give them back to Uncle Joe. They won't live long.

Because having shot off their mouths, told their stories, Uncle Joe will see that life is made great and beautiful for them some morning.

Against a wall and there will be no flowers.

Things That Are Not Caesar's

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of June 28, 1949:

THINGS THAT ARE NOT CAESAR'S

The pastoral letter issued by Archbishop Josef Beran and his bishops and read last Sunday in Czechoslovakia's Catholic churches brings down to date a story that comes close home to people of every faith and even to those who have no formal faith.

This is true, even though the Communist rulers of Czechoslovakia, like those of other Communist-dominated countries, are just now attacking a single church. In Czechoslovakia they have censored or suppressed this church's press; they have inventoried its religious properties with the obvious purpose of sequestering them; they have controlled or suppressed its schools; and in the words of the pastoral letter, "On the whole, it can be said that outside the church (buildings) any religious activity is impossible and many fear to visit churches lest they be accused of reaction and fear the loss of their means of existence." The answer of the Czechoslovak hierarchy is that they are loyal to the republic, but that "they do not want the church to become a mere servant of the state—in other words, the bearer of a different philosophy under a cloak of Christian religion."

It is clear that the threat in Czechoslovakia, as in every Communist-ruled country, is to all churches and to all individuals who assert the right of private conscience. The spokesmen of communism have often been ambiguous in discussing this question. More than 20 years ago, for example, Mr. Stalin told a delegation of American labor leaders that Russian laws "guaranteed to citizens the right to adhere to any religion." He added, however, that "antireligious propaganda is a means by which the complete liquidation of the reactionary clergy must be brought about." A "reactionary" clergy or a "reactionary" church, from this point of view, is simply one which does not permit itself to be used as a political instrument of the state. In effect the Communist god is the party and its leaders. The Communists may permit the worship of another and more ancient God if the Communist god is always given precedence. But from the viewpoint of any sincerely held religion this is blasphemy.

The world's earlier tyrannies mostly struck at men's bodies and properties. The Russian Communists and Russian-inspired Communists, armed with the philosophy of Marx, Lenin, and Stalin, are trying to do a more thorough job. They are trying to destroy men's souls—to corrupt them, to deprive them of free judgment, to violate and debase the human conscience.

An assault like this upon one church or one person is an attack upon every church and every person. Everyone who respects the right of the private conscience or who has any concern for the dignity of man is here on the same side. We can do little, perhaps, to help those who are caught by the new tyranny behind frontiers that we cannot pass. What we can do is to express our indignation and our sympathy. Beyond that we are called upon to strengthen in our own country the ideas of tolerance, of respect for another's opinions and of unity in the democratic essentials. Because there is less freedom in the oppressed countries we must strive for more freedom here. We must realize that this is the crux of today's worldwide struggle.

In the Gospels of Matthew and Mark, in substantially the same words in the King James version and in the Douay Bible, the story is told of the attempt of the Pharisees to "entangle" the Founder of Christianity. They asked Him: "What thinkest Thou? Is it lawful to give tribute unto Caesar or not?" He answered: "Render therefore to Caesar the things that are Caesar's and unto God the things that are God's." No matter what one's religious belief, the words have a dramatic meaning. There are boundaries to the power of any Caesar whether he calls himself Hitler or Stalin or by some other name; whether he masquerades as a "people's democracy" or whether he nakedly admits the truth. There are things that are not Caesar's and that by no exercise of power can ever be made Caesar's. It is the great challenge of our time to all of us to assert those things, in whatever language we speak, in whatever churches we worship, in whatever groups we move. We must have faith that the attempted conquest of the human soul and spirit will fail in our generation as it has failed so many times before.

Msgr. M. J. Smith, Champion of Spain

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a speech by Dr. Joseph F. Thorning, honorary fellow of the Historical and Geographic Institute of Brazil. Dr. Thorning spoke at ceremonies at Denver, Colo., June 16, in honor of one of America's best-known journalists, Msgr. Matthew J. Smith, editor in chief of the Register System, whose headquarters are in Denver. Both Monsignor Smith and Dr. Thorning have been prominent in elucidating the truth about Spain.

The speech follows:

In offering my most cordial congratulations to the Right Reverend Monsignor Matthew J. Smith, editor of the Register, I wish to assure him, on behalf of his colleagues in the Order of Isabella the Catholic, how happy they are that a nationally prominent prelate and newspaper man has been inducted into their ranks at this particular moment of history. The Royal and American Order of Isabella the Catholic was established by descendants of the people who discovered America. It is a national decoration, founded early in the nineteenth century, to honor those Americans who, in defiance of the Bonapartes, remained loyal to the Spanish Crown. Consequently, it symbolizes that love for independence, as opposed to foreign domination, which typifies Spaniards, whether the latter be from Aragon, Castille, Valencia, Andalusia, Galicia, Leon, the Basque countries, or Catalonia. In the white circle, surrounded by the red and gold of the Isabellan cross, one reads the device, A La Lealtad Acrisolada—To Loyalty Made Perfect Under Fire. The ribbon, from which the cross of the knight commander is suspended, carries the colors

of the Holy See. In other words, Monsignor Smith, who today is invested with these insignia, earned the award under fire. And the work which brought him his knight's cross was inspired, not only by his determination to promote the best interests of the United States but also by his sense of deep devotion to the Holy See. Love of country and love of God led him aright.

In telling the truth about Spain, without fear or favor Monsignor Smith has proved himself to be a farsighted religious editor and a noble-hearted American patriot. He belongs in the company of the Royal and American Order of Isabella the Catholic.

If one may be permitted to single out a notable example of the honoree's sense of news values, we may agree upon the story, featured in the Register early this past winter, which brought out, specifically, by naming names and dates and places, the historical fact that every one of the present-day Soviet gauleiters in Europe as a product of Generalissimo Josef Stalin's course in militant subversion carried on during 1936–39, on the leftist side in the Spanish civil war. Ana Pauker, in Sovietized Rumania; Matyas Rakosi, in Soviet Hungary, where Joseph Cardinal Mindszenty was tortured; Klement Gottwald, in Stalinized Czechoslovakia; and Jakob Berman, in the Soviet puppet-state called Poland; all these Marxist gauleiters, just as vicious in the service of Stalin as were Vidkin Quisling and Heinrich Himmler in the service of Hitler, are operators trained in Soviet—that is, collectivizing tactics—in the columns of the Soviet International brigades. There was no doubt where the Kremlin stood and how the Vatican judged the Spanish issue in 1936–39; there can be no doubt where both Generalissimo Stalin and His Holiness, Pius XII, stand today. The latter stands with Monsignor Smith; the Kremlin, wherever it can get its hands on independent editors or courageous prelates of any church, is liquidating them ruthlessly.

We Americans who are Catholics cannot afford to permit the mistakes that were perpetrated by secularists of the left in Bulgaria, Rumania, Albania, Hungary, Czechoslovakia, and the Far East. To replace the present head of the Spanish state by Indalecio Prieto today would mean the tyranny of the Soviet gauleiter, Dolores Ibarruri (La Pazionaria) in Madrid tomorrow. And yet, the advent of Indalecio Prieto, a follower of Karl Marx, would be welcomed, presumably, by Mrs. Eleanor Roosevelt and Mr. Dean Acheson, because Prieto, an agnostic apostle of Spanish left-wing elements, would be acceptable to the Marxist International in Paris and London. Not only would the installation of the Marxist agnostics in Madrid be the signal for an immediate exchange of Ambassadors between Spain and the United States, but such a revolution would also invite Spain to a share in the European recovery program and in the Atlantic Pact.

As a footnote to this hypothetical reallocation of sovereignty in Spain, it must be added that, once the Marxists were supreme in Madrid, they would lose no time in overthrowing, or in attempting to overthrow, one of the fairest and most stable governments in western Europe, that of Premier Antonio Oliveira de Salazar in Lisbon, Portugal. Although the collectivization of Christian Portugal has long been an objective of the Soviet Politburo in Moscow, it has been realized perfectly by the Soviet hierarchy that power cannot be seized, successfully, in Lisbon until the iron curtain has been clamped down upon the more strategic and larger part of the Iberian Peninsula: Spain.

Consequently, the Soviet gauleiters of Iberian origin, just as sedulously trained as William Z. Foster or the Chinese General Mao, are biding their time, waiting for the fatuous agnostics and Marxists of the Anglo-Saxon world to pave the way for the Soviet final ascent to totalitarian power by way of stopgap regimes of leftist innocents, such as were the ephemeral administrations of D. V. Petkov in Bulgaria and Ferenc Nagy in Hungary.

To make the analogy clearer, it may help to mention that the Iberian Peninsula would be just as safe under the control of an Indalecio Prieto as the United States would be if political power were concentrated in the hands of Mr. Henry A. Wallace. Would we think of entrusting this Nation, the hope of world freedom and social progress, to the rule of the so-called Progressive Party candidate? Why then should we be fatuous enough to imagine that the left-wing agnostics of Europe can be relied upon to roll back the tide of Soviet imperialism on all the continents of the world? Karl Marx, personified in our country by the Marxist International, is the most formidable Soviet agent, whether operating in Spain or in the United States; Marxism is only a halfway house on the road to Soviet domination.

In the light of these facts, how can Mrs. Eleanor Roosevelt and Mr. Dean Acheson hope that Spanish Marxism can prove the key to Spain's reintroduction into the community of free nations in Europe in both the economic and the defense fields?

May I be permitted to preface the answer which I submit for this question with an explanation of the order of the two names, Mrs. Roosevelt and Mr. Acheson? I make this arrangement of names, although I have studied carefully, the disclaimer of responsibility for our Spanish policy which was made by the wife of our former President in the New York Times on June 3, 1949. Mrs. Roosevelt stated that she had no share in the making of Spanish policy and that she did not speak with Mr. Dean Acheson about Spain.

This statement was correct, although not expressive of the whole truth. When the United States delegation to the United Nations met in Washington, prior to the recent session of the General Asembly, its members heard the United States position on Spain explained to them by the experts in the State Department. Those officials, responsible for amassing information on the specific areas involved, made it clear that the best interests of the United States suggested support for two possible resolutions in the UN: (1) That permitting member nations to send or not to send chiefs of diplomatic mission to Madrid; (2) that which would admit Spain to membership in a number of the technical bodies connected with the United Nations. There was no time for any discussion among the delegates at this meeting in our capital. Consequently, when they left Washington, it was understood that members of the delegation would follow State Department instructions, formulated upon the basis of the area experts in the Department.

At the first meeting of the United States delegates in New York, however, with Mr. Warren Austin presiding, the State Department instructions came up for discussion. Immediately, Mrs. Eleanor Roosevelt declared that she considered the United States support for the resolution, allowing each country complete freedom with respect to diplomatic representation in Spain, a mistake. One of the principal grounds she offered in expounding her point of view was the antagonism toward the Spanish Government expressed in her fan mail, that is to say, in the letters or messages that reached her in connection with her newspaper column, My Day.

As soon as Mrs. Roosevelt stopped speaking, Mr. Benjamin V. Cohen urged a similar point of view. Mr. Cohen contended that, although the diplomatic boycott of Spain may have been a mistake, originally, it would be an error to repair the mistake, because to repeat the 1946 resolution at this time would be accepted as a sign of approval of the present government of Spain. This line of reasoning, it may be noted, was not much different from the position assumed by the columnist, Mr. Walter Lippmann.

The third delegate to refuse to support the official State Department instructions was Mr. John Foster Dulles, who, as the leading spokesman for the Protestant churches in this country, takes part in most international conferences as well as in the regular sessions of the United Nations.

Unfortunately, Ambassador Philip C. Jessup was called out of this caucus of the United States delegation and consequently did not have an adequate opportunity to explain the reasons, under international law, for permitting entire liberty to all nations to accredit or not to accredit envoys to Spain. Ambassador Ray Atherton, who previously had given a national radio address, considered that his views had been sufficiently clarified in his broadcast. In this speech Mr. Atherton pointed out, among other things, that the designation of United States ambassadors to countries behind the iron curtain did not signify approval of the type of administration that prevailed there; nor would a similar appointment for Spain carry any approval for internal or domestic policy.

Under these circumstances, Mr. Warren Austin, although himself favoring State Department policy as formulated in Washington, considered it necessary to refer the whole case back to the Secretary of State, with the results we know. In other words, the State Department experts in Washington were overruled by an amateur clique at Lake Success. Emotion and sentimentality usurped the place of reason and of a realistic appraisal of our own best interests.

What conclusions may be drawn from this episode? The first is that "fan mail" to a columnist may have more weight with a United States delegate to the General Assembly than the deliberate study and judgment of area experts in the State Department. The second conclusion is that any amount of illogic, such as the refusal to undo a mistake, may be admissible in the highest quarters, provided a country like Spain can be made the scapegoat. The third deduction is perhaps the most important of all, namely, that, since the Catholic Church is an ecumenical body, with a world view in its members peculiarly suited to the analysis of global issues, it would seem natural enough, following the law of proportion and averages, that in a nation of some 148,000,000 people, of whom at least 25,000,000 are Catholics, one outstanding Catholic citizen would be a useful member of the next United States delegation to the General Assembly of the United Nations.

Under democratic administrations, it has long been taken for granted that, other things being equal, such as competence of available personnel, there should be at least one Catholic on the Supreme Court. In like manner, one would expect that a Catholic of national prominence could be immensely helpful in dealing with world-wide questions and situations which involve matters of Catholic philosophy and outlook, especially in view of the admitted fact that Catholics everywhere are irreducible foes of totalitarian Marxism.

Europe has a Christian tradition; Latin America is largely Catholic. Why not invite Catholic participation in the United States top delegation at Lake Success?

Spain has come a long way since the dark days of Potsdam. Fair-minded representatives of the people in the Senate and in the House at Washington have spoken in favor of friendship with both countries in the

Iberian Peninsula. Only a handful of fanatics oppose such friendship. Indeed, the state of public opinion has changed radically within the past year. Twelve months ago, few voices were raised in support of the true principles of international law which should govern an exchange of Ambassadors. Today, prominent leaders of all faiths call for justice toward Spain as an indispensable element of sound foreign policy. These leaders include Senator TOM CONNALLY of Texas, Chairman of the Senate Foreign Relations Committee; Senator ARTHUR VANDENBERG, ranking Republican member of the same committee; Senator OWEN BREWSTER of Maine; Senator MILLARD E. TYDINGS, Chairman of the Senate Armed Forces Committee; Senator PAT MCCARRAN of Nevada, Chairman of the Subcommittee on Appropriations for State, Judiciary, and Commerce; Senator ROBERT TAFT of Ohio; Senator DENNIS CHAVEZ of New Mexico, who understands Hispanic and Hispanic-American issues as well as anyone in the Congress; Senator KENNETH WHERRY of Nebraska; Senator HERBERT R. O'CONOR of Maryland; and the Honorable JOHN W. MCCORMACK, majority leader of the House of Representatives. To Monsignor Mathew J. Smith of Denver, Colo., talented journalist and brave American, goes a generous meed of praise and commendation for this change as well as for his leadership in the fight for truth and fairness.

Reduction Favored

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Palatka (Fla.) Daily News:

REDUCTION FAVORED

Sentiment in Congress in favor of cutting the cost of the Federal Government is growing fast. Many things have contributed to it—among them, the decline in business and employment, the fact that a heavy Federal deficit now seems inevitable, and the reluctance of the lawmakers to increase taxes, because complaints from the "folks back home about Federal spending" are increasing.

However, sentiment in favor of cuts in spending, and practical action toward that end, are two different things. Congress is always bedeviled by pressure groups, all of whom are in favor of cutting the appropriations that go to someone else and increasing their own. As an obvious example, there is hardly a chamber of commerce that doesn't pay lip service to the cause of economy—and then whoop it up whenever it sees a chance to get a slice of Federal tax money for its own area.

In the long run, the decisive factor will be public sentiment—the wishes of the voters as to fiscal policy. A short time ago the Omaha World-Herald carried on an interesting experiment. It published a full account of a speech made by Senator Byrd, in which he described various spending measures now before Congress, and pointed out that the billions they would cost would have to be paid by all the people. The World-Herald then published a ballot on which it readers could express their views on the matter.

The first question asked for opinion on a straight 10 percent cut in all Federal expenditures that can be cut. Only 134 who answered were against this, while 5,869 were for it. The balance of the questions covered specific legislative measures such as Federal housing, Federal aid to education, the national health plan, arms to Europe under the North Atlantic Pact, etc. In every instance the vote was overwhelmingly in favor of strict economy. On the health plan, for instance, 5,828 expressed themselves as being against it and 99 for. On increased pay roll and income taxes, 5,876 said no, while a mere 96 approved them.

In conducting its poll, the paper emphasized the certain but often-overlooked fact that the Federal Government hasn't a cent except what it takes from all of us in taxes. It is true that some polls indicate that a substantial majority of the people want Federal handouts. However, such polls are usually so worded as to make the unwary believe that they will get them for nothing—that the money will come from some mysterious source other than the people's pockets.

The Hoover Commission reports have given Congress what it long lacked—a detailed blueprint for eliminating waste, duplication, overlapping. Now it remains to be seen whether the people will demand its acceptance.

Discrimination Against Negroes in Minnesota

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. WIER. Mr. Speaker, the men and women in Minnesota keenly feel that all forms of discrimination against the Negroes in the State should cease. This attitude is clearly reflected in the hiring and upgrading of Negroes in employment as well as acceptance of them in recreational places, restaurants and hotels. Discrimination against the Negro race is being eliminated in all places except the Minnesota National Guard where they are not accepted on an equal basis with white enlistees. This condition has resolved itself into a controversial issue.

The Peter Graham Post, No. 2948, Veterans of Foreign Wars of the United States, International Falls, Minn., in striving to abolish this unjust discrimination, has adopted a significant resolution to state their policy and to encourage immediate change in the policy of the Minnesota National Guard.

I would like to insert their resolution in the RECORD:

Whereas the practice of discrimination against the Negroes in the Minnesota National Guard has been perpetuated and has remained unchanged for the last 30 years, although in many other phases of life in Minnesota there has been progress; and

Whereas the attitude of recreational places, restaurants, and hotels has changed and many employers are hiring Negroes and upgrading them; and

Whereas this discriminatory policy now in force in our Minnesota National Guard stems from a War Department regulation; and

Whereas last year the Secretary of the Army indicated he would be inclined to except Minnesota from this regulation if the Legislature of the State of Minnesota requested it, and exception has already been made in the States of New Jersey and Connecticut; and

Whereas the Minnesota Poll of Public Opinion published figures indicating that 64 percent of all men and women approached believed that Negroes should be admitted to the Minnesota National Guard on the same terms as white men; and

Whereas Senate File No. 10, which is a concurrent resolution memorializing the President and Congress of the United States to enact legislation securing to all citizens and particularly to its Negro citizens the right to serve in the National Guard without segregation in separate units, has been passed by both houses of our State Legislature, signed by Gov. Luther W. Youngdahl, and forwarded to Washington: Therefore be it hereby

Resolved, That Peter Graham Post, No. 2948, Veterans of Foreign Wars of the United States, International Falls, Minn., do believe that the practice of discriminating against the Negro in the Minnesota National Guard should be abolished, and that interest be stimulated in Washington by sending a copy of said resolution to President Harry S. Truman, Senators Edward J. Thye, and Hubert H. Humphrey; Representatives August H. Andresen, Joseph P. O'Hara, Roy W. Wier, Eugene J. McCarthy, Walter H. Judd, Fred Marshall, H. Carl Andersen, John A. Blatnik, and Harold C. Hagen, urging their immediate attention and to advise the Eighth District of Minnesota, Veterans of Foreign Wars of the United States, of their specific activity in regard to the situation here in the Minnesota National Guard.

ROBERT H. STEELE,
Commander,
Peter Graham Post, No. 2948,
Veterans of Foreign Wars.

Attest:

FRANCIS E. PAPILLON,
Adjutant.

The above resolution adopted at our Eighth District Convention at Cloquet, Minn., May 22, 1949.

GEORGE WOLEAN,
District Commander.

Attest:

R. A. RUCE,
District Adjutant.

Socialist Peer Quits Party

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the London Express:

SOCIALIST PEER QUITS PARTY

Lord Milverton, a Socialist, who was made a peer in 1947, announced his resignation from his party before a crowded House of Lords last night and said: "I thought I was participating in a crusade. I find myself a camp follower in a rake's progress."

He resigned as a protest against steel nationalization and the "intemperate and provocative language" of Mr. Bevan, Minister of Health.

Then sitting as a Liberal peer, he helped the opposition, until 11 p. m., to defeat the

Government four times on amendments to the steel bill.

Burly, 64-year-old Lord Milverton, strong man of the Colonial Service, who prepared the trouble spots of Nigeria and Jamaica for new constitutions, got up to speak just before the Lords started 5 days of debate on the steel bill.

After two or three sentences, the House sensed his statement was serious, and they listened in tense silence as he said:

"A great deal more than iron and steel is destined for the furnace. I have felt for some time that this bill for lovers of freedom marks the parting of the ways."

ONCE FREE

"There are principles involved which make it impossible for an honest dissentient to remain silent.

"I was born free, and I have spent the bulk of my life teaching what freedom means to somewhat reluctant pupils in backward countries.

"I am very loath at my time of life to reverse that progress and to sell the advantages of slavery to a people who were once free."

There was a murmur of approval from the Tory benches. And Lord Milverton went on—

"Perhaps it is because my own experience in administration has shown me how unrestricted bureaucracy can strangle enterprise that I feel some doubts about the widening circles of government controls.

"I have learned much in recent months about the lack of administrative foresight, and the destructive defects in administration of the health scheme and other nationalization measures.

"There is a wider gap than the dollar gap which threatens our national stability—the gap between principle and performance in these schemes.

"If that were all I might have kept silent, while regretting the decision to add further to the national indigestion.

"But as I have listened to the debates I have grown more certain of three things:

"The steel bill is unnecessary at present; it will jeopardize the efficiency of our most vital industry; the urgency with which it is being pressed strengthens the apprehension of those who fear that control of the industry is the end and not the means to an end.

"We have here, naked and unashamed, the time-dishonored principle that they should take who have the power. The craving to be able to say 'L'etat c'est moi' (I am the State) springs to life again whenever the desert soul of man is watered by power."

SO DUBIOUS

"I suppose that is why the price of liberty is said to be eternal vigilance.

"Like the ghost in Hamlet, this bill comes in such questionable shape that it excites misgivings about its real cause."

The possibility that, after the next election, Government control of our lives would pass into the hands of malicious or revolutionary people worried Lord Milverton. He added:

"Because I fear that, I cannot acquiesce by silence in the passage of a bill whose credentials are so dubious.

"I have been told I knew the labor program when I joined the Labor Party. It is quite true.

"I knew it in outline, but I did not in joining sign away my right to think, nor did I anesthetize my conscience, nor, I hope, did I lose the power to learn.

"I had certain aims and ideals and I thought that labor could deliver the goods, I am now apalled at the type of goods being delivered under the false trade label of national interest.

"I am one of a large number of people of independent minds who saw the merit of the party program on social justice but who are now becoming uneasy about the rest of the program.

"I cannot find a case has been made out for the bill. I feel it my duty in resigning to make my protest public, especially as I know there are many others in the party who share my views."

THE NEW BEVAN

"The road on which we are traveling leads to a precipice at the foot of which clearly emerges the totalitarian state.

"We heard at Blackpool [where the last Socialist conference was held] a prominent Cabinet Minister bewailing the fact that the moral stature of the people was not equal to carrying out the measures introduced by this Government; in simple words, that human nature did not see fit to change itself at his behest.

"It is at least permissible to ask in reverse whether the moral stature of the Cabinet has proved worthy of the principles they proclaim. I suggest the steel bill provides a ready answer in the negative.

"The Minister of Health in his new role as the moral leader of the Labor Party has two aspects.

"I cannot regard either the intemperate and provocative language of the politician, or the emotional appeal of the synthetic evangelist, as a suitable substitute for the clear thinking and calm thought the national interest demands."

Lord Milverton concluded: "I speak for thousands of independent thinkers who voted Labor at the last election and who have a keen desire to see social justice.

"They now begin to fear, as I do, that such measures as the iron and steel bill will destroy the only possible basis for social justice—a prosperous and united nation.

"I am unwilling to be a silent passenger on this sinister journey. I will certainly not betray the principles which have made this country great, nor will I help to forge a weapon which, in less worthy hands, may strike those principles dead."

Lord Milverton (formerly Arthur Frederick Richards), who started in the Malayan Civil Service in 1908, became Governor of Jamaica in 1938 and was Governor of Nigeria from 1943 to 1947, walked out in silence.

Thinking in Public

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a reprint from the Buhl Herald editorial of June 23, 1949. The author of this editorial, Mr. C. R. Reeves, an outstanding pioneer and lawyer in Idaho, calls attention to some important facts relative to the proposal of the administration for the establishment of a Columbia Valley Authority:

THINKING IN PUBLIC

CVA—SOME OF ITS PROVISIONS

(A guest editorial by C. R. Reeves, attorney)

There are pending in Congress today bills to create a CVA, and in each of the said bills there is an attempt to make a planned economy of the northwestern part of the United States.

"1. Inalienable rights of man: All men are by nature free and equal, and have certain inalienable rights, among which are enjoying and defending life and liberty; acquiring, possessing, and protecting property; pursuing happiness, and securing safety." (Sec. I, art. I, Idaho Constitution.)

All through history our principles of freedom have been jealously guarded by all loyal Americans.

I quote from Senate bill 1645 which was introduced into the United States Senate April 19, 1949:

"The qualifications of members of the board shall be persons who professed a belief in the feasibility and wisdom of this act. Section 4, paragraph (e) * * * shall have the power—(1) to acquire real and personal property, including any interest therein, by purchase, lease, condemnation, exchange, transfer, donation, or otherwise, and to sell, lease, exchange or otherwise to dispose thereof, including donations incident to experimentation, demonstrations, or other similar uses (without regard to section 3709 of the Revised Statutes, as amended); and to obtain services by contract, donation, or otherwise: *Provided, however,* That the Administration shall have no power to condemn any water right (the following destroys the foregoing provisions) except as it may be appurtenant to land acquired incident to the construction of dams, reservoirs, or other projects or facilities." (This provision completely destroyed because all the matter is related to the CVA object, project, or facilities.)

Section X, paragraph (d):

"The Administration shall establish the maximum size of farm units within each project for the reclamation of lands in accordance with its findings as to the area sufficient in size to constitute an economic family farm or adequately to supplement family grazing or dry farming operations on adjacent lands, but no farm unit shall contain more than 160 acres of irrigable land, or less than 10 acres of irrigable land except that any normal quarter section comprising more than 160 acres of irrigable land, may be included in one farm unit. No benefits from any such project shall be made available to the owners of lands whose individual holdings exceed the maximum area so prescribed by the Administration until and unless such owners shall have agreed, for and in behalf of themselves, their heirs, executors, and assigns, by contracts in form, substance, and legal sufficiency satisfactory to the Administration to sell such part of their lands as may exceed the maximum area so prescribed by the Administration at the appraised fair value thereof, without reference to or increment on account of the construction of the project (double-talking) *Provided,* That the provisions of this subsection shall not be applicable to the Columbia Basin project to the extent that they are inconsistent with the Columbia Basin Project Act * * * (when inconsistent it does not apply).

Section X, paragraph (f):

"In connection with reclamation projects, the Administration may acquire (but not by condemnation) and improve lands for disposition to persons desiring to settle thereon. Such lands shall be disposed of to settlers in economic family farm units." (The board would acquire land for sale and sell it to people who wanted to buy. To acquire this land without condemning is more brutal than the law of eminent domain applied where they would pay a reasonable value. Real estate business for your land.)

"The nigger in the wood pile," no benefits from any project shall be available to owners of land that exceed the maximum area, a clear evasion of the constitutional rights, and contrary to its principles. The land is not acquired for governmental use, but to

resell your land to someone else by brute economic force.

Germany started with planned economy more than half a century ago, and it produced Hitler. The same phrases which tempted the Germans are now couched in slightly different language in the CVA, and dangled before us as a bait. "The greatest good for the greatest number; security for all; jobs for everyone; a more abundant life; freedom from want; let the Government do everything; create a CVA; (S. S.) have prosperity; the Government owes me a living." (And follow in the footsteps of Hitler.)

"He who trades freedom for security will always lose both." (Benjamin Franklin.)

History reveals that planned economy produces collectivism, then totalitarianism; then regimentation, then dictatorship. May God forbid that my country and your country will ever pursue such a course. May our country forever remain where man is free; a land where the individual is free. If the CVA passes Congress, what inalienable right do you possess? You forfeit all of the rights that our forefathers declared in the Declaratio of Independence, that is set out in article I, section 1 of the Idaho Constitution; and you secure for your children and your grandchildren a type of government like Hitler built in Germany and a communistic government while the American citizenship would become serfs.

This was forewarned:

"General Eisenhower recently issued a statement, in which he warned: 'A creeping paralysis of thought and readiness to accept paternalistic measures from the Government could lead this country into dictatorship.' This, he said, 'will come from a constant drift toward centralized government.'

"There will be a swarming of bureaucrats over the land. Ownership of property will gradually drift into that central government, and finally you have a dictatorship as the only means of operating such a huge and great organization."

Front Line Fighter

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Daily News:

FRONT LINE FIGHTER

There ought to be some sort of congressional medal for judicial service (in the cold war) above and beyond the call of duty.

The medal, if created, should go to United States District Judge Harold R. Medina.

Day after day, week after week, Judge Medina has sat in the New York courtroom and endured the slings and arrows of the 11 men on trial for communist conspiracy and their tricky, loud-talking mouthpieces. He has borne this fire under the necessity of withholding his own. He has been conscious every minute of the trial that the defense was trying to trap him, to trick him, to bait him.

One serious outburst of temper, one tangible show of bias, one legal error or shortcut undertaken in anger or impatience and the whole case against the Communists would be vulnerable before the United States Supreme Court.

Under these extreme provacations, which, in the judge's own words have included harassment, defiance of orders, willful disregard of rulings, repetitious and extravagant charges for consumption outside the court, and concerted efforts to "wear me out," this skillful, philosophical jurist has shown monumental patience.

This is partly a byproduct of his learning, his disposition, and his character. And it is partly a product of his realization of the stakes, his understanding of what the defendants and their lawyers are aiming at, and his deep attachment to the principles of justice as practiced in America.

For he knows that not only are the Communists on trial, but our democratic system is on trial with them in the eyes of the world. He keeps his frayed nerves on ice because he understands the importance of leaning over backward to convince the world that even the unscrupulous are assured of a scrupulously fair trial in the democratic United States.

The Brannan Plan Again

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks I include an editorial by Tom Linder, commissioner of agriculture for the State of Georgia, which appeared in the Georgia Market Bulletin, Wednesday, June 22, 1949:

THE BRANNAN PLAN AGAIN

Beginning in 1940, when Congress passed lend-lease, the United States Government asked the American farmers, as a patriotic duty, to increase production. The American farmer, as always responded nobly. With his sons and daughters employed in industry and enlisted in the armed services, the farmer and his wife, with whatever help they could hire, kept the farm going. He performed miracles. With less help on the farm, he produced record crops.

Nature seemed to approve. Weather conditions were as near ideal as could be hoped, and through a world war of unprecedented magnitude the people of America, our Armed Forces overseas and our Allies were well fed.

The farmer persisted in spite of every impediment thrown in his path and in spite of the OPA, the Bowles weevil, the unfriendly attitude of the United States Department of Agriculture, etc., the farmer continued to produce food and fiber in tremendous amounts.

At the time that a minimum of 40 cents was indicated for cotton, to be in line with our general economy, and when cotton went to approximately 40 cents a pound, in spite of the propaganda the bureaucrats could put out, the United States Department of Agriculture came out with an estimate of more than a million bales in excess of the actual crop and forced the price back to 27 and 28 cents and caused the cotton farmers to lose $50 to $60 on every bale that he sold.

Not only that, but the Government put on export controls so as to force American crops to accumulate in America while the American taxpayer's dollar was sent by shiploads to buy agricultural products in foreign countries.

Now comes Mr. Brannan, Secretary of Agriculture, and proposes that American farm prices shall go to world levels and that the American farmer shall become a ward of the Government and depend upon Congress to take money from the taxpayers to give the farmer a decent living. This is communism, socialism, or what isms you want to call it, except it is not Americanism.

We know by experience that any country which embarks on a socialistic or communistic program cannot find any place to stop short of complete totalitarianism. We see England, once launched on the sea of socialism, can find no place on which to rest her foot. She is being carried helplessly along from socializing one industry to another and must be swept by this unchanging tide to complete socialism of medicine, agriculture, and industry. This means totalitarianism is its goal, it matters not by what name totalitarianism may be called.

The same socialistic theory which would have the Treasury pay the farmer for the food the American people eat, would, by logical projection, necessarily call for the Treasury to pay for the clothes which we wear.

Once launched on this never changing sea of socialism, it would be necessary for the National Treasury to pay for our houses and for our automobiles, for our medicine, and for every necessity of our lives.

The inevitable consequence would be in the years to come that the United States would simply constitute a mammoth concentration camp in which all citizens would give their labor to the Government and the Government in turn would supply their needs. This condition would constitute a western Russia.

The pages of history tell us of the rise of the great powers of the past. They tell us of the decay of those powers when they launched on a course of internationalism. They tell us of the fall of those great powers when internationalism, imports of foreign goods, and imports of foreign populations destroyed the basic manhood and statesmanship which had made those powers great.

The last of these great powers is disintegrating before our very eyes. Great Britain, which only a few years ago, boasted that it ruled the waves and that the sun never set on its flag is now an impecunious beggar at the gate of the United States Treasury. And, the people of the United States are turning their pocketbooks wrong side out to support a socialistic regime marking the decay of a once proud and independent people.

Out of one pocket we pay billions of dollars to finance socialistic and communistic regimes in the Old World and at the same time out of the other pocket, we fork up billions of dollars to hire these Socialist and Communist Governments to oppose Russia, the king of the Communists and Socialists.

Now Mr. Brannan would have us to set the ship of state of our own country on that same uncharted sea which the lessons of the past teach us can lead but to shipwreck and disaster.

"The time has come," the walrus said,
"To talk of many things:
Of shoes—and ships—and sealingwax—
Of cabbages—and kings."

TOM LINDER,
Commissioner of Agriculture.

National Housing Act of 1949

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. ELLIOTT. Mr. Speaker, yesterday the House passed the National Housing Act of 1949, which provided for the

construction of low-rent public housing by local housing authorities in the cities of this country. The bill also provided for aids for the construction of rural housing in the rural sections of the country. Likewise, the bill provided for extensive housing research which will have for its objective the lowering of housing costs so that more of our people will have an opportunity to build or purchase homes that they can pay for. The Housing Act of 1949 is, in my judgment, a step toward the solution of the housing problems of this country.

We promised the veterans of World War II that the Government would see to it that they had a reasonable opportunity to house themselves when they returned from the service. Many loans have been made under the loan provisions of the GI bill of rights, but most of these loans were made to the veterans living in the cities of the country where adequate financing was readily available.

Mr. Speaker, I desire to point out that in my judgment it is imperative that this Congress pass legislation bringing the loan provisions of the GI bill of rights within easy reach of our veterans of World War II who live in the small towns and in the rural areas where adequate financing is not now available. I have the honor to represent a district which is largely rural and everyday veterans call to my attention the fact that they have been unable to secure GI loans with which to build houses for themselves.

I am today introducing in the House a bill which, if enacted into law, will meet the situation which I have described. My bill provides for a greatly expanded market for GI loan mortgages and thus will encourage private financial institutions to make a greatly increased number of such loans.

My bill also provides for direct Government loans to those veterans who are unable to borrow from private lending sources the money with which to build their homes. Such direct loans shall be in an amount not to exceed $12,000 and shall bear interest at a rate not in excess of 4 percent per year. Such loans shall be repayable in not more than 25 years. These loans shall be made for the purpose of enabling the veteran to buy his home, or to construct the same.

There will be many objections raised against the Federal Government making direct loans to veterans with which to construct or purchase their homes. These objections, Mr. Speaker, will not be valid because direct loans under the terms of my bill will only be made in those cases where no local private financing is available to the veteran. There will be no conflict in these loans between the Federal Government and private lending agencies. As a matter of fact, I believe that my bill will have the effect of stimulating private lending agencies to extend broader lending coverage and finance veterans' homes in many cases where they have heretofore refused to do so.

Some of the objectors to this legislation will raise the cry of socialism. But, Mr. Speaker, we have no fear of socialism in this country when we make our people home owners. The greatest guaranty against this Government becoming socialistic is for our people to become home owners.

The home is the bedrock of our democracy; it is the basis upon which future advances of our civilization will be made. I will welcome the opportunity to explain to the people I represent my efforts here to encourage home ownership throughout the country.

The Late Col. Robert Bradford Marshall

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. WHITE of California. Mr. Speaker, many people in California were saddened last week at the news of the death of Col. Robert Bradford Marshall. Public power advocates in our State lost a true friend, for to this cause he had dedicated his life. Colonel Marshall was known as the father of the Central Valley project, for he recognized the necessity of developing the rivers of the great central area of California years ahead of everyone else. For a half century he devoted his energies to bringing about the start of that project, a project which is recognized now as vital to the growth and prosperity of California. The story which follows tells the history of the Central Valley project and the part played by Colonel Marshall. It was carried in the McClatchey newspapers on June 22, 1949, and I include it in the RECORD as a tribute to the memory of this man who devoted a lifetime to public service:

DEATH COMES TO COLONEL MARSHALL, FATHER OF CVP

Col. Robert Bradford Marshall, the father of the Central Valley project, died in San Francisco yesterday. He was 82.

Little known and seldom mentioned in the news during recent years, Colonel Marshall was the man who schemed, fought, and suffered ridicule for nearly half a century before he ignited the spark which resulted in establishment of the huge project.

ILL FOR YEARS

Colonel Marshall had been ill for years. He is survived by his widow, Myra; his daughters, Virginia Marshall, of San Francisco, and Mrs. Evelyn Maddox, of Sacramento; and two granddaughters.

Funeral services will be held at 2 p. m. Thursday at the N. Gray & Co. mortuary, San Francisco.

Colonel Marshall resided in Sacramento from 1927 until his retirement in 1938.

The forgotten man of the multi-million-dollar State water plan was born in Virginia, a direct descendant of Chief Justice Marshall, the early-day head of the United States Supreme Court.

UNITED STATES GEOLOGICAL AIDE

In 1891 he came to California as a topographer for the United States Geological Survey. He saw, with his technically trained eyes, the paradox of millions of parched and burning acres in the summer and millions of acre-feet of water pouring wastefully into the Pacific Ocean during the winter and spring.

He dreamed a dream of storing the rain waters of the Sacramento, San Joaquin, and Santa Clara Valleys and of southern California.

THREE DECADE SEARCH

During the next three decades he sought the engineering facts to pound his dream into reality. He covered the State by mule team and buckboard, surveyed dam sites, computed altitudes, charted water flow and analyzed seasonal needs.

In 1919 he resigned his post as chief geographer in the United States for the Geological Survey and turned his plan over to the State.

He went before the 1921 California legislature, was damned and called crazy, but emerged with an appropriation of $200,000 for the State engineers to investigate his plan.

REAL START

That was the real start of the Central Valley project. During the ensuing 12 years more than $1,000,000 was spent in studying the feasibility of the proposal, which in those days was known as the Marshall plan. Practically all of the bigger units of the project, such as the Shasta and Friant Dams, are basically the same as the colonel planned them.

It was shortly after his fight in the legislature in 1921 that a strange ailment caused him to lose his voice. Afterward he was able to talk only through the use of a bellows contrivance. Doctors believed the strain on his vocal cords while arguing to the legislators caused the ailment.

"WE WON"

Marshall once commented:

"Even though I knew it might cost me my voice, I should choose to do it again. I am but one man. Millions are to be benefited. After all, what does it matter whether I carried the fight or someone else did. We won."

It was Colonel Marshall's fondest dream during those early years that he should live to see the success of his campaign. And he did. He saw the water pour from the mighty Shasta Dam and other large units of the project in operation.

Some time after his 1919 retirement from his Federal position the colonel joined the State division of highways. In 1938 he retired and went to San Francisco to live. His death took place in his home there at 2523 Gough Street.

A Bill To Create an Office of Assistant Secretary of the Navy for the Marine Corps and To Fix the Personnel Strength of the Marine Corps at 6 Percent of the Other Armed Forces

REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. MANSFIELD. Mr. Speaker, I have heard many professions of love and loyalty for the United States Marine Corps in the years I have served in this

august body. I have heard and read glowing tributes to the heroism and devotion to duty of the United States Marines in war and peace from men and women in high and low places in this great country. It seems that everyone loves, admires, respects, and needs the Corps.

That is highly gratifying to those of us who have had the honor to serve in the Corps. We believe that the country should take steps to assure itself that there shall always be a Marine Corps of adequate strength to undertake any peacetime or wartime mission assigned to it. We have recently heard statements from many Members of Congress and from the Secretary of Defense as to the need for the Corps and the continued desire of our national leaders to continue to have this stout weapon at our command.

We have seen the marine record for economy of operation and efficiency of organization. And we know that economy is a magic word today. All of these reports as to the great work done by the Corps, of its economy and of its necessity to the Nation, we accept at face value. We believe that the Corps should have a relative standing with the other services—there are three Departments, but four services—and so many of us believe that we should write into law a flooring upon the strength of the Corps. We believe that we should take Fleet Adm. William F. Halsey's advice and guarantee for all time a perpetual Marine Corps in the best interests of our country.

For that reason, and because we know the truth of the laudatory remarks about the Marine Corps, we recommend that the Corps be established at an effective level of 6 percent of the total personnel strength of the armed forces, that an office of Assistant Secretary of the Navy for the Marine Corps be established.

Under permission to extend my remarks, I wish to insert at this place in the RECORD the sponsors of the bill which we have this date introduced in the House to effectuate this purpose in the best interests of national defense. I am also inserting a copy of the bill, an editorial from the San Francisco Chronicle dated June 14, 1949, and an editorial from the Christian Science Monitor dated June 23, 1949.

LIST OF SPONSORS—37 DEMOCRATS, 18 REPUBLICANS

MANSFIELD, Montana; JACKSON, California; DAGUE, Pennsylvania; DAVIS, Georgia; SMATHERS, Florida; GRANGER, Utah; CASE, South Dakota; PATTERSON, Connecticut; THOMPSON, Texas; O'SULLIVAN, Nebraska; JACKSON, Washington; GORDON, Illinois; DAVENPORT, Pennsylvania; MORGAN, Pennsylvania; PATTEN, Arizona; BARING, Nevada; KING, California; FORAND, Rhode Island; SIKES, Florida; HERLONG, Florida; GORSKI, Illinois; MILLER, California; HOWELL, New Jersey; HAYS, Arkansas; RICHARDS, South Carolina; BURDICK, North Dakota; DONOHUE, Massachusetts; CARROLL, Colorado; KELLEY, Pennsylvania; O'NEILL, Pennsylvania; KLEIN, New York; MITCHELL, Washington; DEANE, North Carolina; KARSTEN, Missouri; BOLLING, Missouri; KIRWAN, Ohio; KEARNEY, New York; ROGERS, Florida; BYRNES, Wisconsin; LANE, Massachusetts; HART, New Jersey; FOGARTY, Rhode Island; YATES, Illinois; LOVRE, South Dakota; JUDD, Minnesota; ALLEN, California; BRAMBLETT, California; COTTON, New Hampshire; MCDONOUGH, California; POULSON, California; FLOOD, Pennsylvania; WERDEL, California; NIXON, California; SMITH, Wisconsin; CHIPERFIELD, Illinois.

A bill to create, and assign duties to, the Office of the Assistant Secretary of the Navy for the Marine Corps, and to fix the personnel strength of the United States Marine Corps in relation to that of the other armed forces

Be it enacted, etc., That there shall be in the Department of the Navy an Assistant Secretary of the Navy for the Marine Corps who shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive the same compensation as the other Assistant Secretaries of the Navy. The Assistant Secretary of the Navy for the Marine Corps shall, under the direction of the Secretary of the Navy, be charged with the supervision of the United States Marine Corps and the coordination of its activities with other governmental agencies, and, in addition, such other duties as may be assigned to him by the Secretary of the Navy.

SEC. 2. The first sentence of section 206 (c) of the National Security Act of 1947 is hereby amended to read as follows: "The United States Marine Corps, within the Department of the Navy, shall include land combat and services and such aviation as may be organic therein, and the personnel strength of the Regular Marine Corps shall be maintained at not less than 6 percent of the combined personnel strengths of the Regular Army, the Regular Navy, and the Regular Air Force."

[From the San Francisco Chronicle of June 14, 1949]

OF SECURITY AT 6 PERCENT

The proposal to put a floor under the numerical strength of the Marine Corps is a sound suggestion aimed at enhancement of the Nation's security.

The proposal, advanced as an amendment to the Vinson bill, would assure that the Marine Corps strength is maintained at not less than 6 percent of the combined personnel strengths of the Army, Navy, and Air Force. That would mean that if the combined strength of the other services were 1,000,000, the Marine Corps would have at least 60,000; if and when wartime combined strength hit 10,000,000, the Marines would have, at minimum, 600,000 men.

The amendment would thus work no drastic change from either the present or the historical strength of the Marine Corps relative to the strength of the other services. And only in the matter of fixing the definite ratio would it alter the sense of the present law, which provides that: "The United States Marine Corps, within the Department of the Navy, shall include land combat and services forces and such aviation as may be organic therein."

But it would serve the important purpose of foreclosing any future attempts to destroy the Corps by whittling it down to the point of ineffectuality. And it would thereby give a shot in the arm to the Corps' morale to offset the damage done by those who have been trying to carve up the Corps and turn its functions over to the Army and Air Force.

We have not been concerned for the bruised feelings of any or all individual marines in our arguments in behalf of the corps—sentimentality is a negligible consideration where the public welfare is involved.

But the morale of the Marine Corps through a century and three-quarters has proved, again and again, a vital asset to the national security, and we contend that the safeguarding of that morale is a cheap price for the benefit of having an outfit ready and able to do the grim but crucial fighting jobs that constitute the Corps' mission.

Fleet Admiral William F. Halsey, in advocating adoption of the 6-percent amendment, observed that "the Marine Corps' unparalleled fighting spirit is something that can't be bought with money." It can be squandered, however, by public and congressional apathy in the face of the current campaign to tear it apart. We hope, for the Nation's sake, that this amendment to perpetuate the Corps will be incorporated into the Vinson bill and be enacted into law.

[From the Christian Science Monitor of June 23, 1949]

A FLOOR AT 6 PERCENT

If the Tydings bill passes as is, the Secretary of Defense will have control over the budgets of the three armed services, but he may not transfer personnel permanently from one branch to another.

Thus he could not toss the Marine Corps into the Army nor give naval aviation over to the Air Force. However, the Navy and the marines, and friends of those services, who are aware that elements in the Army and the Air Force have been advocating these very ends, point out that by budgetary starvation he could reduce both the leathernecks and the seagoing fliers into skeleton forces—and do it quietly and gradually.

As for the Marine Corps—Admiral William F. Halsey gave voice to one solution in a speech before the recent reunion of the Fourth Marine Division. There is already a statutory ceiling over the strength of the corps, says the admiral. Why not build a statutory floor under them, too? The floor, he indicates, ought to be put at not less than 6 percent of the combined numbers of the Army, Navy, and Air Force. This would peg the marines at 90,000, or 18,000 less than their present strength—certainly no bid for empire building.

The Navy and Marine Corps, obviously, have dragged their feet in the unification process. But an equal share of responsibility must rest on those in other services who have furnished the chief reason by advocating, secretly or openly, ideas which look suspiciously like dreams of self-aggrandizement.

Report of Governor's Emergency Food Committee To Meet Crisis Resulting From Strike of Longshoremen in Hawaii Shows Steps Taken To Meet Shortage in Supply of Food and Animal Feed

---

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a report prepared by the chairman of the Emergency Food Committee appointed by Gov. I. M. Stainback, of Hawaii, to deal with the

critical shortage in the supply of foodstuffs and feed resulting from the strike of longshoremen.

The report follows:

TERRITORY OF HAWAII,
CIRCUIT COURT OF THE FIRST
CIRCUIT JUVENILE COURT,
Honolulu, T. H., June 24, 1949.

HON. OREN E. LONG,
Acting Governor of Hawaii,
Iolani Palace, Honolulu, T. H.

SIR: You have requested of the undersigned, for the information of the Honorable JOSEPH R. FARRINGTON, Delegate to Congress from Hawaii, a summary report concerning the formation and the activities and findings of the Governor's Emergency Food Committee.

By an executive order dated May 24, 1949, Governor Stainback designated the undersigned, as chairman, and five other citizens of Honolulu, as members of an emergency food committee with a directive to investigate reports of shortages in food supplies and in commodities required in the production of essential foods, to investigate the available means of meeting the emergency needs of the civilian population and to make its recommendations thereon to the Governor. At a later date, a seventh member, the local representative of the Production and Marketing Administration, United States Department of Agriculture, was added to the committee by the Governor. At a later date also, the scope of the committee's permitted jurisdiction was broadened to include human foods, animal feeds, medical supplies, and other commodities found by the committee to be essential to meet emergency needs of the civilian population of Hawaii.

In a preliminary report to the Governor, dated May 28, 1949, the committee announced several unanimous conclusions as follows:

"1. That the stoppage of the normal flow of water-borne commerce between Hawaii and the mainland United States which had been in existence since May 1, 1949, and which had resulted from the currently existing dispute between Hawaii's stevedores and their employers required immediate action to insure the continued well-being of our population.

"2. That such action and all planning concerning it should be taken without any attempt on the part of the committee to forecast or predict the possible or probable time of the settlement of the above-mentioned dispute and the possible or probable time of the resumption of the normal flow of water-borne traffic between Hawaii and the mainland United States.

"3. That, as of the date of the report, Hawaii's situation in connection with existing and prospective supplies of livestock and poultry feed was desperate, indicating an urgent need for early action to eliminate the possible necessity of destruction of dairy cattle and poultry flocks.

"4. That, on the basis of surveys made of existing stocks of human foods in the hands of wholesalers and retailers throughout the Territory, supplies of a number of essential human foods would become critically short throughout the Territory by approximately June 15. These included rice, bakers' flour, bakers' shortening, bakers' salt, yeast, evaporated milk, potatoes, eggs, oranges, butter, and oleomargarine."

On the basis of the above-mentioned findings, the committee recommended that immediate efforts be made through appropriate Federal agencies to provide shipping space adequate to bring to the Territory, at the earliest possible time, 6,000 weight tons of cattle and poultry feeds and 9,000 weight tons, including 500 tons of refrigerated space, of the above-mentioned essential human foods.

Some time later, at the Governor's request, action was taken in Washington, involving the Interior and Navy Departments, and which resulted in the allocation of shipping space on several Navy vessels of a total of 6,000 measurement tons of animal feeds as freight. In addition, at about the same time, space was made available for 15 tons of baker's yeast. As of this date, the largest part of these animal feeds have reached the Territory and have been or are being unloaded. A small quantity is en route. The feed is being unloaded by ILWU members. This committee has maintained contact with the United States Navy authorities in connection with allocation of space to specific consignees of the animal feeds and is supervising its distribution throughout the Territory with a view to securing the most equitable and widespread distribution possible under the circumstances.

In addition, upon the recommendation of this committee, the Governor has forwarded to Washington a substantial number of requests for allocation of shipping space, as freight, for other vitally needed commodities, including hospital and medical supplies and medicines, baby food, canned milk, embalming fluid, chlorine, etc. All of these requests have been approved, sufficient space has been allocated and the needed commodities have either been delivered or are aboard Navy vessels en route to Hawaii. These shipments total several hundred tons, and, as in the case of animal feeds, the committee reviewed each request, designated approved consignees, and supervised distribution. The arrangement under which the United States Government has transported these badly needed commodities to the Territory has been of great help to our Territorial community, but it is entirely dependent upon availability of space on the armed forces' transports and cargo vessels available in this area and it requires specific approval, routed through the Interior and Navy Departments, of each individual shipment. It has also probably caused some disruption in normal armed forces' operations, having involved the operations of five naval vessels.

While this work was going on, the committee undertook to bring together the officials of the Matson Navigation Co. and of the stevedores' union and a number of meetings resulted in the execution, in June 1949 of a contract between Local 136 of the ILWU and the Matson Navigation Co. under which the steamship *Hawaiian Refiner*, a Matson cargo vessel, was designated as a civilian relief ship for the Territory of Hawaii to sail as soon as possible with a cargo of animal feeds, human foods, and other essential commodities designated by this committee. The ILWU agreed that, upon arrival of the ship at Honolulu, it would unload all of the ship's cargo under prestrike conditions and would permit the return of the ship to the mainland United States immediately upon the completion of the unloading. The return trip cargo, however, was limited to a sufficient quantity of molasses to provide a safe ballast for the ship. A copy of that contract is attached hereto.

The committee then reported to the Governor its plans for allocation of space on the Matson relief ship among Honolulu consignees, based upon a pro rata of the total of each such consignee's direct imports to the Territory during the 4 months' period immediately preceding the shipping strike. By Executive order of June 10, 1949, the Governor authorized the committee to proceed with its plan and broadened its authority for the allocation of shipping space to include medical supplies and other commodities found by the committee to be essential to meet emergency needs of the civilian population. The loading of the Matson relief ship has been completed and it is scheduled to sail on June 24 and to arrive in Honolulu on June 29. Its cargo, totaling 10,943 weight tons, includes animal feeds, rice, flour and other bread ingredients, canned milk, dried beans and seed, citrus fruits, oleomargarine, potatoes, onions, eggs, meats, butter, frozen fish, and commercial cooking oil. Commodities, other than food, include cooking gas in tanks, embalming fluid, and milk carton supplies.

The ship will be unable to make any calls at ports other than Honolulu, and consignees on islands other than Oahu will be required to arrange for transshipment from Honolulu.

In order to meet, to a very limited extent, some of the community's needs pending the arrival of the Matson relief ship, this committee, with the authorization of the Governor, also arranged for the release by the Navy of a limited quantity of bakers' flour, bakers' shortening, bakers' salt, and canned evaporated milk.

Due to the greatly reduced armed forces personnel in this area, supplies of food in the hands of the armed forces here are necessarily very limited in relation to the needs of a civilian population of close to one-half million.

In addition to the above-mentioned arrangements for the importation of needed commodities by Government vessels and the Matson relief ship, limited quantities of food and other commodities have been brought into the Territory by air freight and by parcel post on Government vessels. Costs in either case are so prohibitive as to virtually eliminate these means of transportation from any practical consideration in connection with meeting the total needs of our population. In addition to all of the above, an undetermined, though probably relatively small, quantity of bakers' flour and animal feed is reported to be en route to Hawaii aboard a privately chartered vessel which will reportedly be unloaded under a private agreement between the shipper and the ILWU.

It is estimated that the quantities of the specific foods above mentioned for which space was available on the Matson relief ship will meet the needs of the Territory for such foods for a period of approximately 3 weeks. It is hoped that with maximum operating efficiency in connection with space allocations, bookings, loading and unloading, the ship will be able to return to the Territory in approximately that length of time.

It should be noted, however, that the above list includes basic essentials only and excludes many items which may be deemed equally essential. For example, no canned foods other than milk and a small quantity of meat are included, nor was there room for any other type of packaged food such as cereals, pastes, etc. Many of such types of food will probably be depleted prior to the arrival of the relief ship in the Territory on its second trip.

Total import figures covering all types of human and animal foods are not immediately available for any recent period. However, a survey of Hawaiian food and feed requirements made by the Office of Requirements and Allocations of the United States Department of Agriculture for the year 1947 indicates a basic minimum need for 31,730 tons of such foods and feeds per month. One ship, operating at maximum efficiency, and carrying food only, can meet less than half of this need.

In addition, demands are mounting for replenishment of stocks of all types of medical and hospital supplies and for other types of commodities normally deemed necessary to maintain our population's health and well-being.

The normal needs of the Territory's population for human food, animal feeds, and other commodities necessary to insure our comfort and to maintain our commerce, have required the arrival in territorial waters, prior to the strike, of approximately three Matson-Isthmian cargo vessels per week, two from the west coast, and one from the east coast or the Gulf. The capacity of these vessels is ten to twelve thousand tons each. In addition to these, special lumber shipments have arrived from time to time. The passenger liner *Lurline* has brought a sub-

stantial quantity of freight on each of its three trips per month and other steamship lines have brought varying quantities of materials from time to time.

Normal import requirements met by Matson-Isthmian vessels alone would thus average some 125,000 tons per month. Since May 1, which, at the date of this writing is almost 2 months past, some 13,401 tons of various commodities have been unloaded from Matson and Isthmian ships which were en route to Hawaii at the time of the strike, or which embarked for Hawaii after May 1. At the present time, 11 strike-bound freighters with 65,417 tons of cargo aboard are tied up at Territorial piers.

It is our opinion that at least two additional relief ships will have to be made available at the earliest possible time in order to meet all of these essential needs as they arise.

That these additional relief ships, if and when made available, will fall far short of meeting the total import requirements of the Territory is equally obvious.

In conclusion, it should be observed that this committee's duties will not necessarily be concluded as of the date of the termination of the dispute which has lead to the shipping stoppage under discussion. When the dispute has been settled, some time will elapse before there has been a restoration of the normal flow of water-borne commerce. If the most essential needs of the Territory are to be met during this period, some control of shipping space will be necessary. Your consideration of the advisability of extending the committee's authority for this purpose is requested.

Respectfully submitted.

GERALD R. CORBETT,
Chairman, Governor's Emergency Committee.

Miss Loula Dunn

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. ELLIOTT. Mr. Speaker, Alabama is fortunate to have a woman of the initiative, intelligence, and ability of Miss Loula Dunn to head its department of public welfare. Miss Dunn's knowledge of public welfare problems, her sympathetic understanding of all human problems, and her practical approach to the solution of these problems have made her an outstanding personality in her field of endeavor.

Miss Dunn's brilliant record in her field prompted the Mobile Press on Thursday, June 23, 1949, to editorially nominate her for appointment as head of the proposed United States Department of Welfare. I include the editorial as a part of my remarks:

A WOMAN IN MR. TRUMAN'S CABINET—WELL, WHY NOT MAKE IT LOULA DUNN?

If President Truman's newly proposed blueprint for a department of welfare is approved by Congress, he may name a woman as its head.

The Mobile Press here and now nominates for that job an Alabamian distinguished in the field of public welfare. She is Loula Dunn, director of the State department of public welfare.

A woman in the Cabinet would not be an innovation. Frances Perkins served as Secretary of Labor for 12 years in the administration of Franklin D. Roosevelt. Though she had her critics—and what Cabinet officer hasn't had?—she generally is credited with an excellent all-around job.

During the last election campaign, both President Truman and Governor Dewey indicated that they favored creation of a new Government agency devoted to social service and carrying Cabinet rank for its chief, and there was a further indication that each candidate favored naming a woman to this Cabinet post.

The proposed new department of welfare would take over some of the duties now entrusted to the Federal Security Administration. For example, lumped under the department of welfare, each with its own head of sub-Cabinet rank, would be: United States Public Health Service, Social Security Administration, United States Office of Education, Food and Drug Administration.

As Mr. Truman pointed out in his message to Congress, the idea that a Department of Welfare is needed is not new:

President Harding suggested it in 1923; and a special committee appointed by President Roosevelt in 1937 recommended a department of social welfare.

The Hoover Commission—a special, 12-man group appointed by Congress and headed by former President Hoover to suggest ways of making the Government run smoother recently recommended that a department be set up to handle the social security and education jobs of the Government.

Mr. Truman's plan doesn't follow in every detail the recommendations of the Hoover group. It does, however, have the same general purpose to wrap into one department (of cabinet rank) all the agencies dealing with conservation and development of the human resources of the Nation.

The President has given no hint so far of his choice for the important post as Secretary of Welfare. Washington reporters say, however, there is a better than good chance that it will be a woman. This brings up the question of "what woman?"

If the appointment is made strictly on a political basis, the chances are that the appointee will not be qualified in the field of welfare. If the appointment is made on a basis of personal friendship the appointee may be nothing more than a figurehead.

It would be a mistake if the appointment to this important proposed Cabinet seat were made either on political or friendship considerations. The appointment should be made on no other basis than that of competency, and that's where Loula Dunn comes in.

Miss Dunn is a recognized authority in welfare work. She has headed national organizations of welfare workers. Her advice is sought by and freely given to welfare agencies and workers throughout the Nation. The Alabama Department of Public Welfare under her direction is recognized as a model, though not the largest. Her ability has been recognized by the United States Government, which sent her to Europe as an observer. In brief, Miss Dunn is eminently qualified for this proposed new Cabinet post.

She may not at this time know the ins and outs of social security. Though well educated, she is not an educator and therefore not too familiar with the workings of the United States Office of Education. Though not a doctor, she knows the importance of health in the welfare field. No matter what man or woman becomes Secretary of Welfare, he or she will have to rely greatly on subheads of the various agencies which would come under the Department of Welfare. No one person could possibly handle all the minute details of these activities. But Loula Dunn could come as close as anyone to doing it. She has the administrative ability to coordinate the work of these several agencies and to see that it is carried out properly. Loula Dunn is the woman for the job.

Attorney General Tom C. Clark

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. MOULDER. Mr. Speaker, on the 20th day of June, 4 years ago this day, Tom C. Clark, of Texas, became the fifty-ninth Attorney General of the United States. Prior to his appointment to the President's cabinet as Attorney General, Mr. Clark was engaged in the private practice of law in Dallas, Tex., and thereafter his excellent professional services and ability were utilized by the Government in various positions. He served as special attorney in the Bureau of War Risk Litigation, as special assistant to the Attorney General in the Antitrust Division, Chief of the west coast offices of the Antitrust Division, Coordinator of Alien Enemy Control of the Western Defense Command and Chief of the Civilian Staff for Japanese War Relocation, Chief of the War Frauds Unit, First Assistant in the Antitrust Division, and Assistant Attorney General in charge of the Antitrust Division, and Assistant Attorney General in charge of the Criminal Division. Thus, his appointment as Attorney General of the United States brought to the President's Cabinet a man of outstanding ability and experience and first-hand familiarity with the work of the Department of Justice, which he has so ably and efficiently directed during the past 4 years.

Prior to my election as Representative in Congress from the Second Congressional District of Missouri and my term of service as judge of the eighteenth judicial circuit I served as special assistant to the United States district attorney of the western district of Missouri, and in that position I had the opportunity of personally observing the brilliant, effective, and efficient work by Mr. Clark in the performance of his duties.

Tom Clark has served as our Attorney General during and since World War II, a period of time which has been burdened with unusual national and international problems and also innumerable conflicting and controversial legal problems have been presented and successfully solved under his supervision. No other Attorney General has ever been confronted with so many difficult, novel, and knotty legal questions as have been presented to Tom Clark. In addition to his outstanding legal attainment as Attorney General, Mr. Clark has achieved signal distinction by his vigorous efforts for broad citizenship, his support of public education against crime, and his aggressive attack against the infiltration of communism. For the latter he has received special citations from the Army-Navy Union, the oldest veterans' organization in the United States, and the National Catholic Veterans Association.

During his tenure as Attorney General approximately 500 cases have been presented before the Supreme Court of the United States. In this he has won approximately three fourths and has lost

approximately one-fourth. This is a remarkable record and has not been equaled by any other Attorney General of the United States.

In the field of tax-evasion cases the Department of Justice, under Mr. Clark, has a record of obtaining convictions of 96 percent of the prosecutions. Some of his major and outstanding successes involved the Government suit opposing railroad rate discrimination against large sections of the country; in preventing the undermining of the Renegotiation Act, which was designed to protect the public against excessive war profits. He also helped to awaken the Nation to the necessity of expanding juvenile opportunity. He sponsored the idea of the Freedom Train, which has carried the original historic documents from one end of the country to the other so that all of the people who saw them might feel the inspirational force of those great instruments of liberty.

Tom Clark has waged a sincere, active, and vigorous fight against communism. At his direction and under his supervision the Department of Justice has instigated action against communistic subversion and has prosecuted numerous suits now pending in the Federal courts against communistic subversives. Twelve top-flight Communists are now on trial before a jury in the Federal court of the southern district of New York. They are charged with conspiracy to overthrow the Government of the United States by force and violence. They are William Z. Foster; Benjamin J. Davis, Jr., New York City councilman; John Williamson; Eugene Dennis, the party's general secretary; Jack Stachel, educational director; John Gates, editor, the Daily Worker; Gus Hall, chairman, Ohio Communist Party; Gilbert Green; Carl Winter; Robert Thompson; Harry Winston; Irving Potash. All are members of the Communist national board, which is the party's high policy-making politbureau. Thirty-four alleged Communists have been convicted by the Department of Justice in Washington for contempt of Congress. Sixteen alleged Communists have been convicted in California on charges of civil contempt for refusing to testify before a Federal grand jury. Seven alleged Communists were convicted in Denver, Colo., on charges of contempt for refusing to testify before the Federal grand jury in connection with the investigation of the alleged disloyalty of a Government employee. Numerous other alleged Communists are under investigation for subversive activity and are being prosecuted in our Federal courts under the supervision of the Department of Justice. In addition to prosecutive action, the Department of Justice has been carrying out deportation proceedings, through such legislation as the Alien Registration Act and the Foreign Agents Registration against aliens showing subversive tendencies.

As of April 15, 1949, there were 3,278 undesirable aliens in the United States, most of them Communists who cannot be deported to the countries of their nationality because of passport refusals of their own Government. Of this number 2,147 are deportable to countries behind the iron curtain. Of the latter group 2,079 entered the United States prior to 1933. All the top-notch Communists came into the United States before the first administration of Franklin Delano Roosevelt, arriving during the Harding, Coolidge or Hoover periods. Now under President Truman they are being shipped back as fast as law and visa conditions permit. Some have been deported. Gerhart Eisler fled. Others deported by stipulation.

The Attorney General, after an exhaustive and thorough investigation, has listed a total of 159 organizations in the United States as hostile and inimical to our Government and our way of life.

We are and we should be proud of our Attorney General and deeply grateful that we have such an honorable man as Tom Clark in the office of Attorney General. His exemplary conduct, his distinguished service in the office of the Attorney General of the United States and his unassuming personality and brilliant ability has established a monument of appreciation in the hearts of the people far more permanent than marble.

However, there are some who may criticize and attack him, and when I hear such criticism, I think of the words of Benjamin Franklin:

> We must not in the course of public life expect immediate approbation and immediate grateful acknowledgment of our services. But let us persevere through abuse and even injury. The internal satisfaction of a good conscience is always present, and time will do us justice in the minds of the people, even those at present the most prejudiced against us.

Slums in Los Angeles Are Worse Than We Thought They Were

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, the real-estate lobby has flooded the country and the Congress with pamphlets against the housing bill. Of the many distorted and erroneous claims made in these pamphlets one of the most unconscionable is the claim that the slums are rapidly disappearing without any Federal intervention.

In a publication of the Producers Council called Our Housing Improvement Since 1940, Mr. Miles L. Colean says that—

> There has been a spectacular improvement in the quality and usability of the existing supply of housing, so that far fewer families today are living under conditions that can be described as substandard than at any past time.

In another pamphlet circulated by the Commerce and Industry Association of New York, Thomas J. Holden claims that the housing census of 1940, on which most over-all estimates of our housing needs have necessarily been based, greatly exaggerated the slum problem and should not be taken seriously.

A number of exhaustive and scientific official surveys have recently been made of slum conditions, however, which completely refute these irresponsible and inhumane claims. These meticulous house-by-house surveys have been made by trained specialists, using techniques developed and sponsored by the American Public Health Association. And in every case—in New Haven, Philadelphia, Milwaukee, Baltimore, Los Angeles, and elsewhere—the results have demonstrated that the rough index to slum conditions provided by the 1940 census was too conservative by far. The number of dwellings which must be torn down in the areas surveyed, solely in the interests of general health and welfare, is greater in every case than was originally supposed. This may be due in part to the inadequacy of the 1940 census as a detailed scientific guide, but surely it is also due in large part to the obvious fact that the slums are now 9 years older than they were in 1940, and that a long period of general shortage and severe overcrowding was hardly likely to improve them.

Let me quote a few figures on the Chavez Ravine area in Los Angeles made available by the city health department. The 1940 census showed 437 dwellings in this area, or 44 percent of the total, as lacking bath facilities or needing major repairs. And that was bad enough, I should say, to warrant some serious concern by our great progressive city. But a 1948 survey of exactly the same district made by the city of Los Angeles and using the exhaustive methods of the American Public Health Association, proved that 65.5 percent of the homes were either lacking essential sanitary facilities or in need of major repair—a 50-percent increase.

All I can say is that we better begin now to attack this insidious spreading slum-and-blight disease, before it engulfs our cities entirely.

Excerpts From an Address by Vice President Alben W. Barkley at a Jefferson-Jackson Day Dinner in St. Louis, Mo., June 25, 1949

EXTENSION OF REMARKS

OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from an address by Vice President ALBEN W. BARKLEY at a Jefferson-Jackson Day dinner, in St. Louis, Mo., June 25, 1949:

> We meet in the name of two great Americans and two great Democrats, Thomas Jefferson and Andrew Jackson, and in behalf of the democracy which one of them founded and the other fortified by their philosophy and by their administrations.
>
> We are engaged in the task of making the Government, which they set up and advanced, responsive to the needs of the people. We are engaged in the task of making

democracy work in America, by making the Government of the United States sufficiently flexible and adaptable to be able to meet the changing needs of the people in the complex world and in the changing scenes of domestic and international affairs.

Jefferson was described in his day as a supreme demagog, and Jackson as a supreme dictator, but Jefferson was sufficiently farsighted to consummate the greatest real-estate deal in the history of the world when he purchased Louisiana from Napoleon. He was charged with breaking the Constitution, or at least bending it beyond recognition.

No one today questions the wisdom of his action, nor its legality.

Andrew Jackson was charged with being a dictator because he sought to destroy the power and influence of the national bank of that day to use the Government against the people and for their own interests, and for this he was called a dictator.

But no one today questions the sincerity or the wisdom of the course of Andrew Jackson, and no one questions that he was one of the great democratic heroes of American history.

The Preamble of the Constitution of the United States reads as follows:

"We the People of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

There is one thing about the Democratic Party which has always appealed to me. It has never been frightened by an epithet.

When, in 1912, it wrote in its platform a pledge in behalf of Federal aid in the construction of highways throughout the Nation, it was called socialistic. It was claimed that we were trying to break down State lines and set up a great bureaucracy in Washington to control the highways of the Nation. But, from the days of Woodrow Wilson, Federal aid to highways has been the settled policy of this Nation, regardless of what political party or administration happened to be in power. But it was the Democratic Party that initiated this great service.

When, after exhaustive investigations as to our monetary system, the Federal Reserve Banks were established and the Federal Reserve System set up, all those who opposed this great movement charged that the Democratic Party and the Congress were instituting a dictatorship over the banking system of the United States, and this was likewise socialistic.

But, no one in his right mind doubts the wisdom of that great enactment, and no one in his right mind would now suggest its abolition and a return to the days of 1912.

When the Democratic Party, under the Wilson administration, set up the Federal Trade Commission to hear complaints of one group of businessmen against another group or against individuals, and decide them speedily, with power to issue orders to cease and desist any illegal practice, it was claimed that we were setting up another bureau in Washington to control American business. But it was American business, and especially small business, that urged this legislation on the Congress of the United States. No one now doubts the wisdom of that legislation or would abolish the Federal Trade Commission, which has succeeded, in a great measure, in keeping unchoked the channels of commerce so that the competitive system might really work.

When the Democratic Party wrote into the law a provision guaranteeing the right of American farmers and American laborers to organize for their protection and for their advancement, it was claimed that the Government was entering a field which it had no right to occupy, but where is the man of any responsibility in any political party who would now repeal those laws or abrogate that policy?

When, under the Roosevelt administration, Congress passed a law guaranteeing bank deposits for the benefit of the American depositors, as well as American bankers, those who opposed it claimed it was socialistic, that it was creating a socialistic state, that it was putting the Government in the banking business, that it interfered with free enterprise and the competitive spirit. But because of this and other policies inaugurated by the Democratic Party, we have the greatest and strongest banking system today in the world, and the strongest that we have ever had in all our history. But this was denounced by the timid and by those whose eyes are in the back of their head as socialistic, as paternalistic, and that it would destroy the banking system. Therefore, it was socialistic.

When the Congress of the United States, acting under a necessity which everybody in America recognized, created the Securities and Exchange Commission, in order that American investors might have the means of ascertaining the condition and soundness of stocks in which they wished to invest their money, it was denounced by those who opposed it and who did not want to be regulated as an invasion of the rights of private business and as bordering on socialism. But the American people, after the experiences of the 1920's and early 1930's, not only demanded some form of protection against the results of wild speculation and the sale of unsound securities, but, in my judgment, would look with disfavor on any man in public life who advocated the abolition of this commission. But it was denounced as socialistic and paternalistic.

The same is true of the Maritime Commission, whose duty was and is to supervise and promote the establishment of an American merchant marine worthy of our commercial standing among the nations of the world.

The same was said about the Communications Commission with jurisdiction to regulate and parcel out wavelengths in the air and also to regulate interstate commerce in communications by wire or wireless. But the American people remember the chaos which they experienced prior to the establishment of the Radio Commission and the enactment of the radio laws, and they remember how soon this chaotic condition disappeared under the guidance of the Commission set up by Congress. But it was charged that it was paternalistic and the Government was seeking to inject itself into a field where it had no business.

The same is true of the Civil Aeronautics Board, charged with the duty of regulating the transportation of passengers and freight by air, and regulating the inspection of airplanes and qualifications of pilots and others charged with the safety of life and property in this great modern means of transportation.

Who would wish now to go back to the chaotic days of unregulated transportation, whether on land, water, or in the air? Who would want to go back to the chaotic conditions of only a few years ago when it was impossible to get an intelligent program over this new device for the transmission of information and entertainment through the vast stretches of the atmosphere? Yet, when these commissions were established to bring order out of chaos, to serve the American people, to promote their welfare, which could only be done by the intervention of the Government of the United States, Congress and the administrations and the party responsible for their enactment were accused of paternalism, of bureaucracy, and the invasion of the rights of private business. They were socialistic, they tended toward the creation of the welfare state, which is anathema to those who do not wish to be regulated, supervised, or in any way interferred with in the transaction of "business as usual."

When the Democratic Party and the Congress of the United States, under the administrations of Franklin D. Roosevelt and Harry S. Truman, have sought to stabilize agriculture, which is the most indispensable occupation of mankind, and which could only be done by the interposition of governmental power, those who, like the "paprika" bird, see only where they have been and not where they are going, protested against any activity on the part of the Government to aid the farmers of the United States. Yet when it has been submitted to the farmers in every field where they had a right to vote on the application of the agricultural program to their particular crops, they have overwhelmingly endorsed the program set up by the Government, and it has been largely responsible for lifting them out of the deep ditch into which they had been plunged nearly 20 years ago. It has been responsible for the increase in their income from $5,000,000,000 to $30,000,000,000 per annum, and now Congress is engaged in an effort to write a farsighted, long-term agricultural policy which will preserve for the farmers of the Nation their economic independence, and thus contribute to the economic welfare of all the people of the United States.

But this was denounced as a socialistic venture. It was called another step in the creation of the welfare state, an epithet now being hurled against every effort to use the Government of the United States for the welfare of the American people.

The same thing can be said about soil conservation and flood control, rural electrification, and other similar activities on the part of the Government, in cooperation with the State and local governments and with the people. Everybody knows that no city or county or State can protect itself against the floods that descend upon them from other States and rivers beyond their control and jurisdiction. Everybody knows that Congress adopted a flood-control policy as a national policy in order to protect the people and their property against annual losses greater by far than the cost of protection.

Everybody knows that no individual farmer can engage in extensive soil conservation without the cooperation of his neighbors, local authorities, and al. the way up to the Government of the United States. We woke up a few years ago to find that one-third of our soil had been wasted and washed away, and we must either reclaim and preserve it or find ourselves unable to support our own population, to say nothing of supplying the markets of the world. As a result of this, the Democratic Party and Democratic administration inaugurated the great policy of soil conservation, which is being continued under the administration of President Truman, and this involved the reclamation of arid land throughout the West and irrigation of vast acres capable of producing bounteous crops. But it was said to be socialistic. It was said to be paternalistic. It was said that if God, in His wisdom, had withheld the rains from the desert lands of the West, what business did the Government have in interfering with Providence and making these lands capable of supporting millions of people? But it was in the interest of the welfare of the American people. It was in the interest of the welfare of men and women who were seeking homes; and because it was in the interest of the welfare of the American people, it was denounced as a step toward the welfare state.

The same thing is true of rural electrification. Under this great program, inaugurated by the Democratic Party and continued from its inauguration until this day, nearly 5,000,000 American farms are now near enough to electrical power to assist them in lifting the drudgery of housework, and increasing their

production, through the use of electricity in their homes, in their barns, and on their farms. But those who opposed this great movement charged that it was socialistic and paternalistic, and what right did the Government of the United States have to interfere with the empire of the power companies? But, because it was actuated by the desire to promote the general welfare of the American people, it was stigmatized by the epithet that it was creating a paternalistic state, a socialistic state, or a welfare state.

The same argument was made against social security, old-age pensions, unemployment insurance, and is now being made against the effort to bring the Federal Government into cooperation with States, counties, and cities and communities, to make it possible for good health to be normal rather than exceptional in all parts of the United States.

Thomas Jefferson was never afraid of an epithet. Andrew Jackson was not afraid of and epithet. Abraham Lincoln was not afraid of an epithet. Woodrow Wilson was not afraid of an epithet. Franklin Roosevelt was not afraid of an epithet. Harry S. Truman is not afraid of an epithet. The Democratic Party is not afraid of an epithet. Let those who are afraid of epithets rise in their places, wherever they are, and demand that the American people return to the conditions which prevailed prior to the inauguration of these great services to the American people. The Democratic Party will not do so. No other responsible party will do so, in spite of sporadic efforts made, from time to time, to return to the status quo ante.

I am proud to have been a member of the political party and to have been a part of several great administrations which have regarded the Government as the servant of the people, and not its master; which have not regarded it as the sole duty of Uncle Sam to sit astride the dome of the Capitol, draw his salary, and take no steps to make this Nation prosperous and happy and strong, in order that it might not only solve its own problems, but help solve the problems of the world, through the leadership thrust into its hands, in behalf of peace, accord, and understanding among the discordant nations of the world.

Peace Prospects in Israel

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, in the New York Times of June 29, 1949, the Reverend Karl Baehr, executive secretary of the American Christian Palestine Committee, wrote the following letter to the editor, in which he submitted a brief report on his recent visit to Israel.

I believe that the report in his letter is very timely and it gives the answers to some questions that are being raised at this time.

Under permission to extend my remarks in the RECORD, I wish to include the letter to the editor of the New York Times.

PEACE PROSPECTS IN ISRAEL—ATTITUDE OF ARABS VIEWED AS HOSTILE, WITH ISRAELIS DESIRING PEACE

To the EDITOR OF THE NEW YORK TIMES:

Having just returned from the American Christian Palestine Committee's study tour of Israel, during the month of May, I feel that there are several conclusions I would like to share with your readers.

The vast majority of the citizens of Israel want peace. The recent war with the several Arab states is considered a shameful and needless waste of life and property. Government officials informed me that well over a billion dollars were spent by Israel in staving off the Arab aggression that followed the United Nations decision. That sum could have been used in productive enterprises and greatly benefited Jews and Arabs alike.

Along with this intense desire for peace goes a deep and most regretful conviction that the Arab nations, and their behind-the-scenes supporters, do not want peace. Israelis very much fear a renewed attempt to crush their infant democracy. Ample evidence points to the correctness of this conclusion.

While I was in Israel I heard the Arab Ramallah Radio continually broadcast threatening and hostile statements. On May 17 Abdullah el Tel, military governor of the Old City of Jerusalem, declared, "The time for revenge will come." On May 27 I heard this threat: "There will be no freedom from fear in Israel. Forty-five million Arabs will see to that." Radio spokesmen are careful to explain to their Arab listeners that the recent armistice agreements signed with Israel do not constitute a peace but rather are giving the Arabs time to prepare for renewed hostilities.

On my return trip to the United States I stopped at Lausanne and discovered the same situation existing. Israel had made several proposals, which involved real concessions, in an effort to move ahead toward a peace settlement. The role of the Arab States was to reject these proposals and to offer none in substitution.

The Reverend Garland Evans Hopkins, associate secretary of the Board of Missions of Church Extension of the Methodist Church, and long a supporter of the Arab viewpoint, said in a statement following his recent trip to the Near East: "Arab liberals and intelligentsia are organizing to take over the leadership which has often been left to incapable and venal rulers. The end in view is to strengthen the Arab nations to the place that they will be able to expel the Jews from Palestine."

These experiences made me also pessimistic about the prospects of peace. A basic question then occurred to me: In these inflammable circumstances can any realistic observer expect Israel to take back masses of Arab refugees before a firm and final peace is made? One's mind goes beyond this, too, to ask: In the event hostilities are renewed in Palestine, and if, in the course of the fighting, the Israeli forces drive the Arab armies from Palestine soil, will Israel again be blamed for the refugees inevitably created, and for the destroyed villages which usually accompany fighting?

Another basic question needs to be recorded: In view of this obvious hostile attitude on the part of the Arab States, why has our State Department brought no pressure to bear upon them to change their position and negotiate a peace?

KARL BAEHR,
Executive Secretary.

NEW YORK, *June 22, 1949.*

Communism and Religion

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. REED of New York. Mr. Speaker, under the leave heretofore granted to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of June 30, 1949:

COMMUNISM AND RELIGION—III

(Following is the third of a series of excerpts from the recent report by the House Committee on Un-American Activities entitled "100 Things You Should Know About Communism and Religion.")

What about Russia?

Let's flash back. The number of congregations has dropped since 1917 by more than 75 percent. That any have remained at all is a triumph of survival against relentless, cruel, and powerful persecution.

Was Russia a very religious country before?

About half the people of the old Russian Empire belonged to the eastern orthodox branch of Christianity. The Orthodox Church was recognized and established as an arm of the Government.

Beyond the established church there were congregations of Roman Catholics, Protestants, Jews, Mohammedans, and other faiths, even ancient tribal pagan groups.

None beyond the Orthodox Church was recognized as legally established by the Government, but they were at least tolerated. They are not even tolerated now. Only the Orthodox sect is allowed any activity at all.

Why is the orthodox church an exception?

Its priests are today held captive by the Communists and used to help rule the Russian people.

How did the Communists capture them?

By destroying the independent power of the church and then taking advantage of the determination of many people to have a continuing religious service on any terms.

What was the first step?

All orthodox church property, right down to the crucifixes and altar vessels, was seized. All monasteries closed. Churches turned into movie houses and museums. Church bells destroyed.

How were orthodox priests treated?

Thousands were slaughtered. Others were ridiculed and kicked through the streets. As a class, they were held up to the country as parasites and frauds, and refused permission to travel, meet in groups, or to train or ordain others.

How about the other faiths?

Treated even worse, since they represented minority groups.

What else happened?

Official Government agencies were set up with the taxpayers' money to operate "anti-religious museums" and to publish books, posters, pamphlets, and magazines denouncing religion. Atheist carnivals were held on religious holidays. Christmas trees were banned. Sunday was decreed a workday to stop devotional services, and failure to report for work on a religious day meant instant dismissal. Religious oaths were abolished.

Atheism was taught in the schools as a required course for all children. Radio broadcasts by government propagandists dinned atheism into people's ears night and day. Communists who showed any interest in religion were expelled and ruined. Priests and their families were made outcasts of society, refused jobs or food-ration cards, and forced to pay extra rent and taxes.

Orthodox priests are allowed to marry, so the government even took it out on their children by refusing them so much as a high-school education.

Non-Communists who stood by their religion lost their jobs and generally were shoved downhill by the full force of government.

Was all this effective?

Figures on congregations and church organizations in Soviet Russia vary, but over all they show a general reduction in church organizations of 75 to 90 percent over a 25-year period. The number of priests in the Russian Orthodox Church was reduced from nearly 51,000 down to less than 6,000. Orthodox churches dropped from 46,000 before the Communists took over to 2,000 in 1948.

However, religion went underground as a result of persecution, and a vast network was created in which priests carried on religious schools and service in secrecy and survived in disguise with the help of the general public.

How do the Communists control the Orthodox Church?

Through the Soviet Government's state council on Orthodox affairs, headed by Georgi Karpov, an atheist Communist who for years had been a member of the Soviet secret police. Every decision of the church officers must be approved by Karpov, even down to the point of getting his permission to go on a trip.

How do Americans of the Russian Orthodox faith feel about the state of their faith in Russia?

Russian Orthodox bishops and priests here refused to accept the Russian church any longer as a guide or source of religious authority.

Is the Roman Catholic Church restored in Russia?

In no way. One priest is allowed to stay in Moscow for the benefit of foreigners there, but the church is entirely shut off from the people of the country as a whole.

How about the Jews?

The same. Hebrew, the sacred language of the Judaic faith, is forbidden by law. Feast days, religious development and enjoyment for Jews have been suppressed as harshly as for any others.

How about Protestant groups?

They have been crushed.

The Migrant Farm Labor Camps—The Kind of Conditions the Majority of the Members of the House Voted To Sustain When Section 208 Was Cut Out From the Housing Bill, H. R. 4009

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, yesterday when the majority of the House voted to cut out section 208 from the housing bill, H. R. 4009, they turned their back on the need of migratory labor.

Under permission to extend my remarks, I wish to include in the RECORD reports dating from June 1946 to May 12, 1947. These reports describe the conditions under which migratory farm workers are forced to live.

Yesterday, I pled with the Members of this body to save the 43 remaining migrant farm-labor camps so that these farm workers would at least have a roof over their heads.

June 1946, report of industrial relations department to Governor's council, California: "Conditions similar to those of 1935 exist today in Kern County where a tremendous influx of migratory labor is arriving to work in the potato fields. Many of the growers can make no provision whatever for housing their crews who, therefore, are camping in backyards, on roadsides, and on ditch banks with the meager type of sanitary conveniences."

April 1947, report of department of industrial relations to Governor's council, California: "Agricultural labor contractors circulated handbills throughout the southern end of the State, soliciting pea pickers for harvesting a pea crop and almost overnight several hundred persons—men, women, and children—began to arrive and camp on the banks of the Santa Maria River. The contractors had made no arrangements for a camp nor was any work available for several days after the people began to arrive."

Fresno Bee, May 2, 1947:

"KERN EVICTS 300 FARM FAMILIES, SENDS THEM NORTH

"BAKERSFIELD (KERN COUNTY), MAY 2.—Tulare and Fresno Counties may expect an influx of homeless migratory workers within the next few weeks, on the basis of action taken here by the Kern County Health Department.

"More than 300 families, numbering approximately 1,500 persons, have been ordered by Dr. William Buss, county health officer, to vacate temporary shelter in the Edison district as soon as possible.

"DOCTOR CITES ILLNESS

"The eviction order was issued because, Dr. Buss said, of an outbreak of dysentery and one reported case of diphtheria among the migrants.

"Dr. Buss asserted there are no sanitary facilities and no water—a condition which makes the scattered settlement of tents and box shacks a potential disease center.

"Lee Sumner, the county's chief sanitation engineer, said the families have been advised to 'move north' ahead of the harvest in order to find a suitable place to live and assure them of field work.

"ONLY HALF EMPLOYED

"Dr. Buss said only 50 percent of the adults in the group now are employed and many of these work only a few days a week. Some of the families are those of veterans. Most are from out of State.

"Other Kern officials said most farmers are contracting for labor and are not providing living quarters as in previous years.

"Last year the Government operated mobile camps which followed the harvests. This year there are no such facilities. All labor camps in this county, the officials said, are already crowded."

Fresno Bee, May 3, 1947:

"MIGRANT INFLUX WORRIES OFFICIALS

"BAKERSFIELD (KERN COUNTY), May 3.—John Lott, farm-placement manager, declared today Kern County faces the most serious migrant labor problem since before the war because of an unprecedented influx of farm workers from all parts of the country.

"Lott said the county's current crops cannot provide work for all the newcomers and even at the harvest peak there will not be sufficient jobs.

"He said about 3,500 persons are employed in the potato fields at the present time and about 9,500 will be needed later.

"Lee Sumner, chief deputy sanitarian, declared approximately 1,400 migrant families have come here so far hoping to work in the 1947 harvest, and another 1,100 are expected.

"POSES SERIOUS PROBLEM

"The influx, Sumner asserted, poses a serious health problem because there is not enough proper housing to care for the migrants. As a result, he said, they are living in tents, shacks and other crude shelters where there are no sanitary facilities and, in many cases, no water.

"Three hundred such families have been ordered by Dr. William C. Buss, county health officer, to vacate their temporary quarters in the Edison district where one case of diphtheria and several cases of dysentary have been reported."

"TULARE HAS PROBLEM

"VISALIA (TULARE COUNTY), May 3.—Dr. C. S. Ambrose, Tulare County health officer, declared today he does not know whether any of the 300 families to be evacuated from unsanitary camps in Kern County will come here, but asserted Tulare has a serious camp problem of its own.

"Dr. Ambrose said four camps in the county have been abated within recent weeks because of inadequate sewage facilities and other unsanitary conditions.

"He declared the migration of families, mostly from the Middle West, is increasing and most of them are living in tents."

May 12, 1947, Christian Science Monitor:

"SAN FRANCISCO.—The heavy tide of migrant farm workers flowing into California's fertile Central Valley threatens to reproduce the marginal living conditions so well publicized during the 1930's.

"Here is the case of a pea crop in Santa Maria, Calif., which came to the attention of the State division of housing and has caused them to accelerate inspection:

"From 200 to 250 persons were found camping on the banks of the Santa Maria River in central California. Sanitary facilities were almost nonexistent, causing James Garrigan, county inspector, to term them 'dynamite.'

"When questioned, they said they had come in answer to newspaper advertisements to pick '500 acres of peas to be harvested in the Santa Maria Valley March 1.'

"Some of them had come 200 miles from Sacramento to be told that the crop was late. Most of it would not be ready to harvest for from 4 to 6 weeks, they were told.

"Various Santa Maria groups, including the American Legion, protested conditions. Because veterans were in the makeshift camp, the legion reported the matter to State officials. State inspectors corrected the chaotic conditions.

"The division of housing now is asking for legislation that will define the responsibilities of migrant-labor contractors who make the seasonal swing up the State. They want the prohibition of labor recruitment until adequate housing facilities are available.

"The problem of the flitting labor contractor was spotlighted again in San Diego County. Twenty-nine Puerto Rican laborers were brought by bus from New York to do farm labor with the promise of steady work at 60 cents an hour, with good meals for $1.30 a day.

"Eighteen Puerto Ricans were taken immediately to the Borego Valley Desert. The balance were taken to citrus growers to pick lemons.

"The men refused to work at the Borego camp when told that they would get only 30 cents an hour and that they must pay $1.30 out of their daily $2.40 for board.

"WORKERS SENT BACK

"The citrus workers did a day's picking and were laid off by rain. All money was kept by the employers for board. The Borego workers and the citrus workers demanded to be returned to New York.

"Eventually 24 of the 29 workers were returned to New York by the contractor at his own expense, including the cost of food en route."

Contribution of the Legal Profession

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Vice President of the

United States, on May 25, 1949, at the sixth conference of the Inter-American Bar Association, held in Detroit.

The address merits the study of each Member of the Congress, and should be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, I am sure I need not emphasize the appreciation which I feel for the great honor done me by the invitation which brings me here this evening.

We are delighted to have the sixth conference of the Inter-American Bar Association holding its sessions in the United States, and we are happy to witness so large an attendance of lawyers from the various countries of the Western Hemisphere.

You have not come here for any selfish purpose, except that purpose which connotes the improvement in the administration of justice, in the practice of the law which forms the closest application of government in the various communities in which we live. You are here because of your interest in a broader and deeper understanding of the problems of the law itself, and their application and administration in the processes of democracy throughout the western world, and, indeed, throughout the world. The lawyer in every nation is more than an advocate. He occupies a more important position than mere representation of an individual client. He is, in a real sense, a public officer, commissioned by the state or the nation to represent the highest ideals in the application of laws, enacted by congresses and legislatures, to the daily problems of the people.

In many instances, and in many sections of our various countries, the proceedings of the courts in the courthouses, to many millions of people, represent government in action.

Many laymen who do not understand the intricacies of the law, who may not understa~d the complex problems of economics or of politics or of social relationships, repair to their respective courthouses, there to see the law itself applied to the problems of human life; there to see not only the lawyers contend for their respective viewpoints in the presentation of concrete cases, but to see the administration of the law by the courts, as a demonstration of the democratic processes in the application of enactments to the settlement of individual and community problems.

It is in this broad sense, I am sure, and for the broad purposes set out in your charter, that you organized the Inter-American Bar Association in the first instance, and that you travel from distant regions in order to take part in its deliberations for the public good, for the advancement of knowledge and understanding, and for the creation of the deeper foundations for the international relations, which happily are improving in many parts of the world, despite discouraging superficial circumstances.

You, as lawyers of the Americas, represent one of the great regional organizations of the world. Regional organizations are contemplated by the Charter of the United Nations. Lawyers in all countries have participated in the work of the regional organization of the Americas. They participated in the conference that resulted in the Act of Chapultepec. They participated in the conference resulting in the Organization of the Inter-American States, formerly known as the Pan American Union. They have participated in the organization of the North Atlantic Pact, and on the Continent of Europe, in the various regional agreements which give evidence of closer cooperation among the friendly peoples of the Old World.

All these regional organizations have been prompted by a desire of the peoples of the various countries and their representatives to bring about closer harmony, fuller understanding, and greater cooperation in the solution of the problems that beset and bedevil people in all countries and in all conditions.

The inventive genius of man has brought all portions of the world in such proximity as to make it impossible for any one nation or any one people to live alone or to be wholly independent of conditions that prevail throughout the world. This inventive genius has made necessary the more universal study of the languages spoken by those who come into contact with one another. This inventive genius obliterated time and space, and it has brought about the compulsion of all governments to facilitate closer and more harmonious relationships, not only in political and social matters but in the exchange of the products of human toil, so as to afford markets for those products, labor for the toiler, and reasonable profits for the investor.

While these regional organizations have accomplished much, they are yet but in their infancy. Your organization is but a few years old. I see for it a long and useful future, together with an enhancement of the opportunity of men and women of legal training to advance the cause of peace and happiness and understanding, without regard to differences in language or the expanse of miles that stretch between one nation and another.

In the very nature of things, the legal profession has always occupied a position of leadership, in the formation of governments, and in the advocacy of new liberties and the expansion of human rights in every country.

While there is periodic complaint in this country, and in most other countries, at the predominance of the legal profession in legislative and executive positions, all people have come to recognize that the man trained in the law, who knows the history of governments and the development of the legal processes, if they are honest and farsighted and public-spirited, are indispensable in the formation of statutes and in their administration and interpretation.

You have discussed, and will discuss during your conference here, the great freedoms which are involved in the processes of government. You have discussed, and will discuss, the preservation and expansion of human rights for which governments are instituted. These include the freedom of speech, freedom of assembly, freedom of religion, and freedom of the press, which constitute a quarter of freedoms without which democracy itself cannot flourish.

As lawyers you are interested in the administration of justice in the courthouses, before courts and juries, selected by the free process of judicial procedure provided in constitutions and in statutes.

You are, likewise, interested in seeing that justice is done to minority groups in all countries, and that they are protected from discrimination on account of race, religion, or national origin.

As private practitioners of the law in your various countries, you are deeply concerned over professional ethics, the elevation of the standards of personal and professional conduct among those who practice law; and you may be interested in the formation of such a code of professional ethics as will elevate the standards, not only of the profession itself, but elevate its standing in the community wherever that is necessary.

You are interested, of course, in the effort to bring about, in various fields of law and economics, the formation of uniform statutes with respect to such things as trusts, which may find some basis in the statutes already enacted in the United States and Canada.

In view of the expansion of trade among the nations of the Western Hemisphere, and the consequent intimate financial relationship created by such an exchange of national products, you are, no doubt, interested in the enactment of uniform legislation with regard to negotiable instruments, so that technical barriers between trade and finance may be lowered everywhere, and eliminated where possible. These are matters that have been and will be considered by your various committees and those who participate in the deliberations of this session. I mention them only to emphasize the desirability that every step that is possible may be taken to create a common basis among all the nations of America, so that neither language, nor distance, will of necessity be a bar to the most happy political, economic, financial, and social intercourse, about which we are all concerned.

A glance at the printed reports of the annual conferences of your Association shows both the breadth and the technical experience with which you have approached public problems from the very beginning.

A glance at your current program is sufficient to show that your splendid tradition has not only been maintained but strengthened. You have an infinite amount of experience, knowledge, hope, and determination to contribute to the solution of our common problems.

Formed but 8 years ago, in the shadow of the war which was then approaching the Americas, carried on through the days of actual warfare, and now again in the days of peace, you are considering problems that are common to us all, with idealism, professional disinterestedness, and technical skill.

In these days of constantly increasing complexity in the social structure of the world and of its various nations, the individual finds himself more and more unable, acting alone, to make significant progress or a significant contribution. Hence, the individual joins with his neighbors, or his colleagues in his profession, to form an association or a society, in order that its group strength may accomplish what individuals dare not undertake. But even a national organization of professional men is not competent to deal with the problems of today. An international organization has been required. You have met that requirement through your various conferences, and through the cooperation of the national bar associations participating in your work, you have given back to the individual the opportunity to take significant action in relation to today's problems and the power to make his own contribution to them. It may turn out that the most technical of the papers delivered at your conference here in Detroit may prove to be immediately, or in the distant future, indispensable tools in the hands of those who deal, at the highest level of responsibility, with the great problems now constantly confronting mankind.

It is not appropriate for me to discuss, in any detail, the relationship between the Rio Pact and the North Atlantic Pact, but they are universally recognized as important steps in the implementation of the pledges and covenants of the United Nations to arrest aggression and preserve the peace of the world. They are inseparably associated with the obligation which rests upon us all to preserve democracy against any ideology which would seek to destroy it, or seek to impair the great freedoms which mankind has sought to establish and to enjoy.

Lawyers, and public servants, and the people, themselves, in all the free nations of the world, are concerned about the effort to expand totalitarian institutions. We are all aware of the fact that wherever such totalitarianism has existed, it has snuffed out the freedoms and the liberties, for which the Republics of the Americas were established, and which they have sought, in their own countries and throughout the Americas, to preserve, fortify, and expand. It is one of the

basic ideals of our theories of democracy that the state is the agent of the people; that it was created to establish the rights which we proclaim; that it is not a great superpowerful juggernaut to ride ruthlessly over the individual rights of the people, and to establish any doctrine that proclaims that man is only a small cog in the great wheel of world-wide statism.

In his Declaration of Independence, Thomas Jefferson uttered these words:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Abraham Lincoln in his immortal Gettysburg Address reemphasized this concept in the first sentence of his deliverance:

Fourscore and seven years ago, our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

Jefferson and Lincoln were not speaking of physical, moral, mental, and financial equality. They were speaking of the equality of rights among all men, regardless of race, religion, or geographical location to enjoy the blessings of a free government, administered in justice, in order to promote the individual rights which were given to man by his Creator.

Since these rights are self-evident, since they were not granted by man, but by his Creator, neither man nor any of his agencies can rightfully rob any human being of the enjoyment of these rights. They can only be taken from mankind by their Giver, who was the Creator of all things.

It is interesting to note the extent to which the Charter of the United Nations seeks to proclaim and advance these human rights, which are the basis and the object of all government.

At Lake Success the United Nations Commission of Human Rights has taken up for consideration again the task of drafting an international covenant on human rights. It has sometimes been referred to as the bill of rights of mankind, and it constitutes no new conception in the field of government. In 1787 Jefferson said:

"A bill of rights is what the people are entitled to against every government on earth, general or particular; and what no just government should refuse or rest on inferences."

He was speaking then of the desirability and necessity for the establishment of a bill of rights in the Constitution of the United States, which was later encompassed within the first 10 amendments to that document.

The representatives of 18 nations, with Mrs. Franklin D. Roosevelt as chairman, have been meeting to carry out a resolution adopted by the General Assembly of the United Nations at Paris last September, directing the Commission on Human Rights to continue to give priority to the drafting of this covenant. The labor and time which have already been expended in this undertaking are commensurate with its importance. Not only the Human Rights Commission itself but its drafting committee, the Economic and Social Council, the General Assembly itself, and the governments of the member nations, have given most careful thought over long periods of time to this great enterprise.

It is most fitting and appropriate that some reference should be made to this attempt to establish a bill of rights for mankind at this great conference of lawyers.

Human rights, since the earliest days of our history, have been a subject of special interest to lawyers. Indeed, they have constituted a special field wherein the responsibility of lawyers is fixed, because it has always been the lawyer's duty to assert and defend those rights of the individual against the state, which is one of the distinguishing marks of our system of free government.

You are lawyers of the future, as well as lawyers of the present, and the undertaking which I want to describe to you tonight, is one whose fruits will belong to the future, much as our own Bill of Rights, 150 years after its adoption, has in recent years accounted for a greatly increased proportion of all the litigation before the United States Supreme Court.

What is this International Covenant of Human Rights? It is a proposal for an international convention—a treaty—which, in our case, will be submitted to the Senate for ratification. This treaty will do three things if it is consummated. It will define certain fundamental rights and freedoms. It will impose on the parties to the convention an obligation to assure these rights and freedoms through appropriate domestic action, and it will specify the procedures to be followed internationally for dealing with complaints of violations. Supplementary clauses will deal with the special situation of Federal states such as the United States and Switzerland, and with the application of the treaty to non-self-governing territories.

The great object of this effort is to give these basic rights and freedoms the protection of international law. This great object finds both its inspiration and legal basis in the Charter of the United Nations.

Human rights and freedoms is one of the subjects which the Charter mentions most frequently. This statement may come as something of a surprise even to lawyers, yet it is true. The preamble of the Charter recites that "we the peoples of the United Nations" are "determined * * * to reaffirm faith in fundamental human rights."

Article 1 of the Charter states that one of the purposes of the United Nations is to "achieve international cooperation * * * in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion."

Article 55 of the chapter on international economic and social cooperation states that the United Nations shall promote "universal respect for, and observance of, human rights and fundamental freedoms for all."

Article 76 states that one of the basic objectives of the trusteeship system shall be "to encourage respect for human rights and for fundamental freedoms for all."

Article 13 states that the General Assembly "shall initiate studies and make recommendations for the purpose of * * * assisting in the realization of human rights and fundamental freedoms for all."

Article 62 states that the Economic and Social Council "may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all" and article 68 directs it to set up a commission "for the promotion of human rights."

It is interesting to recall how these many references to human rights came to find their place in the Charter. The Dumbarton Oaks proposals, which formed the basis of discussion at the San Francisco Conference, did not give this prominence to human rights. But, at that Conference, as you may remember, this Government appointed many private individuals and organizations as unofficial consultants and advisors, and it was largely as a result of views expressed by private organizations that the Charter now gives such emphasis to the protection of human rights. This circumstance well illustrates the power, and, therefore, the responsibility of groups such as yours in shaping the world in which we live.

The importance given to human rights, rights which the legal profession, according to its ethics and its principles is obligated to protect, in the San Francisco Conference, was the culmination of a development which had been going on for many years.

Even prior to World War I, there had been international action through treaties for the prohibition of the slave trade and traffic in women and children. The minorities treaties, concluded at the end of World War I, were, however, the first important recognition that the rights of individuals and groups within States were a matter of international responsibility. So also the mandate's system of the League of Nations was a declaration of the international responsibility for the lives and welfare of human beings.

Coming on down to World War II, President Roosevelt in his message on the "four freedoms" in January 1941, gave first place to "freedom of speech and expression—everywhere in the world," and second place to "freedom of every person to worship God in his own way—everywhere in the world." In the United Nations Declaration of January 1, 1942, made in the dark days a few weeks after Pearl Harbor, the signatory States declared that they were convinced that complete victory over their enemies is essential to defend life, liberty, independence, and religious freedom, and to preserve human rights and justice in their own lands as well as in other lands. Two months before the San Francisco Conference, the American States, meeting at Chapultepec in Mexico, in the Inter-American Conference on problems of war and peace, adopted a resolution on the international protection of the essential rights of man and another on racial discrimination. The latter declared that "world peace cannot be consolidated until men are able to exercise their basic rights without distinction as to race or religion."

Hence, we see that the effort to give international protection to human rights has a long and honorable history. We have only to look around us to see how urgent is the task. The Governments of Hungary, Bulgaria, and Rumania are each bound by the treaties of peace to "take all measures necessary to secure to all persons" under their jurisdiction "without distinction as to race, sex, language, or religion, the enjoyment of human rights and of the fundamental freedoms, including freedom of expression, of press and publication, of religious worship, of political opinion, and of public meeting." And, yet, by arbitrary and unjustified proceedings against religious leaders on fabricated grounds, as in the cases of Cardinal Mindszenty and Lutheran Bishop Ordass in Hungary, by the prosecution of opposition political leaders in Bulgaria and Rumania, and by oppressive measures of many varieties in all three countries, these Governments have systematically denied the exercise of the very rights and freedoms which they have guaranteed under the treaties of peace, which they have signed.

It is clear, therefore, that the task to which the Human Rights Commission is rededicating itself at this time is both difficult and urgent.

Among the specific guaranties which they are undertaking to write into an international covenant are these:

Security of life and of bodily integrity.

Freedom from bodily restraint and freedom of movement.

Rights with regard to the judicial process.

Freedom of speech, religion, assembly, and association.

Equal protection with respect to all these rights.

You will understand, of course, that this document at present is very much in the draft stage. I have mentioned it, however, in order to emphasize that the United Nations, through the designation of an appropriate Commission, is seeking to bring about

for all mankind a sort of bill of rights which will protect mankind from the encroachment upon those rights by any organized government, under whatever form it exists. In the process of drafting a true expression of these rights, as related to the age-old aspirations of mankind, the legal profession is playing a prominent role. This is not true merely in the phraseology of legal forms, but it is true in the moral and intellectual conceptions flowing from the hearts of men trained in the law and in its basis, determined that as science, medicine, education, agriculture, and all the activities are constantly in ferment and on the move, governments shall likewise move forward in the greater exemplification of the reasons for their existence. Governments can no more be tied to a hitching post than can the arts and sciences, or the processes of manufacture or of agriculture, or the practice of medicine. We know that there is a science of the soil, a science of the stars, a science of the elements. We know that electricity was not invented by man. It was discovered and harnessed. We know that atomic energy was not invented by man. It was discovered; that it has existed since the creation of the world, and that only now have we become sufficiently advanced in our knowledge and in our research to make it available for man's purposes. In the same sense, the science of the law, one of the oldest among the children of men, must likewise move forward.

When Woodrow Wilson was President of the United States, the Kentucky delegation in the Congress called upon him to recommend a distinguished Kentucky judge for appointment to the Supreme Court of the United States. When we had all made our statements in regard to his outstanding qualifications, President Wilson turned to us and said, "Gentlemen, does your candidate believe that the law grows or does he take the legalistic view that it is finished?" In that interrogatory he drew a picture of the sort of man he wanted to put on the Supreme Court of the United States. You will be interested to know that he appointed to this particular vacancy Justice Louis D. Brandeis, who became, along with Holmes and Cardozo, one of the great liberal and progressive Justices of that great Court.

These observations will no doubt convince you of my own individual liberalism, my belief in the progress of law, which is the fruit of government. When I was a student at the law school of the University of Virginia, I walked out to Monticello, Jefferson's home, on the top of the mountain, to catch the inspiration which is breathed in every draft of air that penetrates the lungs. Not only he in the United States of America but many contemporaries in South and Central America, and in the Dominion of Canada, were promoting and promulgating and seeking to fortify the same concepts of law and of government and of human relationships, which he embodied in his Declaration of Independence and the American Bill of Rights, for which he was largely responsible.

This concept and this vision of the perfection of the law, through the hard processes of experience and experimentation, gives zest not only to its practice in the courts of every land, but to its implementation in the statutes written by congresses and legislatures and parliaments, which are supposed to be, and of right ought to be, the expression of the consensus of mankind's opinion as to the sort of government and the sort of society in which he desires to live.

Lawyers have no monopoly upon this virtue of constant effort at improvement of our institutions. Men of good will in all professions and in all walks of life have caught the vision and have sacrificed treasure and blood for its consummation. But lawyers rest under a peculiar obligation, for they are not only advocates of a particular individual's cause before a court of justice, they are public servants in the highest sense of the word, and their conduct before the judicial tribunal and their conduct when they themselves are promoted to the judicial tribunal may set the pattern for public opinion and appreciation concerning the institutions of government.

It is in that sense that I am happy to greet this great assembly of men and women, devoted to the law; men and women who believe that the law grows and that it is not finished and can never be finished so long as life shall progress upon this planet and human beings shall aspire, generation by generation, to a higher standard of life, which shall be protected and guaranteed by their own institutions which we call government.

I wish for this great organization of lawyers in the Americas increased opportunity and influence in the accomplishment of these objectives, and I hope your stay in the United States of America will be most happy and profitable, and that we may have many future occasions to associate with you in this unending quest for justice and for order, not only among individuals but among the nations of the world.

July 4, 1949

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address by me entitled "July 4, 1949," broadcast from radio station KSL of Salt Lake City, Utah, on Wednesday, June 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JULY 4, 1949

I wonder what would happen on this anniversary of the birth of the United States of America if we could chat with some of the men who helped found our Nation. I know that the idea of progress was in the souls of many of them. I know that they all dreamed of America's destiny in the history of the world. I know that George Washington looked forward to the time when the men of the whole world would live together as brothers. But those dreams, those hopes, those aspirations were as indefinite as prophecy. Yes, prophecy is indefinite because all of the details are not spelled out. I repeat, I wonder, if we could talk with our founding fathers, if we would be able to understand one another.

The fact of America's world leadership was brought home to us in a discussion of an amendment offered to my labor bill to repeal the Taft-Hartley law. When the Taft-Hartley Act was passed one of the Senators offered an amendment from the floor which is known as the Communist affidavit. The amendment was based upon the premise that labor leaders were Communists, and that if they had to swear they were not Communists before they could have the right to carry their case to the National Labor Relations Board, the Communists would be smoked out. In this discussion I was carried back in my mind to the time when, as a youngster, I read in the newspapers about a great case before the Supreme Court of the United States, just after the depression of 1893, after the birth of the Populist Party, and after the Grange had worked so hard to bring about an income tax. One of the greatest lawyers the United States ever produced pleaded the case before the Supreme Court. He made it appear so certain—at least, in my mind—that the income tax meant communism at its very worst. Though I did not know what communism was, when I heard that the Supreme Court of the United States had cut down the income tax, I was very glad that we had been saved from that terrible peril. So I came into an emotional state of thinking about communism quite as much as the 140,000,000 people in the United States have come into it now.

After the First World War there was the movement for the one grand and great union, which had it ever been realized, had the dream come true, I think that ultimately it would have resulted in a proletarian dictatorship. Labor would have ruled the whole country under this one grand union. But that did not come about. We have been frightened by pronouncements before the Supreme Court, as, for example, when the gold clause was pleaded and one great justice made the pronouncement, "This is Nero at his very worst." Whereupon, very happily, the Justice took his hat and coat and went out for his holiday, realizing that the Government would go on very nicely even under the auspices of "Nero at his very worst." But that is one of the glories of our country—even Supreme Court Justices and Members of Congress can have freedom of speech to such an extent that they can make pronouncements which sound terrifying and which frighten 8- and 9-year-old boys, as I was frightened, and which probably frighten the people now.

It is well that our courts can say what they will. But that does not mean that what they say or that what any pleader before that court may say is always the truth. We have an income tax now, a graduated income tax, at that, which if the first one was communistic in its nature and would destroy Government, surely this tax which takes more from the rich man than from the poor man would destroy it utterly. The gold clause was declared constitutional despite Mr. Justice McReynolds' opinion that it constituted "Nero at his very worst." Our country did not come to an end.

But I do not want to talk about the Communist affidavit as such. Its real honest purposes or the emotionalism it incites is not what I want to refer to. I want to refer to the fact that after 2 years spent in trying to chase down Communists the Senate in its amendment decided that maybe there are some Communists among employers. This amendment now carries the provision that both the workers' representatives and the employers' representatives must sign not only an anti-Communist affidavit but also an anti-Fascist affidavit. The theory is that if something is fair for the goose it must be fair for the gander.

In the amendment is the provision which attempts to seek out any persons who would try to overthrow the Government of the United States by illegal or revolutionary action. And now I have come to the point I want to make. The United States has become the one stable political entity in the whole world. European nations under the ECA are attempting to gain economic salvation by pinning their economy to America's and developing it around the American dollar. Their hopes, their aspirations, and their very lives rest upon their faith in the ability of the United States to remain stable. These European countries, the most stable

governments in the world outside of our own, find themselves beset with uncertainties. Whether they were the victors in war, whether they were the vanquished, or whether they were neutral, all are in a precarious position and look to America as the one hope.

In one of the Senate Foreign Relations Committee meetings, Mr. Hoffman happened to say that even America could not stand a defeat should another world war come. I asked if we could stand another victory. I meant it because we were the victors over Germany and Japan but we now find ourselves feeding their people. Thus our scheme seems to be that in war we kill our enemies if we can. But after the shooting is over it is our responsibility to feed them. We do not seem to fear our former enemies any more. We seem to fear only one of our allies, an ally in two world wars.

Is there any other money in the world but the American dollar which can give the Chinese people some stability upon which to build their economy? Japan is not only our task but she is our hope in the Far East. Under the trustee system, we have the entire responsibility for all of the South Pacific, not to mention the Philippines.

Yet the Senate, in accepting this amendment I mentioned, seemed to imply that there are people in the world and among us here in America who would like to see the downfall of the American Government. If there is in the United States a man with a mind so crude, so imbecilic, I may say, so lacking in understanding of history, and so unreasonable in understanding what the United States means to the world, that he actually believes it would be well to bring about the overthrow of our Government, that man ought to be outlawed. Such a person is a danger; he is in his mind committing treason, not only against the United States but he is committing the grossest form of treason against the whole world. Why? Not because the United States is the world, but because the only source of stability left in any government on earth is found here. The only economic stability in respect to money rests upon the American dollar. To destroy either of these, means the destruction of the world. If there is such a person, he has in his mind a crime too heinous to mention because the downfall of the American Government would mean the destruction not only of all that is politically and economically stable in the world but also all of the social, political, and economic institutions which constitute civilization.

Do you think that any one of the founding fathers who were struggling for independence ever dreamed that the whole world's welfare would at sometime depend upon what they did. That is what the Fourth of July 1949 means to me. I have gotten over thinking of America's greatness. I have gotten over thinking of the magnitude of the American political experiment. I have gotten over thinking in terms of glorious America. I am stunned in my thoughts because I realize the duty, the responsibility that is now America's. Never was a nation faced with such an opportunity to overcome a world-wide crisis. Crisis means opportunity when viewed from its constructive point of view. It also means destruction and a complete slipping back. That America will fulfill her responsibility to the world I have no doubt. I have full faith that the whole world will be blessed because of the ideals, the concepts, the freedoms, the economic security, and the decent ordinary Golden-Rule theory upon which the political theory of America's destiny rests. Live and let live, but both in abundance. Our task is not just an economic one. It is above all things a spiritual one. Never did the mission of Jesus rest so heavily upon a nation as it does upon the American Nation today. "I am come that they might have life, and that they might have it more abundantly." (St. John 10: 10.)

Overcharges for Electric Lights and Power, 1948

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. RANKIN. Mr. Speaker, an article in Collier's magazine says that I bulldozed through the House the bill creating the Tennessee Valley Authority. That was one of my greatest services to mankind. If we had not had the TVA yardstick, the American people who were overcharged $2,000,000,000 for their electricity last year would either use a great deal less or probably have been overcharged many times that amount.

I have been accused of bulldozing through the House the amendment for the first $100,000,000 for rural electrification in 1938.

That was one of my greatest services to the farmers of this Nation.

They have accused me of bulldozing through the House the amendment to the rules creating the Committee on Un-American Activities—which is doing more to protect this country against her enemies within our gates than any other agency of this Government.

I have no apology for the battles I have waged for those causes which I knew to be right.

If I had lost my fight for the TVA in 1933, and the old House bill, instead of the Norris-Rankin bill, had become law, we would today have one dam on the Tennessee River and the Power Trusts would be getting the power.

We never could have built another dam until we had found a market for the power, which meant there would have been no more dams constructed, and at least 15,000,000,000 kilowatt-hours of TVA electricity would now be going to waste every year. The people of the Nation would be paying many times the rates they are now paying, and the average farmer would not have seen electric lights in his home for the next 50 years.

Congress passed the housing bill a day or two ago. It will cost this country anywhere from 10 to 20 billions of dollars, the main feature of which is slum clearance.

The greatest thing they could do to clean up the slums of this Nation would be to provide cheap electricity to the residential consumers throughout the land in order that they may use those appliances necessary to make their homes pleasant, comfortable, and attractive, and relieve those burdens of drudgery which the average housewife is compelled to endure.

I have compiled some statistics showing the amount of electricity used by the residential consumers in every State in the Union last year, and also showing what it cost them, and what it would have cost under the TVA rates, the Tacoma, Wash., rates, the Bonneville Administration rates, and the Ontario rates.

I selected these four because the TVA is the outstanding development of its kind in all history. Tacoma, Wash., is a city that has its own water-power projects, and has no competition; the Bonneville Administration serves its area with power produced on the Columbia River, the development of which has been along the lines of the TVA. One difference is that the Columbia River water is also used for irrigation purposes, whereas the Tennessee Valley area is amply supplied with an abundant rainfall throughout the year.

I used the Ontario rates because it is in the neighboring country of Canada, just across the line from the State of New York.

By comparing the rates charged throughout the country with these four public power systems, the average individual can understand just what public power means.

Remember that the power business is a public business, and not a private business.

Electricity has become a necessity of our modern life, and it must be handled by a monopoly, since it would be unthinkable for four or five concerns to supply electricity to one community.

Besides, the water power already belongs to the Federal Government.

Many of the largest cities in the country, including the capitals of States like Michigan, Ohio, and Texas, have had public power systems for a long time, and they have proved to be more satisfactory than private concerns and to supply power at cheaper rates.

Here is a table which I have prepared showing the number of residential users of electricity in New York City last year, the amount of power consumed, the amount paid for it, and the savings they would have realized under the TVA rates, the Tacoma, Wash., rates, the Bonneville Administration rates, or the Ontario rates:

Estimated residential sales data for New York City, 1948

Customers	2,067,119
Kilowatt-hours	1,975,565,000
Revenues	$92,802,587

Estimated residential revenues and consumer savings

[Revenue computations based on differences in basic rates]

Rate area	Revenues	Savings
Area served by Tennessee Valley Authority (Tupelo, Miss., rate)	$37,585,048	$55,217,539
Tacoma, Wash.	34,986,575	57,816,012
Area served by Bonneville Power Administration (McMinnville, Oreg., rate)	44,081,229	48,721,358
Ottawa, Ontario, Canada	31,831,287	60,971,300

I repeat that cheap electricity to the homes of that great city would do more to clean up the slums and improve the living conditions than all the money that could be spent there under the so-called housing bill.

In order to show what the residential consumers throughout the entire country were overcharged for their electricity last year, I am inserting a table at this point showing the amount of electricity used in every State in the Union together with the overcharges paid according to the TVA rates, the Tacoma, Wash., rates, the Bonneville rates, and the Ontario rates.

The table referred to follows:

TABLE 1.—*Residential electric service, 1948*

State	Estimated sales data for 1948			Estimated revenues and consumer savings if services were rendered under basic rates in effect in—							
	Number of customers	Kilowatt-hours (thousands)	Revenues	Area served by Tennessee Valley Authority [1]		Tacoma, Wash.		Area served by Bonneville Power Administration [2]		Ontario, Canada

[1] Based on rates applicable in Tupelo, Miss.

[2] Based on rates applicable in McMinnville, Oreg.

You will note from the above table that the residential consumers alone were overcharged more than $727,000,000 last year. Check your own State and see how much your people were overcharged.

Here is another table showing the amount of electricity used by the commercial consumers in each State, the amount paid for it, and the overcharges. The table follows:

TABLE 2.—*Commercial electric service, 1948*

State	Estimated sales data for 1948			Estimated revenues and consumer savings if services were rendered under basic rates in effect in—							
	Number of customers	Kilowatt-hours (thousands)	Revenues	Area served by Tennessee Valley Authority [1]		Tacoma, Wash.		Area served by Bonneville Power Administration [2]		Ontario, Canada

[1] Based on rates applicable in Tupelo, Miss.
[2] Based on rates applicable in McMinnville, Oreg.

Remember that we have 394,000,000,000 kilowatt-hours of hydroelectric power going to waste in our navigable streams and their tributaries every year.

If all of this water power were developed and firmed up to the peak of the average year, it would amount to considerable more than twice the amount of electricity we are now using.

It would enable the American people to build their own homes, clean up their own slums, and make every house a more pleasant and more attractive place in which to live.

It would make this the richest, the most powerful, and the most attractive country the world has ever known.

Two Thousand Jobs Waiting

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. KLEIN. Mr. Speaker, I have heretofore mentioned my efforts, in cooperation with the members of the Rhode Island congressional delegation, to assist Mr. Roberts Hirss, of Woonsocket, R. I., and New York City, in his desire to get his textile mill at Woonsocket in operation.

To that end, I have introduced H. R. 4604, which would authorize the admittance of four Latvian nationals of unique skills into the United States as temporary visitors, with special conditions under which they might become permanent residents, and I have mentioned the cool attitude of the State Department's consular officers toward the project. A companion bill has been introduced in the Senate by Senator THEODORE FRANCIS GREEN.

It is extraordinary for business groups and newspapers to actively support any private bill; but almost every civic and business group in Woonsocket has openly endorsed this bill, and the Woonsocket Call has given it extensive news and editorial coverage.

The reason is that with unemployment growing there are 2,000 jobs waiting on operation of the Hirss enterprises.

Under consent I include in the RECORD an editorial from the Call of June 14, and an important news story from the same issue:

HELP FOR HIRSS

Those of us who remember the days when the Nyanza mill was one of Woonsocket's most active manufacturing plants will applaud the efforts of various groups and individuals to speed the day when machinery will hum once again in the Singleton Street factory.

Roberts Hirss chose Woonsocket for his textile operations for several reasons, at least one of which must have been satisfaction with the community as a place in which to live and do business.

He has been handicapped in getting into production because a few skilled technicians, Latvians, with the special know-how to instruct others in the work, have so far been denied entry into this country.

Various civic and community organizations have endorsed his efforts to induce Congress to pass special legislation and there is reason to believe that bills, already introduced in both the House and the Senate, will receive favorable consideration.

If it is true, as reported, that the admission of only four men to the United States from a foreign country will form the basis for a new industry in Woonsocket, giving employment eventually to hundreds of persons, then we certainly hope Congress will take time out from its busy schedule to lend a helping hand.

Rhode Island's congressional delegation already has promised support.

COUNCIL ASKS CONGRESS PASS HIRSS AID BILL—CITY CLERK INSTRUCTED TO NOTIFY RHODE ISLAND SOLONS OF LOCAL SENTIMENT

The city council last night passed in concurrence a resolution calling upon Congress to pass legislation that would permit four Latvian immigrants to come to Woonsocket, where they are needed to start operation of a private industry.

The resolution cites the council's support of a bill known as H. R. 4604 which would permit the immigration of the four to enter the employ of Roberts Hirss, Inc., so that firm can begin fine textile production at the old Nyanza mill, Singleton Street.

Under the terms of the resolution the city clerk was instructed to communicate the sentiments of the council to the Rhode Island congressional delegation.

In the board of aldermen, Alderman George H. Gregory (ward 3), questioned whether the admission of four Latvians would mean that they would be followed by "400 more."

"There are plenty of unemployed around here already," he quipped. But there were no objecting votes.

DARTT FAVORS MEASURE

In the lower chamber Councilman Harold P. Dartt (ward 2), made an impassioned plea for passage of the measure.

Pointing out that he was in the textile field himself, Dartt explained that the lace production planned by the Hirss firm was so intricate that the special and unique skills possessed by the Latvians were essential.

Migrant Farm Labor Camps

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, the following newspaper clipping from the San Francisco Chronicle of June 22, 1949, speaks for itself.

Under permission to extend my remarks, I wish to include the article:

BABY DEAD, 11 PERSONS SICK OF DYSENTERY

A 2-year-old child is dead and 11 others—adults and children—are critically ill in an Alameda County outbreak of bacillary dysentery.

The child, who was not named, died Sunday at Highland Hospital, Oakland. The 11 others also are under treatment there.

The outbreak has been localized in two places—at Russell City, about 5 miles southwest of Hayward, and on the outskirts of Hayward itself.

Dr. James C. Malcolm, Alameda County health officer, believes the Hayward cases were infected by a child from Russell City.

The disease spread, he said, because of "deplorable sanitary condition in the Russell City area." The small town lies in an agricultural section.

The 12 cases were reported within a 10-day period. There have been no new cases since Sunday and Dr. Malcolm is hopeful the period of greatest danger is over.

The disease is transmitted by flies.

Dr. Malcolm has appealed to the Alameda County abatement district to spray the area to rid it of the insects. The health department also has offered the services of its nurses and technicians to administer sulphadiazine as a protective measure.

Dr. Malcolm ordered a clean-up at Russell City, especially in places where outhouses are used.

He said the disease is usually not fatal to adults but is particularly dangerous to children.

Loans to Germany and Dillon, Read & Co.

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Loans to Germany and Dillon, Read & Co." appearing in a publication entitled "Prevent World War III," May-August number.

The Government Printing Office estimates that the manuscript will make 3½ pages of the RECORD, at a cost of $243.75.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOANS TO GERMANY AND DILLON, READ & CO.

PART 2

In our first installment dealing with the German loans of the twenties we have attempted to show that:

1. American investment losses in German securities were the largest of any foreign nation.

2. Germany has been the most prodigious postwar I borrower from the United States. Her aggregate borrowings from private investors in this country have exceeded $1,300,000,000, almost all of which were advanced during 1924 to 1930, inclusive. Our international bankers sold these securities to American investors, thereby earning large commissions—while American investors were the losers.

3. Germany for years used her American borrowings to meet her reparation obligations.

4. For 7 years—1924 to 1930, inclusive, Germany indulged in the greatest borrowing spree the world has ever known. The liberality with which American investors' funds were advanced to Germany clearly revealed the ignorance and amazing lack of foresight which characterized the whole postwar financing era in the United States.

5. The successful floating of the Dawes plan was used by the Germans for purposes of enticing foreign capital into their country. There followed a period of foreign financing for Germany which has no duplicate in world history.

6. The German recipients of American investors' liberality deemed it advisable to build up their industrial machinery to compete in world markets more strongly than before World War I.

7. The house of Dillon, Read & Co. distinguished itself by making enormous loans to the German industries which went beyond all normal business caution.

Since financial activities of such magnitude cannot be launched without adequate preparation, it behooves us to trace the origin of this financial spree. It began in a most innocuous way in December of 1923, when a group of German hospitals connected with religious groups joined in organization called Hilfskasse (relief fund), which functioned as a sort of a bank and which was supposed to act for all the hospitals as a central monetary organization. As soon as the German mark was stabilized, this Hilfskasse embarked on a propaganda campaign to obtain means of support in foreign countries for their charitable work. Apparently the Germans knew the American propensity for charity. By misrepresenting the true facts, the agents

of the German hospitals succeeded in creating for their organization a reputation of being a good risk and safe investment. They claimed that conditions in German churches and hospitals were desperate, and declared that unless the English-speaking world extended loans to the German groups, the latter would be condemned to utter ruin. Communism being a very popular subject then as now, the representatives of the German relief funds began telling story after story of the Communist menace overhanging Germany and stressed the necessity of maintaining Germany as the last bulwark against the Red tide. Emphasis was placed upon the German churches and hospitals as the strong defenders of Christian civilization; and to prove that they had no secrets to hide, they invited Americans to come to Germany and take a look for themselves.

Shortly thereafter, American representatives came to Germany, and, to their great amazement, discovered that the claims advanced by the Germans were greatly exaggerated. Indeed, they discovered that the true conditions of the churches and hospitals in postwar Germany were quite satisfactory and by no means as hopeless as pictured by the German agents. However, being American businessmen, they reacted like businessmen. They were impressed with the Germans' desire to improve the lot of their churches and hospitals. This was proof to them that the Germans meant well. They concluded, therefore, that American investments would be safe and would produce excellent returns.

When the success of the first German loans became known, the American financial fraternity expressed great admiration for the German shrewdness in handling the loan. This success was proof to them that Germany was a profitable market. A few months later the spending spree began—with the result known to every American who was foolish enough to fall for the German propaganda.

By the middle of 1924 the leaders of the American banking world, J. P. Morgan and his partner, Thomas Lamont, wholeheartedly agreed that Germany could well be trusted with faithfully carrying out the provisions of the American loans. But this time there was no longer question of making loans to churches and hospitals; the German industry saw its chance and seized it. The house of Dillon, Read saw its chance too. But for some reason it did not care to invest in any charitable organizations. As stated by Mr. Clarence Dillon before the United States Senate Committee on Finance:

"You see, Senator King, our loans to Germany have been largely or entirely (with the exception of possibly an item of $3,000,000) to corporations. We have made no long-term loans to the German Government as such, or to municipalities, to subdivisions of Government. Our loans have been made to corporations and business organizations in Germany."

Why were so many loans made to German corporations? The Senate Investigating Committee wrestled in vain with this problem for weeks. The Senators were unable to understand why the corporations were singled out and why no adequate attempts were made by the American investment houses to make sure that the German corporations were good risks. In vain did they quote Parker Gilbert's letter of October 20, 1927, in which he warned:

"I have attempted to bring together in the foregoing pages the accumulated evidences of overspending and overborrowing on the part of the German public authorities, and some of the indications of artificial stimulation and overexpansion that are already manifesting themselves." For instance, Senator Hiram Johnson, exasperated with the evasive answers, referred to the above sentence, and said: "I insist that with a document such as this it was the duty of every banker who floated a German loan in this country to tell his people exactly what the Government of the United States said in respect to German loans."

The only reply the Senate committee elicited from Mr. Clarence Dillon was that his firm had made every effort to ascertain the origin and nature of the German companies to which loans were granted and that the German industries were good risks. Were they good risks? Surely by 1932, when Clarence Dillon was still certain that the loans he floated for the German corporations were sound, he had had a chance to realize what the German corporations did with the money they borrowed. A casual glance at the budgets of the Reich Government for the years 1924–32, inclusive, would have revealed to Mr. Dillon that during these years the German Government spent between 10,000,000,000 to 12,000,000,000 marks on rearmament.

One also wonders why Mr. Dillon did not tell the Senate Finance Committee about the military activities of the German corporations. It is interesting to speculate what the Senate committee of 1932 would have thought of the activities of the branch of the German armed forces which later became notorious as the Luftwaffe and which, between the years 1924–32, received several hundred million marks from banks, industries, and municipalities. At first the German Luftwaffe was disguised as the "Department of Air Sport and Air Transport." It seems nothing was done to stop the activities of this air division, and even as late as 1930, at a time of severe economic crisis, no less than 150 industrial undertakings, including 20 factories for the building of airplanes and airships, were at work rearming Germany in the air. Moreover, this work was not confined to Germany's own territory, since as early as 1922 German airplane factories had begun to establish branch factories in Italy, Estonia, and Holland in order to evade the limitations imposed by the Versailles Treaty on the production of airplanes in Germany.

By the same token, one wonders why Mr. Dillon did not tell the United States Senate committee that in the years 1924–30 be- 40,000,000,000 to 45,000,000,000 marks were invested in German industry, a very considerable part of which went into what the Germans called the military economy, or, in other words, into war industries of one sort or another.

The record reveals that from 1922 onward the cooperation between the German General Staff on the one hand and the German industrialists and their associates on the other became increasingly close, as a result of which Germany's secret rearmament in the economic field was greatly accelerated. Indeed, the cooperation between the military elements and the industrialists was so close that the military aspect of the German industrial development was never overlooked. For instance, the industrialists did not object when the military authorities told them not to mind the expenses involved in the extremely costly experiments made on a large scale with a view to producing synthetic rubber.

Nor did the German industrialists mind when they were told to invest heavily in the production of synthetic oil from coal and to go full steam ahead in the development of optics and fine mechanical instruments which were badly needed for the development of the German war machine.

Since Mr. Dillon knew so well, by his own admission, the true state of affairs of the German economy, surely he must have known that the Germans had completely modernized their large plants, the capacity of which was far in excess of her normal requirements even if one takes into consideration the period of German economic prosperity which prevailed between 1924 and 1928. Surely Mr. Dillon knew that the tremendous German industrial capacity was not needed for a peace economy.

One also wonders whether Mr. Dillon regarded this German overdevelopment as one of those German aberrations. Insofar as we are concerned, we find it difficult to believe that by 1932 Mr. Dillon had not learned the true nature of Germany's rearmament program and that he was unable to see, between the years 1924 and 1932, that Germany had carefully laid out her plans for purposes of establishing a war economy.

There was no secret about Germany's plans. The German industrialists spoke about them openly. Arnold Rechberg, one of the outstanding German industrial criminals of the Hitler regime, went even so far as to complain about the undue influence of the German militarists. As early as 1927 he wrote "never under the Hohenzollerns has the military cast exercised such an important political influence as under the so-called German Republic."

The same year the foremost German scholar and religious thinker, Prof. F. W. Foerster, unveiled in the magazine Die Menschheit, the schemes of the German General Staff for a war of revenge and conquest plotted behind the facade of the German Republic. Professor Foerster, with the true insight of a prophet, warned the world in 1927 that "the masters of Germany today need peace in order to be armed at a time set by the weakness of her neighbors. This time will come between 1933 and 1938."

The overdevelopment of the German steel industry is a case in point. Since Mr. Dillon made most of his loans to the German steel industry he must have been acquainted with the German statistics dealing with steel production. The unparalleled rise in production was shown in the German official publications. Compared with 1923, the production of iron and steel had risen in 1929 as follows:

	Percent
Pig iron:	
Germany	167.9
Great Britain	1.99
France	89.5
Steel ingots:	
Germany	158.1
Great Britain	13.6
France	83.2

As regards coal production, between 1924 and 1929 Germany showed an increase of 37.6 percent, whereas Great Britain showed a decline of 3.9 percent.

All this leads up to one conclusion, namely, that the enormous investments of American capital enabled Germany's industrialists to build up the most modern production apparatus in the world.

We regret to say that in studying the problem of American investments in Germany during that period we found no evidence that Mr. Dillon made any effort to enlighten the United States Senators when the latter tried desperately to find out whether the American financial fraternity had made a thorough study of the nature of the German economy.

As we search through the files of the thirties we find that the house of Dillon, Read remained steadfast in its faith in the German industry. Thus, when Prof. James W. Angell, of Columbia University, wrote a book in 1929 entitled "The Recovery of Germany," we find among his sponsors Owen D. Young, of General Electric; Charles Mitchell, of the City National Bank; Allen Dulles, and the partners of the brokerage firm of Dillon, Read & Co. They all helped the book to become a big success. These sponsors did all they could to prove to the American public that the contents of the book were honest, straightforward, and that

the material could stand up to the strictest scrutiny. And what was the thesis of the book? It was that the Versailles Treaty had been a heavy burden on Germany and the source of all of Germany's misery; that it had crippled Germany's economy just as much as the short-sighted and expensive actions of the French, which Professor Angell claimed were dictated solely by their lust for revenge. The book denounced as false and not proven the statement that Germany had not been carrying out in perfect good faith all of the responsibilities arising from the treaty.

Professor Angell also devoted a large part of his book to the big German trusts which he not only called necessary but whose national work and modern set-up he termed as showing to the world the future course of industry. And dealing with the period period between 1924 and 1929, Professor Angell described it as a recovery unprecedented in the history of the world. Moreover, he claimed that Germany had achieved between 1925 and 1928 the leadership on the Continent for all time.

We leave it to the reader to judge for himself why the American investment houses, including Dillon, Read & Co., found it necessary to sponsor and recommend Professor Angell's book to the American investors who lost their money in Germany.

But before the reader renders final judgment on the activities of Mr. Dillon we believe he will be interested to know something about the career of that man.

In his early years Mr. Dillon was not particularly interested in finance. After graduation he worked as a partner with his brother-in-law and founded the Milwaukee Machine Tool Co. Shortly thereafter he came east and worked with George W. Wickersham who was his attorney. The latter introduced him to Mr. Read.

Soon after joining the firm, Clarence Dillon went to work for the firm in Chicago. While there he made good and sold several issues successfully. Apparently his success in Chicago resulted in his being called to New York, and at the age of 34 he became a partner in the firm of William A. Read & Co.

His ability to judge people and matters of finance very calmly impressed his partners.

When World War I broke out, Washington needed capable administrators. Bernard Baruch was made Chairman of the War Industries Board. Needing a capable assistant, Baruch invited Clarence Dillon to come to Washington as assistant to the Chairman. Clarence Dillon spent 2 years in the Capital and while there obtained a thorough understanding of the world-wide sweep of industrial conditions. What is more, he quickly learned the value of making contacts because he had to deal with industrial giants who came to Washington in search of contracts. Not only did he learn the "ins" of big business but he also acquired a tremendous knowledge of international financial realities.

He never regretted the time he spent in Washington, for when he left his keen mind held in its grasp the threads of world business. In the meantime he had made very valuable connections for the firm of William A. Read & Co., and when he returned to New York his partners showed their appreciation by making him the president of William A. Read & Co. Soon after, Clarence Dillon felt that no task was impossible to accomplish. One of his first real ventures was the refloating of the sinking firm of Goodyear Tire & Rubber Co. The company had commitments of $100,000,000 and was in real trouble. The company had tried in vain to interest several Wall Street houses in its plight, and in desperation its managers came to Mr. Dillon. He immediately undertook a thorough study of the company's affairs and succeeded in raising $100,000,000 for the reorganization of the Goodyear Tire & Rubber Co. Since that time the company has been prosperous.

His self-composure stood him all his life in good stead. He was unperturbed at the greatest moment of his life when he defeated J. P. Morgan and General Motors in his bid for the auto business of the Dodge Bros. in 1925. He calmly wrote out a check for $146,000,000. This purchase was the biggest single cash deal in the history of United States business. Perhaps his secret lay in the fact that he was able to accomplish so much with other people's money.

Perhaps the secret of his success lay elsewhere. It must have been sure instinct that enabled him to accomplish the impossible. Shortly after the Dodge purchase, his name became famous in Wall Street. By 1928 the success of the Dillon, Read house was such that it underwrote some $3,000,000,000 and this enabled it to maintain the lead over Morgan, Kuhn Loeb, Harris Forbes, Chase Securities Corp., National City, and Guarantee Trust Co.

Three years after his famous success Dillon got tired of holding the Dodge Bros. interests. He sold it to the Chrysler Corp. and he broke a new record on Wall Street. He made a profit of $40,000,000. At that time he was 43 and only 10 years in Wall Street. By that time he had been for 5 years head of the investment firm of William A. Read & Co., which in the meantime was changed to Dillon, Read & Co.

Space does not allow a detailed account of all his business ventures. Only a few will be mentioned here. Mr. Dillon is responsible for the organization of the Youngstown Sheet & Tube Co.—a $100,000,000 business—when he succeeded in merging six companies into one. In 1921 he dared to challenge the English Rothschilds who were very firmly entrenched in foreign financing. He was the first American to succeed in wrestling from them a $15,000,000 loan for Brazil. In 1922 he floated a loan for 150,000,000 guilders for Holland.

Dillon can claim the credit for being the first to underwrite a Japanese loan in 1924, at a time when agitation against the Japanese immigration was very strong in the United States. This notwithstanding, he succeeded in selling to the American public $15,000,000 worth of bonds for the Japanese Great Consolidated Electric Power Co. His foreign activities became known far and wide. Many countries in Europe and Latin America sought his counsel, advice, and help. Dillon handled loans for a dozen governments in both Europe and Latin America. Not only did these countries appreciate his great help by paying him handsome fees, but he was also decorated by many governments.

Dillon's ability to do the impossible attracted the attention even of H. L. Doherty when the latter wanted to undertake new financing. Instead of going to his former friends, he turned to Clarence Dillon.

As was to be expected, Dillon's success in Wall Street became the object of widespread comment. The most common interpretation at that time was that Clarence Dillon arrived at the psychological moment in Wall Street. Since the old leaders were bewildered and incapable of coping with the spirit of the times, a new spirit was needed, and Dillon arrived just at the right moment with a new formula. And what was the new formula? In essence it was very simple: Dillon made huge sums of money out of transactions while at the same time keeping control of the management of the enterprise he organized. His success was achieved through the device of issuing to Mr. Dillon and his associates the only class of stock that was entitled to vote. At the same time the shares of another nonvoting stock were sold to the public. The net result was that the investors who had paid for the ownership of the enterprise continued to own their equity, but had nothing to say regarding the management nor could they expect to have anything to say in the future. Since the stockholders were delighted with the financial success of their investment, they didn't care whether they had anything to say about the management or the policies of the corporation which they owned.

One of his Harvard classmates who knew him very well characterized Mr. Dillon's ability and success as follows: "If Dillon wanted to buy a cow he would read up everything on cows, and before he closed the deal he would know more about the animal than the farmer himself."

This leads us back to the crucial point of our inquiry. Why was Mr. Dillon so interested in Germany? As we have seen, Mr. Dillon was very thorough in his analysis of a company which he was asked to organize. It follows, therefore, that in recommending the investment in the German industries, he must have made a very thorough analysis of their nature and character. When the Dillon, Read Co. consolidated the German steel properties on the model of the United States Steel Corp., he made a most thorough and painstaking investigation of the entire steel industry of Germany. Did Mr. Dillon insist on controlling the voting stock of the Vereinigte Stahlwerke just as he did with the American corporations which he reorganized? If his classmate was correct in saying that Mr. Dillon, when he wanted to purchase a cow knew more about the cow than the farmer did, it is fair to assume that in the case of the Vereinigte Stahlwerke Mr. Dillon knew all there was to be known about it.

It follows, therefore, that since Dillon was so thoroughly sold on the German steel industry, he must have known why he wanted to rebuild the German steel industry and also he must have insisted on having a say in the control of the German steel industry.

The United States Senate investigation referred to above unfortunately did not shed much light on the subject. However, a later investigation, conducted by the United States Senate in 1933 known as the Pecora investigation, revealed some interesting side lights on the methods used by the Dillon, Read investment house. That investigation revealed among other facts that Dillon, Read & Co. used extensively the formula of issuing voting and nonvoting stock, the former held exclusively by Dillon, Read. Thus, in 1928, 1929, members of the Dillon, Read Co. made a profit of $6,819,270 on the sale of stock of a subsidiary corporation which had cost them a total of $24,110. The price paid in 1924 was 20 cents a share and the average price received was $52 a share.

It appears that in this case the Dillon, Read house set up two investment trusts with a combined capital of $90,000,000 and an original investment of $5,100,000. The Pecora investigation showed that the majority control and voting power was held by Dillon and other members of his firm.

From the above it is clear that the general formula of Dillon, Read was to retain for themselves the voting control of the companies they organized. Did the same formula apply to the Dillon, Read reorganization of the German steel industry?

As we follow Dillon, Read's action in German affairs we are struck by the fact that ever since the floating of the German loans in the United States in the 1920's, the house of Dillon, Read has been very interested in German affairs. We notice, for instance, that before World War II, when the Germans were very active in the United States trying to break the anti-Nazi boycott and the mounting resentment against nazism, Dillon, Read was in close touch with German interests in the United States.

We are also struck by the fact that as late as April 1941, the Schroeder companies in the United States—the so-cal'ed British subsidiaries which were interested mostly in German businesses in the United States of America and Latin America—refused to give up their fiscal agencies in the United States for the Rhine-Main-Danube authorities, the city of Berlin, the city of Dresden, the city of Leipzig, and the city of Frankfurt. The reason the Schroeder companies didn't want to give up their connections with the above German agencies was that they didn't want the Dillon, Read Co. to remain the sole agents in the United States for the above German entities.

Coming to our times, we have been wondering ever since VE-day why the Dillon, Read partners have been playing such a prominent role in German affairs. The career of Paul Nitze, a former vice president of the firm, was discussed in our magazine No. 25, May–June 1948.

The former Secretary of Defense, Mr. James Forrestal, was president of Dillon, Read & Co. It is worthy of mention that in the course of the Pecora investigation, in the spring of 1933, Mr. Forrestal testified that he escaped payment of at least $95,000,000 in Federal income taxes by forming two personal corporations, one in Canada, and the other in Delaware.

We must also deal with the activities of Gen. William H. Draper, Jr., vice president on leave for Dillon, Read & Co., for in the course of his career in the Army and later as Under Secretary of War he has left an indelible mark upon our policy toward Germany.

To begin with, General Draper's appointment as director of the economic division of the military government and later as economic adviser to General Clay, has always remained a mystery. When we first heard of him it was in the spring of 1945 when he, as a colonel in the Army, was training his troops in Hawaii for the impending invasion of Japan. He fully expected, we were told, to contribute his share in fighting the Japanese. However, instead of going to Japan he was suddenly transferred to the European theater of war just at the time when Germany was collapsing.

The economic division of the American military government was perhaps the most important division, since the principal Allied objective at Potsdam was to prevent Germany from ever again becoming a threat to the peace of the world. The major task of the economic division was to bring about the industrial disarmament and demilitarization of the German economy by imposing appropriate controls over Germany's ability to wage war and by providing Germany with an economy which would give the Germans a standard of living not exceeding that enjoyed by her neighbors.

A proper guide was issued to all American occupation officers. This guide was known as Directive J. C. S. 1067. From the very beginning, General Draper's attitude toward J. C. S. was unfriendly. His attitude toward the basic policy in Germany which called for demilitarization, denazification, reparations, and a level of industry for peace was one of hostility. He never liked J. C. S. 1067 and throughout his stay in Germany did yeoman work to prove that the economic provisions of the Potsdam agreement were unworkable. His efforts to nullify these provisions began from the moment he became the Director of the Economic Division of the military government.

While in Germany, General Draper was the guiding spirit and leader of a group consisting of prominent American industrialists and high officials. Prominent among these industrialists were Peter Hoaglund, prewar representative of General Motors interests in Germany, the Opel works; Graeme Howard, also of General Motors and a close friend of American Firsters in 1941; Rufus J. Wysor, former president of Republic Steel. In this connection, it is also worthy of note that among the prominent American high officials to go over to Germany there were many whose companies had extensive economic ties with the prewar German economy. Among these were three directors of the I. T. & T. Corp.: Col. S. Behn, Kenneth Stockton, and Mark Sundstrom; Charles H. Powell, Westinghouse; Brandon Grove, Socony-Vacuum; R. E. McConnell, formerly with the I. G. Farben subsidiary in the United States—the General Aniline & Film Co. In spirit, all these representatives were in agreement with General Draper who, immediately after the American occupation of Germany, began a drive to discredit the theory that Germany can sustain herself by increasing her light industries, by exporting large quantites of coal and by increasing her agriculture productions. Among the economists who advised General Draper were Calvin Hoover, dean of Duke University, and Don C. Humphrey, also of Duke University.

With the help of Humphrey and Hoover, General Draper attempted to prove, in the famous secret Calvin Hoover report of September 1945, that Germany's heavy industry was indispensable to the welfare of Europe; that Europe needs the productions of the German heavy industry badly; that reparations should not be paid to Germany's victims because in so doing, Germany would lose her machinery which she needed in order to manufacture goods for Europe; and that Germany needed her tremendous steel capacity to provide her inhabitants with a standard of living which must not be lower than that enjoyed by her neighbors.

On October 15, 1945, a secret directive was issued by Don Humphrey to the sections of the economic division advising them that German coal should be used as a lever to bypass the Allied policy toward Germany. The purpose was to retain coal in Germany in order to rebuild the German heavy industry rather than to export the coal to Germany's neighbors to enable them to rebuild their economy.

When General Draper went to Germany to take over the administration of the economic affairs of the conquered country, he knew full well that behind German aggression in the past two world wars were the ambitious German steel barons who tried to dominate Europe economically. It surely was no secret to him that German economic nationalism had been connected since its beginning in the seventies with the fate of the Reich's steel industry which rapidly outgrew the limits set for it. This disproportionate development of the German steel industry was stimulated by both the Reich's protective tariffs which helped to form the closely knit cartels and by the parallel rise of a steel industry in the disputed border district of Lorraine, France.

As a student of economic affairs and as a prominent member of the Dillon, Read investment company, General Draper surely must have studied the economic consequences of World War I. If so, he knew that as a result of World War I the Germans lost the iron ore in Lorraine, France, and that they did everything possible not to give France a chance to develop its own steel industries. And since his firm invested so heavily in the Ruhr industries after the last war, General Draper must have known that the German steel industrialists did everything possible to foster the Hitler rearmament program.

Lastly, he must have known full well the intent of the J. C. S. 1067 directive which aimed specifically at the restriction of the German steel production. His duty, therefore, should have been to implement the nature and spirit of the directive insofar as it applied to the level of industry. However, the facts are that General Draper did not distinguish himself by his zeal in applying the clear directive from Washington. Was this due to the fact that he was in agreement with the Wall Street interests which, as early as 1941 had picked Germany as a field where they could renew the profitable game they played there once before? One is inclined to believe that it must have been so, since his own firm had floated such huge loans for the development of the Vereinigte Stahlwerke.

At any rate, the facts are that when the United States investigation teams went through the files of the Vereinigte Stahwerke in Dusseldorf, in 1945, they found friendly letters written in the 1930's by General Draper to the top management of the Vereinigte Stahlwerke. This would seem to indicate that General Draper must have been interested in the fate of the postwar German steel industry. And speaking about the Vereinigte Stahlwerke, it must be pointed out that its prewar annual steel capacity was approximately 10½ million tons. Contrary to the common belief in the United States, this German steel combine suffered very little damage during World War II. The directors of the company estimated its total damage at 15 percent.

In March 1946 the Allied Control Council agreed that German's total steel capacity should not exceed 7,500,000 tons of steel. Would General Draper be kind enough to explain how it was possible for the Vereinigte Stahlwerke to contract a loan in the spring of 1946 from the Dresdner and Deutsche banks for 125,000,000 marks to repair the damage suffered by the Vereinigte Stahlwerke? Since Germany's total capacity was fixed at that time at 7,500,000 tons, it is plain that the loan granted to the Vereinigte Stahlwerke was a clear violation of the Allied Control Council's decision. What did General Draper do to stop the loan to the Vereinigte Stahlwerke? Or did he help to make the loan possible?

The traditional policy of the United States toward national and international cartels is too well known to be dwelt upon here. When the Big Three met at Potsdam in July 1945 they decided to abolish once and for all the pernicious German trusts and cartels. Article 12 of the Potsdam agreement is very clear on that score. This article was also binding upon General Draper. Not only did he not distinguish himself by his zeal in pressing for the abolition of the German trusts and cartels, but while in Germany made no bones about his distaste for it. On many occasions General Draper criticized the article publicly and privately. Moreover, he was in complete disagreement with the State Department directive to the military government to do all in its power to press for a mandatory decartelization of the German economy.

General Draper's hostile attitude toward the decartelization of Germany finally attracted the attention of General Clay in the fall of 1946, when the latter told his subordinate in no uncertain terms: "Whether we like it or not, the decartelization policy is the policy of the United States, and this policy applies to all divisions of the occupation forces."

However, General Clay's admonition did not produce the desired results. General Draper continued to pull all the wires with the State Department to prevail upon the then Under Secretary Will Clayton to change the United States policy toward the decartelization program.

In 1947, while in Washington on official business, Draper had extensive discussions with Mr. Bernard Armour of the Hayden Chemical Co., a company originally founded with the help of German capital in 1925, for the purpose of establishing the monopoly of the manufacture of penicillin at the Hoechst I. G. Farben plant. Since the official policy of the United States Government was and is antimonopolistic, it was very strange, to

say the least, that Draper should have tried to foster a new monopoly in Germany.

As a footnote to the Dillon, Read story, we believe it is appropriate to mention the name of Philip H. Hawkins. Although Mr. Hawkins, to the best of our knowledge, is officially not a member of the Dillon, Read firm, his name is mentioned here because of the fact that he happens to be General Draper's son-in-law. Prior to his marriage in Germany, Hawkins seemingly was in favor of implementing the United States decartelization policy. His attitude changed overnight, when he became a member of the Draper family. When General Draper left Germany in the summer of 1947, his son-in-law remained. Today he holds the post of Deputy Chief of the Economic Department of the United States military government. On March 20, 1949, the Christian Science Monitor reported Mr. Hawkins as saying that the American authorities would not oppose nationalization of the Ruhr by a federal German government having the necessary powers to act. The dispatch ended with the following words: "The Americans would sanction nationalization at this juncture only if the former owners were adequately compensated."

Would Mr. Hawkins be kind enough to explain who are the real former owners?

We have mentioned above that the Dillon, Read investment house was also a pioneer in floating loans for the Japanese industry. Ever since 1947 we have been wondering whether it was purely a coincidence that General Draper was recalled to Washington to assume the post of Under Secretary of the War Department. For the record reveals that in the summer of 1947, before assuming his post as Under Secretary of the War Department, General Draper went to Japan ostensibly to make an analysis of our occupation policy in the Pacific.

Shortly after his arrival in Tokyo, it was officially reported that General Draper ordered the suspension of our decartelization policy of the Japanese economy, which before the war was controlled by the Zaibatsu group. It is worthy of note that the policy of decentralization of the Japanese economy had been agreed to not only by the United States but by all the members of the Far Eastern Commission. Consequently, it had been decided that the Zaibatsu holdings in Japan should be sold to small independent business firms in Japan.

Why did General Draper kill the decartelization program in Japan? And speaking about Japan, it is also extremely strange that General Draper saw fit to hire the firm of the McGraw Co.—represented by Clifford Strike—to make a special study of the reparations program in Japan. When Mr. Strike returned from Japan he recommended that the reparations program previously agreed to should be discarded. (Parenthetically, Mr. Strike's firm was paid $650,000 for the job.) One may ask: Was General Draper promoted to the post of Under Secretary of War for the purpose of liquidating entirely our established policy toward our enemies?

We do not know all the answers to these perplexing questions. We only know this: In the fall of 1945 General Eisenhower, at that time military commander in Germany, became aware of the fact that many of the high officials under his command were not heart and soul in agreement with the established policies of the United States Government. Accordingly, in October 1945, he issued a statement in which he warned that all those who were not in sympathy with the United States policy toward Germany should either submit or turn over their jobs to those who were in sympathy with it. We do not know whether General Eisenhower had General Draper in mind, but it is our shrewd guess that he did. We regret that General Eisenhower did not stay long enough to enforce his ideas.

Assuming, however, that General Eisenhower did have General Draper and his industrial friends in mind, we don't think the latter would have left their posts without a fight. They went to Germany in the first place because they wanted to renew their prewar profitable relations with that country at the earliest possible moment. It was easy for them to be appointed to go to Germany because they had the proper connections in high places and because they could claim (indeed) that they knew Germany well. They got to know Germany in the twenties when they laid the foundation for Hitler's war machine—with American money. And in order to accomplish their postwar aims they knew how to get into the proper places and at the proper time. That is the reason also, we believe, why the members of the Dillon, Read firm have played such a prominent role in public affairs in recent times.

The question is, Did the American people select these officials to scuttle and liquidate the pledges made to them by their Government in the spirit of 1945? Will the American people continue to allow the spirit of the Dillon, Read firm to prevail? Will the American people be so foolish as to invest again in the heavy industries of the Ruhr in order to manufacture the weapons for world war III?

The Administration's Foreign-Trade Program

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Foreign Policy Flayed—GOP Stand Urged, appearing in the Deseret News, of Salt Lake City, Utah, for June 24, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES FOREIGN POLICY FLAYED—GOP STAND URGED

(By M. DeMar Teuscher)

A blistering attack on the administration's three-pronged foreign-trade program by Senator GEORGE W. MALONE, Republican, Nevada, highlighted Friday sessions of the national convention of Young Republicans Friday in Salt Lake City.

Charging that "American jobs are being transferred overseas because of adherence to the short-sighted policy of free trade," the junior Senator from Nevada urged young party members of the GOP to indorse flexible import fees to replace the free-trade policy.

The blunt-speaking Nevada solon was a key speaker in afternoon sessions of the second day of the conference at the Newhouse Hotel.

Earlier in the day delegates from 47 States had heard attacks on the present foreign policy by Representative DONALD L. JACKSON, Republican, California, and a charge that Republican leaders were neglecting their duty to the American people by their refusal to listen to the requests of the workingmen. The latter charge was voiced by Joseph D. Keenan, American Federation of Labor political-education director, who was one of three speakers to appear on a special labor panel Friday morning.

Senator MALONE, speaking forcefully in an avowed attempt to rouse the Young Republicans into waking up to their responsibilities, declared the Republican Party has "forgotten the workingman after 82 years of fighting for his protection through protective tariffs.

"A tariff is simply a floor under American wages. If we think we can follow the administration promise of preserving the American standard of living while allowing free trade with every nation on earth, we are badly mistaken," he asserted.

He attacked the administration's three-pronged program, declaring that under point 1—the ECA—our "chief export to guarantee trade balance deficits of European nations, our chief export is cash."

He added that under the proposed international trade organization, which would include 58 nations, we would have the same vote and eventually the same standard of living, as Siam.

The third prong of the program, a proposed 3-year extension of the 1934 Trade Agreements Act, is being pushed on a reciprocal trade basis, although no mention is made of the phrase "reciprocal trade" in the 1934 act.

"Adherence to the three-pronged free trade program is leading us into the position in which ECA-subsidized foreign factories already are underselling us on our home market," he charged.

He added that, when this situation became a general one, that American workers, particularly the farming, mining, lumbering, and textile industries, would find their jobs transferred to foreign soil.

"The Republican Party must offer the country a positive program to protect the workingman of the Nation, while assisting the nations of the world, on a real business basis, to raise their own living standards. When those standards meet ours, then is the time to talk for free trade," he asserted.

A Protest Against Communist Art

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein a resolution passed by the Native Sons of California at a meeting of the Grand Parlor in May.

The resolution speaks for itself and bears directly upon the production of some so-called modern artists. This is in harmony with exposures which I have discussed before the House of Representatives recently on three different occasions.

The resolution follows:

Whereas pursuant to action taken at the 1948 session of the Grand Parlor, resolution No. 41 referring to certain murals displayed on the walls of Rincon Annex Post Office Building in San Francisco was submitted to the board of grand officers having referred the matter to the Americanism committee; and

Whereas said Americanism committee, following an intensive investigation of said murals, rendered a report in writing incorporating its findings that said murals do not

truly depict the romance and glory of early California history, but on the contrary cast a most derogatory and improper reflection upon the character of the pioneers, and that other murals are definitely subversive and designed to spread communistic propaganda and tend to promote racial hatred and class warfare and recommending that the Grand Parlor go on record as opposing said murals: Now, therefore, be it

Resolved, That the findings and recommendations of the Americanism committee in connection with the said murals be approved and that this Grand Parlor go on record as condemning the said murals for the reasons aforesaid and that a communication be forwarded to the proper authorities advising of such action upon the part of the Grand Parlor and requesting the immediate removal of said murals; be it further

Resolved, That our Representatives in Congress from the State of California be advised of the action of this Grand Parlor and that their aid be solicited in accomplishing the objects thereof.

Tribute to the Greek People

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the Statler Hotel last Monday night before the Pan-Laconian Federation, a Greek organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, distinguished guests, and members of the Pan-Laconian Federation, it is indeed a privilege to be invited to take part in this convention for it is in such gatherings as these that the men and women who have come to our shores have kept alive the finest spirit of their own traditions and contributed so magnificently to our great American tradition of human dignity and freedom.

At the outset, may I extend my congratulations to you for the splendid work to which you are giving yourselves. The world needs more of this inspiring common concern for the less fortunate, for the suffering, the helpless, and the innocent victims of man's inhumanity to man, and for the underdog.

If civilization is to survive, this common concern for our fellow man must be established as the greatest single mark of human greatness.

For if history has one lesson to teach us, it is that free men in a free society can maintain their freedom only as they cultivate and strengthen this spirit, and discipline their own thoughts and actions by it.

It is my own humble opinion that there is no greater service we can render to ourselves or to others than by identifying ourselves with organized expressions of this spirit such as is represented by this Pan-Laconian Federation.

Our modern age has produced far too great a number of cynics, defeatists, and pessimists who decry as unrealistic and utopian this approach to the solution of our human problems.

In spite of the added ammunition, which each new generation seems to furnish the cynics in the form of increased human suffering, we know that over the long expanse of human history it is this spirit alone that has made the difference between civilization and savagery.

And as we look back over this history, we have learned that wherever man fails to keep this concern for the welfare of his fellow men alive, wherever he has refused to formulate and to abide by laws and customs designed to protect the rights, the freedoms, and the dignity of his fellow man, he has declared an open season on his own.

Certainly the tragic experiences of the recent war and postwar years have confirmed this simple fact. What is more, these tragic experiences have only placed a more staggering burden of proof on those of us who hold such a faith.

Yet it is true tonight, as it has always been in the past, that whenever a group of dedicated men and women are confronted by the challenge of an insoluble problem they can always derive inspiration from the quiet past, adequate to the stormy present.

In the year 490 B. C. news reached the Athenians that Darius was crossing the Aegean to conquer the Greek states, according to Herodotus, to enslave Athens and Eritrea and bring the slaves back into his presence.

Immediately an Olympic champion runner named Pheidippides was dispatched to enlist the aid of Sparta. For 2 days and 2 nights he traveled, swimming rivers and climbing mountains, finally returning with the news that the Spartan army would march at full moon.

Meanwhile the Persians had landed and the Athenians marched on Marathon in the mountain passes to hold the Persians until their allies could join them. On the march these 9,000 Athenians were joined by 1,000 Plataeans.

Finding these mountain passes unsuited for their cavalry units, the Persians reembarked their cavalry and part of their infantry to make an attack on Athens directly from the sea, leaving a rear guard of 20,000 men. On the advice of Miltiades, even though the Spartans were still on the Isthmus of Corinth, the Athenians decided to attack.

On September 21, 490 B. C., the Athenians did attack and destroyed the Persian rear guard, thus driving them out of Greece.

Then it was that Pheidippides set out on his historic run bearing the news of victory. Upon entering the city, he fell dead, gasping out as his last words, "Rejoice, we conquer!"

Ever since that day this story has held a peculiar fascination for the people of every land.

When the Olympic Games were reinstated at Athens in 1869 a marathon race was included in the program and has remained the outstanding event and the most coveted prize in the Olympic Games ever since.

It is only fitting that this race in 1869 was won by a Greek peasant named Loues. We are told that, as he entered the stadium at the end of the race the Greek spectators rose as one man in a frenzy of acclamation to celebrate their countryman's victory and that women literally tore off their jewelry and flung it in the path of his feet.

It is even said that a lowly street urchin approaching him with reverence promised to black his boots for the rest of his life for nothing.

I believe that no other event or act of physical endurance has ever so captured the popular mind as this 26-mile, 385-yard marathon.

For instance, the marathon was run in 1908 from Windsor Castle to the Olympic Stadium in Shepherd's Bush, London. In that year the 2,000-year-old tragedy of Pheidippides was very nearly repeated. This marathon was run in terribly hot weather and under conditions in which overeager participants set such a pace at the start that the condition of the leaders at the finish was pathetic.

It was Dorando Pietri, Italy's representative, who fought his way into the lead over the last stretch of the gruelling grind until just outside the entrance he was forced to slow down and finally forced to crawl on his hands and knees. As he entered the gate of the stadium he collapsed. First aid was administered and he rose to totter on around the arena track. Fifty yards further on he collapsed, and was revived and helped up again. Then only yards from the finish line he collapsed for the third time. This time it was a group of British spectators who could no longer restrain themselves who rushed to his side, picked him up, and carried him bodily across the line.

Of course this courageous Italian was disqualified since he never could have finished that race unassisted. Yet his determination and courage was recognized not only by the British spectators; it was matched by the gallantry of Her Majesty, Queen Alexandra, who awarded him a gold cup for his heroic performance.

It is little wonder then that this marathon run is regarded as the blue ribbon of the Olympic Games and is honored as a championship in all countries. Of the Olympic victors, the United States, Finland, and France have each produced two. The other victors come in singly from such widely scattered nations as Greece, South Africa, Argentina, and Japan.

Somehow this story of the marathon symbolizes the finest traditions of ancient Greece which you are keeping alive in this Pan-Laconian Federation.

In the first place, it symbolizes the endurance, the physical, mental, and spiritual stamina which can be developed through self-discipline only by free men and women or by men and women struggling and determined to be free. More than any other act of physical competition the marathon involves the rigors of the strenuous training program, of physical maturity, and keenness of judgment which taxes the powers of self-discipline of free men. And it was in ancient Greece that men discovered the constant necessity of such rigorous self-discipline if men and nations were successfully to withstand or surmount the impersonal forces of nature, time, and fortune. What else but this practice of self-discipline and self-denial could explain why Greece still exists as a nation today?

Overrun in turn by Macedonians, by Romans, by Goths, and Vandals, and Herulians and Slavs—conquered and turned into a colony by Normans, Byzantines, Venetians, and the riffraff of the Crusades, then almost completely depopulated and repopulated by the Albanians, forced to live under the ruthless tyranny of Turkish domination for almost four entire centuries—used as a base of supply and battefield by forces of the Allies in the First World War—attacked, occupied, devastated, and liberated by both sides in this last, greatest of all wars, now divided by civil and guerrilla warfare, and desperately awaiting the day of genuine liberation and peace, what greater inspiration could any of us seek than the knowledge that throughout such a history the finest traditions of the Greek people and the nation, itself, are still struggling and determined to be free?

The marathon is also symbolic of another great Greek tradition, namely the pride of citizenship. What greater allegiance can a man have than his allegiance to a like-minded group who share a common background, common customs, respect for the same laws, and patriotism and love for the same nation, and people that gave them birth. No other nation on earth has ever prized citizenship more highly than ancient Greece. Is it not tremendously significant

to find how this same ancient respect for the rights of citizenship, which is the basis of human freedom in a free society, has been kept alive by the constitution of the Pan-Laconian Federation, which incorporates among its other provisions a reaffirmation of your faith in and loyalty to the Constitution of the United States.

Those of us who throughout these tragic years have sought to alleviate human suffering and distress know better perhaps than anyone else what citizenship in these United States really means, and determined as we are to help our fellow men, we shall not lightly surrender the rights, privileges, duties, and safeguards which our present allegiance guarantees. For, until other peoples and nations have succeeded in developing the basis of similar rights and privileges, there can be no citizenship that is worthy of the name other than our own to which we can surrender.

To my mind, there is a third historic truth of which the marathon is symbolic. It is the mutual admiration and sense of fellowship in a great cause which integrity of character and physical endurance evokes from common folk. Again, great strength of mind, body, and heart, which are the result of self-discipline enlisted in the service of others, are perhaps the greatest assets and potentials of human freedom. For it is only where men are genuinely free that they can voluntarily identify themselves with and lose themselves in the service of others. Perhaps it is the lack of heroic self-denial and of complete identification with the sufferings of others that has failed to draw the peoples of the world closer together.

But I would rather believe when I realise how much you folks are doing to relieve distress, to establish hospitals in which to minister to the sick, and to share whatever may be your fortune with the less fortunate, and when I also realize the countless others who are rendering a similar service, I would rather believe, I say, that all these individual seeds have just not had time to take root and grow. Again, may I heartily congratulate you for the good work you are doing, for the great cause in which you serve, and may I leave this final word of encouragement. This work in which the Pan-Laconian Federation is engaged is keeping alive the instinctive humanitarianism of our great American traditions at their noblest.

Unemployment—Analysis by the Public Affairs Institute

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I have just read a study, "Unemployment: It's Here; Let's Stop It Now," made by the Public Affairs Institute on the most timely and important subject confronting us just now, namely, unemployment. In this brief analysis, the facts are presented and ways suggested for both relieving the conditions of the unemployed and halting the downward trend in economic affairs.

I commend the material of this study to all Members of the Senate; and ask unanimous consent that it be printed in the RECORD.

The Printing Office estimates that the manuscript will make four and a quarter pages of the RECORD, at a cost of $318.75.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

UNEMPLOYMENT: IT'S HERE; LET'S STOP IT NOW

(An analysis and program by Dewey Anderson, executive director, Public Affairs Institute, formerly State relief administrator of California, author of Occupational Trends in the United States, Recent Occupational Trends in American Labor, Occupational Mobility in an American Community; and Wilfred Lumer, staff economist; John Shott, senior economist, Public Affairs Institute, June 19, 1949)

A WORD OF INTRODUCTION

Let's end this growing indecision and anxiety about our country's economic condition right now. For it is doing none of us any good. It feeds on itself. That way leads to creeping paralysis. That way leads to despair. That way leads to depression.

Let's get our facts straight—as straight as we can. And then let's act as intelligently as we can, as boldly as we must, and in time to get going along the road to continued high levels of employment and full use of our resources.

We don't take any stock in the current whispering among men of high position in government, in academic circles, and business that we should not disclose the economic facts of life for fear of inducing a "psychological depression."

Most fearsome just now is a continuance of a policy of "drift" in the face of disturbing economic conditions and trends that may well lead us into depression. Inaction now is compounding the problems we will have to face later on.

Ours is still a healthy, vigorous economy. But it is not an economy that runs itself on some theory of automatic or mechanical self-stabilization. It responds to human decisions, human will, human effort.

In 1946 the American people, through their Congress, made an important, far-reaching decision. They passed the Full Employment Act. In signing it, President Harry Truman made a prophetic pronouncement:

"In enacting this legislation, the Congress and the President are responding to an overwhelming demand of the people. The legislation gives expression to a deep-seated desire for a conscious and positive attack upon the ever-recurring problems of mass unemployment and ruinous depression. I am happy that the Senate adopted this legislation unanimously, the House of Representatives by a large majority.

"The Employment Act of 1946 is not the end of the road, but rather the beginning. It is a commitment by the Government to the people—a commitment to take any and all measures necessary for a healthy economy, one that provides opportunities for those able, willing, and seeking work. We shall all try to honor that commitment."

In this legislation the American people gave expression to their determination not to accept an economic policy of drift.

It is to assist in redeeming this pledge that the facts and conclusions are set forth in this paper. It has not been idly conceived. Data have been collected from Government sources, and subjected to the critical appraisal of experts in the field. While the views expressed and proposals made are our own, and whatever errors of fact or judgment there be likewise ours, nonetheless it can be said that the general thesis and many of the proposals are shared by these experts, for whom we serve as a means of expression before the public in some degree.

We propose making another appraisal of the unemployment situation during the last quarter of 1949 and in the spring of 1950. We trust that so much will be done in time and on a scale large enough to halt present unemployment trends that our present analysis and predictions will require substantial revision.

We feel our obligation so keenly that we cannot refrain from making the findings of our research public at this time to assist in a better understanding of the facts. That is the purpose of the Public Affairs Institute—to present the facts in an objective manner, all the known and available facts so that the American people may work their way out to sound conclusions and appropriate action.

1. HOW MANY UNEMPLOYED

At least 3,300,000 persons were totally unemployed and actively seeking work during the week of May 14, 1949, according to the Census Bureau. The rate of unemployment in May 1949 (5.3 percent of the civilian labor force) was almost double the unemployment rate in November 1948 (2.7 percent).

This is not frictional unemployment. It is a minimum estimate of real unemployment, jobless people able and willing and actively seeking work. It is probably considerably below the actual number of people who are practically unemployed today.

The census figure gives no hint of the economic and social and human aspects of either unemployment or underemployment. But it is a rock-bottom figure to tie to and to measure against. It is big enough in actual numbers to concern all of us. The trend of unemployment since November 1948 ought to scare us into a realization that large-scale unemployment may be in the offing unless we act now to stop its growth.

2. HOW MANY WILL BE UNEMPLOYED?

We have analyzed the rate of economic decline that has set in. Assuming only a continuation of the moderate rate[1] that characterized the first half of this year, we estimate that there will be:

1. About 6,000,000 unemployed (5.8) in the last quarter of 1949.

2. By mid-1950 almost 8,000,000 unemployed (7.7).

3. WHERE ARE THE UNEMPLOYED?

Unemployment has passed the spot stage. It is not a local, but a national problem. It is most noticeable in our big industrial States. It has started the back-to-the-farm movement once more that prevailed in the early days of the great depression, hence is affecting the rural States as well.

Unemployment has reached such proportions in some States as to cause much concern. In New York during the last week of May there were 487,000 workers idle and seeking State unemployment benefits. This number was 76 percent above October 1948. Nor did it include 130,000 workers who had already exhausted their benefit rights to unemployment compensation, many of whom could still be unemployed. It likewise did not include any from among agricultural workers, the usually self-employed, professional, or other workers not covered by social security. Yet this figure was the largest number of unemployed on record in New York State since benefits were first paid in 1937.

With the start of the new benefit year in June 1949, the New York State Industrial Commission forecast the number of claims would jump to 600,000.

[1] Based upon projection of average monthly rate of decline in nonagricultural employment first 5 months of 1949 from fourth quarter 1948 levels and assumed 600,000 new entrants into the labor force in 1949. This also assumes a decline in gross national product of about 10 percent by fourth quarter 1949 as compared with the corresponding quarter 1948.

In the week ended May 14, 1949, there were more than 100,000 persons who had been unemployed for a week or more and were seeking unemployment compensation in each of seven other major industrial States, namely:

California	306,800
Pennsylvania	194,000
Illinois	179,100
Massachusetts	171,000
Ohio	130,500
Michigan	129,700
New Jersey	111,400

4. THE CONDITION OF THE UNEMPLOYED

In early 1948, 20,000,000 American families, almost half of all families in the country, had what might be called emergency funds, sums of less than $500. Eleven million families of this group had no liquid savings. Average liquid asset holdings of all skilled and semiskilled workers in the United States amounted to $250. This was the cushion against loss of a job or unforeseeable hazards confronting a substantial proportion of our people in the midst of our most prosperous period on record.

During 1948, the real wage position of a substantial number of workers deteriorated further. Continued depletion of savings and further resort to debt undoubtedly reduced the liquid asset position of the working group as a whole. SEC data on additions to individual holdings of liquid savings which show a decline of over 40 percent in 1948 tend to support this assertion.

The mounting unemployment of 1949 means that an increasing number of workers and their families are living off an unemployment compensation check at considerably reduced living standards and borrowing when they can or must. For the very substantial number who are ineligible for social-security benefits, it means public assistance. Legislation reminiscent of depression days is now before State legislatures. In Ohio, Gov. Frank Lausche has just said the mounting poor relief costs is the State's No. 1 crisis.

In economic terms, unemployment resulting from the curtailment of business activity since November 1948 has resulted in a decline of almost $5,000,000,000 in private wages and salaries by April 1949. This figure conceals completely the human misery, doubt, and anxiety that such income losses mean to the unemployed worker and his dependents. But those who lived through the depression decade can visualize that.

Substantial unemployment is the product of economic dislocation. Any amount of it, above that irreducible minimum known as frictional unemployment of the in-between job kind, is intolerable in a healthy economy. Yet there are those who viewed 1948 as a year of overemployment, would like to see the labor force reduced considerably in size, and who consider it impossible to maintain maximum levels of economic activity and large numbers of employed. These people of small faith and limited vision consider the full employment-full use of resources approach as impractical.

5. THE CONDITION OF THE EMPLOYED

There is danger that we take the easy road, seeking to level off economic activity at considerably below 1948, storing outside the economy a body of workers totaling 5 to 10 millions, trying to adjust matters for the workers employed so that they are content with their lot.

But workers are not easily segregated. The labor force, while fluid, is a body. Unemployed workers affect employed workers. Economic declines such as we are now experiencing have noticeable and unwholesome results for those workers who are fortunate enough to hold on to their jobs.

Here are some of the things that are happening to them.

Hours of work in factory employment during April 1949 averaged only 38.3 per week. This was the lowest level reached since mid-1940. It represented a reduction in the durable goods industries of 1.9 hours per week since last October, and in the nondurable goods industries of 2 hours since last September—the previous postwar peaks of hours worked.

Average weekly earnings in manufacturing during April 1949 had fallen $2.50 since December 1948, a decline of 5 percent in the past 4 months. Yet the cost of living had reversed its previous declining trend, advancing in April over March. With food, rent, utilities, and transportation rates up, with the earnings of employed workers declining, with unemployment mounting, the squeeze is on. As the effective demand of employed workers falls, the entire economy will feel the effects.

6. WHAT IS UNEMPLOYMENT COSTING US?

Projecting fourth quarter 1948 output and price levels, we estimate that the difference between what full employment output would have been and what was actually produced in the first quarter of 1949 cost us $13,000,000,000 (at annual rates). This is equivalent to an annual average loss in goods and services which might have been available to each of our 42,000,000 families of $310.

If the present rate of decline is not accelerated, by the fourth quarter of this year less than full employment will be costing us a potential of about $40,000,000,000 in goods and services (at annual rates). If the same rate of decline continues through mid-1950, for fiscal 1950 the annual average loss will be about $50,000,000,000.

Our stake in full employment is represented by a threatened potential annual average loss of about $1,200 in goods and services which every family in the United States could have if full employment prevailed during the fiscal year 1950.

Can we afford to settle for anything less than full employment and continuous full employment?

7. THE COST TO THE FEDERAL GOVERNMENT

Had fourth quarter 1948 full-employment conditions prevailed during the first quarter of 1949, Federal net cash receipts would have been about $2,000,000,000 in excess of expenditures (at annual rates seasonably adjusted).

Less than full employment prevailed in the first quarter of 1949, however, and resulted in an estimated excess of net cash expenditures over receipts of about $1,500,000,000 (at annual rates seasonally adjusted). The cost to the Federal Government of less than full employment was about $4,000,000,000.

If nothing is done to stop the present economic decline, and our estimate of nearly 8,000,000,000 unemployed holds true for mid-1950, there will be an excess of Federal net cash expenditures over receipts of about $10,000,000,000 for fiscal year 1950 (at annual rates seasonably adjusted).

If full-employment conditions at the levels of fourth quarter of 1948 are projected through fiscal year 1950, it is estimated that there would be an excess of net cash expenditures over receipts of only $1,000,000,000.

Unemployment of any size and duration costs the Federal Government, which is another way of saying the people, too much money to be tolerated. We simply cannot afford, as a Government, to permit the present levels of unemployment to continue any longer. To let them mount higher is to court serious trouble.

8. IS THIS RECESSION OR DEPRESSION?

When the joint committee of Congress heard testimony on the economic report of the President in February of this year, business economists and experts told the committee that there was little to worry about. We were experiencing a healthy readjustment, just let business alone and all would come out all right. The economy was like an overfed baby, just "burp it" and all would be well. Other cautious people called what was happening a reasonable disinflation, and urged above all else that we keep calm.

Well, let's accept this last admonition and calmly survey the current situation.

The Census estimate of a 2,200,000 decline in nonagricultural employment since November 1948 reflects sharp cut-backs in output resulting from a weakening demand for goods and services. It does not reflect a satisfaction of the essential needs of many million Americans who are still potential buyers of goods and services. It does not indicate that we have satisfied the wants and reasonable desires of our people.

But it does show that potential buyers did not have the money to buy with, that prices were not sufficiently attractive to those who did, and that businessmen saw insufficient prospects of selling, hence factory wheels slowed down or stopped and shops curtailed activity.

All this resulted in man-hours of durable goods workers dropping 14 percent in April from the postwar peak of October 1948. Nondurable-goods workers lost 16 percent in man-hours from the peak of September 1948.

Total industrial output had declined more than 10 percent by May 1949 from the October 1948 peak, according to the Federal Reserve Board's Industrial Production Index.

In steel, the bellwether of industrial output, operating ratios had declined by the week of June 6 to 89.1 percent of capacity as compared with a March 1949 peak of 102.0 percent. And there appears to be nothing in sight or contemplated that will alter the successive weekly declines in steel production.

By the end of May 1949, demands for capital as represented by business loans outstanding at weekly reporting banks in the United States had declined for 17 consecutive weeks. In the first 22 weeks of 1949, business loans at reporting banks fell $2,100,000,000.

Residential home building, as reflected in new starts, had been lagging. In the first quarter of 1949, 12 percent fewer homes were started than in the same quarter a year ago. In April 1949, starts were 14 percent below the previous year's level. In May, approximately the seasonal peak, the drop-off was less substantial—about 5 percent below last May's postwar record of 100,000 new starts. However, with seasonal factors exercising diminishing influence in the remainder of 1949, and with actual and prospective declines in income and employment limiting effective demand, home-building activity can be expected to fall below the level of second-half 1948.

All these add up to ominous signs of economic dislocation only partly reflected thus far by declines in business activity and employment. They are not the kind of facts that warrant any easy "prosperity just around the corner" psychology. Yet they do not spell inevitable and prolonged "depression," either. Government action on a modest scale now may well avoid the necessity of drastic action later. For, as measured in terms of gross national product, the drop from the fourth-quarter 1948 peak has not been too serious.

No one can predict the future with any certainty, for no one can control all the important factors that go to make that future. Our main point is that the present situation is too serious to ignore; it requires the careful and immediate consideration of the President, the Congress, organized business, organized agriculture, organized labor. It deserves the attention of all thoughtful citizens.

For the real danger period lies just ahead of us. It is in the second half of 1949. If the presently accelerating trend toward sharper business declines and increasing unemployment are not reversed, and soon, we are headed for serious difficulties. They can be stopped now, if we will to stop them.

9. THE STRATEGIC ROLE OF THE GOVERNMENT

The National Government—the administration and the Congress in combination—

can take the steps necessary to counter the foreseeable trend toward further economic down-turn in the latter half of 1949 and early 1950. Only the Government has the statutory obligation and power to do so.

So far, the downturn in economic activity has been moderate due to several factors, some of which may not be present as a brake against depression in the near future. That is why the Government can and should act now while declining trends are still manageable.

Here are some of the reasons why the decline has been moderate to date.

(a) Steel and autos, two key industries both as primary employers of labor and as vital segments of our industrial society, have continued to operate at high rates mainly as a result of accumulated backlogs of actual orders on their books.

In steel, the inventory position of warehousers, fabricators, and end product users is now in excess of current and foreseeable rates of demand. The warehouses are bulging; inventories, too. Backlog, as the result of current operating rates, has vanished. Cancellation of orders has hit the industry at an alarming rate. New orders are substantially below the level necessary to support current operating rates. By year-end, if no reversal of the present trend occurs, operating rates may be expected to decline to 75 percent of capacity or below. This will mean substantially more than 25 percent curtailment of employment, for high-cost, heavy man-using capacity will be completely retired.

In autos, there is still a heavy demand. But backlogs are being met and demand will respond to changes in personal income in the second half of 1949. Output will be adjusted to this situation. Only if mass purchasing power is maintained at higher levels, can the auto industry hope to continue high-level production during the last half of 1949 and the first half of 1950. This means halting the currently developing economic decline.

(b) Exclusive of the steel and auto industries, business generally in the first half of 1949 did cut back production to an anticipated lower level of demand. But despite these precautions, as is characteristic in the initial stages of the downswing of the economic cycle, business overestimated the strength of demand. This overestimation of demand lent added strength to the economy and moderated the rate of decline in the first half of this year.

In the absence of action which will tend to strengthen current demand, however, businessmen will profit by their experience during the first half of this year, and adjust their production schedules downward. This is already occurring in a wide variety of businesses, some of which have gone so far as to appeal to the Government for bailouts.

(c) The Federal Government has played a decisive role in keeping the economy on high levels of activity during the past several years. It has been especially important in moderating the present decline. Rising cash expenditures combined with a declining level of cash receipts resulted in an estimated net Federal cash contribution during the first half of 1949 of about $5,000,000,000 (at annual rates). But the Government's net contribution to the economy fell off, in the first half of 1949, by approximately 50 percent below the rate in the second half of 1948. This may have had a very important bearing on the decline in general business conditions in the first half of this year.

10. PREVIOUS DECISIVE ROLES PLAYED BY THE GOVERNMENT

In the past, the Government has played a decisive role in maintaining high levels of economic activity. We achieved our wartime full employment through Government action. We were climbing out of the great depression through Government action. We sustained much of the postwar economy through Government action, thereby averting widely predicted cut-backs.

But can the Government so act to decide the trend either toward or away from depression now? In the recent past the Government has played just such a role. We can learn from that experience. Here it is:

1. In the early part of 1947 business encountered a softening of consumer demand. Some saw this as the long expected postwar depression. It had many of the earmarks. Cautious output and spending policies were initiated in the first quarter of 1947, and were reflected in actual declines in business investment in the middle quarters of that year.

In June 1947, however, the European recovery program proposal came along, shortly after an unexpected rise in foreign demand, and produced a decisive reversal of earlier business pessimism. One has only to recall how effectively business supported ERP until it was passed by Congress, and to get its billions appropriated without one cent of reduction in the total, to have more than a hint of the importance of ERP to business output plans in 1947 and 1948. Seldom did American business want the Government to spend such large amounts of taxpayers' money so fast.

Another important action of the Government in 1947 was the redemption of $2,000,000,000 in terminal leave bonds beginning in September of that year. Here was purchasing power put directly into the hands of hundreds of thousands of consumers scattered all over the land. This is the kind of purchasing power that seeps into every nook and cranny of the economy, gets spent quickly and to excellent advantage in sustaining or reviving business optimism.

These two actions by Government, namely the ERP program and the redemption of terminal leave bonds, went a long way toward reversing the business pessimism which characterized the first half of 1947.

2. In 1948, involuntary accumulations of inventory in the face of high levels of output again engendered business pessimism about the future prospects of demand. Again the possibility of declines loomed ahead. But again, Government action at a critical juncture proved decisive. That action took the form of (a) increased appropriations and contract authorizations for rearmament and military purposes, and (b) the $5,000,000,000 tax reductions.

While this evidence of the important role that Government has played in maintaining economic activity and bolstering lagging purchasing power may be dismissed by some as too circumstantial, we doubt whether any will hold that the outcomes would have been as beneficial had the Government failed to act. We believe that the Government can and should act now.

11. WHAT ACTION SHOULD THE GOVERNMENT TAKE NOW?

Before proposing a specific list of things the Government should consider to halt the downward economic trend now, two points should be made.

First, the Government has a clear statutory obligation under the Employment Act of 1946 to act affirmatively. The obligation rests jointly with the President and the Congress, and both must be held accountable to the people.

Second, it should be manifest to the so-called budget balancers that it is now too late in the downswing of the economic cycle to effect a balanced budget by cutting expenditures of the Government. This is not to say that every bit of padding, every bit of waste, should not be cut from the budget. That should be done for efficiency reasons alone. But major budget cuts now will only aggravate the present economic decline and make the effort to bring about a reversal more difficult and more costly.

The proposals to be considered, stripped of all other purposes, are based on the notion that business investment and plans for production are fashioned by business managers in accordance with their expectations of the probable level of demand for their product. If the current downward trends are to be halted, something must be done now to give businessmen proof of the firmness and high level of demand. That means Government must discharge its obligation of providing so far as lies within its power the conditions of full employment.

Our proposals for consideration and study fall into two broad categories, namely, those things which the Government can do before Congress adjourns for the summer recess, and those longer-range activities which the Government should start and continue if the pull-out from current decline is to result in sustained high levels of economic activity leading hopefully toward economic stability at full employment-full use of resources levels.

Things the Government should consider now:

1. Raise tax exemptions and reduce tax rates

In a time of declining economic activity arising from a weakening of effective demand the thing to do is to increase effective demand. This can be done by Government putting directly into the hands of prospective purchasers more spending power.

At this juncture Government should raise exemptions in the lowest tax paying brackets and reduce rates in the middle brackets, if consumer demand is to be promptly and effectively stimulated.

Budgets can't be balanced when activity is declining. Revenues fall faster and sharper than expenditures can be cut.

2. Increase incomes for those who do not benefit from lower taxes

The lowest income groups and those with the highest spending ratios out of given income levels are the groups not affected by tax reduction. They either earn too little to pay taxes or don't earn anything by reason of unemployment. Their purchasing power could be raised by:

(a) Veterans:

Extend the veterans' readjustment benefits program which expires next month for at least 1 year. At a level of 5,000,000 unemployed it is estimated that benefits paid to this group would come to one-half to three-quarters of a billion dollars. A high respending effect would produce jobs corresponding to a much larger total amount of money than the initial payments.

Move up the date of payment for the $2,000,000,000 national service life insurance premium from 1950 to second half of 1949. If the armed forces terminal leave bond redemptions provide a guide, it can be expected that these premiums will be respent and lift total demand immediately.

(b) Nonveterans:

Increase the duration of covered unemployment and raise benefit rates.

Increase the old-age retirement benefits.

Remove eligibility restrictions on public assistance.

Increase the Federal share of public assistance to be matched by the States to at least $2,000,000,000 for fiscal 1950.

3. Provide employment and income directly

Initiative emergency public works and service projects in distressed employment areas. Service projects are especially important for white collar, nonmanual labor groups who cannot be employed on heavy public works.

4. Youth programs

(a) Higher education:

Many veterans now in school will not be able to complete their higher education as a result of insufficient armed service credits. These groups should not be thrown on the labor market when jobs are scarce. Their subsistence and scholarship allowances should be extended to permit completion of

their higher education. The return to the Nation of the higher incomes which the added skills will enable these veterans to produce will more than compensate intial outlay.

For nonveterans the Government should inaugurate stipend allowances based upon scholarship qualifications to enable the youths now completing high school to go on to higher education.

The same reasons which apply to the necessity for extension of the veterans' programs are applicable here.

(b) Reestablish Civilian Conservation Corps.

There is a great backlog of conservation work, fire prevention, park maintenance, etc., which has been accumulated.

A nonmilitary youth conservation corps providing 1 year of useful, healthy outdoor activity will be beneficial to the youth, increase incomes, and relieve pressure on the labor market.

5. Provide adequate Employment Service appropriation

During a period of unemployment and job scarcity the work of the Employment Service becomes increasingly important.

Prompt job referrals and adequate coverage of employment prospects will minimize the incidence of unemployment.

Adequate studies of skills and adaptability to new skills will greatly enhance retraining of workers for occupations which appear more promising.

In conjunction with the above services, the Employment Service should be authorized to provide financial assistance for transportation of workers and their families to new job sites.

The foregoing proposals are admittedly not the answer to the basic problems in our economy which must be met and solved if we are to have long-term sustained economic stability and growth.

They are, however, immediate things which the Government can do to mitigate the rate of economic decline and ameliorate the conditions of the initial victims of business recession.

The longer-range problems cannot be overly delayed.

Experience in the postwar should teach us that distortions in the distribution of income cannot long continue before its effects produce an insufficiency of demand relative to output and consequent adjustments of investment, output, and employment.

We need tax, wage, and price policies that will make for increasing levels of consumption expenditures both absolutely and as a percent of total demand.

We need liberal credit policies and profits as an incentive to investment and output but profit rates that coincide more in line with the reduced long-time trends in the cost of securing capital and with the proper amounts necessary to induce sustainable levels of investment.

We need a national labor and wage policy designed to stimulate and strengthen free collective bargaining, rather than restricting it, high minimum wage standards, both of which should reflect in real wage income the growing productivity of our work force and the level of consumption necessary to sustain maximum production.

We need to recognize, as the postwar experience is teaching us, that increasing levels of Government and private investment, in the absence of the stabilization measures implied in the brief comments here, tend to become self-nullifying and in the end cannot avert the consequence of growing economic imbalance.

Finally, we have to recognize that ours is a dynamic economy which requires continued expansion or else it declines.

A goal of 60,000,000 jobs may have corresponded to full employment in 1946 but a growing population and the productivity which as yet uncovered technology will give us requires setting our sights for the 1950's far above 60,000,000 jobs.

TABLE I.—*Civilian labor force, employment, and unemployment*

Period	Civilian labor force	Employed workers			Unemployed	Unemployed as a percent of civilian labor force
		Total	In nonagriculture	In agriculture		
1948—January	59,214	57,149	50,089	7,060	2,065	3.5
February	59,778	57,139	50,368	6,771	2,639	4.4

Source: Census Bureau's Monthly Reports on the Labor Force.

EXPLANATION OF TABLE I

Civilian labor force, employment, and unemployment

These data are taken from the Census Bureau's monthly reports on the labor force. That survey is an approximation of the national situation derived from a sample of the population.

The Census Bureau has stated it is "neither a minimum nor maximum measure" of unemployment.

It has been criticized as an understatement of the true unemployment situation in its total economic context.

These estimates have consistently been referred to as reflecting merely frictional unemployment, i. e., people temporarily in between jobs not primarily attributable to economic factors.

This is a mistaken interpretation.

The Census estimate of unemployment reflects only those people totally unemployed at least 1 week and who volunteered the information that they were actively seeking work.

Excluded from the labor force estimates are the so-called inactive unemployed. Persons totally unemployed but who are not actively pressing upon the labor market. Three Census test surveys June 1947, February 1948, and June 1948 indicate that inactive unemployment averaged 20 percent of reported unemployed. In May 1949 this group would have increased reported unemployment 660,000.

Excluded from the number reported unemployed and included as employed but not at work are a group of persons not working but reported as—

(a) Temporarily laid off with definite instructions to return to work within 30 days of lay-off.

(b) Scheduled to report to a new job or business within the following 30 days.

Category (a), it has been pointed out, becomes increasingly less definite as economic activity declines and lay-offs increase. The employers' intention to recall laid-off workers and the new job prospects become increasingly negated by worsening of the business outlook.

It can be seen also that (a) and (b) occurring consecutively could result in a worker being totally unemployed for 60 days, yet classified as employed in the census estimates.

Excluded from the number unemployed and reported as employed in census estimates are persons who may have worked as little as one hour a week by reason of economic conditions.

If there is such a concept as frictional unemployment its measurement is to be found in a portion of the persons excluded from the Census estimates of unemployment.

In reading the table, it should be borne in mind that the movement of the nonagricultural group is most significant. For, the figures on agricultural employment are subject to certain qualifications and interpretations. Agricultural employment is sharply seasonal, and this has to be taken into account in reading down the column of figures. Also, agricultural employment is flexible. It reflects the situation prevailing in the relatively more attractive city employment. A city worker returns to the family farm during periods of lay-offs or unemployment. Whether as a worker on the farm in the true sense is not too well known.

Nonagricultural employment figures are extremely important, first because five-sixths of all workers are so engaged. This is the segment of the labor force which is subject to sudden or prolonged changes in economic conditions. These are the people who comprise the bulk of consumers and are most dependent on their weekly pay envelope for their ability to buy goods and services. These are the people who possess great unmet wants that represent a huge aggregate of potential demand.

No statistical figure in this table, no percentage of the total labor force represented as unemployed, is a matter to be viewed with equanimity, or these figures do not represent some frictional unemployment of people in between jobs who are just getting readjusted. These figures are a minimum estimate of real unemployment.

TABLE II.—*Changes in nonagricultural employment and total unemployment*

NONAGRICULTURAL EMPLOYMENT

[In thousands]

	1948	1949	Increase (+) or decrease (−)
January	50,089	50,651	+562
February	50,368	50,174	−194
March	50,482	50,254	−228
April	50,883	49,999	−884
May	50,800	49,720	−1,080

TOTAL UNEMPLOYMENT

January	2,065	2,664	+599
February	2,639	3,221	+582
March	2,440	3,167	+727
April	2,193	3,016	+823
May	1,761	3,289	+1,528

EXPLANATION OF TABLE II

Changes in nonagricultural employment and unemployment

This table sets forth changes in employment and unemployment of nonagricultural workers, arranged to enable the reader to see what has occurred in comparable time periods. In January 1948, 50,089,000 persons were employed in nonagricultural pursuits. A year later 50,651,000 were so employed, a gain of 562,000. But during the same time span unemployment had increased from 2,065,000 in January 1948 to 2,684,000 in January 1949, an increase of 599,000. Here is noted a phenomenon of both increased employment and increased unemployment.

But in no monthly comparisons since January has this occurred. On the contrary, each monthly comparison shows a decrease in the number of employed workers and an increase in the number of unemployed.

Let us look at one or two displays. From February 1948 to February 1949 nonagricultural employment dropped 194,000. During that time unemployment increased 582,000. From May 1948 to May 1949 employment decreased by 1,080,000; while unemployment increased by 1,528,000 workers. This represents a loss of jobs for employed workers and the failure of new entrants to secure employment.

While there is no regular pattern of increments of declining employment of nonagricultural workers, each successive monthly comparison shows a substantial decrease over the previous month. If a rate of decline persists for the period ahead as is shown for recent months, it would indeed prove frightening.

Each successive year-to-year comparison from February 1948 through May 1949 shows mounting unemployment, and with sizable increments.

Lone Star Steel

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. PATMAN. Mr. Speaker, much has been said recently about the application of the Lone Star Steel Co., of Lone Star and Dallas, Tex., for a loan of $74,000,000 from the Reconstruction Finance Corporation for the purpose of establishing an integrated steel plant at Lone Star, Tex.

This project was commenced just before World War II, and although the blast furnace was practically complete when the war was over, the plant had never gone into production. The last year, however, it has been in production and producing from 1,000 to 1,200 tons of pig iron a day. It is good pig iron and sells for a premium price. In addition, it produces valuable coke and many valuable byproducts.

It is well known that a plant of this type cannot survive indefinitely making pig iron alone.

Mr. John W. Carpenter initiated this project and no person worked harder for its success than Mr. Carpenter. This week Mr. Carpenter sent to President Harry S. Truman a telegram, which gives an interesting history of the project and also recommends the loan applied for. It is as follows and is self-explanatory:

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: I have just sent the following telegram to the Chairman and members of the board of Reconstruction Finance Corporation, Washington, D. C.:

"I am communicating with you with reference to loan application of Lone Star Steel Co. As president of Texas Power & Light Co., I caused to be made an extensive investigation of iron-ore deposits in east Texas. Said investigation was made at great expense and over a long period of time. The investigation revealed that there are large rich deposits of iron ore in east Texas. At my expense I had iron ores assayed and tested as to iron-making kind and quality and found that the ores were suitable for profitable commercial operations.

"I caused also to be made tests as to quantity and quality of Oklahoma coals to determine as to suitableness for coke making, both as to blast-furnace and foundry uses, and found the coal highly suitable for profitable use in both blast-furnace and foundry operations. I found that there was large and inexhaustible quantity available at low cost of mine operations. In 1940, I advanced the funds for the organization of Lone Star Steel Co. and served as its president until 1947. During that time the facilities now located near Daingerfield were constructed and erected by Lone Star Steel Co. as agents for Defense Plant Corporation. The plant and properties were economically well constructed, designed, and built by some of the Nation's most highly qualified engineers and construction men. Dr. George H. Anderson whom, I understand, is one of Lone Star Steel Co.'s representatives negotiating with you for the loan which will be used in the building of steel facilities. Dr. Anderson is thoroughly familiar with the facts pertaining to Lone Star Steel Co.'s plant and property both in Texas and in Oklahoma. He is imminently qualified to pass upon these matters with reference to the loan now pending. I obtained the services of Dr. George H. Anderson from and upon the advice of Dr. Stein, vice president of du Pont Co., Wilmington, Del.

"After years of investigation and work and great expenditures of funds in proving the usefulness of Texas ores and Oklahoma coals for above-named purposes and after building facilities of Lone Star Steel Co. and after having acquired the properties from War Assets Administration, it is tragic to see other large steel interests utilizing east Texas iron ores which were proven and tested as to usefulness as above stated and also utilizing Oklahoma coals which were proven and tested by Lone Star Steel Co. as above stated and successfully using the same in the production of iron and steel. I say that it is a tragic affair that Lone Star Steel Co. was denied the loan during the war times as its application embraced to build a completely integrated steel plant and at the same time approval was given to application of other steel companies to build similar plants in this area and to use the same materials, both iron ore and coal, that were discovered and proven as to their usefulness at the expense of first Texas Power & Light Co. and Lone Star Steel Co. In 1947, due to my health and also due to increased responsibilities with Texas Power & Light Co., I resigned as president of the company and asked the board of directors to elect E. B. Germany, which was done. I have continued as a member of the board of directors of the company and am vitally and deeply interested in seeing Lone Star Steel Co. completed to a fully integrated steel plant. The value of the iron ores and coal fields and plant facilities and other properties exceeds the amount estimated in the loan application now filed with you. The value is considerably more than the amount of the loan requested and the Reconstruction Finance Corporation not only will be fully justified in making the loan to the Lone Star Steel Co. as per its application in the amount of $74,000,000 but it will be rendering a public service to the economy of our whole country and especially rendering a service to the economy of the people of the five Southwest States: Texas, Oklahoma, Arkansas, Louisiana, and New Mexico. The loan as above stated is fully justified and the security offered by the company safeguards RFC amply for making the loan and it will all be paid back and RFC will lose no money whatever but the making of the loan will redound to the credit of the officers of RFC for helping a worthy struggling concern which will become with the help of RFC a valuable asset to our entire country. It will be a substantial taxpayer. It will be a stabilizing influence in the economy of the five Southwestern States and the entire United States. The making of this loan as per the application of Lone Star Steel Co. will be a demonstration that the welfare of independent concerns such as the Lone Star Steel Co., which is owned almost wholly by the people of Texas and the Southwest is and will be safeguarded and encouraged by RFC. The failure to make this loan will be most regrettable and unfortunate. I have spent the past 50 years in building and constructing and operating properties as large and some of which are larger than Lone Star Steel Co.'s properties, and I believe that my appraisal of the values of Lone Star Steel Co. and its future possibilities are conservative.

"I serve as a member of the RFC in Dallas and have for many years, and I have had an opportunity to look in upon and appraise many of the loans made by RFC for other kinds of projects and industries, and it is my candid and honest opinion that Lone Star Steel Co.'s plant and its operations and the results of the same will give RFC a feeling of great satisfaction and pride for having helped an industry that has already proven its merit and worthiness.

"With highest regards,

"JOHN W. CARPENTER,
"Chairman of the Board,
"Texas Power & Light Co."

The Lone Star Steel Co. enterprise was founded and built without any promotion expense whatever, as I am sure you already know. The Honorable SAM RAYBURN, Speaker of the House; the Honorable WRIGHT PATMAN, Member of Congress; and the Honorable TOM CONNALLY, United States Senator from Texas, I am sure, will vouch for the integrity and patriotism of Lone Star Steel Co. and the men who organized and built it. These gentlemen and other Members of the Senate and Congress from the five Southwestern States helpfully cooperated in many respects to the end that an efficient pig-iron plant, including blast furnace, coke ovens, and other facilities and auxiliaries, were built; but the steel-making facilities which our application called for were not then approved. The Lone Star Steel Co.'s plant is incomplete until steel-making facilities are added as per plans and specifications which have been filed with the Reconstruction Finance Corporation, together with application for loan for the same. As stated in my telegram to RFC, above, the value of properties of Lone Star Steel Co. already built and owned is more than the amount requested in loan application.

I am sending this to you because I believe that it is in accordance with your policy to be helpful with such an enterprise as this one, and anything that you may say or do in behalf of Lone Star Steel Co.'s application for the loan will be deeply appreciated by the people of the Southwest.

With highest regards, I am,

Sincerely yours,

JOHN W. CARPENTER.

What Price Freedom?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting an article, What Price Freedom?, presented as a public service by the International Latex Corp. and which appeared in the Washington Post on Thursday, June 30, 1949.

I want to commend to the Congress the thoughts expressed in this article by Chancelor Robert M. Hutchins, of the University of Chicago. They are well worth the spending of a little time on because, in these trying days, it is heartening to hear a man of Chancelor Hutchins' ability and integrity speak out on the question of freedom.

The times call for an awareness of our great American heritage and a recognition that the freedoms which are so peculiarly ours must be maintained if we are to go forward and remain great. These principles which have been handed down to us must not be lost through complacence but rather they must be maintained to the end that this country will continue to furnish the right kind of leadership to our own people and to a world sorely in need of guidance at this particular phase in its history.

The article follows:

WHAT PRICE FREEDOM?

(By Robert M. Hutchins, chancelor of Chicago University, at the two hundred and thirty-seventh convocation)

We hear on every side that the American way of life is in danger. I think it is. I also think that many of those who talk the loudest about the dangers to the American way of life have no idea what it is and, consequently, no idea what the dangers are that it is in.

You would suppose, to listen to these people, that the American way of life consisted in unanimous tribal self-adoration. Down with criticism; down with protests; down with unpopular opinions; down with independent thought. Yet the history and tradition of our country make it perfectly plain that the essence of the American way of life is its hospitality to criticism, protest, unpopular opinions, and independent thought. A few dates like 1620, 1776, and 1848 are enough to remind us of the motives and attitudes of our ancestors. The great American virtue was courage.

We ought to be afraid of some things. We ought to be afraid of being stupid and unjust. We are told that we must be afraid of Russia, yet we are busily engaged in adopting the most stupid and unjust of the ideas prevalent in Russia, and are doing so in the name of Americanism. The worst Russian ideas are the police state, the abolition of freedom of speech, thought, and association, and the notion that the individual exists for the state. These ideas are the basis of the cleavage between east and west.

Yet every day in this country men and women are being deprived of their livelihood or at least their reputation, by unsubstantiated charges. These charges are then treated as facts in further charges against their relatives or associates. We do not throw people into jail because they are alleged to differ with the official dogma. We throw them out of work and do our best to create the impression that they are subversive and hence dangerous, not only to the state, but also to everybody who comes near them.

The result is that every public servant must try to remember every tea party his wife has gone to in the past 10 years and endeavor to recall what representatives of which foreign powers she may have met on these occasions. A professor cannot take a position on any public question without looking into the background of everybody who may be taking the same position on the same question. If he finds that any person who is taking the same position on this question has been charged with taking an unpopular position on another question, the professor had better not take any position on this question, or he may be haled before some committee to explain himself.

Is this the American way of life? The great American word is freedom, and in particular, freedom of thought, speech and assembly. Asserting the dignity of man, and of every man, America has proclaimed and protected the freedom to differ. Each man is supposed to think for himself. The sum of the thoughts of all is the wisdom of the community. Difference, disagreement, discussion decided by democratic processes are required to bring out the best in the citizens. America has grown strong on criticism. It would be quite as consistent with the American way of life to offer prizes for the most penetrating criticism of our country as it would be to offer prizes to those who have done the best job of advertising it.

The heart of Americanism is independent thought. The cloak-and-stilleto work that is now going on will not merely mean that many persons will suffer for acts that they did not commit, or for acts that were legal when committed, or for no acts at all. Far worse is the end result, which will be that critics, even of the mildest sort, will be frightened into silence. Stupidity and injustice will go unchallenged because no one will dare to speak against them.

To persecute people into conformity by the nonlegal methods popular today is little better than doing it by purges and pogroms. The dreadful unanimity of tribal self-adoration was characteristic of the Nazi state. It is sedulously fostered in Russia. It is to the last degree un-American.

American education has not been constructed on such un-American principles. In general, the practice has been to give the student the facts, to try to help him learn to think, and to urge him to reach his own conclusions. It is not surprising that the heart of American education is the same as that of Americanism: It is independent thought. American education has not tried to produce indoctrinated automatons, but individuals who can think, and who will think always for themselves. The basic principle of American Government, and one that accounts for the importance of education in this country, is that if the citizens learn to think and if they will think for themselves, the Republic is secure. The basic principle of the Russian dictatorship is that the people cannot think or cannot be trusted to think for themselves.

The American doctrine rests on the proposition that it is the individual in himself that counts. It is not who his father was, or how much money he has, or what his color or creed is, or what party he belongs to, or who his friends are, but who and what is he? So the test of a teacher is whether he is competent. The professional competence of a teacher is hardly a question on which lay bodies, or even administrators or trustees, would wish to pass without the advice of persons professionally competent in the teacher's field.

If we apply any other test than competence in determining the qualifications of teachers we shall find that pressures and prejudice will determine them. In 1928 it was said that Al Smith could not be President because he would be subservient to a foreign power; and today in many places, and if not today it may happen tomorrow, anti-Catholic or anti-Jewish campaigns may mean that teachers who belong to those churches will not be able to practice their profession.

Teachers may be expected to obey the law of the land. But it is still permissible, I hope, to ask whether a law is wise. To discriminate against teachers, to act as though they were all disloyal, and to put them under special legal disabilities seems injudicious if we want able, independent men to go into the teaching profession.

The assumption appears to be that American education is full of Reds, an assumption that is the precise reverse of the truth. All the excitement of the last few years, all the hearings, investigations, and publicity releases, have not turned up more than four or five Communist professors, even though membership in the party has been perfectly legal up to now. To require oaths of loyalty from all because of the eccentricity of an infinitesimal minority is an unnecessary and derogatory act. And of course it will not effect any useful purpose; for teachers who are disloyal will certainly be dishonest; they will not shrink from a little perjury.

The way to fight ideas is to show that you have better ideas. No idea is any good unless it is good in a crisis. You demonstrate the failure of your ideas if, when the crisis comes, you abandon them or lose faith in them or get confused about them to the point of forgetting what they are. The American idea is freedom. Freedom necessarily implies that the status quo may come under the criticism of those who think it can be improved. The American idea is that the state exists for its citizens and that change in society must occur to meet their developing needs. The whole theory of our form of government is a theory of peaceful change. Many of the changes that Marx and Engels demand in the Communist manifesto have taken place in this country, and they have taken place without communism, without dictatorship, and without revolution, thus disproving, incidentally, one of the central theses of Marx and Engels, that such things cannot be accomplished without communism, dictatorship, and revolution.

These reflections on the Communist manifesto lead me to say that labeling some thing or some man Communist because Communists happen to favor it or agree with him, that easy process by which one disposes of different views by applying a dirty name to them, involves the negation of thought of any kind. If it had been applied consistently in American history it would have deprived us of some ideas and some men that we are proud to think characteristically American. For example, the Communist manifesto demands free education for all. Are we therefore to recant, and renounce the American doctrine of free education for all?

And what would the FBI say of Thomas Jefferson, who calmly remarked in his first inaugural, "If there be any among us who wish to dissolve this union, or change its republican form, let them stand undisturbed, as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it"?

Jefferson was not in favor of revolution; he was serene in the face of talk of it because he had confidence in our people, in our institutions, in democracy, and in the value, power, and results of independent thought.

We are now in the midst of a cold war. We must protect ourselves against external enemies, their representatives in this country, and any citizens who may be conspiring to overthrow or betray the Government. But the statute books are already filled with laws directed to these ends. It has never been shown that there are so many spies or trait-

ors in this country, or that the external danger is so great and imminent that we have to divert the entire attention of our people into one great repressive preoccupation, into one great counter-revolution in which the freedoms of our citizens must be thrown overboard as too burdensome for the floundering ship of state to carry.

It is useful to remember that Jefferson spoke in 1801, when our Constitution was 12 years old, and when the infant Republic was in dreadful danger from deep divisions within and from the wars that were raging between the great powers. If he was right in speaking in such a way at such a time, we cannot be far wrong if now, when America is the most powerful nation on earth, we seek to recapture some of his sanity and courage.

How is the educated man to show the fruits of his education in times like these? He must do it by showing that he can and will think for himself. He must keep his head, and use it. He must never push other people around, nor acquiesce when he sees it done. He must struggle to retain the perspective and the sense of proportion that his studies have given him and decline to be carried away by waves of hysteria. He must be prepared to pay the penalty of unpopularity. He must hold fast to his faith in freedom. He must insist that freedom is the chief glory of mankind and that to repress it is in effect to repress the human spirit.

Farmers Want North Fork, Kings River Development

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

FOWLER, CALIF., *June 30, 1949.*
Congressman CECIL F. WHITE,
House of Representatives,
Washington, D. C.:

Your action in introducing bill H. R. 5264 asking for North Fork, Kings River development as an integral part of the Central Valley project by the Bureau of Reclamation will meet with the hearty approval of the big majority of the farmers residing in the Kings River area.

L. L. MILLER,
Member, Advisory Council, Rivers and Harbors Congress.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. LEMKE. Mr. Speaker, the McLean County Independent of North Dakota has been publishing a series of articles by Bigelow Neal entitled "Valley of the Dammed."

These articles show the arrogance and abusive manner in which people are deprived of their property in violation of the constitutional provision that private property shall not be taken for public use without just compensation. This by the so-called real estate division of the Army engineers.

The articles contain a great deal of humor for the reader, but I can assure you not for those who lived in the Valley of the Dammed. The articles are instructive and thought provoking. They challenge our sense of justice. Below are the first two installments of the articles entitled "Valley of the Dammed":

VALLEY OF THE DAMMED
(By Bigelow Neal)

PART I

First of all I plead guilty to the charge of stalling. I did just that last week and I am compounding the felony in this issue for the sole purpose of getting the greatest coverage possible before beginning my story.

This week, then, I am devoting my time to things I dislike in any composition, namely: Introductory remarks. My excuse lies in the necessity for some understanding, on the part of my readers, of the motives and scope of this series of articles as well as the spirit which lies behind them both with the McLean County Independent and myself.

We are not engaged in a commercial activity. Many years ago I came to the conclusion that a man who started out writing for nothing would continue writing for the same compensation, and I have made it a rule, except in an occasional public service or charitable cause, never to pull the cover from my typewriter unless someone paid me for so doing. But there are times, such as this, when the cause becomes greater than any idea of personal gain. Accordingly, whatever this document may prove to be, you who read are to know that the writer is sincere and is telling the truth as he is able to see it.

As for the Independent, it is impossible to profit by these articles. It can sell a few subscriptions, it is true, but the real value of a subscription lies in its effect on the advertising rates of the paper. Trying and hoping as we are to reach up and down the Missouri River and out on either side wherever land is to be taken for the gigantic piece of construction now under way, most of this temporary circulation would be beyond the interest of local advertisers. In the main then it is, to the paper as well, an act of public service.

You will wonder, if this is a noncommercial venture, why the issues following this will be copyrighted. The answer is that I intend parts of this for national publication and if it were not protected here, it would be unsalable in the East. All of which doesn't mean that any North Dakota paper can't republish parts of this document with no more expense than that of the letter asking permission.

Later on I shall adopt an attitude highly critical of the methods employed by the real-estate division of the Army engineers in purchasing these lands of ours. Before I reach that point I should like to have it clearly understood not only that I have no enemies among them but that most of them are among my personal friends. If anything I say reflects in any way on their personal characters, it is because of an error or lack of clarity on my part.

As a matter of fact, these men of Riverdale are fine people. As personal friends or business associates it would be difficult to beat them. The difficulty comes when, as fathers of families, they must have their salaries to support their dependents and, to earn these salaries, they do as they are told.

Doesn't this imply that there are much worse men somewhere behind them? No; it doesn't. Neither you nor I can ever find the men who are to blame for this tragedy which has settled like a shroud over the valley of the Missouri. This for the simple reason that those men do not exist. It is solely a matter of a mob doing things which no individual member of a mob would be apt to do. It's what you might call a psychological steam roller built upon the foundation of a policy. Somebody started it. Nobody knows how to stop it.

The basic question we have to consider here is not the honesty of individuals or even mobs. It is this, and I say it with all reverence, how long can Almighty God allow the rights of a defenseless minority be crushed under the iron heels of a greedy majority?

No; you're wrong again. I freely admit the necessity of controlling the Missouri River. I grant without a question the right of the Government to take these lands. Had I the power to destroy the whole project with a wave of my hand, I'd sit on my hand until my fingers went to sleep.

If those last two paragraphs sound a bit contradictory, we'll let it go at that for the present.

And so, beginning next week, with no thought of malice or revenge, with hatred for no man and with a friendship for many of whom I must be the most critical, I'll go down into the murky depths of this land purchase and rental program.

But before I sign off, speaking on behalf of my neighbors and of the perhaps 50,000 families who must sacrifice their homes to the building of this mighty project, I want to thank the McLean County Independent for doing what no one else has dared to do. That is to amplify a voice speaking in the interests of simple justice in a land where so many people expect to be made rich at the expense of a few.

PART II

A little more than a year and a half ago, I lived in a prosperous and happy community.

Today it is lonely and desolate and cold. Where once there was laughter and happiness, today it is a land of silence under a mantle of gloom.

Then it was a place where men fashioned out of the soil the answers to their prayers. Now it is a graveyard of human dreams, where only the songs of the coyotes echo among the tombstones.

Strange, isn't it, that such a devastating blight could strike so suddenly and with such deadly effect? Here we have been shaken by the assaults of hail and drought and grasshoppers. We have weathered depression, hot winds, blackleg, smut, and blizzards. But it seems that we did not know the worst. And least of all did we realize that our deadliest enemy would be none of these things or that, when it came, it would prove to be something of which we never had given a moment's thought—the greed of man, the cold grip of human cupidity closing about our throats.

The story of how this came about is sordid. In no place among all its chapters is there a rift where the sun shines through. It is the story of this greed. It is the story of stupidity. It is the story of man's cruelty to man.

I say these things because there is no reason for what has happened. Not a single soul has gained, or ever will, by the unnecessary losses that we of the Missouri River Valley have suffered. We have lost more than most of us can ever regain. Those who have done this thing have put themselves—in God's own good day—under the sword of their own merciless consciences. Sooner or later that sword will fall. To those who have done this thing, the future offers even less than it does to those who have been wronged because as a great scientist once said, "To every action there is an equal and opposite reaction." The pendulum may swing far to one side but, as sure as the sun rises and sets, it will come back.

And so it is that with personal malice toward no living soul, with hatred for none,

with no idea of revenge or spite, with no desire to hurt or to wound or destroy, I am pleading the cause of more than 100,000 men, women, and children yet to be crushed under this steam roller of stupidity, stoked by the fires of greed. And I say to you that, under the hands of one who has the ability, a typewriter is more dangerous than all the atomic bombs in the stock pile of Mars. God grant me the ability, just this once, if never again, to do this thing well.

Once, long years ago, a magazine editor, for whom I have worked for a quarter of a century, told me that a man who deliberately wrote a story with a sad ending had no mission in life. Since then, no matter how far into the depths my stories have gone, in the end, I have turned on the sunshine and my yarns have closed on a happier note. But, in this one, we go down and down through layer after layer of shadow into a darkness too deep for the brightest sun to penetrate. And there, when the time comes, I must leave it. The very best I can do is to hope and pray that man is better than I have been forced to believe and that, some day, the pressure of public opinion may turn a great wrong into a right and that thus the sun may come to shine again.

A declaration of principles

First, I would have you understand that none of us in the Valley of the Missouri—even had we the power—would prevent the building of this dam and this project. We freely acknowledge that it is right. In connection with this great project we have offered, without complaint, every necessary sacrifice.

Second, we never have, we do not, and we will not fight the Government of the United States or any part of it that acts within the law or within the limits placed upon its activities by the Congress of the United States or the Supreme Court of the United States.

Third, we will obey promptly and with full reverence and with full respect every order of the United States district court.

I say these things by virtue of that authorization which comes from more than half a century of association with my neighbors. I know they would have me say exactly this in their behalf.

The people who must suffer

Probably you will notice with something of a shock that I have given the number of people to be driven from their homes by this project as 100,000.

I refer, of course, to all to be displaced under the Pick-Sloan plan and the official estimate has been 20,000 families. Multiplying that number of families by the usual five to the family, as the average, we get 100,000.

As a matter of fact, my experience with the propaganda given out by these people, has been that 100 percent up or down, in the direction of their prejudice, is somewhere near the right figure.

In the number of families to be moved by the Garrison Dam alone, they started with 500, not including Indians. For 2 years the figure has enjoyed a normal growth until now it is given as between seven and eight hundred. I fully expect this figure to reach maturity at between fifteen hundred and two thousand. Perhaps you will remember that the original cost of the Garrison Dam was placed at $140,000,000. But after the dam was authorized, the figures derived so much nourishment from some source that they have grown now to around $177,000,000; and they probably are a long way from maturity.

If this same rate of growth applies to the number of people to be moved, it is likely that it will exceed 200,000. But for this narrative I will stick to the engineer's estimate of now—20,000 families or 100,000 men, women, and children.

Outline

Truly, this is the most contrary narrative I have undertaken in 25 years. No matter where I begin or on what part of the subject, I find so many things I should have covered first that my story threatens to move backward faster than it goes ahead. As it stands now, I am in real danger of coming out the front of my story instead of the back. I am introducing a tentative outline here so that the readers and the author may both have some idea where they are going:

1. The Army Engineer Corps.
2. The method of appraisal.
3. My personal experience with a negotiator.
4. Here because of my conversation with said negotiator I shall drop back to explain what is meant by the Department of Justice.
5. The United States District Court.
6. The United States marshal and his part in the transaction.
7. The legal rights of the landowner.
8. Procedure in court.
9. Securing an attorney.
10. The question of the legality of options already signed.
11. The land-rental program.
12. The disposal of buildings.
13. The lease.
14. The question of income tax on funds received from the Government.
15. What might have been done and what should have been done.

Revamping the Nation's Foreign-Trade Policies

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a dispatch entitled "Fight Trade Policy, Young GOP Urged," from the Salt Lake Telegram of June 24, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIGHT TRADE POLICY, YOUNG GOP URGED

(By Will Jarvis)

Senator GEORGE W. MALONE, Republican, of Nevada, Friday urged young Republicans to work for a revamping of the Nation's foreign-trade policies, which he said are "ruining our living standard and destroying our industry."

Speaking before the Young Republican National Convention Friday afternoon in Newhouse Hotel, he gave a sweeping denunciation of:

1. Economic Cooperation Administration (Marshall plan).

2. Proposed 3-year extension of the 1934 Trade Agreements Act, generally called the reciprocal trade agreements.

3. Proposed adoption by this country of the International Trade Organization principles.

ATTACKS TRUMAN

He also attacked President Harry S. Truman's bold new program and what the Senator termed the "bipartisan foreign policy myth."

In their stead, Senator MALONE said he wanted to see a workable American policy which would include:

"1. A flexible import fee system to maintain our high standard of living through the floor under wages, while we help other nations to raise their own.

"2. The rebuilding of our national defense organization to the point that it can protect us against any overt gesture from governmental systems that seek to penetrate either our territory or those countries whose integrity is important to our ultimate peace and safety."

OPEN-DOOR POLICY

"3. An extension of the Monroe Doctrine, or open-door policy, to embrace all nations in Europe and Asia, whose cooperation and integrity we consider necessary to our own peace and safety.

"4. America to be the sole judge of when its peace and safety is threatened. And we would feed emergency-hungry peoples of other countries to the extent of our ability without endangering the welfare of our people."

In strong language the Senator attributed the closing of mines in the intermountain area and of other industries in different parts of the union to the three-part-free-trade program.

FEEDING WORLD

"Since the end of the war we have fed into the bottomless maw of Europe and Asia the fantastic sum of $41,000,000,000," he declared. "It is leading us into a position in which ECA-subsidized foreign factories already are underselling us in our home market."

"It is high time," he said, "that we throw away the administration's soothing sirup and analyze the symptoms of this contagious disease and work toward a real cure."

His flexible import bill, he explained, would be substituted for the 1934 Reciprocal Trade Agreement Act. His bill would turn the Tariff Commission into a foreign-trade authority with full authority to find the peril point in the matter of import fees and tariffs below which the jobs of American workmen and the industries of this Nation are threatened and should in each case automatically become the import fee or tariff, considering other factors, he said.

HITS BRITAIN

He charged Great Britain with "manipulating" its currency for a trade advantage and said that it is impossible to make effective trade agreements that does such.

Such manipulations are a form of "piracy," he added, then warned that if the administration's three-part free-trade program is adopted the Truman depression will break all records.

President Truman's bold new program, which would guarantee the investments of American industrialists who build industries in foreign countries, was described by Senator MALONE as a proposal to displace American jobs.

He quoted administration officials as saying that there can be no bipartisan foreign policy without extending it to national economic affairs.

"In which case," he said, "the Republican Party becomes merely a camp follower and there would be no need for the two-party system."

CARRY THE BALL

The junior Senator from Nevada told the Young Republicans that they could take his program and "carry the ball from Salt Lake City to the Atlantic Ocean and gather votes all the way."

Earlier the delegates heard an address on foreign policy from Representative DONALD L. JACKSON, Republican, of California, who warned that it is better to be right than simply bipartisan in foreign policy.

He especially condemned American policy toward China and said that the Republican Party had not concurred in the policy of waiting till the dust settles, as it was described by Secretary of State Dean Acheson.

"Standpatism" Assailed at Young GOP Meeting

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a dispatch entitled "'Standpatism' Assailed at Young GOP Meeting," published in the Salt Lake Tribune for June 25, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"STANDPATISM" ASSAILED AT YOUNG GOP MEETING—SPEAKER ASKS PARLEY PUSH FARM-LABOR PROGRAMS

(By O. N. Malmquist)

Young Republicans of the Nation demonstrated that they can take it as well as pass it out Friday by devoting the second day of their national convention largely to self-analysis and listening to critics of the GOP or segments within the party.

Scattered but frequent outbursts of applause greeted an address by Joseph Keenan, director of the AFL labor's league for political education, who told the delegates what was wrong with the party from organized labor's standpoint.

DON'T EVADE ISSUES

United States Senator GEORGE MALONE, of Nevada, urged the young party members to "pick up the ball" which many of the Republicans in Congress shun, and come out against the hoax of free trade, which he argued is hurting the American workingman and the American economy.

Robert Elliott, a 32-year-old Republican county chairman from Oregon, lambasted what he termed the elder statesmen of the Young Republican organization and accused them of trying to cook up deals to control the movement.

"STANDPATISM" HIT

On group of critics belabored the party for "standpatism," while another group deplored disposition of some of the members to tag along with the Fair Deal.

All in all the day's sessions suggested a search for factors which make the party tick or fail to tick rather than a unifying mutual-admiration get-together.

Intermixed with the critical analysis of the Republican Party were some pointed attacks on Democratic administration policies.

DEMO POLICIES RIPPED

Representative WALT HORAN, of Washigton, a participant on the farm panel, accused Democrats of following an inconsistent and basically dishonest agricultural policy.

Representative DONALD L. JACKSON, California, who spoke on Republican responsibility in foreign policy, denounced the administration policy in China, declaring that it was originated by a China clique in the State Department and that it is not concurred in by the Republican Party.

Clarence Hill, of Kansas City, Mo., head of the agricultural division of the Republican National Committee, lambasted the Brannan farm program, describing it as a major step toward socialization which would permit one man to tell farmers how much they could plant, how much they could harvest, how much they could market, and at what price.

AIRS TRADE POLICY

The United States, said Senator MALONE in a panel discussion of the 1950 election, is getting the greatest pushing around that any nation has taken in 2,000 years of recorded history. And the hope of the party, he asserted, lies in the young Republicans who are not tied up with the opposition party by deals as to many of the elder members of the party are.

He singled out as one of the great fallacies of the administration the State Department's selective "free trade" program based upon the 1934 Trade Agreements Act. Many Republicans, he complained, have been camp followers with respect to this program for the past 15 years and still are. It now has reached the point, he continued, where there is no protection at all for American labor or industry. He argued that unless the policy is reversed the country is heading into a depression which everyone will know about in 6 months.

The Republican Party, Senator MALONE declared, historically has been the friend of the laboring man but has forgotten him lately by helping along a program which will reduce his standard of living.

The Nevada Senator proposed as a substitute for the reciprocal trade program (which he declared is not reciprocal) a flexible import fee system designed to establish a market for foreign goods in this country on a basis of domestic costs. This, he maintained, would place a floor under the wages of American workers and at the same time permit assistance to other nations in raising their standard of living.

FREE TRADE SOUGHT

"When all nations achieve a level whereby production is based on a living standard as high as own own," he continued, "then under the flexible import fee system we automatically would have free trade.

"I suggest that this convention break the trail for the Nation. * * * Young Republicans are not involved in any bipartisan deals and you have the energy and driving power to do the job."

Mr. Keenan bluntly and forthrightly told delegates that organized labor had been more disposed to support Democratic than Republican candidates. He offered a long list of reasons why, all of them revolving around the simple proposition that most Democrats in Congress vote for bills labor supports while most Republicans vote against them.

Europe Fears United States Will Cut Imports

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Europe Fears United States Will Cut Imports," written by Michael L. Hoffman, and published in the New York Times of June 28, 1949.

In my opinion the article is particularly pertinent at this time because of the fact that Congress has been unable to act on the reciprocal trade agreements legislation prior to June 30, 1949. It is anticipated, however, that the trade agreements legislation will be considered at the conclusion of consideration of the North Atlantic Pact.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE FEARS UNITED STATES WILL CUT IMPORTS—WONDERS HOW IT CAN HEED ECA PLEA TO INCREASE EXPORTS IF BARRIER IS PUT UP

(By Michael L. Hoffman)

ANNECY, FRANCE, June 27.—Fear that the United States is on the verge of scuttling its 15-year-old policy of gradually encouraging increased imports is spreading over Europe like a plague.

This correspondent recently has talked with more than a dozen top-ranking European economists about the consequences to Europe of an American price recession. Without exception they have cited the threat of increased import duties resulting from pressure on Congress by industries fearful of competition in a tight market as the main in some cases the only thing that they fear.

Here at Annecy there has been noticeable tightening in the negotiations for all around tariff cuts in which 34 countries are engaged. News of agitation in American industrial circles for duty increases is one of the factors making European negotiators cool toward the idea of reducing their own tariff restrictions.

TARIFF HELD ALL-IMPORTANT

In the eyes of European economists and responsible economic officials of governments, American policy on tariffs is far more important than a few hundred million dollars one way or another in next year's Marshall plan appropriation. If the United States adopts the policy of shutting out European goods as soon as they become competitive they say there is little use in the Marshall plan at all.

For 2 years the United States has been lecturing Europeans to build up exports to the dollar area. This is essential if Europe is to become viable and to become viable is an obligation the western countries undertook in joining the Marshall plan.

The Economic Cooperation Administration is now engaged in a big drive to force Europe to take great risks by loosening trade barriers and making currencies more freely convertible. Europeans are beginning to ask whether there is any use taking risks, including depreciating their currencies, to improve the competitive position of European exports if the only market in which they can earn dollars is to be closed to one commodity after another as soon as their competition makes itself felt.

COMPETITION STAND QUESTIONED

It is very difficult for Europeans to understand why Americans feel so strongly that there must be competition within Europe when the United States seems so reluctant to accept competition at home.

It is even more difficult for them to understand how the country which presents the major world economic problem by the incomparably high productivity of its labor and industry can fear competition from people that have neither tools nor resources to match those of the United States.

No responsible European underestimates the difficulty of allowing goods to be imported when the effect is to reduce prices or sales of home-produced products. Some European governments, however, are doing just that in the interests of a better balanced European economy and creation of a wider area of competition. All western European countries are being urged to take similar difficult steps by the ECA.

Inasmuch as the outstanding element of unbalance in the world economy is the low level of United States imports compared to United States exports. Europeans are beginning to ask more and more insistently whether the United States really intends to give them a chance to redress this unbalance in the only way that it can be done soundly—by selling more goods to the United States.

Ratification of the Habana Charter

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the National Federation of Business and Professional Women's Clubs, Inc., Washington, D. C., on the International Trade Organization in support of resolutions authorizing ratification of the Habana Charter:

The National Federation of Business and Professional Women's Clubs has given through its local clubs, organized in 2,800 communities throughout the United States, active support for the work of the United Nations since its inception. It urged the establishment of the United Nations and has approved membership of the United States in the various affiliated agencies. The International Trade Organization is planned as an integral part of the United Nations economic machinery. It will carry forward the pledge of the members made in the Charter to create conditions of stability and well-being which are necessary for peaceful and friendly relations among nations—by cooperating in the solution of economic and social problems. Establishment of the International Trade Organization at the earliest possible date is essential in order to strengthen the framework for an expanding world economy.

The National Federation of Business and Professional Women's Clubs through action of its legislative steering committee, authorized by convention action to support participation by the United States of America in the United Nations, has gone on record in favor of acceptance of the Habana Charter. Completed at Habana last March, after 3 years of planning and negotiation, the Charter was signed by 54 nations. It is a long complicated document because it sets up ideal standards of conduct with goals toward which the trade organization will work and at the same time makes exceptions and provides escape clauses which take into account the world conditions as they exist today.

The Federation approves the goals of the ITO to increase the production, consumption and exchange of goods in a way as to contribute to a balanced and expanding world economy; to foster and assist economic and industrial development; and to further equal access by all countries to markets, products and productive facilities, believing that a business world founded on such principles will create more employment opportunities for women in the United States and a higher standard of living for women in other parts of the world. The ITO carries forward the basic concept of an open-door trade policy between countries based on the principle of non-discrimination that has held since early days as a guide for our commercial treaties.

Rather than deplore the escape clauses added to most every article, we regret the world conditions which make the clauses necessary. Conditions taken into consideration are unbalanced state of world trade, vast differences between the present levels of national economies and the shortage of hard currencies, conditions existent as a result of the war. It seemed necessary to make allowances for the demands of national reconstruction programs, the desire of undeveloped countries to protect new industries and problems of countries trading within a custom union. It must be remembered that three of the most important escape clauses which permit, (1) the suspension of tariff agreements if it is found that an unforseen development occurs which threatens injury to a domestic producer, (2) the placing of quotas on exports and imports which interfere with our domestic price support program and the restricting of imports and exports as a measure to promote national security, were placed in the Charter at the demand of the United States. The escape clauses grant permission for a limited period under certain circumstances and place additional obligations which it is believed will check extension of objectionable conditions.

Trade with other countries is vitally necessary to the United States today since the industrial capacity of the United States doubled during the war. Without customers abroad, full operation of our plants and our high level of employment cannot be maintained. The United States needs raw materials from abroad which are in short supply in this country and those which are vitally necessary for strategic reasons. Unless we buy from other countries, they cannot secure dollars with which to buy from us. Unless they sell to us, they can never establish a balanced economy in their own countries, the goal of the European recovery program. The ITO will have no authority but it offers a framework through which we can work with other nations to promote exchange of goods and to eliminate restrictive trading practices. It is a step in the righ direction that if taken now while trade policies are still in a period of flux, will be an impetus toward a freer world-trading system in the years to come. It is hoped that at the end of 5 years when the Charter provides for a complete review and revision that world conditions will make possible the elimination of those escape clauses which tend to nullify the high objectives of the trade organization.

We believe that the Charter be accepted because it offers machinery for improving the present world trading conditions which if left unchecked will lead to open economic warfare. It should be the responsibility of the United States to use its leadership in support of an orderly trade expansion rather than accept the law of the jungle as a basis for its trading code. In view of the fact that the first draft Charter was proposed by the United States and that in the master agreement of the lend-lease, the bilateral treaties of European-recovery program and article II of the Atlantic Treaty, the United States promises to seek to eliminate conflict in international policies and encourage economic collaboration; refusal at this time to ratify the Habana Charter, we believe, would have tremendous political repercussions around the world which would be detrimental to the best interests of the United States during this critical period.

The Fifth Freedom

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 1 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able commencement address delivered by Richard B. Scandrett, Jr., a distinguished lawyer of New York City, N. Y., at the commencement exercises of Kiskiminetas Springs School, located at Saltsburg, Pa.

This address contains some very timely observations of wisdom and inspiration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FIFTH FREEDOM

(By Richard B. Scandrett, Jr.)

I

Men of Kiski. I assume this is a proper way to address you, for I understand the school admits no boys under 14 and that the kindergarten has been abolished, in fact, if not in name. However, the adoption of a routine rule of admission, involving a minimum-age limit, is a simple procedure. It is far more difficult to reduce intellectual adolescence among the middle-aged. There are far too many individuals in the general, and the academic world, who never progress beyond subjective thinking, which is normal in adolescents, to attain the objective intellectual attitude of maturity. Too many so-called adults continue through life to regard the world as their particular oyster; an error we hope you have learned this early to avoid.

It requires a certain amount of fortitude to return to this nostalgic environment, and face the memory of misdeeds committed here as a boy more than 40 years ago. "For a boy's will is the wind's will and the thoughts of youth are long, long thoughts." And never forget, too: "The boy is father to the man."

Actually, when your president invited me to speak to you today, I welcomed the opportunity. I have a deep feeling of gratitude to Kiski, and to the wise men I learned to know here, led by that great teacher who stimulated the minds and understood the hearts of boys so well, the late Andy Wilson. Also, I was glad to have the opportunity to pass on a suggestion or two to you. I come to suggest, not to admonish.

All Kiski alumni have watched with increasing satisfaction the progress of the school under Dr. Clark's leadership. The French statesman, Aristide Briand, remarked on his 70th birthday: "At times I have been unfairly criticized without being too disturbed; at other times I've been unduly praised, and it hasn't gone to my head; but oh, how I writhe when I am interpreted." So, lest he writhe, I will try not to interpret Dr. Clark. But I will quote his profound conviction that the real educator is the student himself rather than the teacher; that the most a teacher can hope to do is to help his pupils to help themselves—to help stimulate interest, to give a boy the urge to accomplish, to whet his aggressive curiosity in things worth while; to help him find and realize his best capacities.

Despite the hazards of interpretation, I venture to generalize my impression of your president's objective for Kiski as being to do everything possible that Kiski graduates may make a real start here toward becoming conscious human beings—able to think for themselves, meet their own problems, and recognize and help solve the larger problems that beset all humanity today.

Society owes a great debt to its teachers, and particularly to those at the head of its educational institutions. In paraphrasing Shakespeare, old Oliver Wendell Holmes wrote:

"Uneasy lie the heads of those who rule,
Especially he who heads a school."

Neither a teacher nor a parent can give a child his experience, or his thoughts. Nor should they try. A great Indian philosopher and poet expressed this too little heeded truth when he wrote:

"Your children are not your children. They are the sons and daughters of life's longing for itself. You may give them your love but not your thoughts, for they have their own thoughts. You may house their bodies but not their souls, for their souls dwell in the house of tomorrow, which you cannot visit, not even in your dreams."

II

Since your thoughts must be your own, make them really yours, not faint carbon copies of others'. Do not accept slogans or generalizations, no matter how reliable their source may seem, unless you have made them your own, through understanding. Keep in mind that the devil can quote scripture for his own purposes. The wisdom of our great men is too frequently glibly distorted by those who quote either without comprehension, or to deliberately mislead. The ringing conclusion of Lincoln's second inaugural. "With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right," has been too often scaled down to fit personal standards with no resemblance to those of Lincoln, and with little deference to possible illumination provided by the Deity.

"Our country right or wrong" has degenerated to the Q. E. D. of chauvinism; lifted out of the context of both Stephen Decatur and, later, Carl Schurz. The complete Schurz version is: "Our country right or wrong—when right to keep it right, when wrong to put it right."

The world as a whole, and we in the United States in particular, have developed a state of arduous credulity in which we are increasingly prone to accept statements of fact, or expressions of opinion, with too little inquisitiveness as to their basis. Much too much of our thinking has become "canned thinking," which is not thinking at all, and involves no intellectual processes. We read or hear, and accept, without remembering that slanted propaganda and ax-grinding are always with us. Our minds can become sieves that lose the important and illuminating facts along with the worthless. When the Chinese Communists crossed the Yangtze River recently, a very large segment of our American press and public was shocked and alarmed, despite the circumstances that much reliable evidence was available that the Communists could have crossed the Yangtze River at any time during the past year. Certainly informed Chinese and Americans who have kept abreast of developments in China had made no secret of this fact.

We read avidly the results of political polls and are stunned when the lightning strikes—in the unexpected place. Too many of us are qualified for the initials F. W. N. D.—Frequently Wrong but Never in Doubt. I suggest that you ask yourself seriously, Has Kiski helped me to keep out of this class?

Thought, like other experiences, pays you in proportion to what you bring to it. There is much more stone in the hills than gold. But if your senses are keen, your discrimination quick, your standards high, and your mind disciplined, you will find gold. A woman once visited the studio of the great English landscape painter, Joseph Turner, and stopped critically before a canvas of a magnificent sunset. "It's a beautiful picture," she said, "but it isn't real. I've never seen a sunset like that." The artist replied, That, madam, is true, I'm sure. But wouldn't it be wonderful if you could?"

Too many of us fall easily into two classes: the star-gazers and the cynics. Cynics almost always disavow the label. So many of them prefer to call themselves realists that today the two words, realism and cynicism, have become almost synonymous, a meaning you will not find in any reputable dictionary. Many centuries ago, a Greek philosopher named Thales was walking in a field gazing at the stars, and fell into a pit. an old woman, hearing his cries, came to his rescue. After she had helped him out she asked how he had happened to fall in, and when he told her that he had been studying the stars, she exclaimed, "Oh foolish man. How can you expect to understand the stars when you don't see what is at your feet?" Many years later, another scholar watched an apple falling from a tree to the ground, and by observing what happened at his feet has handed down to posterity some very important information about the stars. The world needs more Isaac Newtons, but its Thales are proportionately far in the lead.

I suggest that you try to steer the difficult course between star-gazing and cynicism, keeping your sights always high enough to include the stars, while you train your feet to respect the hazards of the ground you tread. The Russian writer Gorky said that man is spelled with a little "m," but that occasionally in each generation there is a man who merits a capital M. George Bernard Shaw describes such a man in his definition of a genius, as one who sees farther and probes deeper than ordinary men, and who has the energy to give effect to his wider vision and deeper probing. Perhaps there is such a one among you here today.

III

In the summer of 1941 Franklin Roosevelt and Winston Churchill condensed and articulated the aspirations and hopes of the peoples of the world in a document which we call the Atlantic Charter. For 8 years we have discussed and interpreted the "four freedoms." In these discussions the cynics have scoffed, and the star-gazers have been impatient. But the true realists, whom we might call gradualists, have recognized with Herbert Spencer that "no one can be perfectly free till all are free," and that the four freedoms are necessarily relative, an end to be striven for, a hope to be nurtured.

I suggest a fifth freedom as a fertilizing agent in the soil to promote the chances for growth of the "four freedoms." It is a down-to-earth freedom, but without it the hope for the other four is seriously jeopardized. This fifth freedom can be called "freedom from bunk"—freedom from canned thinking, freedom from smugness, freedom from persistence in error, freedom from the FWND's. Certainly there is a desperate need for this fifth freedom in any approach to understanding today's very complex problems in international affairs.

The perspective of nations, as well as individuals, is limited—limited by their structure, culture, ambitions, need for security, and fears. Contrary to general partisan opinion, relatively few problems are black or white. Decisions usually involve making a choice between possible ways of attaining an end which often can be definitely agreed upon. Lincoln repeatedly stressed that important principles may and must be flexible. A fine, noble, and useful word has in recent years fallen into disfavor. Conciliation is no synonym for appeasement, no symptom of defeat. Conciliation indicates mutual gain, benefit for both, literally a promising together. The peoples of the world have always shared a desire for peace. The atom bomb has accentuated the urgent necessity for peace, but it did not create the yearning for freedom from the fear of war. Now, more than ever before, it is clear that the essential immediate end, is an acceptance of limitation on their national sovereignty in the security area, by all the powerful nations in the world. It is obvious that any possibility of this end being attained requires that the two most powerful nations—the United States and Soviet Russia—attempt to work out a formula under which each of them could obtain mutually satisfactory assurances that they could safely accept such limitations. No appeasement or surrender of ideological or economic independence, nor any settlement of such individual conflicts between nations would be involved. Certainly we in the United States will continue to have faith in the capacities and dignity of the individual with our fundamental conviction that the State is the servant of our people. Nor can or should we expect the Soviet Union to discard its opposite conviction that the State is supreme and the individual a cog in its operation. The object of agreement on such limitation of sovereignty would be not to settle such disputes, but to insure against any resort to war to accomplish their settlement. Of course, this involves the assumption that the Soviet Union needs and desires a peaceful world as much as we do. It involves also the further assumption that the other nations of the world would welcome a meeting of minds on such a formula by the two most powerful nations. What is needed is 1: a recognition by both the United States and the Soviet Union that the finding of such a formula is indispensable and 2, that bipartisan negotiation of a formula would involve no agreement unless acceptable to other nations. In short, such bipartisan negotiations would be preliminary and exploratory for the purpose of attempting to find a formula in which there might be a reasonable expectation of amending the United Nations Charter to accomplish the abolition of the veto. Despite the difficulties of finding such a formula, the basis for hope is the overwhelming mutual need for peace. In a military sense the alternative is "One world or no world." Dumbarton Oaks and the San Francisco Conference took place when a United Nations Organization without a veto was regarded as an impossibility by both the United States and the Soviet Union. That was before Hiroshima and Nagasaki. Today's "A" bombs are many times more powerful. Any extensive military operations in the future could cripple, if not actually destroy, civilization. For in that moment when the atomic bomb shattered Hiroshima, it shattered the ivory tower of national sovereignty all over the world.

Both in the Soviet Union and in the United States there has been too much of the subjective approach of adolescence and too little objectivity. I felt this constantly during 6 months which I spent in Byelorussia in 1946 as chief of the UNRRA Mission to that third largest of the Soviet Republics, which had suffered the most complete damage of any country in the war. The physical destruction exceeded the worst in England, France, Germany, or Poland—all of which I had myself seen. The loss of life was so great it was literally incalculable in 1946, a year after the war's end. Byelorussia, almost unknown to the United States, is composed of 11 states. In 1 of those 11 states, the total killed in the war was greater than all the American killed, in all branches of our services, in all theaters of war.

At a farewell dinner at which officials of the Byelorussian Foreign Office expressed their appreciation of the work of the UNRRA Mission, I was asked to give my impressions of their country. At the close I said: "It is necessary that the people, not only of Byelorussia but of all the other republics which constitute the USSR, try to impute as proper motives to the people of the western democracies as you know that you yourselves have. And we of the western democracies must learn to impute as proper motives to you as those which we know that we have."

"Gaspodin Scandrett, you are talking about Utopia," one of the officials broke in.

"I am afraid so," I replied, "but the necessity is nonetheless real. It might help us both to keep in mind that, like individuals, nations most clearly reveal themselves in the motives which they ascribe to other nations. Let me quote an American statesman who once said that the greatest tragedy in the world is a child who has been deprived by its parents of the benefit of its own sacrifices.

"Having traveled from one end of your country to the other, I know of the sacrifices which all of your people have had to make and the suffering which you have all had to share. All of you know what war means. That is the greatest asset for peace and tolerance and understanding that any nation can have. And every asset carries with it a responsibility. The people in the United States do not have that asset

in any comparable degree. Our homes and cities have not been bombed. Our children have not been murdered. Our abhorrence of war is more academic than yours.

"And so," I concluded, "human nature being what it is, you cannot reasonably expect us to go as far as your asset enables you to go in tolerance and understanding." The Byelorussians nodded their heads in agreement. It was as though they were thinking what I had in my mind but had not said, "to him that hath shall be given and from him that hath not shall be taken away even that which he hath."

One generation after another of those peasants on the western border of the U. S. S. R. have suffered invasion and destruction of their homes in turn by Swedes, Poles, French, Germans. I left Minsk early the next morning sharing the hopes of its mayor and people that this time the rebuilding of their city would be permanent; that 1944 would prove the final year of those periodic destructions which have been the grim milestones in its tenacious history.

IV

If the world's collective brain and conscience could embrace the Kiski motto, its problems could be solved. For our school has a wonderful motto in its three-word trilogy—tolerance, faith, and humility. Any one of these words has inherent in it an entire course of study which a good teacher could call history, or philosophy, or English, or theology. All three are magnanimous words. They complement each other. If you understand one, you have the key to understanding the others. If your years at Kiski have resulted in your attaining even an approach to comprehension of the significance and wisdom which any one of these words means, Kiski has given you a good start. You are on your way to becoming a conscious human being.

Tolerance lives only in the open mind. It is a quality of spirit and desire, compounded of character. Without understanding tolerance is only a wraith, a shadow to come and go, as it has through history. True tolerance broadens all horizons; learning, living, and loving mankind.

Faith encompasses the meaning of the first two words in that other great trilogy—faith, hope, and love. There can be no separation of love from faith, and faith, in its very nature, is hope. Many of us remember our first wrestlings with the baffling conception of space. Where does it end? How can there be an end? And the inescapable conclusion that man cannot know. Therein was the beginning of wisdom, as well as faith. Socrates said, more than two thousand years ago, "A man is truly wise when he understands that he knows nothing." And although one should not take this too literally, it does suggest that Athens may have had its quota of FWND's, or whatever the Greek equivalent was then.

Tolerance and faith are great words. But the most difficult and significant of the three words in your motto seems to me to be the last—humility. It is an old and revered word, stressed repeatedly by Christ. Its heart is concern for others, selflessness, service. Dwight Morrow used to divide people into two classes: Class A who accomplished and worked, and class B who managed to get the credit for what class A did. He used to observe that it was much better to be in class A, and that there was much less competition there. President Lowell, of Harvard, expressed the same view when he said, "Much of the success of the administrator in carrying out a program depends upon how far it is his sole object overshadowing everything else, or how far he is thinking of himself; for this last is an obstruction that has caused many a good man to stumble and a good cause to fall. The two aims are inconsistent, often enough for us to state as a general rule that one cannot both do things and get the credit for them."

In delivering a commencement address at the University of Glasgow, Kipling related a schoolboy's experience at Eton. This boy was the best rugby player in the school. During the week before the championship match, he was sent on an errand by the headmaster; an errand which took so much time that he missed rugby practice that afternoon. The other members of the team were incensed at his absence at such a crucial time, and felt he had jeopardized their chances of winning. Like a great many other boys, they waited for no explanation, but beat him up. The boy promptly complained to the headmaster that he had suffered a humiliating injustice, as he had been punished for something for which the headmaster, and not he, was responsible. The headmaster listened gravely. "Yes," he said, "you are quite right. It was unjust. But it was a good thing to have happened to you. If you think about it you can learn a valuable lesson. There is a great deal of injustice in the world, and it is well to learn early to take it in your stride. And if you think further you can learn another lesson which some men never learn, and without which no man can be really successful in the business of living. It is just this; take care of your obligations, and let your rights take care of themselves."

Today, more than ever before, we who have privileges and opportunities must accept with them our obligations. If we cannot fulfill the demands of our time in character, generosity, understanding, and leadership, we may live to bequeath to our children only the memory of freedom. We are inextricably bound with the fortunes and future of the world. A peaceful, healthy world is our gain just as certainly as the war-deaths of future artists, composers, scientists, and teachers is our tragic loss, and our children's loss.

More than 300 years ago, when the peoples of the world were physically separated, John Donne wrote lines which are increasingly meaningful in our climactic time, meaningful in the spirit of the Kiski motto, and meaningful in the realities of mankind's need.

"No man is an island entire in itself. Every man is a piece of the continent, a part of the main. If a clod be washed away by the sea, Europe is the less, as well as if a promontory were. Every man's death diminishes me, because I am involved in mankind. Therefore, never send to know for whom the bell tolls. It tolls for thee."

Communism Versus Religion

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. MACK of Washington. Mr. Speaker, the Communists have started a new wave of persecutions in Europe with Archbishop Josef Beran, of Czechoslovakia, as their symbolic victim.

This should forewarn every citizen that it is the intention of communism to destroy all religions. If one denomination is destroyed, you may be sure it will quickly follow that all denominations will be destroyed.

That the destruction of all religions is the goal of communism was clearly revealed and admitted by Nikolai Lenin, leader of the Communist revolution in Russia in 1917 and founder of the Red government now headed by Joseph Stalin, when in 1917 he said, "Down with religion! Long live atheism! The spread of the atheist view is our chief task."

In this battle of communism against religion no one can be a neutral. One must either be for freedom in religion or he is for communism and atheism. To be for communism and atheism means one is for dictatorship, while if one stands for the church, he stands for democracy.

Our American democratic system—our American Constitution—was founded on the teaching of Christ, who held that right should be the master of might, that the weak should be protected against the strong, and that justice and mercy should rule in men's hearts. Christianity teaches that public officials are the servants, not the masters, of the people. These noble principles were incorporated in and are the cornerstone of the Constitution adopted by our founding fathers and under which the American people have made great material progress while, at the same time, they remained freemen.

How different are the policies of communism, which proclaim that power is the greatest virtue and that might always can and should triumph over right. Under this unholy philosophy, the Communists say any means is justified in accomplishing the ends communism seeks. Thus do Communists justify the practice of their well-known efforts to change governments by force and violence, a process that is utterly alien to democratic thinking.

Where communism dominates the lives and enchains the minds and souls of men, the Bible, greatest of all books, is burned; and to read it is a crime.

Communism holds that marriage in a church is not legal. Under communism, children cannot be baptized or christened in a church and funerals from churches often are prohibited.

Under communism, churches and synagogues no longer own their own property, free, clear, and untouchable, as they do in the United States today. Church property becomes, under communism, government property. Congregations only use such small rooms or buildings as the Communist Government may license to them as concessions.

Under communism, could a Christian help out with church charities and welfare work?

No. There would not be any. All church schools, hospitals, orphanages, asylums, and such things would be seized by the government. Religion would be denied any say in their operation or management.

The faith your pastors teach is communism's deadliest enemy. Recognizing this, the Communists check every word the pastor utters from the pulpit and out of the pulpit the Communists make him the target for abuse, ridicule, and scorn, and sometimes the victim of persecutions.

How different is the attitude of democracies toward the church and Christianity than that of communism.

In our own country we practice religious tolerance. We allow each person, citizen or alien, to worship his God as his conscience dictates.

Sentence 1, article I, of the Bill of Rights in our American Constitution declares:

Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof.

Under our way of life the church and the state are separate. The individual is free to worship his God as his conscience dictates. He has freedom of assemblage, freedom of speech, and freedom to write what he thinks. His home is free from search, and if accused of crime, he is permitted to see his accuser face to face, and is guaranteed a speedy trial by a jury of his peers. No such rights prevail under communism.

Coaches and trainers of most American sports—baseball, football, golf, and tennis—warn their players, "Keep your eye on the ball."

In the contest between communism and religion the ball is freedom. Keep your eye on that ball—the ball of freedom.

In every issue ask yourself, "Does this preserve or does it tend to destroy freedom?"

For many centuries our forefathers have for themselves and for us, their posterity, struggled at great sacrifice to gain freedom. Mindful of these great sacrifices our forefathers made to attain this priceless blessing of freedom, let us not sacrifice it lightly or without a struggle for its preservation.

The state was created to serve mankind. Man was not created to be the servant of the state. Communism is human slavery because it makes man subservient to the state. We cannot lose any one of the freedoms bequested to us by our forefathers without being in immediate danger of losing them all. In every political issue let us keep our eye on the ball—and the ball is freedom.

Conserve Natural Resources

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. LEMKE. Mr. Speaker, the People's Lobby Bulletin for May has an interesting article in connection with the conservation of natural resources.

We are fast depleting our natural resources—resources that belong to unborn generations. Some of these resources can be saved if we make proper use of our rivers and streams. The latent power in these rivers and streams belongs to the Nation. By harnessing these we can produce hydroelectric power constantly and conserve coal, oil, and natural gas.

The article is thought-provoking and should be carefully read. Here is the article:

Secretary of the Interior J. A. Krug, in his annual report for 1948 (fiscal year) makes an unassailable argument for public ownership of the four major competing sources of energy—coal, oil, water power, and natural gas—to be integrated into what the late great conservationist Gifford Pinchot, called a giant power system.

Part I, of the Secretary's report, is entitled "Natural Resources Programs."

Mr. Krug states:

"Two great wars, and a generation of profligate waste have eaten into our natural resources, and begun to exhaust many of them * * *.

"We need to devise a new system for determining whether in a given instance we will use oil or gas, or coal or water for energy.

"We need to take into account all the costs and base our choice, at least to some extent on future supplies and needs.

"Our American system cannot last indefinitely, if we continue to base all decisions on dollars and cents calculations, which do not include all of the costs.

"It is a matter of concern to the Nation, that oil is the fuel we depend upon to run our automobiles, tractors, our airplanes, and our ships. Solid fuel and water power cannot be used for most of these vital transport services.

"The future of transportation—which in turn is the basis of modern civilization—rests on the availability of liquid fuel.

"Yet in the face of the fact that oil is our scarcest fuel and the only fuel for many vital uses, we continue to expand our use of it, in place of coal and waterpower. * * *

"This is the result of making our decisions on a narrow dollar-and-cents basis."

Secretary Krug states that in 1947 new domestic oil-burning furnaces installed were 29 percent of those in use at the end of 1946, and the increase continued in 1948, and "there was an equally spectacular gain in the use of oil-burning stoves; factory shipments in 1947 were double those in 1946," and "nearly 25 percent more oil was burned in 1947, than in 1946, for the generation of electric energy."

"Use of oil for purposes for which it is necessary, continues to expand"; motor vehicle registrations in 1947 were nearly 38,000,000, and travel was heavier than ever before; "agricultural use of gasoline in 1946 doubled the 1941 totals, and was even higher in 1947," and "aviation gasoline consumption rose a third higher in 1947 than in 1946."

"Atomic energy or solar energy may change the long-range situation" Secretary Krug holds, "but neither can be counted on at this time to provide our necessary motive power for transport, in the foreseeable future."

PETROLEUM AND GAS

"America is the biggest producer and user of energy in the world. In 1947, it is estimated that we used 45 percent of the energy consumed in the world. Our nearest competitor was Russia, with only 11 percent. We used 10 times as much as the average for all the rest of the world.

"Oil and gas, which we are using more freely every year, are our most exhaustible and limited sources of energy.

"Petroleum, with natural gas provides almost half our total energy.

"The best estimates we have of proved oil reserves—from the industry—place them at about 21,000,000,000 barrels. Most experts believe the industry estimate of proved reserves is conservative, and that we have perhaps as much as four times the proven reserves.

"Even if this were true, we have only about two generations of domestic crude oil supply left. When the last war began, we had a big developed reserve capacity. Now we have virtually none.

"The best information in the hands of the Government today, does not justify complacency. We are using 600,000 barrels a day more than at the peak of the wartime demand. During the past 2 years the relatively easy ways of augmenting supply have been largely utilized. From now on, additions to capacity and supply will call mostly for new work and probably will be more difficult."

We are now producing about 2,000,000,000 barrels of oil a year.

The Secretary of the Interior states that the oil development in the Eastern Hemisphere, "would have the peacetime objectives of largely meeting Eastern Hemisphere demands from local resources, and of making the potential oil resources of the Eastern Hemisphere more accessible to the west.

"The Western Hemisphere has only half of the proved oil reserves of the world, and only a probable one-third of the oil reserves which ultimately will be developed throughout the world; yet the Western Hemisphere has been supplying more than 80 percent of the world's oil.

"This is a relationship which cannot endure too long, or the Western Hemisphere may find itself becoming dependent for oil upon the Eastern Hemisphere.

"Unitization of oil and gas fields, a key to maximum recovery and to operating efficiency, lags far behind the needs of the Nation.

"Natural gas, which is produced along with petroleum as well as separately, is today our third biggest source of energy, producing more than 13 percent, yet we are allowing about a fifth of our natural gas consumption to escape into thin air every year.

"This waste would produce two-thirds as much electrical energy as all of our water power sources combined.

"Industry estimates of proved natural gas reserves, place them at only enough to last 40 years, at present rates of consumption."

The areas of submerged resources of oil and natural gas along our coasts, Mr. Krug estimates at "almost 760,000 square miles," and of enormous value.

Synthetic oil, he believes, can be produced from coal, at a cost of "only a little over 12 cents a gallon," and states—"Rapid development of a synthetic fuels industry will safeguard America's future. It may require Government financing."

COAL

"Coal still remains our most plentiful source of energy, although it now supplies only half, instead of the 90 percent it used to provide, of our national demand. We have half the known coal reserves of the world, estimated to last several hundred years. Our reserves of anthracite are estimated at about 16,000,000,000 tons, or enough to last 160 years at present rates of consumption."

"We are using up our richest and most available coal veins, and are running short of certain types, particularly those required for the production of coke for the manufacture of steel. Despite our huge supplies of bituminous coal, we cannot afford to waste it.

"Coal may have to take the place of oil in our scheme of things, before many years.

"It would require a 50-percent increase in coal production to meet a deficiency in petroleum supplies of 2,000,000 barrels a day." (We are now consuming nearly 6,000,000 barrels a day, or three times that amount.)

'Huge estimates of our coal reserves have created a dangerous complacency about our future coal supplies. We need a reappraisal of our coal reserves, particularly in coking coal."

WATER POWER

"Water power contributed only 4 percent of our total energy from all sources in 1947.

"Production of power was 73 percent higher in fiscal year 1948 than in 1940, and still failed to meet demand.

"Total installed water power capacity of the Nation is only 17,000,000 kilowatts. Another 77,000,000 kilowatts remain to be developed.

"Even at the increased construction rate of the past 16 years, it would take another 150 years to make this potential water power available to the public.

"Every year we are burning up something like 60,000,000 barrels of precious oil, more than 100,000,000 tons of coal, and almost 500,000,000,000 cubic feet of natural gas, making electricity.

"Of the 321,000,000,000 kilowatt-hours of electricity produced in the United States during the fiscal year 1948, only a little more than 80,000,000,000—or about one-quarter—was hydroelectric power, the one kind which is constantly renewed—yet preliminary surveys indicate we have undeveloped hydoelectric power sites, capable of producing an estimated 393,000,000,000 kilowatt-hours of power a year, or almost five times what we are now getting from water power.

"It is estimated that our demand for electricity will be over 400,000,000,000 kilowatthours by 1952. Under present methods, most of this additional power will be made from oil, gas, and coal.

"If, instead of developing our 393,000,000,000 kilowatt-hours of potential power from water, we used oil, it would burn up about a billion barrels of oil a year, or approximately as much as the rest of the world is using for all purposes—and about half of our annual consumption of oil."

GOVERNMENT MUST OWN

Secretary of the Interior Krug states:

"We must push ahead as rapidly as possible with the development of all practicable hydroelectric power. We need to develop within the next 20 years at least 40,000,000 kilowatts.

"The Federal Government probably will need to build at least 30,000,000 of those kilowatts, at a cost of twelve billion to fifteen billion dollars.

"This program should include the St. Lawrence power and seaway, which is needed not only for power, but also for transportation."

Only the Federal Government, through public ownership of coal, oil, water power, and gas can coordinate and integrate the development and efficient use of this fourfold source of energy.

Both State and Federal regulatory bodies have failed to enforce efficient methods of production and distribution of energy by regulation.

Competition, even if it could be enforced, would be wasteful and inefficient.

Discrimination and Education

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. O'HARA of Illinois. Mr. Speaker, on the last day on which we will meet in this historic Chamber until the workmen have completed their task of repairs and remodeling, I think it is not inappropriate to speak on the subject of discrimination.

I abhor discrimination of any kind being directed against law-abiding men and women who walk in the image of their God doing the share of the work of the world that it is given them to do. All my adult life, actively expended in championing the causes of ordinary men and women who too often have too few to speak for them, I have fought discrimination wherever I have found its ugly head.

On coming to this Congress, a new Member and at an age when there could be no ambition except to be true to myself and the philosophy by which I had lived my life, I made to myself the pledge that wherever I found discrimination my vote would be withheld and wherever I found that which in sound legislation would eradicate in some measure some form of discrimination there would my vote be and there would it be counted.

Discrimination, Mr. Speaker, in a democracy such as ours is the poison that destroys; a slow-working poison, it is true, and for that reason the more insidious and to be guarded against. It is not enough that there should be no legislation, binding in its obligations upon us all alike, which by intent and in its administration is actually discriminatory; there should be no legislation which a considerable number of our people honestly believe does discriminate against them. The security of our Nation depends not so much on the billions of dollars we have voted for the national defense as upon the continuing unity of our citizens.

If any considerable group honestly believes, even though some may think mistakenly, that the members of that group, and especially their children, are being discriminated against, it is the part of wisdom, and I think the duty of us in the Congress, to listen to them with patience and with understanding.

During the last 2 weeks I have received in opposition to certain provisions in the Barden aid-to-education bill the largest mail that has come to my office during my brief service as a Member of the Eighty-first Congress. I have been deeply moved by many of these letters. What reply can I make to a mother in the Second District of Illinois whose three sons, educated in the parochial schools in my own home area, were accepted as good soldiers by the country that they loved and did not live to return to her? What reply, Mr. Speaker, can I make other than to assure her that when transportation, recreation, health protection, and other things, distinctly separated from the domain of religion, are distributed for the benefit and the welfare of the school children of America the distribution for which I would vote must be alike to all the school children of America.

I am strongly in favor of Federal aid of education. I shall be keenly disappointed if the Eighty-first Congress fails in this. I do not believe it will fail. And it is heartening to me, as I am sure it is to all my colleagues who both abhor discrimination and strongly support Federal aid to education, that among the members of the House Committee on Education and Labor, we are told, is prevalent a spirit and a determination to work out a bill which will meet with general acceptance. Meanwhile it is to be hoped that the school health bill which has already been passed by the Senate, and which I have joined with many of my colleagues in the House in sponsoring, will be approved by the Committee on Interstate and Foreign Commerce and brought to the floor of the House. The benefits of this bill go to pupils in public and nonpublic schools alike.

I include a resolution passed by the State Senate of Illinois on June 29, 1949:

Senate Resolution 65

Whereas there is now under consideration in the Eighty-first Congress of the United States a bill which would provide Federal aid to education; and

Whereas this bill, in its present form, is patently unfair and discriminatory in that it prevents nonpublic schools from participating, directly or indirectly, in Federal funds and even prohibits the use of Federal money to provide pupils of nonpublic schools with textbooks, transportation, and essential health services; and

Whereas nonpublic schools form an important part of the total educational system of this country, and any method of Federal aid which unjustly discriminates against pupils attending nonpublic schools is not only unfair to these schools but will adversely effect the entire structure of American education: Therefore be it

Resolved by the Senate of the Sixty-sixth General Assembly of the State of Illinois, That we publicly express our opposition to the Federal aid-to-education bill in its present form and urge the Eighty-first Congress to amend the bill to guarantee that at least nonreligious textbooks, bus transportation, and health service will be provided to all school children, whether they attend public or nonpublic schools, and that we urge that the bill be further amended to assure that there will be no Federal control of schools as a result of Federal aid; and be it further

Resolved, That a copy of this resolution and its preamble be forwarded, by the secretary of state, to each Senator and Representative in the Eighty-first Congress from the State of Illinois.

Adopted by the senate, June 29, 1949.

SHERWOOD DIXON,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Communism and Religion

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Times-Herald under date of July 1, 1949:

COMMUNISM AND RELIGION—IV

(Following is the fourth and last of a series of excerpts from the recent report by the House Committee on Un-American Activities, entitled "100 Things You Should Know About Communism and Religion.")

What has communism done against religion outside Russia?

It has seized church and synagogue property and killed church leaders wherever and whenever communism has gained control.

Where it has not yet gained the upper hand over the country as a whole, it has tried to corrupt religion from within by setting sect against sect and creed against creed.

Are Communists trying to corrupt religion in the United States of America?

Yes.

What is their method?

The Communist Party of the United States assigns members to join churches and church organizations, in order to take control where

possible, and in any case to influence thought and action toward Communist ends.

It forms "front organizations," designed to attract "fellow-travelers" with religious interests.

It tries to get prominent religious leaders to support Communist policies, disguised as welfare work for minorities or oppressed groups. In the words of Earl Browder, former head of the Communist Party of the United States of America:

"By going among the religious masses, we are for the first time able to bring our anti-religious ideas to them."

What is a "front organization"?

An organization created or captured by the Communists to do the party's work in special fields. The front organization is communism's greatest weapon in this country and takes it among people who would never willingly act as party agents.

What is a "fellow traveler"?

One who sympathizes with the party's aims and serves the party's purposes without actually holding a party card.

How can I spot them?

Many organizations have been listed as Communist fronts by the attorney general and this committee. You can get a list of these by writing to the House Committee on Un-American Activities, room 226, Old House Office Building, Washington, D. C.

To show up a fellow traveler, ask him to name 10 things wrong with the United States and then ask him to name 2 things wrong with Russia. He will be on Russia's side every time.

Are American Communists atheistic?

Yes.

What happens to a religious person who turns Communist?

The party ridicules his religious ideals and dins atheist propaganda into his ears, day and night, in an attempt to convert him to atheism.

What if a new Communist refuses to renounce religion?

Kicked out.

What happens to a person who gets kicked out of the party ?

He is hounded for the rest of his life.

Have the Communists used blasphemous propaganda against the church?

If there is any doubt in your mind as to the vicious and blasphemous propaganda Communists are using against religion, then go to your public library and read a typical example of it entitled "Good-by, Christ," by Langston Hughes.

It is so atrocious that we will not reproduce it here, but even so, it is mild compared to the atheist propaganda in Moscow.

How do Communists work among church people, since they themselves are such haters of religion?

Communists are two-faced.

In their secret party meetings, they make plans to destroy religion.

In public, they say religion and communism should be friends and that both are working for the same goals.

Are there Communist clergymen?

Unfortunately, yes.

Do they admit they are Communists?

Some do, but except in special cases, the party requires Communists to keep their membership secret.

Are they important?

Not as important as the others who have joined the Communist fronts which the Attorney General and this committee have declared to be subversive.

Do you mean that just because a clergyman joins or sponsors one or two Communist fronts for one reason or another, he is playing Stalin's game in America?

No. We are talking about those clergymen who have over a period of years consistently followed the party line and joined, not one or two fronts, but 10, 20, or 30. These are the core of agents the party depends on in the religious field.

But couldn't some of these clergymen be innocently misguided in their attempts to do good?

Well, they have followed every crook and twist of the Communist Party line. Would you excuse that in your minister's case?

But is communism a real danger inside our churches?

Here's J. Edgar Hoover on the subject:

"I confess to a real apprehension, so long as Communists are able to secure ministers of the gospel to promote their evil work and espouse a cause that is alien to the religion of Christ and Judaism."

Society and Crime

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me at the graduation exercises of the FBI National Academy Friday, July 1, 1949:

It is with the greatest pleasure that I find myself here today, participating in these activities

There is something of the small boy in all of us, no matter how laden with years, who wonder-eyed, wanders freely in the land of imagination, quick to sense adventure and magic. I remember playing Indian and cops and robbers and cowboy. I remember, too, how we chose sides to be the bad man or the good man. All these memories crowded in on me when I started to think of what I would say to you today. And when I thought back to all these days of make-believe, of the days of the silent films, and the comic cop in the Keystone comedies, I discovered a startling and essential difference between the attitude of the youngsters of my day and that of the youngsters today. The most obvious thought became almost in the nature of a revelation to me. I discovered something which practically everybody takes for granted—that the boy's sense of adventure, glamor, and magic is no longer on the side of crime. It's on the side of the law, on the side of the cop, as we used to call him. On the sidewalks of Brooklyn the tough guy was the hero, the tough guy who never ran when he heard the battle cry, "Cheezit, the cops." The tough guy—I remember him—who seemed to the small fry to possess all the wit, the agility, the prowess in the world. And as I grew into adolescence, I found that the movies, the newspapers, and the comic strip all aided and abetted this portrait which had no relation to reality whatsoever. The papers and magazines were full of the exploints of Pretty Boy this and Baby Face that. We read of Lucky Lou or Tiger Jim or Foxy Sam who had outwitted and outmaneuvered the law. Adolescents all over the country read and listened and daydreamed of how they, too, would show the whole world through screaming headlines how they outwitted the cops.

The cop? What was he? A bully and a dullard. The outlaw? A quick-witted, quick-moving Robin Hood. It took a man with a vision and the genius of Director J. Edgar Hoover to understand how the very fiber of society was being eaten away by an attitude. In the years of his untiring labors and those of his associates he set that portrait of a criminal into focus. He exposed the criminal for what he is, a shabby worm, eating his way into the heart of society. He exposed the criminal ego, tore it apart to reveal the puniness, the clumsiness, and the shallowness of that ego. The rootin', tootin', shootin', he-man, and the more subtle varieties of worms like the blackmailer, forger, and kidnaper no longer entangle the dreams of youngsters. The John Dillingers and the Floyd Nelsons no longer capture the imagination of susceptible youth. No, the youth of the Nation have lost their hearts to the G-man. It's a plain case of alienation of affection.

What this means to the youth of our country in particular, and to society in general, can hardly be calculated. But it is visible everywhere, in the attitude of your son or your neighbor's son, in the comic strips, in the motion pictures, in children's games, and in the newspaper reporting of crime.

This significant change was not brought about by the ringing of a bell, or the pushing of a magic button, or by parades or by any of the paraphernalia of the circus antics. It was brought about by the quiet, persistent, self-effacing activities of a coordinated unit, activities based upon the scientific approach in the combat against lawlessness. It was not the dare-devil, I'll-take-a-chance approach—though I must admit that often the spectacular results seem to hide the preparations behind them and preparation is, after all—true artistry. What the FBI put to use—unprecedented use—were the instruments of detection, the science of ballistics, fingerprinting, chemistry, physical training, photography, engineering and, so forth. The human intelligence manipulated these skills and crafts and set them to work on the side of law and order, with the result that the reading of an FBI report contained all the drama the human mind responds to. When we listen to the finished recital of, let us say, a pianist or violinist, or watch the performance of a first-rate baseball pitcher, we forget the hours of practice and training that made such performances possible, we forget the hours of gruelling work and the painstaking repetitions, and the hours of learning the techniques and rules of the art or skill. So it is with the men trained by the FBI. We watch the results with satisfaction and give hardly a thought to the patience and the discipline that lay behind the results.

As one author in discussing the activities of the FBI stated in summarizing one particular case "In this case three cheap racketeers, filled with greed and ego, entered a conspiracy in the belief that they could outsmart the law. Ignorant of the forces that mailing even one extortion letter would bring crashing down on them, they blandly matched their puny wits against a force of the FBI men, police, postal inspectors, railroad officials, chemists, fingerprint experts, handwriting experts, paper experts, radio engineers, and a topflight test pilot. There it is, the care, the painstaking preparations, the application of science, the harnessing of skills, the thorough education of the participating agents of the law which have taken the glamour out of crime.

The law-enforcement agent is made; not born.

An appreciation of this fact must widen and heighten our admiration of the work done on the side of the law. One of the most wholesome byproducts of this approach is evident in watching the play of our children. The game is no longer based on which ones can run faster. The excitement of the chase lies in the preparation for it. I'm sure you've seen them playing at fingerprinting, at measuring distances, at decoding, at figuring the scientific possibilities, and yet, in no sense, has this work at preparation destroyed theirs sense of wonder and magic. And let me tell you, the same goes for the grown-ups.

The jurisdiction of the FBI does not extend beyond defined limits. That is why the establishment of the FBI National Academy in 1935 to train State county, and municipal law enforcement officers in advanced

methods and techniques of law enforcement was the most effective blow against crime in the United States in the past 15 years. Since the establishment of the academy, 1,969 police officers, representing all of the United States, its territorial possessions and numerous foreign countries, have been graduated. We honor today 55 law enforcement officers graduating from this academy. With each graduating class, the offenders against State laws know how much smaller their chances are for getting away with it. As each class is graduated, and returns to its duties to apply the lessons it has diligently learned, the respect for the law grows in the same proportion that the life of the outlaw loses its glamor and appeal.

We will not attempt to gloss over the truth that there are certain areas within our beloved country where law and order are being undermined and in some instances destroyed because of the inhabitants' lack of respect for it. When that happens, mob hysteria is substituted for the fair gathering of evidence, for the honest presentation of the case, and for constitutional guarantees of civil liberties. Terror enters the household. Prejudice makes a mockery of justice and the security of the individual—the very basis of our democracy—fades into fear and panic, which, in turn, breeds new violences and lawlessness. Because of jurisdictional limitations, the national law enforcement agents cannot enter. But how well trained are the State, county, and municipal law enforcement officers to combat a terror that can and has in the past grown out of hand? In other instances, how deeply have they been inculcated with the meaning of the FBI motto, fidelity, bravery, and integrity? What objectivity can the local enforcement agents bring to the stamping out of mob rule? The answer lies in just such a group as is being graduated today. They can, and will, I know, bring the dispassionate approach to their respective areas, minds disciplined by scientific inquiry and thus free from irrational and emotional prejudices, a concept of law that precludes prejudgment and precludes punishment before trial.

Thus, the FBI National Academy serves the Nation and the region, in twofold cooperation to secure the dignity and sanctity of lawful living, to rip open the sordid seams of criminal pursuits exposing the loathsome corruption that dwells within.

To the men graduating today, we pay special tribute. They have evidenced that smugness and indifference have no part in their make-up, that they are ready to accept the challenges and responsibilities that attend their work, and that theirs is the integrity that urges each man to give his best to his work, a best that no untrained man, no matter how earnest his desire, can give. He has parted ways with the snap judgment, with the trial and error, hit or miss, approach which have heretofore given the criminal so free a hand. They are truly to be envied for so few of us take the opportunity to add to our stature, to keep developing in and with our jobs, as these men have done, not only to their inner personal gain, but to the enrichment of our Nation.

Good fortune attend you always—and let the tough guys beware.

Rural Telephones

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution which was approved unanimously by the Rutherford County, Tenn., Farm Bureau and which endorses the proposed Poage telephone bill and demonstrates the great need which favorable action by the Congress in this regard will fill.

The resolution is as follows:

Whereas the rural telephone service in Tennessee is very poor and a great majority of rural people have no telephone service at all and even entire communities are entirely without telephone service; and

Whereas the small independent telephone companies are financially unable to provide the necessary financing; and

Whereas they have been unable to secure satisfactory financing from any other source; and

Whereas the Poage telephone bill provides the necessary financing for a complete and satisfactory telephone program; and

Whereas rural electrification and other efforts have been made to the end of rural development and for the necessary rural telephone service to be neglected would be inexcusable in this over-all program of rural development: Therefore be it

Resolved, That the Rutherford County Farm Bureau urges each and every Member of Congress to give their full support to this needed and worth-while legislation.

RUTHERFORD COUNTY FARM BUREAU
BOARD OF DIRECTORS,
ROBERT ROSE, *Secretary*.

More Light on the Arab Refugee Problem

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1949

Mr. KLEIN. Mr. Speaker, it has been only by rigid self-control that I have refrained from direct answer to the amazing misrepresentations in regard to the Arab refugee problems made recently in the House. As an indirect answer I have already inserted certain informative matter in the RECORD, and under consent I am now inserting a communication from the letters to the editor column of the New York Herald-Tribune of June 29, 1949.

Text of the communication follows:

REFUGEES FROM PALESTINE—SOLUTION FOR DISPLACED ARABS AWAITS OVER-ALL PEACE PLAN

To the NEW YORK HERALD TRIBUNE:

I was surprised to read in the New York Herald Tribune, June 21, 1949, that Mrs. Mark Ethridge had declared upon her arrival in New York that "it was 'too bad' that the Jews, in building a national home, had found it expedient to 'throw out 910,000 persons who had been living there for 1,400 years.'"

I just returned from a month's study tour of Israel. My findings do not support her contention that the Jews "threw out" the Arabs. In an interview with Monsignor George Hakim, Archbishop of the Greek Catholic Church (a Uniate Church which is in fellowship with the Vatican), I secured a report on the flight of the Arabs from Israel. As an Arab and a former supporter of the Mufti, he cannot be accused of being "pro-Jewish." He listed four factors which precipitated the flight of the Arabs:

1. Most of the Arab leaders left in the early stages of the conflict—during the period of the irregulars, between November 29, 1947, and May 14, 1948. They, he declared, remembered too well their experiences with irregular gangs during the 1936–39 riots. Great sums of money and goods had been extorted from them at the point of a gun. They did not wish to face that again.

2. A second element in precipitating the flight, particularly in the Haifa area—the area where Monsignor Hakim lives—was the fact that the British informed the Arabs that they would not protect them. Since most of the Arab leaders had already fled, the people were thrown into a panic so that they fled by sea to Lebanon. They fled in spite of the fact that the Jewish authorities guaranteed their safety and rights as citizens of Israel.

3. The Ramallah Radio and Arab propaganda, in general, prophesied that the Arab armies would overwhelm the Jews in a matter of 2 weeks. The Arab peoples left, therefore, to get out of the battle area with the expectation of an early return.

4. A fourth cause was the fear of massacre by Jewish extremists, such as occurred at Dier Yassin, a regrettable act which followed the Arab massacre of all the Jews of one of the Kfar Etzyon settlements south of Jerusalem. It appears that the Arab propagandists used this incident in two ways: To inspire a will to fight the Jews and, on the other hand, to stimulate them to flee from Israel in order that the invading Arab armies would face only Jews.

That Israel is not willing to readmit Arab refugees, except as a part of an over-all peace settlement, is reasonable when one listens as I did, to the Ramallah Radio. On May 17 Abdullah el Tel, military governor of the Old City of Jerusalem, declared: "The time for revenge will come." On May 26 I heard the announcer say: "There will be no freedom from fear in Israel. Forty-five million Arabs will see to that."

With this official Arab attitude, is it illogical or unreasonable that Israel is interested in the guaranties of a peace before she takes on the security problem of returned Arab refugees

It seems to me that peace in the Near East depends upon a changed attitude in the Arab world, and in the in-between levels of our State Department and the British Foreign Office, who still cherish hopes of amputating part of Israel's territory. I found in Israel, among Government officials and in the population generally, an intense desire for peace. They did not want the war; they wanted to live at peace with their Arab neighbors and with the several Arab nations. They do not want war now; they want a peace which will bring them security, and which will not reward Arab aggression.

KARL BAEHR,
Executive Secretary, American Christian Palestine Committee.
NEW YORK, *June 27, 1949.*

A Columnist Rediscovers the Midwest

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

MIDWEST KEEPS PACE WITH REST OF NATION IN GLOBAL OUTLOOK

(By Edgar Ansel Mowrer)

WICHITA, KANS.—Anybody who thinks the people of the Middle West are more isola-

tionist or less aware of the big world should take another think.

In my judgment, middle westerners are at least as globally interested as the population of the eastern seaboard. It is probable that today recognition of America's involvement in the planet is about equally distributed, with the big cities perhaps a shade more alert. The only reason for this is that city dwellers can, if they will, inform themselves more easily.

During the last few days I have attended a number of institutes on foreign affairs in what is sometimes referred to as the Bible Belt.

At each of these meetings, the interest was as keen, the questions asked and answered as shrewdly thought out, as anywhere else in similar groups. It seemed to me that, in their own direct way, middle westerners are probably more eager to do something about it than their compatriots in the blase east.

HAZY ON RED SITUATION

Interest seemed to center in Russia, Germany, world federation, European recovery, China, and Latin America, in just about that order.

There was, I thought, still some little confusion remaining about the Soviet Union and the other Communist Parties, an unreadiness to admit the full scope of the Kremlin's ambitions and its inability to compromise basic principles. On the other hand, there was little anti-Communist hysteria of the sort alleged by American liberals. There was, instead, a painful irritation with the Russian Government. This seems to be connected with the previous expectation that once we disposed of A. Hitler the American people could relapse into our pre-1939 absorption in internal and private matters. The Soviet refusal to permit this relaxation is, in my judgment, the basis of what is called hysteria. It is really the indignation of a man who is being annoyed when he wants to take things easy.

I found no enthusiasm for a preventive war—or any other war.

NO BUNDISM IN SIGHT

I was told that in some places pro-German, even pro-Nazi, groups of citizens are again raising their ugly heads. None came my way. There is, however, a general readiness to forgive Germany natural in people who did not themselves feel any of the immediate effects of Germany's relapse into savagery.

Interest in the various popular schemes for some form of world federation is extremely lively. The Roberts-Streit plan for a federation of civil-liberty democracies has distinguished champions. United World Federalists' hope of larger federation has greater support, particularly among intellectual groups. In some states that movement has local political importance.

The belief is common that the entire world is in crisis and that something more drastic than "containing communism," more effective than supporting the present rachitic United Nations, has to be done about it.

Farm prosperity has made the Middle West more prosperous than in the memory of man. It is only normal that there is considerable worry about a coming slump and conjecture about its effect on existing action for European recovery. This point is labored by the remaining minority of isolationists who have "learned nothing and forgotten nothing."

China, save for the occasional testimony of returning missionaries, seems remote. Interest in Asia has been poisoned by the current propaganda blackening the Chinese Nationalists and subtly turning the Chinese Reds into rose-tinted creatures who couldn't really wish ill to America.

Interest in Latin America seems far lower than in 1939, possibly because other and far more pressing international problems are claiming so much attention.

All in all, the impression I got was that of a perplexed people trying to come to grips with new but not insoluble problems. Shortages when present were in the field of information, not of understanding or willingness to tackle.

NEWS COVERAGE LIMPS

As a newspaperman, I say regretfully that some of this shortage can probably be traced to local newspapers and radio commentors. Rightly or wrongly, some editors and station managers seem to have decided that the American people are not too much interested in world affairs—or that if they are, they shouldn't be.

Coverage of important international news is frequently subordinated to insignificant sensations and trivial features. There is, however, improvement over 2 years ago. Once these editors and commentators admit to themselves that—short of world federation—the American people will never more be free from international problems, they will again lead rather than follow their public in the field of foreign affairr

For the Middle West is energetic, courageous and increasingly educated. And, as one middle western newspaper, the Illinois State Journal, once wrote:

"A good education enables a person to worry about things in all parts of the world."

Hospital Construction Need

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a statement submitted by me to the Subcommittee on Public Health, Science, and Commerce of the House Committee on Interstate and Foreign Commerce on bills to amend the Hospital Survey and Construction Act, together with the statement by Stephen J. Moran, director of the department of public affairs, city of Newark, N. J., with a report by the medical board of the Newark City Hospital, together with copy of resolution adopted by the board of commissioners of the city of Newark, N. J.:

STATEMENT OF REPRESENTATIVE PETER W. RODINO, JR., TENTH DISTRICT, NEW JERSEY, BEFORE THE SUBCOMMITTEE ON PUBLIC HEALTH, SCIENCE, AND COMMERCE OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE ON BILLS TO AMEND THE HOSPITAL SURVEY AND CONSTRUCTION ACT

Mr. Chairman, the city of Newark, N. J. which is part of the Tenth United States Congressional District of New Jersey, is a melting pot of approximately one-half million people. These people come from all walks of life. Like many other cities, we have our rich and poor and our middle class. Many of these people are in need of medical attention and hospitalization. Some are financially able to provide this care for themselves. Many are not. Our city has tried to minister to the health needs of the indigent through the Newark City Hospital, which was erected more than 50 years ago. However, we have not been able to do this work effectively because the Newark City Hospital is not adequate in many respects.

The medical board of the city of Newark and our Newark public officials have for a long time been pressing for the construction of a new hospital, one which can adequately meet the needs of our city's indigent cases. However, lack of funds has made this project only a hope instead of a reality.

I know from personal experience and observation of the overcrowded conditions at the Newark City Hospital. I know, too, that it is an antiquated, outmoded, and obsolete structure which menaces and jeopardizes the lives of the patients who are compelled to be hospitalized therein. In my opinion, this 500-bed capacity hospital which ministers to the needs of a 725 case load—makes good medical and nursing care impossible. Our citizenry is aware of these conditions. And when its poor, who have no other place to go to for hospital treatment, are ordered there they despair.

The taxpayers of our city, who are already overburdened, would like to do their just share to remedy this condition. They would like to see a new hospital constructed. But the estimated cost of a new and adequate hospital under present economic conditions is so prohibitive that it has precluded construction.

Because of the priority classification under which the Newark City Hospital has been placed, it has been impossible to aid the city of Newark under existing legislation, Public Law 725, Seventy-ninth Congress. However, should more funds be made available by increasing the allocation of Federal grants-in-aid, the city of Newark will be in a position to undertake the construction of a new hospital.

The city of Newark makes up only a small part of the United States. But recent surveys indicate that the need exists all over for additional health facilities. State plans estimate that to provide adequate health care, an additional 897,000 beds are needed. In order to be able to accomplish this, it will be necessary to increase the Federal share in the cost of projects over and above the present one-third which the Government now grants.

But State agencies lack the financial ability, even with present Federal aid, to construct and maintain a hospital.

I strongly urge, therefore, that the present existing legislation be amended so that the present program be extended, and Federal allotments be increased to meet the health needs of our Nation.

I would like to include herein a statement by Stephen J. Moran, director of the department of public affairs, city of Newark, N. J., together with a report by the medical board of the Newark City Hospital.

STATEMENT BY STEPHEN J. MORAN, DIRECTOR OF DEPARTMENT OF PUBLIC AFFAIRS, CITY OF NEWARK, N. J.

Modern public hospital structural facilities are urgently needed in the city of Newark, State of New Jersey, a highly industrialized and cosmopolitan municipality with an estimated population of 450,000 persons.

The Newark City Hospital with a 500-bed capacity has an average census of 725-bed patients. The overcrowded condition in this institution seriously impairs the effectiveness of the hospital care and treatment of these indigent patients, and still worse, due to the obsolescence of the physical structure their very lives are in constant jeopardy.

The building which was erected more than a half century ago is a truly menacing fire-hazard. It is utterly inadequate and unfit for housing the ever-increasing numbers of bed-ridden patients therein. The local private hospitals are unable to find room for the excess patients referred to them by this municipally operated institution. In consequence we are compelled to crowd our patients into already congested wards, put beds in the corridors, in the sunrooms and in every other available space.

Aside from the potential dangers to life and limb, proper segregation of these patients in line with best modern hospital practice is impossible.

Herewith I am submitting for your information the recommendations contained in a special report by the medical board of the Newark City Hospital addressed to the citizens' advisory committee. I respectfully commend their views and recommendations to your earnest attention.

I am making this appeal on behalf of my city for substantial Federal and State aid, pursuant to the passage of the proposed amended Federal legislation which I strongly urge as a vital necessity in our specific case. The public hospitalization situation in Newark is very bad and is getting cumulatively worse.

Prevailing economic conditions obtaining now in Newark preclude the possibility of financing the construction of a much needed new local public hospital.

The estimated cost which the city would be called upon to bear under existing legislation, as per Public Law 725, Seventy-ninth Congress, is prohibitive, and far beyond the financial capacity of our already overburdened taxpayers.

NEWARK CITY HOSPITAL,
Newark, N. J., February 8, 1947.

Mr. THEODORE SORG,
Chairman, Subcommittee of Citizens Advisory Committee,
Newark, N. J.

DEAR SIR: At a special meeting of the Medical Board of the Newark City Hospital held January 30, 1947, Dr. Edward Sprague asked the board to submit to your committee its views and recommendations, or its answers to four specific questions.

1. As to the need for a new city hospital:

We reemphasize our oft-repeated statement that the present structure is outmoded, obsolete, not fireproofed, and is inadequate in size and in design for the proper care of the indigent sick.

Its lack of fireproof construction could result in a definite menace to the lives of the inmates, and its constantly overcrowded condition makes good medical and nursing care difficult and at times impossible.

It is our considered opinion that no amount of remodeling could rehabilitate our old hospital so that it would measure up to present-day demands and standards of hospital design and construction.

2. As to site:

We believe that it is essential that the new hospital be constructed in the immediate vicinity of or directly adjacent to the present structure. If rehabilitated, part of the present structure could be used as an outpatient department, clinics, etc., as further outlined in question 4. The present north wing could be used to house the chronic cases now totaling between 100 and 150 in the hospital. The tuberculosis patients might very properly be housed in the south wing, rather than in new hospital. There are many other possible uses to which the present structure might be put, and we suggest this question be gone into in detail later.

3. Number of beds recommended (in the combined new structure and present building if rehabilitated):

We fix this figure at 950. Our average daily census is 725—there are always some cases that have to be assigned to other hospitals, because no beds are available for that type of case or because of sex. The peak load in the hospital was 768 with over 300 cases assigned to other hospitals. This was during the depression and other hospitals then had much available bed space. Nevertheless there were more than 1,068 indigent patients hospitalized as municipal wards.

Most hospital administrators are agreed that the ideal normal load is 80 percent of the bed capacity of a hospital. With our average census of 725 this would call for over 900 beds.

The attached charts show the number of beds by wards and services and sex. The estimated number of beds needed on each service (male and female) appears in the last column of table No. 2 and totals 997. These figures represent the opinions of the heads of various services, the hospital administrators, and the superintendent of nurses. The greatest and almost constant overcrowding occurs on female medical ward 10, on female surgery ward 16, and wards 13 and 18 for psychopathic and alcoholic cases. Ward 13 with 11 beds—female, and ward 18 with 18 beds—male, must harbor the insane, the alcoholic, police prisoner cases, and juveniles as well as any sick person developing delirium who must be segregated from other patients, all in one ward.

Due to constant overcrowding on ward 13 and 18 psychopathic cases sent in for observation and commitment, frequently must be hurried out within 24 hours of admission, thus being deprived of the opportunity of being studied and observed over a proper period of time.

We recommend 25 to 30 beds for females and 35 to 40 beds for males, to be divided into separate wards for psychopaths, alcoholics, police cases, juveniles, and noisy delirium in the acutely ill.

The medical board, the medical director, numerous grand juries, and other inspecting bodies have repeatedly pointed to the need for remedying the conditions found on these two wards, and since there are no facilities available in any other hospital in this community for these cases, it has always been an important but hitherto unsolvable city hospital problem, and a municipal problem demanding immediate action.

With all the above facts in mind we believe that a bed capacity of 950 is indicated.

4. Need for out-patient department:

This question can be solved by transferring the city dispensary presently located in the Board of Health Building, to the city hospital.

Upon motion duly made and seconded the medical board of Newark City Hospital adopted the following resolution by a unanimous vote:

"Be it resolved, (1) We urge the erection of a new city hospital; be it further

"Resolved, (2) That the new hospital be erected in the immediate vicinity of the present structure; be it further

"Resolved, (3) That the bed capacity be 950 including present rehabilitated facilities; be it further

"Resolved, (4) That Newark City Dispensary be transferred to City Hospital as the out-patient department."

In addition to the above answers and explanations there are many details that should be discussed, and we recommend that conferences be arranged between your committee and the medical board.

DAVID A. KRAKER, M. D.,
President.

Whereas there is now pending before the Senate and House of Representatives of the United States, proposed amendments to the Hospital Survey and Construction Act, whereby the amount of Federal aid for hospital construction, maintenance and operation will be substantially increased and the period of time for said financial aid is lengthened; and

Whereas the city of Newark is in need of new and additional hospital facilities; and

Whereas we believe that the Federal Government should give financial aid to the city of Newark in securing these needed additional facilities: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Newark, That the Senate and House of Representatives be urged and requested to adopt the proposed amendments and such other amendments as may be necessary in order to provide sufficient funds to assist the city of Newark, and other municipalities in like situations, in obtaining the desired and necessary hospital building and facilities; be it further

Resolved, That a certified copy of this resolution be forwarded to His Excellency, the President of the United States, to the President of the Senate, Speaker of the House of Representatives, the two United States Senators from New Jersey, and to the several Congressmen from New Jersey.

BOARD OF COMMISSIONERS
OF THE CITY OF NEWARK, N. J.

NEWARK, N. J., *June 29, 1949.*

The Red Menace

EXTENSION OF REMARKS
OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, on Tuesday of this week, a clear-thinking, highly respected citizen of my home community sent a letter to the President of the United States. The writer, Mr. Carl Taylor, sent me a copy of that letter. In three short paragraphs, which I hope the President will see personally, Mr. Taylor expressed the disgust of millions of Americans with this administration's coddling and pampering of those who hide behind the Constitution as a shield to protect them while they work to destroy it.

By unanimous consent, I am inserting the letter referred to:

TAYLOR FARM,
Waukesha, Wis., June 28, 1949.

The Honorable HARRY S. TRUMAN,
President of the United States,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: The common people of this area are becoming increasingly alarmed that your administration is permitting foreign elements to completely permeate the Government of our country.

Three days ago, two Justices of the Supreme Court of the United States appeared in court to testify for a person accused by the Justice Department of being a spy for a foreign government. Yesterday, those same two Justices voted to free Harold Christofel of the charge of perjury. No one doubted, and he did not deny, that he perjured himself. His acquittal came on a legal technicality.

In absence of some vigorous action on your part, to indicate that you have realized that all of these leftists and many outright traitors constitute not a "red herring" but a Red menace, you will certainly lose the confidence of the common people of this area.

Sincerely yours,

CARL TAYLOR.
